There are powerful influences at work to-day to lead organized labor to break faith habitually. If they cannot bring about this action in a comparatively straightforward way, as Germany did through her own officials, they propose to laborers to slip off in a body and repudiate their own organization. In this way, where they are successful, their efforts will have one practical result—to give labor the reputation of a common liar, which by the unanimous racial testimony of some hundred thousand years means that labor in any organized form will—if this opinion should become universal—be wiped out.

This, however, the promoters of this movement assure us, is just the thing—in fact a matter of principle with them; for their fundamental purpose is to erect a new society, a new social contract on a general wreckage of the good faith of the old.

They will—if they can. And anyone of common sense would know instinctively, even in default of the object lesson now being staged in Russia, just what kind of society it would be. It would have just the same chance of success as a marriage between the defendant and the corespondent in a particularly nasty divorce suit, and for precisely the same reason.

Bonds and Stocks

IT BEGINS to look as if the monopoly of investment favor which stocks have enjoyed in the last three or four years had begun to weaken. An overwhelming desire for shares in enterprises which offered large, if speculative, returns has been the striking feature of the markets. Investors fairly hooted at the idea of buying bonds. What they wanted was large profits.

The high cost of living, the prevailing inflation, proved facile arguments, ready at hand for anyone with the least inclination to speculate.

In a period of feverish activity, of mounting prices for all classes of goods and unheard-of rewards for the successful manufacturer and producer, it was certain that many stocks would pay high dividends. The inevitable consequence was a rush of capital into these shares. Any appetite that remained for fixed-interest-bearing bonds was more than surfeited by the five Liberty Loans. Individual investors and investing institutions, such as insurance companies and savings banks, were obliged to take more than they really wanted of these government issues. Other bonds suffered by neglect, and the Liberties themselves discouraged their most ardent friends by slowly sinking under their own weight.

But now the war is over and the Government no longer drains the money resources of the country. The peak of inflation has quite possibly been reached. Certainly the strain upon the productive energies of the country is already lessened. Tens of thousands of the newly rich will probably seek to invest at least part of their profits in fixed-interest bonds. There will be no more Liberty Loans, and the treasury has reduced the floating supply by nearly a billion dollars through the operation of a sinking fund. Already there has been a considerable advance in the price of all the various issues.

Even if times continue very good indeed, we can hardly look for the excessive profits and dividends of the last few years.

The investor who now has money to put out must consider with great care whether he prefers risk and the continued chance of large profits or certainty and only a moderate income. Does he wish to put all his funds into stock, thereby serving to guarantee some other investor's bonds, or does he prefer to have someone else guarantee him against loss, and enjoy the resulting feeling of security?

The Investor's Melting Tale

I AM THE owner, said the man, of a bond of a great public utility company. I bought it largely because it was offered by the greatest and most reputable security houses in the country—accompanied by a signed report by the corporation's president showing that its earnings would be much more than sufficient to cover my bond's interest. Several hundred, probably several thousand, other people with me contributed the tens of millions needed by the company.

The property did not earn the amount necessary f interest. This is of course sad, said the speaker, in itself. But it is by no means my whole story. The cians in control of the city government are now in a st highly inflamed sympathy for the poor man who patr the public utility—and furnishes, they may assum greatest number of votes in the municipality. The determined that he shall pay no more for his se They have the power to prevent it.

And they point with much pride to the circular made me buy my bond—signed, sealed and delive above stated by me—thus showing the world with ab certainty that they are fully justified in not givir company more income—and that the great fina all know this.

The politicians, if they hold their present positio enough, will certainly bankrupt this property. Th no one in the whole situation who doubts this. is a sad outlook for that company—like, I suppos eral other thousands of its kind throughout the co and incidentally, I may also say, for me!

This saving and investing of money in the U States to-day is a great life, said the investor conch if you don't weaken.

Crusaders of Cleanliness

"THE section I am captain of is not in a very bad tion, but there is room, I think, for a three hu per cent improvement." Thus ardent—or naïve—w report of a high-school student who volunteered his ices as block captain in a permanent campaign to sanitary conditions in New York City's streets. a nation of veritable spotless towns would be ours i every citizen purposed to burnish his particular stree in cleanliness it was thrice nearer heaven.

Residential beauty, of course, is only stone-deep— incidental to the far more important fact that a health is charted largely by the temper of its g Formal public-spirited recognition of that fact was by the Merchants' Association of New York two ago this month, when the leading business men inst their Anti-Litter Bureau.

By means of addresses and literature the bureau e about a thousand assistants from among the city's school pupils, housewives, women's police reserve business houses. Fortified with identification car badges and backed by the city's ordinances to enf if need be—their mission, each of the recruits w pointed captain of the block or square in which he lived. Daily tours of inspection, with polite not householder or storekeeper that the law was being vi in uncovered garbage cans or unswept sidewalks— sixteen commonplace offenses—soon worked towa ding pavements and vacant lots of potential disease

DECORATIONS BY GUERNSEY MOORE

MY NEIGHBOR, Jim Ayers, was telling the other day that when he was a boy living in rural Virginia he started one morning with his brother Dan for a ...l school four miles away. As they walked along, ...ct, they heard a terrifying noise which seemed to ...e om a big woods far off on the right. They were ...le country boys, and having never seen much the ...g rumble in the distance became so unusual that ...termined to go over and see what was going ...ing the risk of being whipped for disobeying ...r.

...ey walked from ten o'clock in the morning ...re in the afternoon, the noise and the roads ...time becoming worse. They were chased by ...g dogs and scratched by briers; they ate raw ...g for dinner and waded streams, but kept on; ...s last they walked into the ...lof Bull Run.

...ve been thinking lately that ...erican people have innocently ...e into a row as unusual and ter...g as those two country boys ...e into nearly sixty years ago. ...rhaps it is only fair to the reader ...y at the beginning that I am ...e a statesman nor a business ...n connected with active affairs ...kind. I am only one of the ...ged majority, having little influence on public ...rs Indeed, for several years I have been in com...tirement on a farm, except for occasional forays ...distant and crowded places. But through my watch ...r from which I observe the busy world, there filters ...cision of newspapers, magazines and books enabling ...coorm opinions without being jostled. I am content ...cept the judgment of you gentlemen still in har... sincerely trust your decisions will be as wise and ...apossible. I am still interested to the extent that ...s pay the regular taxes you assess, as well as my ...oion of the new taxation called Propaganda. In ...ering a tax program a German official was recently ...e as saying: "I am frank to confess that it is ...al" This expression caused a good many Americans ...ri up their ears; they felt a disposition to mark ...sitence in their newspaper for future reference.

...supose every busy man resolves to retire from active ...somewhere round sixty, and live thereafter at ease on ...ay-day money. Few actually do it, as the proper ...ornity does not present itself. So the majority of ...rl men, after many hurried repairs, remain on the ...i competition with 1920 models, and function after ...sbn until the old machine goes to the scrap heap.

Too Many Wheels for the Tinkers

...CUALLY quit active life near my sixtieth birthday, ...te great activity from the age of thirteen, when my ...erplaced me in a printing office and gave me stints ...eorm every day—or take the consequences at night. ...r passed from my father's control I had other ...te, for I lived in the old days of long hours. In my ...lcment on morning papers we began at two P. M., ...we rarely in bed before three the following morning. ...employers and foremen were autocrats in those days; ...e workmen know little of the bosses I was compelled ...atfy in order to hold a job.

...ft I became my own master I found I still had a ...er A family of children growing up, ambition to own ...hne and business, and, most important of all, an ...veopposition; so that until I turned my business over ...yons I was a hard worker. In my day the Old Man ...epected to be ...t do anything ...the shop; and ...g along pretty ...l did a good ...cit.

...the present idle ...rtective time of ...le I observe ...i the evening ...e I visit my ...thr, who lives ...r, e discuss cur...e nts until late. ...rly we were ...l settle world affairs by ...e clock, when he proceeded ...vi the clock in preparation ...bd, and as a hint for me to go; but ...ly much is going on that more time ...equired. From the humblest to the greatest I note a feeling of apprehension. A sound national policy is even more important than a sound individual policy, since a bad national policy may mean final disaster to millions, whereas a bad individual policy may mean only disaster to an individual and his family. Occasionally we have jumped from the fire into the frying pan, but progress in public affairs has been distressingly slow. Individuals have accomplished great results, but en masse the people are lamentably ineffective. Mischievous new thought is being distributed as liberally as a weed throws its seeds to the four winds.

A tinker appeared in a rural community one day, and a clock being given him to mend he worked at it a considerable time, all the while telling how capable he was in fixing things and how fortunate it was he appeared just when he did. When he was ready to go and about to receive his pay the farmer noticed that a wheel had been left out.

The tinker's attention being called to the omission he said cheerily: "Oh, that's all right; that's what's the matter with it."

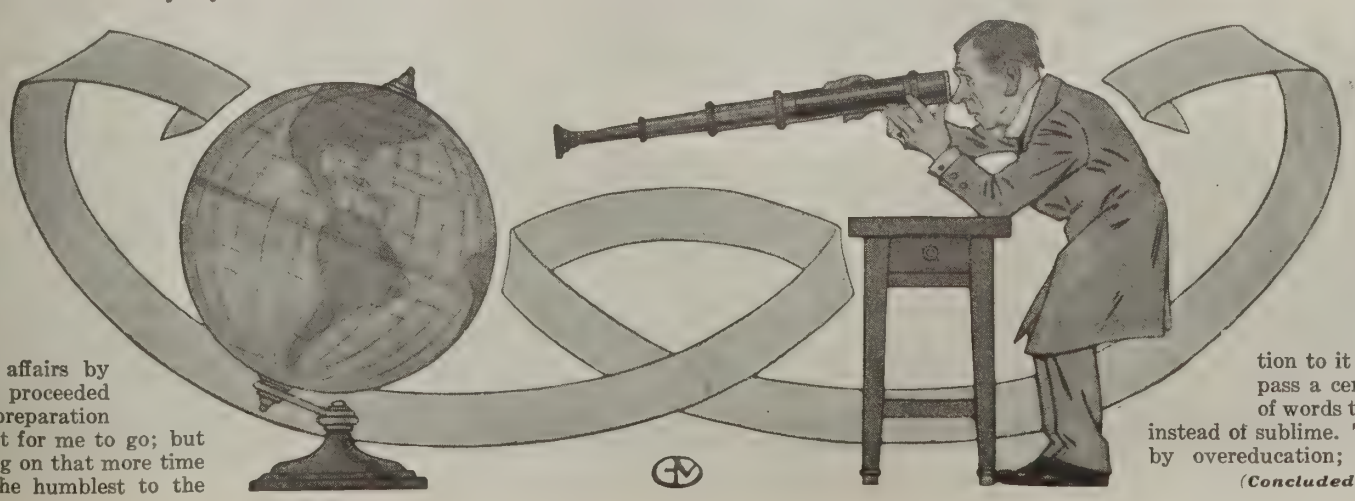
In fixing the country's troubles our national tinkers have left out a wheel here and there, and the machinery no longer functions properly.

People have too much leaning toward the insurgent. I once knew a little girl who when she held her breath and kicked and screamed attracted the attention of the entire neighborhood. Her name was Susie, and when Susie went on the rampage her own mother cried, it was so terrible. And the neighbors said: "There is a good deal to be said on Susie's side!"

But there wasn't; Susie's mother was a fine woman, and Susie certainly the worst child in the neighborhood.

I was much interested the other day in a statement that a famous fast train between two important cities had been taken off.

Passengers complained of discomfort, the wear and tear on the machinery was tremendous, and accidents were very disastrous when they occurred, because of the great speed. So the flyer, a modern accomplishment of which we boasted much, was taken off, and its work is now being accomplished by slower, safer and less expensive trains, with everybody better satisfied.



We might quit with profit, safety and comfort some other too progressive habits.

Our trouble is not lack of good men; I sometimes think the trouble is our leaders are too good, as are our newspapers. We are a nation of Great Hearts, always demanding progress; our Oliver Twists are forever holding conventions, demanding more, and getting it.

Nor do we lack prosperity; it may be that the threat to our government comes from prosperity rather than from lack of it. The sales of automobiles alone are proof sufficient that history has not afforded another people so generally prosperous as we are to-day, though in our gloomy hours we claim to be slaves.

Truly we Americans are singularly blessed by the gods. As H. L. Mencken expresses it:

"To be an American is to be the noblest, the proudest, the grandest mammal that ever hoofed over God's green footstool. Often in the black abysm of the night the thought that I am one awakens me like a blast of trumpets, and I am thrown into a cold sweat by contemplation of the fact. I shall cherish it on the scaffold; it will console me in hell."

But there is no perfection; even an American has his small blemishes, his scarcely discernible weaknesses, his minute traces of folly. And as the children say, "What goes up must come down." There is much in the air now; it is the future and not the present we have to fear.

When I was a young fellow I joined a lodge, and after I had been initiated, with great humiliation to myself and amusement to the others, the Grand Potentate said: "We will now open under the head of the Good of the Order."

That made an impression on me; for the members talked seriously after their fun with me and discussed the general good. May not the American people with profit to themselves hold a session for the Good of the Order, and seriously talk over their affairs, which have certainly become confused?

Philosophy Drowned in Sentiment

I LATELY encountered a striking sentence from Iliya Metchnikof, admittedly a man of great intellect and learning. He belonged to a body of men who forsaking the world gave up the rivalries and personal interests of ordinary men, and sharing their goods and their work lived in austere devotion to the good of humanity. A writer who described the intimate routine of life at the Pasteur Institute compared it with that of a medieval religious community. Iliya Metchnikof was one of the foremost of these; so gentle, so learned, so intelligent that it has been said of him that he is one of half a dozen of the world's greatest men. The opinion of such a man is worth considering. It was Metchnikof who said: "In the course of years philosophy has been drowned in the flood of sentiment and notions, and it has been a great task to restore reason to humanity."

Reason is philosophy, and philosophy is common sense. I know only simple things, and am convinced that others do not know more; if there is truth in the wonderful fancies of which I have heard I must have met with some hint of it in the course of a long and active life. But I know of no really wonderful thing except that we Americans, naturally blessed as no other people ever were, are threatened with disaster.

Every writer and speaker frequently declares: "We are confronted with great problems." I do not believe it; our problems are really simple if we will go about them in a simple way. There were few great problems in the first place, and they have been worked out. Life is not such a complex thing that we must experiment with it forever. The world is full of fine nonsense, and we are paying more attention to it every year. After we pass a certain point in the use of words they become ridiculous instead of sublime. Thousands are injured by overeducation; I have even heard

THE TROUBLE DO

By Rufus Steele

ILLUSTRATED BY F. R. GRUGER

THE outer door of the dispensary operating room, commonly used for exit purposes only, was forced open from the outside and a moment later a grimy Italian worker was projected into the atmosphere of iodoform by powerful hands.

"There you are, Macaroni," a voice followed the reluctant one—"delivered just as the foreman said. Now tell the doc about it—he ain't a-goin' to hurt yer busted mit."

The door closed briskly and the Italian set his back against it in an attitude of forlorn defense. His right arm was buried under his coat. His eyes, round with fright and moist with pain, swept the operating room. Down the center stretched a row of porcelain basins surmounted by nickeled faucets of strange design. Facing the basins at either side was a long oaken bench divided into a dozen roomy seats by broad flat arms like those of the chairs in a dairy-lunch room. The seats were occupied by workers from many departments of the plant. But the men were not eating. Instead each rested upon the glass-covered arm at his right a bare hand or a bare foot and upon every exposed member there was some indication of what happens when human flesh impedes the movement of revolving or descending steel. The two or three men who made no such display held a piece of cotton to an eye. Both benches were silent. Some of the sitters regarded their injuries fearfully, some stoically and some with a broad grin. The grinning ones were not the freshly damaged, but knowing veterans who had come back for a redressing.

A middle-aged man, roundly plump in a white apron but quick in every action, moved along the rows with an air of simple but positive command. Two male and three female assistants, all similarly aproned, carried out his instructions with nimbleness. Sometimes he applied a salve or whipped a bandage into place himself. His light-blue eyes flitted constantly from the injury to the eyes of his patient.

"Doctor Ethridge," a nurse whispered, "look behind you."

The head of the dispensary turned and gazed at the Italian crouching against the outer door, the right arm still buried in his coat. The physician's smile was of a marvelously softening quality. It could not, however, melt an adamant of ignorance, apprehension and nameless distrust. The Italian responded neither to the smile nor to the gesture inviting him to an unoccupied seat. One of the male assistants took a step forward. He was halted by his chief.

"Don't rush him—it is very important," the chief admonished softly. "That crowd of Italians has been badly treated somewhere. They are so shy the office can't get a line on them. This case may be the open door to an understanding. Go on with your work."

From that moment the Italian, wrestling with things that racked his soul, appeared to have been forgotten.

"You dropped something—a steel wheel with a cogged edge, I should say."

Doctor Ethridge was bending over a lacerated great toe as he spoke.

"A foine guesser yez are—I work in the gear shop," moaned the injured one. "Shure now, Misther Doctor, how many pay days will I be afther missing?"

"You'll be at home only long enough to have the kids get used to you," the physician laughed. "A close shave, but you get off light. Don't worry. I'll phone your foreman to have a pile of gears waiting for you a week from to-day."

"Aw, doctor, bless yer eyes!"

A nurse was whipping a bandage round the toe. Ethridge patted the bare ankle as he glanced once more into the now luminous face. A moment later a Polack with a jagged cut from wrist to knuckles was wincing under the physician's pressure test for fractures.

"Nothing broken," was the cheerful announcement. "You snatched your hand away from that drill just in time to avoid something serious. We'll soon have you as good as new."

The Polack burst forth in his native tongue, causing the man bending over him to beckon one of the nurses.

"Get this for me, Miss Pribo," he begged.

"He wants you to know that he comes
family in Poland," presently the nurse tra
"His people know Paderewski."

"I know Paderewski too!" exclaimed th
cian. "Tell our friend he shall be fixed up
more quickly for that. I'll notify the mutual ben

"I'm So Glad to See You," She Murmured. "I Guess Providence Must Have Sent You"

MADE BY THE MAKERS OF CAMPBELL'S SOUPS

Buy two cans at a time!

Campbell's Beans are a staple article of diet. Most housewives buy two or more cans at a time and serve these delicious beans regularly. They are a meal in themselves! They are so richly flavored with tomato sauce and lean bacon pork, so thoroughly digestible (slow-cooked), so nourishing, so convenient, so economical. Fine for growing children.

Except west of Mississippi River and in Canada

Campbells' BEANS

LOOK FOR THE RED-AND-WHITE LABEL

(Continued from Page 34)

but he shifted from an asset to a liability like a thrown lever. It was neither just nor practicable to replace him while he was temporarily disqualified. Worker's compensation must be paid him. No one but Ethridge could help the situation. He was expected to get the lever ready for swinging back again in the shortest possible time.

There was one thing common to the injured men who flowed through his door that almost appalled the physician: It was the way they accepted their injuries as inevitable. The workers seemed forever to be getting just what they expected. They were satisfied if it befell at a time when they could bear it with only moderate strain.

"It just happened," was the usual explanation of the man supporting a bleeding hand or a bleeding toe on the arm of his chair. If he showed average intelligence he was in for an argument, no matter what language must be brought into play to correct his point of view.

"Things may seem just to happen," Ethridge would answer, "but you bet they really never do! 'Just happened' means ignorance, lack of attention or interference. Find out for yourself what it means, then this sort of trouble will not come to you again."

In establishing the theory for himself Ethridge followed trails that led immediately below the surface. He slashed and dug his way along and in time he was trembling with the thrill of original discovery. He was uncovering and relating the little known. He was clarifying the mainsprings of accidents.

"Miss Randaw," he shouted one day to the efficient lean linguist who served him as interpreter and office assistant, "call in the whole staff quick—I've got things to tell them!"

For days he had been poring over stacks of carefully filled-in cards—the records of thousands of dispensary cases. When the two doctor assistants and the nurses had surged in like a white wave he said:

"Folks, accidents spring from definite causes. They occur in certain ways and the tide of them actually rises and falls at certain hours. We have been slow to perceive this because the re-dressing cases claim our attention so fully between high tides, but I find I can classify accidents—and therefore predict them—according to the clock.

"Accidents begin when work starts in the morning and occur in steadily increasing numbers until ten, when the morning peak is reached. The early ones are likely to be of the more distressing kind. There is a steady descent from ten to twelve, when the noon whistle brings a halt. The first hour of the afternoon is our most peaceful period. Then mishaps take a fresh start and the cases multiply swiftly until the afternoon peak is reached at three. There is a gradual dropping off then until the whistle at five. I do not mean to say that serious accidents may not and do not occur at any hour, but I am giving you the regular movements of the tides. I want you to observe and talk to your patients. Learn all about these tides. Then we shall find whether it is humanly possible to sweep them back or to ease their flow."

The wherefore of ebb and flood was a mystery quickly cleared by Ethridge for himself. Startling as it seemed, accidents were nearly always traceable to a condition of the victim's thought. A different mental state would have spelled prevention. The more he could have to do in mending men's minds, the Trouble Doc concluded, the less he might have to do in mending their bodies. When matter was set in motion in the form of powerful machinery there could be no diverting or dulling of the intelligence without disastrous results. The heavy accidents of the early morning nearly always befell workers who had come with a load of trouble or care from home. They were under stress or excitement; they did not give their full thought to their machines. After a couple of hours procedure was no longer sufficiently automatic to be safe. The accident came.

About this time other men began to give less thought to what they were doing for quite another reason. They were the men who wanted to rush through the job they were on before they knocked off for dinner. Accidents befell them. The men with gnawing troubles and the men in a sudden rush combined to make that morning peak at ten o'clock. The peaceful period of the early afternoon was attributable to the fact that the workers were moving deliberately and carefully while enjoying their digestion. Then would go through the plant a little fever of hurry up. Mishaps would begin to occur in this corner and that. The climax that came at three reflected the haste that was to make up for too much dallying after a full meal and the human liking to skip along so as to wind up the thing in hand with the close of the day.

One thing puzzled the dispensary head for some time. A tabulation covering months showed a peak of accidents that recurred late every Friday. A good many men ate fish on that day, but Linden fish were fresh and easy of digestion. Finally Ethridge rang the accounting office.

"How do you make up the weekly pay roll for the men on piecework?" he inquired; and the answer came: "On the showing they make when the whistle blows Friday night. Lots of them try to double their week's output that very afternoon."

The puzzle was solved.

Ethridge saw that his first step must be to bridge every chasm to the men. He must win their confidence in a dozen languages. He had realized from the first that, while he was still a doctor with a doctor's right to be trusted, he was also a representative of the company. He was rated as on the employers' side, and suffering workers coming to him often held up an injured hand as though the white bandage of first aid was their flag of truce. He strove with all the resources of great-heartedness to get behind their shields. Some were exceedingly slow to drop their guard—there appeared to be a good deal to be done before the average employer would be on a basis of ready understanding with his men. But the Trouble Doc made progress. Again and again men weak in one way or another responded to tactful offers of assistance, and response, however faint, was all that he required. He did things for workers that no list of a plant physician's duties had ever been known to include. Sometimes he could get at groups of men, as when he helped Ferrani Luigi and as many of his brethren as would follow to take the first awkward steps in things American.

He followed the injured home. It was his duty to do this when necessary, but he went to many a patient physically able to come down in the van. He was about his healing business with little medicine in his methods. He looked into the eyes of wives and children—mute and reserved in the presence of a representative of the employer—and before he left them he had established a smiling basis of coöperation. He had made them unafraid. He pried the shutters off darkened windows. He revolutionized kitchens. He spread the foreign born out into more rooms and more air. Light came into the dull faces of swarthy mothers when they were made to feel that a genial prince of this new overwhelming America recognized their existence—and cared. At his direction they lifted the hand of misgiving from their offspring and let them scamper off to the public school.

Men Ethridge had mended continued to drop into the dispensary. They just looked in to say hello. While saying it they talked in low tones of many things they would have sworn had no relation to the plant. The Trouble Doc was laying a corrective hand upon affairs in homes he had never even seen.

Such activities on the part of the plant physician could not fail to attract attention. Tongues wagged busily. Assuming perhaps that the executive offices were blind, two petty officials waited on Ames and presented an unsolicited account of the strange things that were going on. He thanked them without comment or reply. When they had gone he called for the dispensary reports for many weeks past and studied them with an analytical eye. His conclusions were expressed in a laugh of unmixed satisfaction. The petty officials had missed the great fact that was written across the face of these reports:

Ethridge was taking care of accidents and losses before they occurred.

The Trouble Doc looked out from the dispensary upon what to him was an unending tragedy. He watched two of the best-known lame ducks of the plant get together as regularly as noon came round. Peg Higgins kept the side gate. He sat on a cushioned bench with his primitive wooden leg resting across a soap box and motioned to the visitor to come inside if he had a pass or to visit the office and equip himself if he had none. Three minutes after the midday whistle Peg would be joined by Stub Knowles, who had been Superintendent Conway's messenger ever since the four fingers of his right hand were snipped off at the palm. Both men were under thirty-five. Each was rated as a crackajack when his accident came. Sitting on the ground with their backs against the fence, they loved to companion in misery while they fished their dinner out of pails.

To Ethridge they were a constant reminder of the sprinkling of cripples that extended through the works. The cases of serious maiming were not numerous as matters go in plants where all day long men are using tools of monstrous strength to twist and shape stubborn metals, but they were far too numerous in the eyes of Ethridge, who was working toward a day when maimed men might not be regarded as a natural by-product of operation.

There was never any mistaking the lame ducks of industry, for they made no effort to camouflage a loss with an artificial limb as men so often did in the outside world. The Trouble Doc could understand the difference. Pride moved men in the outer world. In the plant world men judged everything from the standpoint of utility and had not learned the utilitarian value of pride. The plant cripples hung shattered and dragging at the point where the accident mill let them drop. The Trouble Doc was in the business of snatching present and future victims away from that mill. As he sat one day watching the doleful dining of Peg and Stub he was electrified by a thought:

Why not reach into the past and try to commute some of the mill's hideous decrees?

While Higgins and Knowles were sprawled on the ground with their food the next day the Trouble Doc sauntered out of the dispensary and tactfully worked himself into the conversation.

"Say, why don't you boys let me get you some class artificial limbs?" presently he exclaimed as sudden inspiration. "You would look like the fellows then."

"Tin hands and tin legs don't fool anybody bu chopped-up guy who wears them," observed Stub Kn dejectedly.

"You would feel more like the other fellows too Trouble Doc persisted.

Stub held a cup under a faucet, which he worked fully with his right elbow, and brought the one-l man a drink. In exchange Peg handed up a cigare had rolled.

"You mean all right, doctor," Higgins declared be swallows, "but lame ducks are like a lodge. Peopl don't belong just can't understand—that's all."

The Trouble Doc went back to the dispensary pu That afternoon he asked questions of a seasoned fo while extracting a brass splinter from the man's thu

"Yes, a good machinist can lose a finger or a toe an maintain his cutting edge," declared the old boss language of his trade. "But when you take off a han foot you most likely draw the temper of the tool. U you might just as well have scrapped the entire mar

Ethridge made a study of the lame ducks roun plant and came to the conclusion that amputatio deeper into the spirit than it did into the flesh. A ma had paid heavy physical toll to his machine found waiting when he was ready to return to work. He accept a half task and go hobbling about it with the tainty of a backward child. His body had suffered, b thought had suffered more. He was worthless weighed in the hard balances of his own mind.

The Trouble Doc confided to Honey that he was to use every energy and every resource to rejuvenate two broken ones sprawling at the side gate, because succeeded the example would send a current throug spines of all the rest.

Ethridge had to devise a way to get at Stub Kn The maimed messenger served Conway, a grizzled su tendent of one of the shops, a boss of the old school openly condemned the dispensary's methods. Kn Ethridge learned, had been trained as a watchmaker in England, but in his adopted country he had ans the lure of heavier tools and heavier pay and had be one of the cleverest die makers in the plant. A clock dispensary went wrong and Stub consented to look it It stayed wrong with a persistency that kept the chag clock fixer coming back day after day.

Stub was led to reveal the secret of his aversion artificial hand. It would not be his hand. When he in again with a new weight for the clock he foun Trouble Doc messed up with plaster of Paris. H making casts of the hands of workers of various nati ties, he said. Stub was persuaded to permit a cast own good hand to be made to represent the English brightened like a new moon at the thought of a c getting away with a thing like that. That afternoo Trouble Doc and an ingenious worker in the tool who was designer and artisan too, were in absorbed sultation over the cast of Stub's capable but sing shaped paw. You couldn't reverse a cast of a left ha get a cast for a right, the artisan explained, but by cal tion you could work out a right hand that would hav exact shape and characteristics of the other.

A week later Knowles came into the dispensar receive a nickel wrist watch as a reward for fixin clock. He agreed that the watch would be safest o right wrist and held out his stump to have the gift la on. In a twinkling the Trouble Doc had slipped some over the stump itself, had shot the thumb through a and was buckling the strap of the wrist watch to hol contrivance firmly in place.

"Put your left hand on the desk, half closed—ju you held it the day we made the cast," ordered the do

The messenger, not comprehending, obeyed. He fe right arm pushed down—and lo, he was gazing at two h on the desk as alike as a pair of peas! Artifice had s even the color of Nature. There were warts on the hand and there were warts on its mate.

"Wiggle your thumbs!" shouted Ethridge.

A pudgy digit rotated above the curved fingers of hand, giving the astonishing illusion that artifice vanished and that Nature alone remained.

Stub Knowles went all atremble. The doctor eased down into the swivel chair and a voice as of hope i spoke softly into his ear: "Of course there was a way and we have found it. For the present it's our deep se Don't let anything in the world make you tell Peg. are to wear this hand at night in your room until you l to use it well. Train your thumb and you can do anyth By the first of July we'll be ready for everybody to k about the new Robert Knowles."

Then Ethridge went after Higgins. The gatekeeper once been a well-paid man in the scrap house because o ability to appraise and salvage metals. The accident took off half of his leg and three-quarters of his s

STYLEPLUS CLOTHES

Moderate Prices

Yes, very moderate
in view of conditions

Styleplus Clothes are always good quality, but are never found in the top range of prices. Comparison any time will show you that.

At the "happy medium" cost, Styleplus Clothes give you real style, splendid tailoring, all-wool fabrics, guaranteed satisfaction.

Styleplus appeal to one's pride and unusually at this time to one's sense of values, because H. C. L. is making everybody, in all walks of life, sit up and take notice.

You know the quality and style. The sleeve ticket tells the price. Your judgment will make you a Styleplus wearer once you see the clothes—suit or overcoat.

Conditions will force prices higher next season.

Sold by one leading clothing-merchant in most cities and towns. Write for name of local dealer.

appeared to have left his obstinacy unimpaired. The Trouble Doc tried to joke his man into line and failed. He angered him to white heat and got nowhere. He tried the spur of ridicule and got only a pitiful outcry. Then he played a chance card and went to see Peg's wife.

Mrs. Higgins was a big-eyed little creature—hardly more than a girl. She had been a bride when the accident came. She left a pile of sewing that did not look like her own to let him in. He told her he was the plant doctor and her friend.

"I'm so glad to see you," she murmured. "I guess Providence must have sent you, because I've got something to tell."

She made several unsuccessful attempts to go on. Then she took hold of his arm and clung to it until she had flooded his sleeve with tears. He withdrew the arm and put it round her trembling form.

The next morning Ethridge went over to Higgins' gate.

"I called on your wife yesterday," he said.

The gatekeeper looked at him in surprise and began to blink hard.

"I hope, doctor, you haven't been rubbing it into that poor little woman that she's married to a mere piece of a man."

"Oh, we had enough to talk about besides you. Do you know what you're going to be before the year is out?"

"Fired?"

"No, a father!"

Peg Higgins, when he could grasp the meaning of the announcement, laid hold of Ethridge's arm—just as his wife had done the afternoon before—with an emotion that was half sheer terror and half a groping desire to find the right way. There was no obstinacy left in him. As his mind cleared he begged to be guided.

The Trouble Doc laid his foundations on cleared ground.

"Yes, I'll tackle an artificial leg," Higgins consented. "I'll do anything to keep that little child from feeling it has a lump on a broomstick for a father."

The two lame ducks continued to meet daily over their dinner pails, each throbbing with his momentous secret and never suspecting that the other might have a secret too. Ethridge let them alone by day, but night after night he labored mightily in teaching first one and then the other to wear and use artificial limbs correctly. They thought he was training their bodies, but he knew that their sweat of agony was restoring their souls.

The morning of July first brought long-to-be-remembered surprises. Pet and Stub were ready to face the world in their new form, and the Trouble Doc arranged matters so that first of all they faced each other. Their glad surprise clinched all that each had done. Then the stream of workers pouring in through the big front gate of the plant found mingling in its midst two men who were strange and yet shockingly familiar. Yesterday they were recognizable as cripples across the yard; to-day it took more than a casual eye to note that the leg of the one and the hand of the other were not the wearers' own. Hundreds called to them and scores slapped them on the back and shook hands. The exclamations of pleasure and incredulity ran up and down the line.

"What's so different about Peg Higgins and Stub Knowles?" one man inquired.

"Why, they've got artificial stuff on, you idiot!" came the answer.

"Of course," said the first man, "but I'm darned if that seems to explain it! Nobody would think of calling 'em lame ducks now!"

The transformation of the gatekeeper and the messenger was a nine days' wonder. There was no doubting its completeness in the eyes of the workers, for the familiar nicknames of the men were dropped. Many persons spoke to the Trouble Doc of what had occurred, and finally he began to hear from those he most hoped would speak. He heard halting words of inquiry from others of the maimed.

After a fortnight in which Knowles did not cease to tread on air he entered Conway's office one morning and picked up the batch of messages waiting in the basket.

"Let 'em lay!" growled the old superintendent. "This order says you are transferred to the meter shop. I'll bless that super over there for stealing my messenger! I s'pose everybody'll be after you, now that you're a two-handed man."

When Knowles reached the office of the meter shop its head greeted him pleasantly, but it was the Trouble Doc who hustled him out into the huge assembly room, stopped at a table between two nimble-fingered journeymen and pushed him into the operator's chair.

"Here's where you work now," said Ethridge briskly. "These fellows on each side will have to dig if they want to keep up."

It was all confusing to the man sitting awkwardly at the table. He reached out and took up a little cogged wheel from a brassy pile. Wheels and light frames made up the other piles. Automatically he brought a couple of the wheels into a frame and the cogs of one engaged the cogs of the other. A light came suddenly into the man's face. He looked up at Ethridge, who waited with the superintendent beside him.

"Yes, you get it," said the Trouble Doc softly. "Meters are just clocks. By noon you'll know all about them."

Knowles said no word, but the sudden illumination of his being shone out through his eyes.

"Sign your slip," said the superintendent. "You are on the pay roll from now."

He laid a card on the table and thrust a fountain pen between the new operator's left forefinger and thumb. Knowles touched the card with the pen, halted, shifted the pen over and with the veins standing out on his forehead wrote his name in rolling but legible letters with his new right hand.

In the meantime Higgins, detained in the office for half an hour by a trivial matter, arrived at the side entrance and found his gate already open. A new keeper sat on the cushioned bench. Higgins stepped round to ask him an indignant question face to face and discovered that the poor usurper was using the old soap box to support a primitive wooden leg exactly like the one he had rested on it two weeks before!

"Hey there! Leave a peg-leg job to a peg-leg man, can't you?"

The shout came from Ethridge, who rolled out of his auto and shut off Higgins' bluster and sputter by rolling him into the car. They whirled off among the broad buildings, stopping at the scrap house, and Ethridge hustled Higgins into the cavernous room where scores of men were using trucks and cranes to pile scrap metal pieces of every shape and size. Higgins noticed presently that Ethridge seemed to be waiting on him.

"Excuse me, doctor," he said with embarrassment, "but if you were just meaning to show me the scrap house I'll say I know it mighty well already. I was working here when my accident came."

"Do I look like a man who had time to carry rubber-neck tourists through the scrap house?" asked the Trouble Doc. "I ran you over here to your new job."

Higgins looked at him dazedly.

"My new job? Why, surely—surely the company doesn't expect me to work in scrap again!"

"It couldn't be any worse than being parked at the side gate telling a lot of idiots to go get a pass, could it?"

Higgins could not hide his panic.

"I know you have made a new man of me, doctor, but how can I handle a truck or a crane?"

"You are a new man all right and each day you'll get to be a better man from now until the big event comes off at your home. I wouldn't be surprised if some day your son stands here looking in this very door and watching his daddy with pride."

"Please, doctor"—Higgins was swallowing hard—"just tell me what it is I'm expected to do!"

"We'll have to leave that to the foreman."

"I wish Jennings was boss here now. I could make him understand."

"Why, isn't Jennings foreman now?"

"He got his leg hurt too, as you ought to remember. So did the boss before him. In the old days I heard many a man say he'd like to be foreman because the work is light, but didn't want the job because the foreman has to stand so close to direct the piling that things are always rolling down on his leg."

"Which leg?"

"Why, whichever leg he keeps next to the pile."

The Trouble Doc rested his hands on the rejuvenated gatekeeper's shoulders.

"Higgins, old boy," he said with that ring of true friendliness in his voice that made men who had suffered want to die for him, "the management knows all this better than you do. They want to reduce the risk of injury. They have appointed you foreman because you know the business and can keep an artificial leg against the slippery old pile."

They stood there among the masses of iron, heedless of the movement and clang, while the Trouble Doc helped his patient, sometimes with silence and sometimes with speech, to make the last fierce grade. Higgins, mounting and struggling to accommodate himself to his changing universe, perceived the opening of great doors where he had glimpsed only a dark and loathsome wall. He knew his exile was ended and that he was sweeping through those doors. He was being born, as it were, a second time. It was being vouchsafed him once more to have part in the world—to be, among men, a man.

"I believe," the Trouble Doc said one day to a small party of plant physicians who had heard of his success and had come to inquire into his methods, "that what we generally mean by human nature is just the raw surface of a fellow. My theory is that if I dig hard enough into any individual sooner or later I'll bump something I can bank on."

What the Trouble Doc stated as his theory was something more—it was his working plan. This explained his almost Joblike patience. He could go on smoothly with a worker who, he knew, was exaggerating an injury or falsifying the manner in which he received it in the hope of a better settlement. He even saw false claims go in without making a move—and then saw them yanked out by the workers themselves. Tunneling hopefully, the Trouble Doc had broken through at last into the claimants' sense of fair play.

He discovered that this sense of fair play was neither national nor racial. In some races it was more deeply covered than in others, but just the same it was universal. He bored with an interpreter into foreigners who were as crooked as their foremen expected them to be, and saw them reverse themselves in the presence of an awakened conscience. In trying to start the mainspring of right action he sometimes needed sledge hammer and machine drill, but often a word or a look or a sick-room visit was the magic drop of oil. Cynical observers wondered how he got away with it.

One night an Italian almost burst his stitches when he shot up in bed, clutched the consoler of his agonies and shouted: "You a-sticka to me, doc! And I a-sticka to you!"

That was how the Trouble Doc got them—he stuck.

Ames stuck too. Back of all the Trouble Doc's undertakings, giving him strength to go on, was the staunch support of the official who had hired him. Alexander Ames was an industrial captain with a vision. He was not talkative, but he was known to have said that the heyday of American industry would come when there was actual understanding and coöperation between the top and the bottom and every middle stratum in plants. He was too wise to direct Ethridge. Having accepted him as the right man, he stood behind him like a brick wall. Ames loved to slip into Ethridge's operating room and watch the absorbing routine, but he never stayed long. He wished to avoid the appearance that the office interfered.

Ames had just left the dispensary one particularly busy morning when the Trouble Doc, bending over a split toe, was aware of the entrance of a bulky man who dropped into a vacant space near the end of the row. The impression gained in a fleeting glance was that the newcomer carried his left hand stiffly in a bandage and that he had a heavy jaw. Ethridge—giving first attention and turning over the patients to his assistants for the finishing touches—reached the end of the row and realized that he had not encountered that jaw. He moved across to the opposite row of injured ones and was conscious that the shifting stranger occupied a place near its middle. He lost run of the coming and going in giving help to a crushed finger and when he swept the row again Heavy Jaw was missing. Presently he knew that the man had gone back to his original seat. Covertly he studied him, noting the large frame, the straight mouth above the jaw, the full mustache that spread across ruddy cheeks, the small deep-set eyes that traveled constantly in search of something or other, and the ears outstanding like a couple of question marks printed in red. He might be of Scotch descent, a dogged fighter and forty-five.

The Trouble Doc kept his back to the mysterious one for half an hour, though aware that nothing whatever was escaping the busy eyes and ears, then turned to him and made several passes above the bar aged hand.

"Hocus-pocus, doodle docus! Now i busted, now it's well!"

He snatched off the wrapping deftly, e posing horny knuckles and horny fingers which there was not a sign of cut or bruis

"A good detective," he remarked with chuckle, "wouldn't have got his banda on backward. Why are you gumshoei the dispensary?"

The exposed one blinked a time or tw but his solemn countenance showed no oth sign of discomfiture.

"To get the straight of something," answered in deep and even tones.

"Weren't you ashamed to mimic t injured?"

"When it's for the cause there's nothi I'm ashamed of."

"I congratulate the cause. Who are you

"Matt McDonald."

"I've heard of you—crackajack in t turbine shop, a leader among the workers

"I'm honored to be president of M chinists' Local 32."

"Gumshoeing the dispensary for t union! I don't suppose we are charged wi anything serious?"

"Running under false pretenses."

"Surely the president of the uni wouldn't listen to such a lie?"

"It didn't sound like a lie."

The Trouble Doc looked hard at h frankly answering accuser. He was nettle but he liked the man.

"My pretenses are to patch up the i jured."

"That's the stall part. Keep a-coming

"Maybe sometimes I patch up the spirits."

"But what does all your patching le to?"

"You mean—increased good feeling?"

"Hell's bells! I mean increased produ tion!"

Ethridge expressed himself in a low lo whistle.

"Are you suspicious," he asked presentl "of anything that can increase production?

"Suspicious of anything that can get su a body hold on the men!"

The Trouble Doc dropped into the se beside his visitor. He was feeling the ting of discovery.

"Every man to his business, Mr. McDo ald. But why should anybody suspect t dispensary's motives?"

The small piercing eyes bored Ethrid steadily.

"It's a fine old game of the employers at last McDonald responded, "setting be traps with some kind of help-the-poo worker stuff for bait, and when they cat a bunch of their employees to use them in counter organization to try to bust t union."

The Trouble Doc came to his feet e citedly. With difficulty he controlled h speech.

"The dispensary a bear trap? I g you!" Then he added: "Can I help yo get more information?"

"I reckon"—McDonald rose also—"I' got more real dope now than is neede To-night I'll pour it into the union."

The big man took a step toward the e trance.

"You mean"—Ethridge was fairl aquiver—"you mean you are going t boycott the dispensary?"

For the first time during the conversa tion a change came into the face of th union official.

"My God, man!" he ejaculated. "I' giving it a straight O. K!"

An hour after the incident the Troubl Doc was scheming to follow up Mat McDonald. Here was a king-pin of a worke who carried the answer to many a questio that was in the doctor's breast. The ma would be invaluable to him in his work once he could get up inside his guard. Ho was he to go after McDonald without rais ing a suspicion that would defeat his end He wrestled with the ticklish problem Coincidence stepped in and solved it.

Ethridge looked up from a patient tw days later to discover that McDonald wa waiting, his left paw in a bandage. Eth ridge burst out laughing and the presiden of the union joined in. Yet this was n laughing matter. The turbine crackajac had suffered an injury which while neithe very serious nor painful meant resting th hand for days.

"It serves me right," said McDonald.

What Ethridge thought was that it bes served him.

A D I L L A C

CADILLAC
STANDARD OF THE WORLD

The social prestige which attaches to the ownership of a Cadillac naturally appeals to ambitious women.

It is only human to prefer a product whose leadership in excellence is universally granted.

But the Cadillac has a much deeper, stronger hold, than that, on the women of America—on those who own a Cadillac, and those who have not yet attained their ambition, but realize how much that ownership means.

In every woman there is an appreciation of physical and mental comfort and a demand for dependability.

Naturally, therefore, they revel in the restfulness of the Cadillac, and in that splendid evenness of performance which goes on and on, without change, the year around.

It is a wonderful thing for those who own Cadillacs to know that they are motoring in a car which has attained the very climax of physical and mental ease.

It is a pleasant thing, too, to know that these Cadillac qualities are recognized by others—that everywhere you go, you are accompanied by the approval and admiration, of those who recognize the true greatness of the car.

These are some of the reasons why the Cadillac has so firm a hold on the affections of the women of America everywhere.

CADILLAC MOTOR CAR COMPANY // DETROIT, MICH.

"YOU NEVER CAN TELL —"

By Grace Lovell Bryan

PHOTO. BY ABBE, NEW YORK CITY

A LAZY afternoon sun beat languidly against the many-glassed windows of New York's most popular restaurant. Shopgirls, office boys, those whose lunch hour began at one, clattered noisily in. At a table a little apart from the hurrying throng two girls, smartly gowned, leaned chummily over the clothless table.

"Was it Shakspere," queried Pansy Imogene, small and dark, as she gave her order to the attendant waitress for one chocolate éclair and a dill pickle, "that said 'You never can tell from where you sit what your photograph will resemble'?"

"Search me. I never worked in none of his shows," replied her friend, infinitely blond, also a member of the striking chorus girls; "but ain't it the truth?" She sighed responsively.

Pansy Imogene patted the fetching spirals over her tiny ears.

"That's what Rowena Jones said when they broke the news to her after the wedding," she chuckled.

"What company's she with?" inquired her friend.

"She ain't in the business," returned Pansy Imogene. "She used to work at the Giltmore cigar counter. No, not now. It was her wedding I spoke of."

"Well," exclaimed her friend with some irritation as Pansy Imogene stared past her with a far-away look, "don't start anything you can't finish."

"I won't," said Pansy Imogene; "so listen. Rowena was as cute a kid as you'd see in a Broadway front row—auburn hair, big blue eyes, and one of those re-trousseau noses that always looks appealingly ingénuey. Her mother got her name out of Ivanhoe, a book by General Winfield Scott.

"Her pa kept a drug store independent of the trust, which was some undertaking, so that and the fact that they was six kids in the family didn't enable Rowena to squander any money on twelve-dollar shoes. There wasn't any mortgage on the old homestead to be foreclosed at any minute, because they didn't have any homestead, but where there's a flat there's rent, and what with the H. C. of L. barking continually at the door both ends just about met with no room to lap over. Rowena worked from eight to six at the hotel, and in the summertime when she had a Saturday off she'd retire to the bosom of the notions in some department store for the day in order to grab off the extra cash; and life wasn't one grand sweet song.

"The Giltmore, the place where the idle rich hived, didn't help matters any. Lamping the wealthy go floating past you ordering their maids, driving up in imported cars, and tipping five-dollar bills to a rich waiter, that would 'a' kept the Jones family in butter and eggs for almost a week, dining on lark's tongue and pâté de foie gras while you had prunes and your ma did the family washing, ain't my idea of unadulterated bliss. It would kinda get your nanny to witness a bunch of peacocks—simpering dolls with nobody-home expressions and dames with maps that'd stop a clock—trailing by your humble counter in airy draperies that cost not a cent less than three or four hundred bucks; and you with a gorgeous eleven-fifty dress on marked down from thirteen-seventy-five. Rowena had a pearl ring once that would 'a' been great if the pearl had only been real, but it sure was a pleasure to view 'em as big as peas wound round some fat old dowager's neck that should 'a' been thinking of lilies and requissey in pakay, which thrilling words I copped from a book of poems.

"Rowena would lean over the counter and dream of what she'd do if she had their money; and after she'd installed her parents on the entire top floor of her Fifth Avenue mansion, with chaise longues like she'd read about in magazines, and a butler and their own car to take 'em round in and show 'em the Statue of Liberty and other sights—they having lived in the Bronx all their lives—she'd see herself all dolled up in a gold evening wrap and a tiara, sitting in their box at the opera gazing at the singers through a pearl opera glass, and after it was over turning to her husband, who said 'Home, James,' and was used to it. Then off they'd trot to be taken in hand by her French maid, who wore a classy violet uniform copied from the Vanderbilts, and she'd retire alone—being as that seemed to be a custom with the rich—under a real lace coverlet in a gorgeous ivory bed!

"After which she'd put on her three-ninety-eight-cent hat and trot home to help her mother finish the ironing and put the clothes to soak, her not having been able to do it during the day, being occupied with darning the family socks and making shirts for Tom and Johnny and Willy besides canning a trifle of fifty quarts of fruit to last them over the winter and running down the noon hour to tend store while her husband come back to eat the lunch she'd cooked for him before she went.

"I guess it was about that time that Rowena would 'a' turned Bolsheviki if there had been any money in it. And when her father took to working nights trying to figure out a way to keep from losing his store entirely, since his customers was gradually leaving him for the benefit of cut rates, and the collection of bills grew on the family table—Rowena conceived the idea that there was only one thing for it; she'd have to sacrifice herself on the altar of her parents by marrying one of them billionaires.

"Haven't you seen countless times in the movies where the rich man invariably passed over the girls of fortune who had nothing but looks and class and money and position to their name—in favor of the poor girl with nothing but looks and luck, the P. G. merely happening to come along in time to get run over by the R. M.'s automobile or something like that, making everything beautiful? Well, being as that was the case and Rowena had seen those same pictures her chances looked easy, for here she was in the lap of luxury, so to speak, mingling every day with owners of every kind of fortune from soap to soup. So the next thing to do was to pick one out.

"Being that nobody had ever proposed to her but George Jennings, a poor but honest shipping clerk who called regular twice a week with a ready-made suit on that hung terrible in the back and looked at her with earnest but near-sighted eyes and begged her to be Mrs. Jennings, said business of marriage was what you might call new stuff.

"You know grooming and clothes do make an awful lot of difference in a man; also grammar. Rowena liked George well enough, but when she would contrast him with the men she saw in the daytime he just naturally had to suffer. Besides, the last time George proposed he said: 'Ain't you going to have me nohow?' and the double negative finished him
months to come. Row
was kinda fastidious ab
such things. You know
can't rub against class
polish without getting
tached to some of it;
well, even a mahogany gr
wouldn't look good with
polish.

"Who was she going
take? That was the q
tion, as Hamlet's ghost f
ingly remarked—or ma
it was Ham himself. I
Rowena was pretty, also
fined and good enough
anybody, but so far
hadn't had any attent
from the multis that
could pin down except fr
a few men whose wi
weren't with them; mos
the gilded youth w
brought her stuff treated
as nothing but good-look
machinery of a well-o
hotel run for their bene
Of course there were th
who asked her out i
smirky kind of way t
might have opened the f
chapter to Pitfalls of a
City if she hadn't been w
enough to pass them up.
rest didn't know she was
earth. An English duke v
happened to be favoring
hotel with his presence ev
called her 'my girl,' and
lieve me she give him a l
that oughta blown the gl
right out of his monocle! But outside of such sundry
debasing endearments 'twas all she'd had. In other wor
it looked like a bad location, as they say in the films.

"Her ma says, when she had a chance to sit down, t
the reason she wasn't snapped up by any of the plutocr
was class; that in this country as well as in England,
whom she had read voluminously in the newspapers, cl
was predominant. To them in the upper strata she v
only a servant or—what was far worse—a toy. So, s
she, beware of any man you don't meet in your own hor
says she, for woe is sure to follow. For when a rich m
takes a poor girl out to dinner he means business in
movies, but ruin off stage—and there you are!

"It looked like Opportunity was knocking and all
poor girl could do was let him knock!

"And then one day, attended by a couple of vale
footmen, fourteen trunks and everything but a crov
Charles Vaughn Allenton appeared upon the scene, a
the first afternoon noticed Rowena as a human being. T
long lane had turned.

"Talk about polish—Charles Vaughn fairly glisten
He had interesting gray hair, the skin of a boy of ten, a
clothes—the kind that at first you don't notice. Rowe
always noticed George Jennings' clothes; you could
help it. And if it hadn't been for a bulge under his ey
that wasn't apparent from a distance he'd 'a' been han
some. Right off he bought enough cigarettes to stock
the Army of Occupation. The second day he hung rou
so persistent and respectful and earnest that it was easy
be seen he meant business, and Rowena's heart shou
have given a leap of joy, for here was a rich man su
enough in love, as far as she could diagnose the sympton
ready at any moment to ask her to be his! Well, the ve
next afternoon he asked her out to dinner, gazing at h
with such tender regard and pure emotion that she te
him yes, and beats it with a heavy heart to one of the d
clerks to ask him who the guy is and how much dough
going to buy her. She don't feel the pangs of delight th
she had calculated on when she first thought of giving h
fresh young life for the welfare of her parents. But sh
had made up her mind; besides, it sure looked as if h
father was going to lose his store.

"The clerk when she mentions her intended husban
though not under that title yet, looks at her with infini
pity beneath his wavy and detected-by-everybody-bu
himself toupee.

"'You don't know who he is?'" he asks, almost betra
ing the emotion of surprise.

"'No,' answers Rowena apologetically.

(Continued on Page 43)

(Continued from Page 40)

"He is the uncle of Vincent Armour!' he announced grandiously.

"Vincent Armour! Rowena put her hand to her head th stagger that nearly keeled her fair form to the floor. e been reading about the Armour family and especially nt, the heir to the family fortune, since she was knee everybody had who could read.

"Vincent Armour's uncle?' she gasps.

"Yes,' replies the clerk haughtily, having waited on the families in the country. 'He is Charles Vaughn Allen-. The Allentons are almost equally prominent, on the ther's side. Mr. Allenton is a well-known sportsman, mber of the most exclusive clubs, the Met——'

"My Gawd!' interrupts Rowena, kinda delirious. And couldn't be with the chance to marry into the Armour ily? It near knocked her off her pins. 'Vincent Ar-t!' she repeats woozily.

"Young Mr. Armour is now at Hot Sulphur Springs, taining the Gotroxes and the Stuyvesant Finches,' nues the human newspaper, and back she goes to her ner to lean against it for assistance."

Pansy Imogene took a bite of the chocolate éclair and ck dreamily.

"Vincent Armour's married," interposed her friend as waitress poured her tomato soup into a large cup. id all about his wedding. It was a quiet one at the of the bride, then they went to Palm Beach for their moon. Ain't it great to be rich?" she sighed.

"Isn't it?" agreed Pansy Imogene. "Well, Rowena ler wares all afternoon in a kind of daze. Of course hadn't been properly introduced, according to her ideas, which seeing she knew nobody who knew es except to say 'Yes, sir,' and 'It will be right up, ould have been rather difficult. However, reading where that everybody is the master of his ship or hing like that, besides having an ancestor that fought ough the Revolution for representation Rowena de-le that by being very distant and ladylike Charles of couldn't get any wrong ideas. Anyway, he knew ation, which hadn't seemed to make any difference, ng that he loved her for herself alone and was one of Nature's noblemen exactly as she'd seen portrayed films.

"So putting on her best taffeta that she got at a sale on ft Avenue and would have looked ultra if it had only e this year's model, and her last summer's hat—an copy of the one Mrs. Vanastor had worn through the t the week before—Rowena meets him down the e ways, as he had requested in a low and tender all prepared to vamp him in strictly respectable style thonorable intentions; remembering how the duke osed to the poor but beautiful secretary, attracted by the sweet simplicity of her smile, in The Career of terine Bush. Also she was figuring how her name ul look on visiting cards, and wondering if she couldn't e the Armour name somewhere in the middle.

"Charles hands her into his machine, which was lined th glorious blue tapestry and fitted with vanity cases everything but a room and bath, and Rowena sits breathless against the cushions with her red head r a perfect Ferris wheel. Charles looks too classy for r in a brown suit cut beautiful, and a funny kind of pearl in his rich tie, his polish extending even to his linger nails. The car runs along so smooth you can't a sound and Allenton explains that they're driving t Long Island because he knew she'd like being away the noise and crowds of New York restaurants, which s darned-fool thing to tell a girl who'd never seen the of any of them except help-your-selfs.

"Well, they got out at one of those summer hotels with ite porch and little tables with pink shades, and it sure s ovely. The waiters hung round Charles kind of vent, which showed that even there they knew who he s in fact they seemed quite well acquainted. And he de the dinner, and then talks so sweet and loving about r es and the usual stuff she'd heard from George Jen-ng, but told in a different kind of caressing way instead bng blurted out like a witness at a murder trial telling mthing against the defense, which was the way George ecto pull it, being embarrassed.

"After the waiter had eased away their first course nes reaches over and took her hand, and Rowena half u her eyes and waited for him to begin: 'Darling, I v only known you for a short time but do not let the ffence in our stations keep you from bestowing on me u heart and hand.'

"What he said was: 'You're a girl who would appreciate only home, aren't you?'

"Rowena gazes at him modestly and says yes, wishing e ould like his eyes better than she did. But it was ai he was coming to it.

"Have a cocktail?' he says, changing the subject some-ha 'They mix them quite well here, and ——'

"Rowena replies she don't care for any, being taught ffent, and says she thought it was against the law any-ay but Charles only smiles kinda lordly.

"'Not with me,' he returns with aristocratic nonchalance; 'laws are made to be broken. I am the arbiter of my own destiny,' he goes on stiffly.

"Rowena says, 'Oh,' thinking it was easier to arbiter if you had the cash to do it.

"He dallies with some clams and even with the messy way you have to eat 'em he never lost his equilibrium. He sticks his fingers in the finger bowl and wipes them elegantly on the napkin, then leans tenderly toward her.

"'Miss Jones, I want to ask you ——' Rowena drops her eyes soulfully. There was some music playing somewhere and no one on their side of the hotel, which was under a bunch of trees and real secluded, fashionable of course on that account. He seems to be finding it rather difficult, and Rowena thinks that asking a girl to marry you is just as embarrassing whether you're making eighteen per or a million. Mrs. Charles Vaughn Allenton, aunt to Vincent Armour. Gee!

"'Will you, sweetheart,' he begins again, 'will you accept a home from me, and all that goes with it?' And he leans over with kind of a queer look in his eyes.

"A home! Rowena looks away, flustered. He meant one of the many mansions he owned. 'All that goes with it' was the ring and the license and a yacht and a dozen automobiles—one for her mother and another for her dad so they could each ride round alone in case they ever had a fight, which they never had! Then she sighs. Of course, she'll accept; she'll have to. But she has an awful feeling over it, like when you're going into the dentist's chair for a nice extraction.

"But there was the family, and the six kids; so with a kind of lump in her stomach that was foreign to all the charts of anatomy she puts on a faint smile and steels herself to say: 'Yes, Charles, I am yours'; which was the correct way by all the novels to accept a proposal of marriage—when she sees Charles' mouth suddenly open wider than was necessary and his bulging eyes is staring wildly over her head.

"Rowena turns round to where he's looking, and sees a automobile driving up the roadway to the hotel. There's three or four women in the car, all talking elegantly and not looking their way at all, but Charles' nice complexion goes a kind of a pea green and he says under his breath, 'Good God!'—which was anything but refined—and turns his back completely to them and Rowena, and shoves his head 'way down into his collar as far as he can get it until she herself wouldn't recognize him, and stays that way till the party who'd stopped in front of the entrance piled out of the car and flocked into the hotel.

"Rowena surveys him with amazement. Of course it couldn't be his landlady after his board bill, as she had seen happen among the best people in her own set—but maybe one of the women was his cast-off child by a former unfortunate error whom he had refused to acknowledge? But no, they was all too old for that. Charles doesn't speak except to call hurriedly for his check when they hadn't even had the ice cream, and pulls Rowena out to the car, looking backward all the time; and only after they've started on their way back to New York does he resume his social color.

"Then Rowena asks him what the matter was. He turns to her with a gay laugh in which all his assurance and nom de plume had returned and says, 'Why, sweetheart, didn't you understand? I was afraid she'd see me. The tall one is my wife!'

"Can you beat it! Well, believe me, after she could get her breath Rowena tells him what she thinks of him in everything but Chinese—and he asks in a chilly way, like I expect Nero surveyed the early Christian martyrs when they asks him why he was going to throw 'em to the circus lions, what object did she think any man in his position would have entertaining a girl in her position, and says he thought she understood what he was driving at all along. Then he politely takes her home, mad as a hatter.

"Her ma was right! A sadder and a wiser girl, Rowena returns to work the following morning with all her dreams of being related to the Armours in any capacity except as a member of the human family shrunk to the size of a mustard seed. I don't know if you'd call it bitter, 'cause she was too good a kid to get that way, but she felt kinda cheap like you will if you'd been handed a raw deal and gone into it with your eyes apparently open. She tells nobody home about the instance of almost alighting into the apex of the social register, but any duck that dared say anything further than 'How much?' or 'Have you any stamps?' from then on was handed the glassy gaze by a girl whose red head was not colored that way for nothing. All that seemed possible now was marry George; and how would that help the family? Also the debts were piling higher. In other words, it looked like a bad season.

"Her first Saturday off arriving about a week later Rowena prepares to hike for the department store for the usual one-day stipend, when she glimpses in the paper an ad for girls to wear evening gowns at a fashion show at the Brownstone Hotel, for Saturday evening—ten dollars apiece for the job! Rowena sits up, perspiration breaking out all over her fair brow, for aside from the money—which was marvelous—it meant the feel of silk and chiffon and gorgeous clothes! Though she had been viewing the frills and furbelows of the rich with outward scorn ever since her late experience with Charles you can't kill the desire for swell duds that's been planted there since the time of Eve, who didn't start with much but certainly made the most out of what she had; and a chance to wear raiment she could have only by accepting a proposition like Charles Vaughn's was too good to pass up. So she answers the ad and is told to report that night at seven-thirty. After which is plenty of time to hand George the merry yes and make one life happy. It looked as though she might as well.

"She can't eat any supper, and her mother gets worried and wonders how on earth could anything like wearing a few fancy clothes make a girl so excited; and Rowena shows up at seven, which is just as well, for the woman in charge—a nice fat old lady who used to be wardrobe mistress for shows and can't forget it—tries on the different gowns to be worn and gives the best of 'em to Rowena, making the other models almost have epilepsy when they arrive promptly at seven-thirty, as was told; which shows you how punctuality ain't always a howling virtue.

"And oh, those dresses! They'd have made the female angels hang out over the railing up above and wish to the Lord they was still living. Rowena gazes at them enraptured—the dresses, not the angels. Of course she'd seen things like them at the Giltmore, but this was different, and being kinda giddy from not eating any supper and excitement and rouge the old lady insists on putting on her, she walks out for her first appearance in a violet-and-silver creation with her eyes like stars. And say, the applause in consequence beats the other languid, used-to-it models all to smithereens.

"When she finally sweeps into the dressing room in her last gown, an orchid-and-gold dream, the old lady does a pleased giggle and tells her she made a hit, and remembers for fifteen minutes ensuing how Lola De Vere, the dramatic queen she used to work for in the early sixties, attired in just such a gown, captured the Duke de Epicac with it, though only a lowly milliner before she went on the stage; and the duke marries her the next morning—at which last Rowena gives her the icy regard, knowing different.

"Seeing how Rowena hates to part with the dress the old lady tells her if she wants to she can go round through the outer rooms with it on, for fifteen minutes, if she hurries right back and don't try to walk out any side doors with it, as was pulled on her once, because detectives were posted at all the entrances and would catch her in the act. Rowena promises, tickled into the seventh heaven, and dashes out into the hall, where the audience is breaking up and pairing off to look at the exposition of Georgette-crêpe underwear in all its expose. When she meets one of the bell boys walking round paging somebody unintelligibly as usual the haughty gaze she bends on him is like the Queen of Sheba glaring at a common slave. Somehow you feel different when dressed for the part.

"Well, she was gliding about doing an exact imitation of Miss Vanderhoff, the débutante whose mamma gave a recent dinner dance at the Giltmore that cost a mere trifle of fifty-five hundred dollars, and being so extremely *faux pas* that the first thing she knew she ran plumb into a man who was standing just round one of the gold pillars, indulging in a cigarette.

"They both beg pardon at the same time, and then they both laugh and he looks at her, and say, he's got the prettiest smile you ever saw in all your life, and before Rowena can stall it off she gets a jolt round her heart and instantaneously realizes that she's fell in love, it being the same sensation she had once when she first learned to swim and jumped into the water to get it over with. There ain't a doubt—she's IT. Then she sees that he's all dolled up in beautiful evening clothes just like the ones she's become too familiar with at the hotel, and knows he's one of them idle rich that she's sworn never again to give a chance to toy with a poor girl's reputation! Well, her heart simply does a nose dive and lands palpitating. He stands gazing at her as though he liked the view.

"'I beg pardon,' he says in a grand deep voice and another of those smiles—his black hair fairly shone, which worried her worse, reminding her of Allenton. 'Did I hurt you?'

"Gee, but he was handsome. There was nothing for it but give him the icy stare. Never again would she trust another of his hated race. As he'd seen her doing the model stunt and knew what she was, of course the only way was to beat him to it by refusing to give him a chance to follow in Charles' footsteps, which was kinda hard with her heart acting so outrageous against the orchid gown.

"She gazes at him through lowered lids. 'I am afraid,' she replies in the elegant high-bred voice of Mrs. Vanastor, 'that I am the one who committed the *coup d'état*.'

"He laughs friendly like. 'Have you enjoyed the show?' he goes on, kinda tender. 'Being a mere man of course I'm not exactly competent to judge, especially as I got here awfully late.'

"Rowena stared at him. 'Didn't you see the models?' she inquires. (Continued on Page 169)

EVERYBODY'S BUSINESS

By FLOYD W. PARSONS

Ocean Supremacy

WE ALL want prosperity. To get it we must do business, and lots of it. Domestic trade is not enough. America can only continue in power by holding and increasing its foreign business. The United States' trade with foreign nations has reached the enormous total of ten and a half billion dollars a year. The balance in our favor amounts to more than four billion dollars, and on this business we net a handsome profit.

The most important element in the serious problem of building a great foreign trade is the provision of adequate modern port and harbor terminals. There must be no rough spot in the continuous movement of freight from the factory and farm to the hold of the ocean-going steamship in the harbor. In entering the world markets on a large scale we are coming into competition with maritime nations that have devoted generations to the study of ship economies. It is silly to assume that all we have to do is to paint "U. S." on the bows of our ships, run up a Star-Spangled Banner and announce "We're here!"

PHOTO. BY IRVING UNDERHILL, NEW YORK CITY

Present Method of Coaling a Ship With Hand Baskets at Nagasaki, Japan

On investigation, it was found that at New York the average cost of handling a car from the time it landed within the terminal limits of Jersey City until it was delivered to its destination in Brooklyn or Manhattan, including lighterage, was $35. At Chicago the same job cost $10.35; at Binghamton, New York, $1.80; at San Francisco, with a municipally controlled terminal, the cost was $2.50.

The whole nation suffers and pays for the lack of proper terminal facilities in New York. The astonishing thing is that the people of other cities and states have patiently paid the unjust tax on incoming and outgoing commodities, placed for the benefit of a select few.

The city of New York is arranging to spend from $25,000,000 to $100,000,000 for new piers and harbor facilities. Only two out of twelve of the new piers are to exceed 125 feet in width, which is the size of pier established in the olden days of sailing ships. Only two of the piers provide for railroad tracks on the pier proper. Ten of the piers are to be of light one-story construction, precluding the installation—now or later—of overhead traveling cranes and conveyors. The plans of these piers call for foundations to support a one-story building, so there can be no additions of other stories in future years. And this is being done in a country that is now producing wonderful equipment for handling cargo at terminals—equipment that is being supplied in large quantities to other governments and foreign companies that are availing themselves of the benefits afforded by American engineering skill.

Over in England, at the busy city of Manchester, the British have put in a new port costing $80,000,000. At this new terminal ships are unloaded, warehouses filled and trucks and cars loaded by monster cranes. Man power is the scarcest thing on the dock. A single employee operates a huge crane. He wears a belt equipped with electric push buttons, and though he doesn't move more than three or four paces in any direction, still he controls the machinery that carries the goods to all points.

On the antiquated piers in New York, where manual labor is required, it costs more per ton to handle food and merchandise than it costs to transport the same food and merchandise from Chicago to New York. The citizens of New York and of the whole nation pay for the extravagant waste involved.

To say that all American cities are asleep to the opportunities that lie in the mechanical port would be a diversion of fact, for a number of important seaboard communities are attacking the problem in the hope that many of our shortcomings in harbor equipment may be dispelled. As a result there is a likelihood that New York will eventually suffer the loss of business, thus paying the price for her failure to advance with the development of remarkable labor-saving machinery.

American ships operate with wage scales nearly double those paid to the seamen of other countries and our only salvation is to increase efficiency and individual accomplishment beyond anything attained by other nations. That we can do this is borne out by instances of isolated accomplishment in a few industries.

Up on the Great Lakes cargo carriers have been able to transport iron ore for a lower charge than any other tonnage rates in the world. Such results have been made possible by the use of wonderful loading and unloading devices. The time that a ship loses in port is absolute waste. The United States Government learned this truth during the war and in those strenuous days Uncle Sam requisitioned the brains of the nation's leading mechanical experts to solve the problem of rapid ship loading. Much was accomplished, and the Government's Army Supply Base in Brooklyn is a step in the right direction.

The Brooklyn base is the largest capacity freight terminal ever built in an American port. There are two concrete warehouses each larger than any similar structures ever erected. One house has a storage capacity of 144,000 tons; the other warehouse, with a floor area of 2,130,000 square feet, has a storage capacity of 180,000 tons. The car-storage yard in connection with the base has a capacity of 1295 cars, 179 of which can be unloaded at the same time. Rapid freight handling in the terminal depends on the use of group elevators for vertical transmission and of tractors and trailers for horizontal transmission.

The elevators are run without operators, being controlled by a dispatcher at a central station. They are provided with an automatic leveling device, so that when they stop they are level with the floor, which permits trucks to be quickly run and off of the This is the fi time in history a group of ele tors have been by a dispatcher tem. The sche saves the labor 63 men, at the sa time increasing efficiency of the eration. The m pressure of a fi tip on a but starts and stops elevator, opens doors, and ne misses the floor le by more than quarter of an in

These new ar piers have ne been subjected t severe test. H ever, in one 8-h day, a total of 3 tons, or 479 tons hour, were recei into the smaller the two warehou At the same ti the elevators w handling outgo freight, and the t simultaneous mo ment amounted 575 tons an ho This was acco plished with only per cent of the vator capacity. T terminal was signed to have loading capacity 25 tons an hour ship hatch and appears that t result can readily be obtained. In the light of modern p sibilities such an accomplishment is a modest performan but it is far ahead of the practice at most American pie

Let us take, for instance, the task of coaling large stea ers. Over in Japan, at the port of Nagasaki, the Japs han the coal in hand baskets. To bunker 3000 tons of coal t method requires 950 stevedores and operators working hours. Each laborer handles about 314 pounds an ho and the total effort amounts to 19,000 man hours.

To do a similar job in New York with buckets, but loa ing 8000 tons instead of 3000, requires 10 gangs for hours. Each laborer handles 1666 pounds an hour and t total effort is 9600 man hours. But if we coal in New Yo and use eight modern elevators and trimmers we can lo 8000 tons of coal with 96 men in 10 hours. Each man w average 8.33 tons an hour and the total effort will be 9 man hours. Think of that! Only 960 man hours in N York with machines as compared with nearly ten tim that effort in Japan, where the laborers do the task hand and load less than one-half the same tonnage of co

Perhaps the greatest adaptation of machinery to t business of loading a ship is the continuous elevator co veyor for medium-sized packages. When this device operated in conjunction with a modern crane hoist for t heavier freight it affords an appreciable reduction in labo increases the speed of loading from 25 to 75 per cent, sav on electric-current consumption and practically eliminat the damage to goods common in the more primitive met ods of cargo handling.

But loading ships is not the only thing. The job quickly removing the cargo is just as important. Und the old hand-truck system freight could only be stacke to a height of five feet. This caused the introduction stacking machines which now stack freight to a height 15 or 20 feet, thereby trebling or quadrupling the amou of use that can be obtained from the limited floor space of warehouse or pier. The overhead conveyor, though not y installed in many terminals, will soon be considered common necessity in handling cargo for ships. This devi obviates the necessity for wide aisles for the passage trucks and acts as a great aid in stacking.

Down in Beaumont, Texas, there is a port which th natives brag about, and not without reason. In March

"encore!"

THAT'S when you appreciate your Pathé Dance Records; when the band stops and you want some more—right away before the spirit of it goes cold. And if it's a Pathé Phonograph, that's just how you get it—right away, at once; no waiting; no needles to be changed.

The right kind of music, too; brilliant, sonorous tone; a surge of rhythm; volume enough for a couple of hundred couples to dance by; and if it's the latest, newest dance sensation that you are after, you can be certain that Pathé will have it for you while it *is* new.

The very latest—the livest—the high spots of dance music for this Christmas month—

(Continued from Page 44)

this year the Beaumont terminal established an enviable record in unloading 2040 barrels of asphalt in eight and a half hours. The cargo moved at the rate of four and a half barrels a minute and the total cost for handling the entire shipment of 1,051,500 pounds was $25.16. This accomplishment was due entirely to the very modern mechanical equipment in the Beaumont terminal.

The port of New Orleans is a great receiving station for Central American bananas. This product must be handled with care to avoid bruising the fruit. A careful study of the situation resulted in the installation of endless-belt conveyors, which handle thousands of bunches an hour without injuring a single bunch. The operators have become so proficient in unloading the fruit that within three hours after a banana ship docks in New Orleans all of its cargo is riding north in special trains of refrigerator cars.

The recent talk about New York harbor having reached its limit added considerable impetus to the efforts of other cities to get a share of the export business. That New York's failure is due to antiquated methods rather than to natural limitations is borne out by a Navy Department survey. It was shown that the harbor's dock space amounts to 221,398 feet, while the occupied space is only 77,506 feet. It was further shown that there were 445 berths for ships of average size, of which only 195 were occupied at the time of the survey. This indicates that there is still plenty of room in our big metropolis. The deficiency lies in obsolete equipment.

Galveston lays claim to the honor of being the speediest ship terminal in America. This port uses electric wharf cranes and is able to clear a ship in 24 hours. Seattle on the Pacific, and Norfolk on the Atlantic, are following close in the wake of Galveston. The largest pier in the world is at Seattle. It is 310 feet wide and one-half mile long. It has a berthing capacity of seven large ocean-going vessels. The largest piers on the Atlantic Coast do not exceed 1600 feet in length. However, up to the present time the best examples of how to handle cargo are still found on the Great Lakes. It is possible to load a ton of ore in Duluth, carry it to Conneaut and there unload it, all for the small cost of 50 cents. This is accomplished by ships that are laid up during the four cold months of the year and that pay American wages to seamen and officers. What could we not accomplish if our ocean traffic were as well managed?

Fortunately, many people in the United States have finally learned that the important thing is not the cost of actually operating a ship but rather the cost of keeping the vessel idle. The present high wages alone are a sufficient argument in favor of speedy ship loading. In countries where labor costs are low this reason would not be so valid. Nevertheless, among the more important nations that country which can coal and load its ships the fastest will possess a valuable advantage in the coming race for marine supremacy.

Four Moralities

THE other afternoon I stopped in to see one of my editor friends.

"You're just in time," said he. "I'm expecting an interesting caller. If you can spare a half hour I wish you would sit in on the discussion."

When told that the coming visitor was a famous engineer and author I needed no further urging, and a few minutes later was shaking hands with thecelebrated guest.

Said the editor: "Our loss during the war averaged about $35,000,000 a day. How can we make up this enormous waste? What can the industries of America do to aid in the recovery?"

"You say the war cost us $35,000,000 a day," replied the engineer. "That means a total loss of more than $25,000,000,000 in two years. Let us see how this compares with present preventable losses. The average duration of human life is 51.5 years. Our scientists figure that if we eliminate easily preventable diseases this would be 60 years. If in addition the children we waste in infancy were preserved the nation would have approximately twenty million more healthy grown-ups, each producing at least $3 a day. As a consequence we must assume that low hygiene costs us $60,000,000 each and every twenty-four hours.

"Then there is the matter of a higher education for the average citizen. Mobilization of our Army showed that we had 20 per cent of illiterates. Our annual production is $72,000,000,000 and our per capita wealth is about $2400. Investigators have computed that if we substituted the Russian average of intelligence for our own the annual production in this country would be only $18,000,000,000. Assuming that we wiped out illiteracy and accomplished a substantial betterment in general education our yearly production would be increased at least $20,000,000,000. Therefore our loss from ignorance is $57,000,000 each day and this figure includes due allowance for the unavoidable human element that enters into the problem.

"Experts have made exhaustive studies of the losses due to industrial incompetence and these tabulations show a waste of $50,000,000 a day. Then there is a fourth loss resulting from faulty assignments. Everywhere we find men working on the wrong jobs. Not fifty per cent of the people in the United States really find themselves. A Tennessee mountaineer, unknown even in his own state, turned out to be the greatest individual accomplisher in the whole war. The best figures obtainable place the losses due to wrong assignments in all of our American industries at $20,000,000 a day. Adding all these losses we get the astonishing total of $187,000,000 a day. This is what we pay for our neglect of only four moralities.

"But the story does not end here. The average production of corn of all the farmers in the United States is less than 32 bushels an acre. A boy in a Southern state raised 243 bushels on a single acre. The same thing is true of potatoes, only that the record production is ten times as great as the average output instead of eight times as with corn. The very best cow is worth 300 times as much as the average cow and the highest production of milk from the most valued animal is ten times as much as the nation's average. Likewise our best hens each produce eight times as many eggs as the average individual production of all our hens. Think of the millions in money we would gain by simply doubling the productive capacity of our farms and domestic animals.

"Increased individual productivity is the remedy for most of our present ills. If we go on as at present then our war debts will be with us in generations to come. strange but true that most of us take advice as w physic—to fling it aside the moment the doctor's ba turned. We insist on learning through adversity, and then our remembrance of what we are taught by affli is as fleeting as the rainbow or the echo of the woods. don't think I am assuming to possess a higher degr virtue or sense than other mortals. My doctor advise to go to a dentist three years ago—and I haven't gone

"We are not strenuous enough. Most human b carry low-pressure steam. We work, study and play too little vigor. In the matter of health preservatio exhibit both ignorance and indifference. Always w reaching for reasons to excuse ourselves. Talk o advance of civilization! It has barely commenced. H one citizen in ten has introduced the first fundament system into his everyday life, and our Government spends more money to improve the quality of hogs th does to improve the breed of the nation's infants."

Building for Keeps

THE first time an American travels in Europe astonished by the permanent character of the build There are dozens of blocks with solid rows of brick stone houses without a single structure of wood. result there is less than one-fifth as many serious fir England, France and Holland as there are in the U States. As a people we differ from foreigners in tha view America as a nation, and such things as fire losse abstract matters. We are incurable optimists who lo take chances. We smile on flimsy construction sin conforms with our idea that rapid growth will soon ca the replacement of present buildings with larger ones. citizen who expects to make a million doesn't build hi thousand-dollar home with the expectation that going to live in it always.

This difference in national characteristics between peans and Americans was brought home to me the time I went down into an English mine. My training always been that a coal mine was good for twenty or t years and we built accordingly. Over there the u ground construction was put in to last a century. upkeep was high; theirs was low. We were const battling hazards; their more permanent constructio duced risks. We spent less at the start; they spent later on.

Europe builds for permanence, not because she lumber but because the inhabitants possess a degr carefulness that seems to come only through the pre of generations of necessity. MATTERS OF OPINION

How to Fix Wages

ORE and more frequently wages are being fixed by the desires and wants of the workers rather than by the value or utility of the work performed. It will o to lay this all at the door of organized labor or say t is entirely caused by the monopoly power of unions. h sentiment demands that every worker receive at least cessities of life, and it is being urged that he should not only those necessities of subsistence but also a egree of comfort. There is a growing demand that should provide for an American standard of living. he present time when arbitration boards fix wages variably take into account the standard of living as ained by representative budgets. To-day hundreds dies are being made of family budgets, whereas a ation or two ago no one but the worker himself ed about how much it cost him to live. Minimum- legislation, which is steadily gaining ground, is concerned with assuring the worker enough to live a living wage.

very latest attempt to adjust wages to the cost of by moving them up and down with the index number commodity prices recognizes that a certain fixed mini- should never be cut under.

these tendencies fit in with the growing sense of ss and justice. But there is danger of forgetting that long run wages can hardly exceed a rightful share of int product which capital, brains and labor produce. principle sounds cold and abstract and must be red in every case by considering the human neces- and desires of the worker. Naturally no one knows cy how to apportion the shares to capital, labor and . But many forces are steadily working out a solu- The intelligent employer and the intelligent trade both will do their utmost to arrive at a fair and just on, for certainly ultimate forces will see to it that hole productive system goes to smash unless both il and labor refrain from trying to divide more than produce.

Perhaps in an ideal world each unit of capital and each idual will be rewarded in proportion to the contribu- made to general welfare rather than by the amount of n produced, for wealth and welfare are not always ical. Unfortunately we have not yet learned to are welfare or our various contributions to it. For esent the best way out lies in increasing the produc- of wealth, largely through advance in the technical so that there will be enough and more to go round.

Business English

EXECUTIVES everywhere who employ recent college graduates have an old bone to pick with the colleges. he burden of their complaint is that the long and elabo- English courses now in vogue fail to train young men women to write clear, well-expressed letters and to concise and informative reports.

They declare that the average college man's business ts are vague and slipshod and that his most volumi- reports are apt to convey less specific and essential ation than could be communicated in three minutes ord of mouth.

The literary requirements of business are far from ve. The flowers of rhetoric are neither demanded nor d. We have yet to hear a business man speak glingly of a subordinate's attainments because of his ient knowledge of Spenser's Faerie Queen or because ought that Henry Fielding wrote Roderick Random, re have witnessed more than one apoplectic outburst obscure, muddy-minded office letters and reports.

In detective yarns and mystery stories suspended est is no doubt an admirable quality. But when a pot is so constructed that the Old Man must read to the tim of the twenty-third and last page before he can ver whether the concern is making money or losing it decide whether he should book winter reservations for mself and the girls at Palm Beach or at the poorhouse, ery art is sadly misapplied.

Business English is often spoken of as if it were some at and difficult dialect of our mother tongue requiring s acquisition special teachers whose familiarity with ad had brought them uncanny knowledge of its mysteri- atois. Yet every office boy should know that business ngsh should be the simplest, clearest and least adorned of expression of which the user is capable. The rie est executive would have no cause for complaint if he ou have his office correspondence conducted by the poor ls w tinker who wrote Pilgrim's Progress; and if he ou procure the services of any one of the sober gentle- er who translated the Bible for King James he would be rtunate indeed.

When the colleges have completed their autumn drives for endowment funds and have relieved the more pressing needs of their underpaid professors they will perhaps give ear to the plaints of the employers. For a long time there have been educational radicals in the teaching ranks who have averred as loudly as they dared that the conventional collegiate training in our mother tongue and its noble literature is all wrong. Some of these rash pedagogues would even invert the chronological order of study and proceed from the familiar to the unfamiliar, from the simple to the complex. They would even require students to con their Stevenson and Kipling before Addison; Addison before Shakspere and Shakspere before Chaucer or Beowulf. They would teach the art of letter writing before that of play writing and would turn the good old system topsy-turvy.

Such ideas no doubt are the rankest heresy—and yet in these days of universal change there is no saying that they may not some time be adopted.

Bashful Books Worth Knowing

WRITERS of fiction cannot complain that their work is not taken seriously or that the press of the country is not liberal in the space that it devotes to new novels. The most trivial romance that bears the imprint of a reputable publisher is reviewed in the newspapers from one end of the country to the other, and women's clubs in town and village from ocean to ocean often discuss it as earnestly as London society used to devour the first impressions of a new Waverly or a long-heralded volume of Byron's verse.

Histories, biographies and memoirs of the better sort are also accorded a generous share of free newspaper publicity.

But there is another large class of useful works that is scarcely ever mentioned in the literary columns and of whose very existence the average joy reader is quite unaware.

Books that belong to this family are not are a rule well advertised and the young men and women to whom they are most useful have to ferret them out in the cheaper bookshops of the large cities and the country boys and girls are rarely able to find them at all.

These worthy but bashful books are those that teach trades, handicrafts and the practical arts of everyday life in shop, factory and office.

It is impossible to spend a noon hour in a large bookshop without becoming aware of the vague but insistent demand for these useful and practical works. The prospective customer rarely asks for a specific title or an individual author. He—if it is a he—simply asks for a book on alternating-current dynamos or internal combustion engines; and she—if it is a girl—demands a volume on the care of the sick or practical millinery or the touch system of typewriting. It is rare that these young seekers for information go away empty-handed. Occasionally the bookseller offers a technical work beyond his customer's means—in which case the lad usually lays down a dollar bill and says that he will bring the other two on his next pay day.

There is scarcely a mechanical trade whose principles, technic and practice are not set forth simply and clearly in one or more inexpensive handbooks. The literature that has been built up about the electrical and automobile trades is embarrassing in its richness. Carpentry, woodworking and the building trades have countless representatives. There are books on the use of the steel square which are so exhaustive that a cathedral could be constructed with no other instrument save plumb line and level. The less alluring trades are by no means neglected. Perhaps the young man crossing the bookseller's threshold is helper or apprentice to a wood finisher, a coppersmith, an iron molder, a plumber, a cabinetmaker or a steam fitter and has conceived the idea that a book about his trade would help him to advance in it and would enable him to understand some of the tricks about which his boss is so mysterious.

The young man is quite correct in his supposition, and his visit to the bookshop on his own initiative is strong evidence that he will get ahead. He has hit upon an idea that is so sound that no less a personage than Adam Smith made note of it in the book he published about the time that Thomas Jefferson on this side of the water was writing the Declaration of Independence.

In discussing the British seven-year-apprenticeship system the Father of Political Economy called attention to the needless waste of boys' time and expressed the opinion that a few weeks' instruction would suffice to teach the trade of watchmaker. The suggestion was naturally unpopular among master watchmakers, for under the existing system they not only had the boy's labor free for seven years, but frequently made his parents pay them a premium in cash over and above the youngster's work.

Even in our own day the system of long apprenticeships has a tendency to perpetuate itself, for there is a mean streak in human nature which makes us dislike to see our juniors learn with ease and rapidity that which we ourselves were able to acquire only by the hardest and most laborious toil. Ninety-nine journeymen out of a hundred harbor more or less of this feeling. They are not averse to seeing the young helper sweat over the rudiments of his craft. They have the spirit of the apothecary in one of Captain Marryat's novels who initiated his green assistant into the mysteries of the prescription counter by giving him a small lump of India rubber and bidding him to reduce it to an impalpable powder with pestle and mortar! They dread the up-and-coming lad, who if taught and encouraged would soon outdistance them in the race for advancement.

This is where the technical books come in. They answer questions without evasions and without snubs and care not a whit how fast the learner progresses.

The boys in white collars can make books play quite as important a part in their advancement as their brothers at bench and lathe. The American Library Association has recently published an annotated list of five hundred books on business. There is no phase of legitimate commercial activity that does not possess a literature of its own. For the clerk in the bank or bond house, the export trade, insurance, the real-estate office or trust company there are more specialized books than he could read in ten years.

Consider, for example, the young bank runner's future and how books may mold it. The president of his institution is an elderly man who has been a banker for forty years. The tellers and bookkeepers are almost as old, but the cashier and vice presidents are young men between thirty and forty. What is this boy's future to be? When he is sixty will he do business through a teller's window, or will he rule the best mahogany office behind the marble rail? His use of books will have much to do with the answer to the question. He can keep his job—such as it is—without opening a book. But if he is to win through the gate in the marble rail he must know more about the theory of banking than is ever learned merely by the pursuit of routine office work.

If our young man is to be a really first-class banker he must learn far more than the collateral value of a few hundred stocks and bonds. He must be an economist, a student of natural resources and trade routes; he must understand foreign exchange and the banking and currency systems of a dozen foreign countries; he should know the ins and outs of foreign commerce and politics and acquire an uncanny aptitude for reading more quickly than those about him the barometers of business.

Books are a help to the mastery of all these branches of knowledge. Books and trade journals—plus hard work and lots of it—account for the youthful vice presidents.

The future of American banking is so bright that it is almost dazzling, but its richest rewards will be reserved for the men of the broadest training. The new generation of bankers will be men of far wider intellectual range than those who dominate the average countingroom of to-day. America's new rôle in world finance is daily stiffening the requirements for successful bankership, and yet much of the requisite knowledge is to be had for the seeking and for the determination to master it.

The opportunities for young clerks are so numerous and so alluring that it is not too much to say that with two or three years of persistent out-of-hours study any bright bank runner may learn far more about some one important phase of modern banking than is known to-day by the average American bank president.

What is true of banking is true of a dozen other mercantile pursuits. Books will open the way, but they will not do everything. They will not do the student's thinking for him. Not all the food they furnish will be predigested, but they will supply the needed nourishment and they will help mightily.

Young men and women should seek out these bashful helpers. Publishers' catalogues will assist in tracing them. Intelligent booksellers can give valuable hints; and good-natured librarians—which means practically all librarians—will be glad to do their share.

DUKES AND DIAMONDS

By G. H. FLANDRAU

WHEN the war was over his eminent family were again confronted by the fact of the Honorable Terry. While hostilities were on he had been happily and seemingly healthfully occupied on the Flanders Front and the family had not worried. It was somehow impossible to imagine anything untoward happening to the Honorable Terry. During this time he had done all that was expected of him; and, to the extreme annoyance of his superiors, several things that were not. Indeed, he had narrowly escaped serious trouble because of sundry misguided initiatives which should have resulted in the death of himself and his men, but mercifully didn't.

He came through it all without a scratch, and upon his return his family, who had hoped otherwise, could gather no evidence from his manner, conduct or point of view that he had been saddened or wisened by his experience. On the contrary his attitude was calculated to imply that if there had been a war he himself was not aware of it.

Owing to the inexplicable miscarriage of Fate his older brother, who should have become a peer of England and succeeded to the dukedom of his uncle, and whom Providence had most perfectly formed and fitted for this destiny, had died of pneumonia in a base hospital back of Amiens in 1915. So it now seemed probable that the dignities he would so well have borne were destined to revert to the graceless Terry.

He returned cheerfully to England, assuming as a matter of course that he was to be kept on in the smart regiment to which he belonged—a natural supposition and one which would have been justified if the Honorable Terry had been other than he was. But after a large number of his more pressing debts had been paid by the old duke, and Terry himself seized, almost at the altar, and prevented from wedding a pretty Salvation Army girl to whom he had inadvertently proposed marriage, a serious family council sat on his case and severe measures were decided upon.

"I'd almost rather marry and have a dozen children myself," cried the old duke, reaching for his crutch and shaking it at the assembly, "than have the succession go to that young—that young —— I shan't pay another debt, and, Lucy, if I hear of your doing so I'll cut the entail."

The dukedom of Worretsdown was not a rich one and Lady Lucy, Terry's mother, was almost poor. Besides Terry there were several girls, but they were not yet of an age to make the matches it was highly desirable they should make.

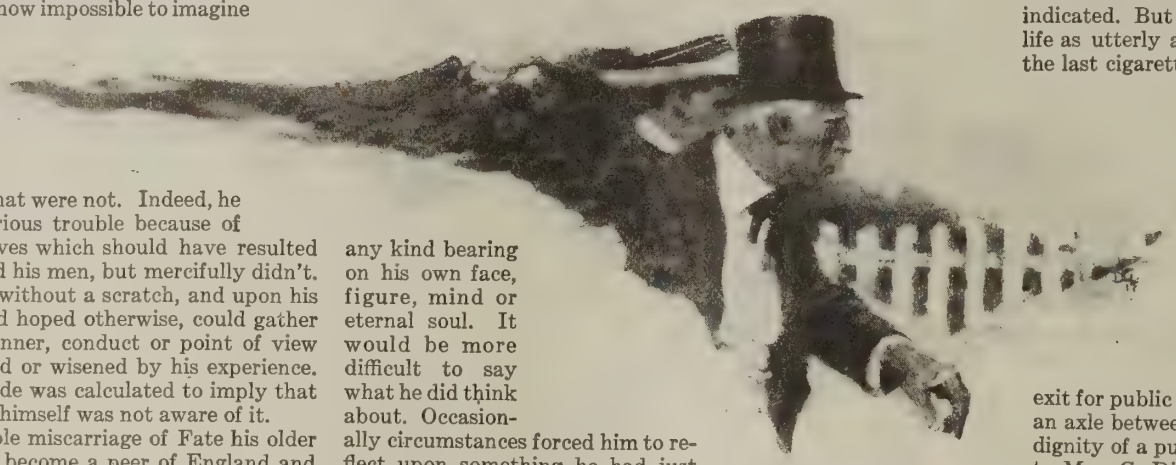
Councils had met before to consider Terry's case, had taken resolutions and issued ultimatums, and they had had precisely no effect whatever on the subsequent proceedings of the young man. In view of these failures an extremely radical decision was come to. Terry, it was decided, must be taken from the surroundings and companions which caused him to behave with such curious, persistent and expensive indiscretion. He must resign from his regiment and he must be sent away.

It was not in the blood of Lady Lucy or the old duke to light on any startling innovation in the disposal of the scapegrace, so the old dodge of the colonies—a few years in a Western Canadian city—was at last decided upon. It was felt that the simple pastoral people by whom he would be surrounded, the vast prairies, the wheat fields, the buffalo—would all do their part in refashioning into a reasonable being the young man who would become the eighth duke of Worretsdown and twelfth Baron Contreville.

His allowance, a small one, was to be entirely dependent upon his remaining in or about the city of Vancouver. If he ventured more than a hundred miles from these precincts it would stop. In view of these commands it is only natural that the Honorable Terry after a few months' sojourn in the charming and remote city on the Pacific Coast—full, the guidebooks say, of old-world charm—should be found one giddy, blue-eyed, pink-and-white morning in the spring of the year occupying a green plush seat in a parlor car rapidly advancing from Boston upon New York.

A look of light-hearted anticipation sat on his brow. His tan tweeds were festive; his long, loosely built body was relaxed. He was blue-eyed and pink and white like the morning, and his ingenuous face with its small curling mustache attracted the eye, openly or furtively, of every female passenger who sat or could arrange to sit where she could see it.

It is improbable that the Honorable Terry knew how engaging was his person. He was not given to reflections of any kind bearing on his own face, figure, mind or eternal soul. It would be more difficult to say what he did think about. Occasionally circumstances forced him to reflect upon something he had just done, but he thought about what he did after it was done—never before, a thing with which the old duke was in the habit of bitterly reproaching him. To-day, until after the train left New Haven, he thought of nothing. Once indeed he did think he would have a lobster and some shad roe for lunch when he got to New York; and again that it was a deucedly odd thing he should be compelled by some inexplicable eccentricity of the American race to drink water with, before and after his meals. But most of the time his level light-blue gaze rested vaguely on nothing and he felt very fit and that was all.



His More Pressing Debts Had Been Paid by the Old Duke

But when the train slid out of the New Haven station one overpowering idea had rushed in to fill the vacuum—which Nature abhors—that had been his mind, and filled it to the complete and hopeless exclusion of any other possible thought.

She came down the aisle with her chin in the air and her lips not smiling but imperceptibly parted as if they had just smiled or were just about to do so. Terry was not imaginative, but he suddenly had a very acute vision of what her smile would be like, and it was almost more than he could bear. And then her eyes, her skin, her nose—tipped up as if she had just sniffed at the mingled scents of gardenias and apple blossoms! It was the face of an angel, a goddess, an enchanting child. As Terry had been decently bred his gaze seemed never to have left the hat-rack at the side end of the car, and yet it is highly probable that she, inspired by a cryptic sense peculiar to pretty girls, was aware that he was aware.

Accompanying the divinity was a being calculated to inspire in properly regulated minds respect if not awe. To minds not properly regulated she might have suggested a well-corseted poodle. But what a poodle, and what corsets! Inconceivable that one should call her short and fat. Rather let it be said that she was not tall and not slender—highly condensed but not slender. And she emphatically was no longer young. But she was not a person to be described negatively. Her clothes, countenance and bearing were positive to the last degree, and when she arranged herself on the seat across the aisle from Terry she seemed already to have relegated the other occupants of the car to their respective and inferior spheres. The wild-rose skin and parted lips took their place facing her—and facing the Honorable Terry.

Towns and telegraph poles, red barns, apple orchards and the Saugatuck River raced past the windows unseen by the blue eyes of the highly nonchalant young man in tweeds, who stared at a pair of wicker suitcases perilously balanced some distance from him, and who saw, by some trick known to youth and love, not the suitcases but the lobe of a small pink ear peeping out from under a wave of golden-brown hair, a bewitching floppy hat and an assortment of eyes and lips that were a menace to the inherited restraint of twelve generations of Norman barons.

The landscape changed. Flat marshes appeared—a glimpse of wide silver where the Sound had wandered inland; gigantic revelations in oils of the progressive stages of a Turkish bath; the names and charms of plays, pills, soups, underwear and soft drinks. Then chimneys, wires, tenements—New York.

In the Honorable Terry's bill case, along with a draft supposedly destined to cover the cost of food, shelter, cigarettes, brandy sodas and caddy fees in Vancouver for the period of three months, was a small calling card with the name of Richard Bateman engraved on one side and the address of a New York club scribbled ac the back. This address it had been Terry's in tion to convey to the first taxi driver on h when he descended from the Boston express, a view to immediate transportation in the direc indicated. But this intention had vanished fro life as utterly as the last puff of blue smoke f the last cigarette he had tossed away before bo ing the eastbound train f Vancouver.

With superb detachment strolled toward the exit in wake of a lissom figure i brown checked skirt and sports jacket, and the con trated magnificence of a s little party in rustling bl taffeta and cocks' plumes. T took their way, fortunately the unformulated determina of the Honorable Terry, to exit for public vehicles. If her car had not bro an axle between Hartford and New Haven the dignity of a public taxi would have been spa to Mrs. C. Dillingsby Pott and Mrs. Dilling Pott's niece. But if the axle hadn't broken t would not have boarded a Pullman car at N Haven, and if ——

However, the axle did break and the Honorable Te got into the taxi that was snorting and smelling back of one the aforementioned ladies deigned to enter in vaulted exit of the Grand Central. He dropped a wor explanation into the ear and a pleasantly worth-w bank note into the hand of the breezy individual driv the cab, and the vehicles plunged together into the hubl of the street.

Reassured by the driver's reply to his request—a re to the effect that "That's the best thing I do, mister the Honorable Terry gave his attention exclusively to problem of whether her eyes were black or violet b unaware of time and direction. Then suddenly the t stopped, and the driver twisting round on his seat st his sweaty quizzical face in through the window.

"First stop," he announced, jerking open the door.

Selwyn—Selwyn was the last of a series of names belo ing to the Honorable Terry—got out.

"They went in there," said the driver, indicating entrance a few doors ahead; "one on the corner. T won't be out till day after to-morrow."

"I say! Now what makes you think that, my d fellow?"

"Dressmaker. Give 'em up for lost."

Terry laughed. Odd fellows, these American serva but jolly, quite jolly. The driver volunteered further marks, and as Terry stood leaning nonchalantly on stick, his coat buttoned tightly round his narrow waist, had an air which attracted the eye of a young lady exhil ing a lace machine in the window opposite. She stop operating the machine, puffed her hair out over both e powdered her nose and eyed him expectantly. Her pr arations were, however, without result. He did not l across the street.

After a moment's conversation with the driver strolled toward the corner, dragging his stick, a t plume of cigarette smoke trailing behind him. He had plan. To experience a wish for something was in Honorable Terry's mind to feel that that something qu naturally and rightly must be his, and he was not ab taking steps—physical rather than mental steps, to sure—to obtain it. He experienced a wish just now, acute desire to know the pretty girl he had seen on t train, and he desired it with an intensity with whi he believed, he had hitherto never desired anything. was inconceivable to him that he should let her slip aw into the unknown without a clew at least as to who she w

The open door of the corner shop was flush with t street and he quickened his steps as he passed it. lounge by would, he seemed to feel, be unnecessarily v gar. So he walked briskly, without turning his head—might almost be said without looking in—and yet he ve distinctly saw the entire interior of the showroom, whi was small. What is more, his glance unmistakably e countered the glance of the black—or was it violet-blue? eyes; and he received not a sign; not, heaven forbid, wink; not even a tremor of recognition. Just a litt blank look, too brief almost to be said to have existed, b into which his instinct read hope. He whirled his ca round several times to celebrate, and a flush of pleasa excitement crept into his cheeks.

"Right-o, what? Right-o, right-o, oh, quite," he o served to himself from time to time; and unable to g

k Bateman was a young man who knew everybody
to know, did everything he ought to do, played
dge, golf, drove a good car, danced, went to war,
ls in France, took in a few smart parties in Lon-
e home unscathed, and spent every week-end at a
house where the chef was impeccable and the
f the best. He was small, debonair, with a good
od clothes, good features and a ready and infec-
gh.

geted Selwyn with enthusiasm:

e there, Terry, I'm glad to see you! By George,

r-o!" responded Terence. "I say, old bean, do
a rum old party with a pug nose who carries a
bag?"

! Say that over again and pronounce distinctly.
e've got a little drinking to do first. You can tell
ter we get them started."

epaired to Bateman's rooms upstairs, and during
round they reminisced. While Dickie was shaking
econd, however, Selwyn's mind reverted to the
hand. He pulled the bag out of his pocket.

Moses!" exclaimed Bateman. "That's some

who hadn't paid any particular attention to its
appearance, too intent on what it might contain,
hat it was indeed some bag. It was large and
fine gold and platinum mesh arranged in stripes.
e top was a row of snapping white diamonds, and
dable monogram of smaller diamonds was worked
side.

g to deliver it to the young lady yourself?" said
with a friendly wink.

lear chap, that's the whole trouble. I don't know
is."

don't ——"

's what I want to find out." Selwyn sat down,
ing the bag upside down emptied the contents on
. To his amazement three large emerald rings, six
ite pearls and a small gold coin purse scattered
polished wood.

"Well, I'll be—what is this anyway?" Dickie sat down opposite the Honorable Terry and gazed at him curiously.

Terry laughed. "I say—what a lark! She'll be cock-eyed till she gets it back." He opened the coin purse. It contained several twenty-dollar gold pieces and a few quarters. There was no card or address of any kind.

"Now that's what I call very odd," said the young man. "There's no bally card in the thing."

"If it isn't indiscreet," began the other.

"Look here, old man, you know everybody. You ought to know whose bag this is."

"Me!" There was a moment's silence. "Why in thunder—— Where'd you get it anyway?"

"In a shop round about somewhere. I don't know the name of the place."

"In a shop? Did you buy it furnished?"

"What ——"

"Did you buy it full of rings and pearls and twenty-dollar gold pieces?"

"Dear old thing, no! I didn't buy it at all. I picked it up."

"Well," exclaimed Bateman with emphasis, "quite a haul I should say. However, when you get through spoofing me ——"

"But I'm not spoofing you—I never spoof. Awful rotters, those chaps always trying to spoof a fellow—never know what it's jolly well all about. I picked it up, I tell you, in some sort of beastly dressmaking place."

Bateman carefully filled the two glasses and observed in a queer voice, "Have another drink."

They drank.

"It's a fine spring day," observed Dickie cautiously.

"But if there's no address in it," Terry complained, "how the deuce can I take it back?"

"Look here, my friend, do you want me to know about this business or don't you?"

Selwyn's amiable face assumed a puzzled expression.

"I wish you did know something about it. I don't. Don't American ladies carry cards?"

"Suppose we begin at the beginning," said Dickie; and by a series of judicious questions he led the young Englishman back through the events of the morning.

Telling about his adventure revived Terry's spirits, and when he had finished he was once more tingling with pleasant excitement.

For a few moments Dickie made no comment; then he remarked: "As I understood from what you wrote me before you came on, you are not supposed to remove yourself more than one hundred miles from Vancouver while you're on this side?"

"Right."

"If you do, your money will stop and you will be obliged to dig sewers or break rocks for the remainder of your stay in America—that is, if you wish to continue to dine?"

"Right as rain."

"In view of which facts I wrote suggesting that if you contemplated visiting New York you change temporarily your name, New York being keen on swells. Without this precaution every evening edition would be filled with fictitious interviews explaining your views on important questions you've never heard of and photographs of somebody else labeled The Honorable Terence Algernon Pigot Bellamy Selwyn, heir to the dukedom of Worretsdown, and so on. You agreed that it would be wise to take my advice."

"Deuced thoughtful of you, too—upon my word it was."

Dickie sprang to his feet and rammed his fists into his trousers pockets. He took a few turns up and down the room and then, standing still, burst into a joyous laugh.

"I will be damned," he observed. "Can you beat it? No, you cannot. You arrive in New York under an assumed name. You proceed to the shop of one of the most fashionable dressmakers ——"

"How do you know?" interrupted Terry.

"What?"

"That it was a fashionable shop?"

Dickie groaned. "I should have thought from the data that even you—— But never mind. Let us pass on. You go into one of the most fashionable dressmaking shops and steal, in broad daylight, a handful of gold, platinum, diamonds, emeralds, pearls and rubies —— Oh, I know," he said hurriedly; "there were no rubies. I just put that in to make it sound worse. Well, after all this you sit here looking about as worried as a fat bishop with a private income, come to town to preach an Easter sermon."

"A bishop? I say, why should I look like a bishop?"

"You shouldn't—that's just it. I don't want you to, but you do."

"Look here," said Terry irritably, "I ask you to identify a compatriot of yours, a thing, it seems to me, you might easily do, and you go talking about bishops. I don't look like one. Have you ever seen a bishop?"

"Selwyn, my child, my comrade, my humor was ill-timed. I was merely trying to indicate the seriousness of the situation. Never mind about the bishop. The point is, and you seem persistently to ignore it, you have committed a crime. I am unaccustomed to crime and I fear for you, that's all."

Terry laughed. "You're an amusing chap, you know. Upon my word you are, what? Such a bally odd way of putting things."

Dickie regarded him earnestly. "There is no such person," he murmured with conviction. Presently he walked to the window. "The police have not as yet thrown a cordon—I believe that is the word—about the club. They will shortly."

"Black without any beastly brown in them," mused Terry. "I'm fed up on brown eyes. Bit of a bore, brown eyes; too many of 'em."

"If it were not for the sake of Lady Lucy ——" began Bateman. "Now listen, Selwyn: The only hope is that the lady you have robbed will advertise for the bag to be returned for a reward, no questions asked, and that sort of thing, before they have had time to run you down. I hope so. In the meantime you would better give the bag to me—awkward if you were to be taken up with it in your pocket."

"Thanks heaps, my dear chap, but I'd rather like to keep it by me. You see, she picked it up several times. I rather like to think she did that."

Again Bateman said "Well, I'll be ——" But he didn't finish his sentence. Instead he remarked ironically: "All right. Keep your loot. I ought to wash my hands of you, but I won't. When you're run in send round to me and I'll go bail."

Mrs. C. Dillingsby Pott had a round face, a small round nose deeply embedded in round cheeks that sagged a trifle, a round mouth and two round choleric eyes that were inclined to bulge. All human beings that belonged in any way to her she enveloped in an active, managing and somewhat injudicious affection. All those who did not were potential enemies, and were regarded as such by Mrs. Dillingsby Pott.

Even before the disappearance of her bag she had been in a ruffled mood. The accident to the axle which had interrupted her journey from Boston to New York was the first annoyance and brought in its train various others. Then Sylvia had been most unsatisfactory at Madame Helen's. She was vague, inclined indeed to be dreamy, and had asked her aunt four times if the latter had noticed a perfectly sweet Englishman on the train. Her aunt had noticed nothing in the train but the heat and cinders, and said as much. She requested Sylvia to stop being silly and to attempt at least to concentrate on the respective possibilities of lace and tulle.

It was due perhaps to these small perturbations that on leaving the showroom to go into the fitter she committed the unusual indiscretion of leaving her bag behind. Superfluous to go into the commotion that took place when it was discovered that the purse had vanished. Madame Helen was alternately prostrated and fiery. She shook the young lady who was supposed to grace the antechamber with her presence continuously from nine until five. The young lady cried and admitted that she had left the room for half a minute to go in search of her lip stick, thinking Madame Helen and the two ladies would be there while she was gone. Several other young ladies, mostly models, cried, too, with a tendency, when they stopped crying, to think that the poor working girl was, as usual, being insulted and ground down.

Mrs. Dillingsby Pott requested that the traffic policeman at the nearest corner be sent for at once with a view to the immediate discovery of the bag; but Madame Helen implored her for the sake of the shop's good name not to have in a policeman. Besides, she pointed out, Mrs. Pott, as she herself admitted, did not think that any person employed by Madame Helen had taken the bag. The matter was one for a detective to handle. She herself would be very glad to take up the matter with a detective.

This offer was rejected by Mrs. Dillingsby Pott. Though the honor of Helen's shop was not questioned the criminal carelessness of the place was clearly demonstrated. She proceeded with dignity to her cab and Madame Helen followed her to make a request, namely, that Mrs. Dillingsby Pott out of the kindness of her great heart would give the matter as little publicity as possible. People were unreasonable, and just the rumor that a robbery had been committed in her establishment ——

"Publicity, my good woman, is something I have had, with some difficulty, to avoid all my life," said her patroness. "You may be sure that neither my name nor yours shall be bandied about in the unspeakable press in connection with stolen jewelry. Incidentally, please pay, for me, your young ladies to keep my name out of it, and let it be known that I offer a thousand dollars reward for the bag."

When Madame Helen went back to her shop she kissed the young lady she had offended, observed that Mrs. C. Dillingsby Pott made her sick, and shook them up a cocktail all round.

In spite of the vast abundance of her possessions Mrs. Pott was no more willing to part with any one of them than anybody else. The thought of her emerald rings, pearls and handsome bag caused her acute distress. She was indignant, too, and felt that it was most probably the work of some socialist.

"I don't know what the world is coming to," she told Sylvia, "with strikes and the servant question as it is, and now this."

Rather incoherently she telephoned Mr. Dillingsby Pott at his club, and it took him some time to grasp what it was all about. Meanwhile several pots had gone by, he was sure, and he was in a hurry to get back to his game.

"Lost your bag, did you, Martha? . . . What? . . . Stolen; yes, yes; I understand. . . . Well, I'll send someone up right away. . . . Yes, this afternoon, right off. . . . Yes, you'd better stay in till he comes. You tell him all about it."

With that Mr. Pott withdrew from the telephone and returned to the game. On his way back he asked an attendant to telephone over and have a detective sent up to Mrs. Dillingsby Pott.

Dougherty was one of the oldest men on the force. He was not considered brilliant by his associates. A fair routine man, but not brilliant. As there was no one else available when the club secretary telephoned for a detective, and as the former did not give the impression that the occasion was one of any special importance, they put Dougherty on the Pott case.

A routine man was precisely what Dougherty was. He loved formulas, systems, finger prints and crime waves. He had a great respect for smart well-known criminals and looked upon them with the same mixture of interest and awe that some people feel for movie stars and millionaire babies. It was his consuming ambition to capture one of them with his own hands, though he had little real hope of doing so. He ran in nigger crap shooters, pickpockets, dope takers; but in his dreams he hooked the big fellows.

He was a heavy-set man with a bulbous nose, a rather bald head and a soft voice. When a footman admitted him to the marble seclusion of the Pott mansion he was both awed and hopeful. This might be his chance; it looked like a real job to Dougherty. He refused to relinquish his derby hat, as he was using it as a repository for a large, dead, half-chewed cigar, dropped into it when he passed through the wrought-iron portals. And during the interview with Mrs. Dillingsby Pott he held it between his hands like a collection box, jiggling the piece of cigar up and down absent-mindedly from time to time.

He admired Mrs. Pott extremely, and in view of her grandeur felt more than ever convinced that this time he was to be pitted against nothing less than a king of the profession.

Miss Mamie Shannon, who that week was demonstrating a lace machine in the shop window across the street from Madame Helen's, pulled her turban of Oriental brocade well down over one plucked eyebrow, rouged her lips and fastened, according to the mode of the moment, a single imitation sable skin close about her throat. Memories of a rather exciting day fused in her mind with anticipations of what she expected would be a rather agreeable evening. Mamie liked to eat and dance and kid and dance and be told that she was some baby doll and dance and dance and dance. Formerly she had liked to punctuate the evening's pleasures with a few discreetly spaced pink cocktails in tall-stemmed glasses. This was no longer possible and she did not particularly miss them.

She was prompt at the rendezvous, bursting with the news she had to tell Wilcox about the passenger he had deposited near Madame Helen's shop that morning. It was an odd happening all round. She and Wilcox had experienced a sudden attraction for each other at a dance where they had met some months before. It had lasted through that one evening and then they had happened not to see each other again until that very morning.

Wilcox, less preoccupied than his passenger, had soon become aware of the female loveliness so advantageously displayed in the window across the way. Also, the young woman seemed to resemble someone he knew. He regarded her attentively. His scrutiny was observed by the lace maker. She stopped demonstrating, puffed her hair out over her ears and powdered her nose as she had done—though without results—for the Honorable Terry. This time she did not reap indifference. Wilcox descended from his box seat and strolled across the street.

"Gee, it's that little girl I met with Walker and his wife. What was her name, now?" "Some peach; this is luck," and similar phrases said themselves under his breath as he approached the shop.

It was a small arts-and-crafts place—very arts, crafts and handmade, where the uglier crocheting, tatting, weaves and stitches of our Puritan grandmothers are revived and propagated. Wilcox, in whom timidity was not an outstanding feature, jauntily entered the shop and thrust his head between the curtains that draped the back of the show window.

"At last!" he exclaimed. "I've been looking for you for three months. How's the Walkers?"

"Why, Mr. Wilcox!" said the young lady, looking extremely surprised.

A majestic woman with hair as black as a beetle and a horn-rimmed pince-nez on a thin hooked nose—not a Semitic nose—bore down upon them. Meanwhile Wilcox went on:

"How are you on the shimmy now, beauty? Good for a bout this evening?"

"What is the meaning of this?" said the black lady with the beak, tapping Wilcox's arm.

Without withdrawing his head from the curtains Wilcox took her hand and squeezed it.

"At seven, then?"

Mamie nodded. "Yes. You must go away now."

Wilcox, emerging, shook the hand he held, formally.

"Pleased to meet you. Yes, I'll be delighted to call again," and leaving the manageress spluttering with rage he strolled into the street.

He settled himself on the front seat of his cab and tilted his cap over his eyes, thinking of the nice little bank note slipped to him at the station by the Honorable Terry. It would help a great deal on the party and he hoped it would be duplicated when the young man had finished with him. Time dragged and it began to seem to him that his fare was taking an unnatural time about whatever he was up to. Wilcox got down, searched, investigated, waited, and was at last forced to the conclusion that he had been abandoned. He was indignant.

"The dirty sucker! He cleared out, by golly, and stood me up for my fare! I'll get him."

His grievance stuck by him all day and he poured it at once into Mamie's sympathetic ear. It wasn't the money—he didn't mind that so much; it was the idea of a by-Jove Englishman putting something like that over on him.

"Well, wait till you hear what I've got to say about your Englishman—only I didn't know he was English," she said. "Say, I've been interviewed by a detective to-day."

Wilcox was interested.

"Detective! Well, I hope it ain't one of those co-respondent stunts you're mixed up in." He winked.

"Smarty," she returned, simpering. "You better not get too smart; you may get mixed up in something yourself, driving crooks round."

"Crooks?"

"Yes, crooks. There was a robbery committed in Helen's place across the street about five minutes after you was talking to me, and I just about saw it done."

"Come off!"

"If you hadn't taken a nap on your front seat you'd have seen it too. I saw that party you drove walk past the shop, look in the door and windows and then dodge inside. In about a minute he dodged out again, puttin' something in his pocket, and sneaked round the corner. I didn't exactly think he was sneakin' then, but now that I look back, and knowin' a purse was stolen ——"

"By gee, is that on the square? How'd you get on to it?"

"Why, a detective came over this afternoon and interviewed me, as I'd been sittin' in full view of Helen's shop all day. He's workin' for the woman whose bag was stolen."

"Who is she?"

"Don't know. He didn't say, of course, and the girls at Helen's won't tell—she don't want anything to get into the papers. And she's offered a thousand dollars' reward for the purse."

"Honest? Say, I could use some of that thousand."

"Well, go to it. You've seen the guy, and the detective ain't. Besides, he don't know he's English—thinks he's a New York crook—one of the regular ones."

Wilcox, practically born and literally brought up on the sidewalks of the Tenderloin, possessed in ways and to an extent he himself did not realize the wisdom peculiar to city pavements.

"Then the detective's a nut," he observed.

"Why?" She was piqued. He was her detective and she was proud of him.

"If he says that fella is a professional crook; because he ain't."

"How do you know?"

"I don't know how I know, but I know. He may have stolen a few gold bags off Helen's, but he's no regular thief. Take it from me."

And in view of the hunting instinct that dwells in every male bosom, and more particularly in view of the thousand-dollar reward, Wilcox resolved to keep an eye peeled for a tall Englishman with pink cheeks who was not a professional crook.

When Dougherty had finished his examination of the premises where the theft had taken place and had interviewed the girl across the street he went off well satisfied, especially satisfied with the interview. He admitted to himself that that interview was a clever stroke. It summed things up very neatly. A man, tall, handsome, even distinguished-looking, arrives in a taxi. He is well-dressed, has a nonchalant, man-of-the-world air—unquestionably, just as Dougherty had thought, he is one of the big boys. He is seen to pass the shop twice, then pause, look through the window and at last, at the exact time the robbery must have taken place, to enter the place. Almost immediately he returns and slides round the nearest corner. It seems to Dougherty a perfectly clear case.

The question is, What criminal corresponds to t accurate description he has obtained of the thief?

Dougherty betook himself to a joint he kn occasionally visited on Fourteenth Street and some near beer. He tipped a wink to the rat who him and told him to bring one for himself.

"Aw, I don't drink that ditch water."

"Well, sit down anyway."

The other looked about nervously.

"Don't be afraid of sitting down with me. None fly fellas's afraid of old Dougherty, not yet a Besides, there's no one round."

The rat sent his shifty glance about the room mo habit than anything else, for the place was emp toward an inner doorway. Then reluctantly he sa

"Say," observed the detective, eying the ugly, utterly unregenerate and unredeemable face him, "I don't envy you your job—both sides of the

"Shut up," whispered the other.

"There's nobody here. Don't sh-h me like t makes me nervous."

"You go to hell," suggested the other, about "What d'ye want to do anyway? Get me in wr good?"

"Sit down! You and me know a couple of thin don't forget it. I'll leave things lay with you the wa is now if you don't get gay."

The young man settled back in his chair s twitching at his nose.

"Now, who's in town?"

The boy, leaning close to Dougherty, spoke soft rapidly.

Suddenly at the mention of a certain name the de experienced a thrill of triumphant certainty.

"It's him!" he said to himself. "Queer I didn't t Nifty Harry before."

But he was careful not to let the boy suspect that any more interest in one name than another. He wish to run the risk of a betrayal. Nifty Harry! Dou recalled him—tall, well-dressed, fine-looking in a wa a small blond mustache and a certain air of breedi

As he left the place he reconstructed the drama morning. Harry, so the rat said, had come into Ne that day by the morning train. He had seen the wo the parlor car—Harry always traveled in style spotted the purse, followed them to the shop and the loot. It was absurdly simple. A dizzying exu laid hold of him. By golly, Dougherty had done it Put something over on one of the big fellows, ma everlasting name and pulled down the reward, would be duly credited to Mrs. Dougherty's account savings bank. Nothing left to do now but get some the job with him and run Nifty Harry to earth.

Sylvia was going to be late to lunch. It was tunate, because her aunt liked meals to be on Besides, Mrs. Hornaday Pott, Mrs. Dillingsby sister-in-law, and her two earnestly uninteresting ters were lunching with them, after which they going to an opera matinée. So Sylvia told Thompk hurry, and when they got into the clearer spaces Forty-seventh Street he shot ahead.

She was much bored. The prospect of lunching wi superb Pott sisters-in-law and the Pott cousins was some. Also the prospect of a Wagnerian matinée w heavily. Meanwhile the canary-colored spring su gilded the day, odors of spring found their way in shining, tan-upholstered, plate-glass cupboard refer as the town car, and Sylvia yearned to be told that sh beautiful and, if possible, to be kissed.

At Fifty-seventh Street they slowed down for a cr and her cousin Dickie Bateman's roadster overtook and slewed round the corner. It rushed eastward and instant had disappeared, but Sylvia's was a seeing ey in that instant she had discerned that Dickie was d and that by his side sat no other than the young En man whose admiration for herself had so greatly enli the journey to New York.

Sylvia was used to admiration, could recognize it folded at a distance of a hundred yards—and neve enough of it. She liked Englishmen and had though one of particularly beguiling appearance. Indeed sh thought of him a good deal since the previous da regretted that they would in all probability never But if he was a friend of her cousin Dick's this proba was greatly diminished. It was awkward that D should not be on speaking terms with Mrs. Dillir Pott—or, rather, that Mrs. Pott should not be on spe terms with Dick, owing to a perverse evening when h tried to persuade her that socialists should not all be up and shot at dawn, a conviction which Mrs. Pott ished determinedly. So he was not in favor. Howeve that could be changed. There must be a way. And b Sylvia sat down to the lunch table she thought she found it.

Mrs. Dillingsby Pott and Mrs. Hornaday Pott intimate friends and disliked each other extremely.

er much time together, perhaps on the assumption that e my in the hand is better than one concealed behind a gengaged in hidden activities. If Martha lost ten uls Jane banted. If Jane dined an ambassador Martha d a prince. It was a tea for a tea and a ball for a ball. set Jane's two plain daughters Martha took to her- e beautiful niece, and knew she had scored.

T rival ladies faced each other at lunch, both short of a, condensed as to figure, with powdered dewlaps, e eyebrows and prominent eyes, intent on the content t dishes offered them. Then into the placid pool of armed neutrality Sylvia cast a small pebble:

"y the way, Aunt Jane, what is the name of that rly smart young Englishman who's visiting Dick nan? They say he's a great swell."

At Jane looked up from the lobster mousse she was g into and regarded Sylvia with surprise.

"eally? I didn't know there was any such person. ctia, you saw Dick on Saturday. Did he say?"

"o, mamma. Dick never does say anything to me."

"ow do you know he's visiting Dick, Sylvia?" said s Dillingsby Pott reflectively.

"eavens, everybody knows. He'll be the rage, I sup- and we'll get so sick of him. The idea of an earl or a ris puts some women off their heads. I think it's ou. By the way, have you and Muggsy decided one out together?"

T great ladies Pott made no further reference to 's pebble, but the ripples eddied across the pool and ld two letters of invitation into Dickie Bateman's r that evening.

During the afternoon Sylvia's Aunt Martha had ob- vd casually, "I suppose, Sylvia"—she sighed—"that is mother's sake I ought to be more lenient with cl Of course he's a dreadful trial, but he's had his sc now. I hope he realizes he's had his lesson."

"n, yes, aunt."

"don't want to let down the bars too suddenly or he y ot realize that he has had his lesson, but we might ri him formally. We might have him Friday night."

"es, aunt."

Fm her writing table Mrs. Pott observed: "Did you r had some man stopping with him, my child?"

"es, aunt."

"ell, he might as well bring him along. We're short m, as usual."

"By the way, Selwyn," remarked Bateman when Terry ml up at his rooms next morning at the hour when a ang gold liquid might be expected to gurgle into a thin med glass, "how are you on dining out Friday?"

"hat's offered?"

Th honorable one bestrode a small chair and tossed his t atly onto a bronze head of Sir Walter Scott.

"tnall dinner party of thirty given by Mrs. Hornaday ttor His Excellency the Honorable Signor Something Cher, ex-prime minister, and a Rumanian princess o—"

"I say, old son," interrupted Terry, "you're not ics?" He looked frightened.

Dkie laughed.

"ell, we've got another chance. Mrs. Dillingsby Pott ilwise gathering about her a few friends." He glanced th note in his hand. "On Friday at eight, an informal n of twenty-eight ——"

"hat the deuce do they come bothering us ——"

"e don't have to go, you know; only it might be ung. Aunt Martha makes—like yourself—rather a elty of pretty women. She can afford to because her n we lamb is prettier than any of them; whereas ar unt Hornaday Pott picks on celebrities and excludes at whenever she can, the little Hornaday Potts having enlightly marred in making."

"I say, are these persons with the astonishing names nations of yours?"

"ey are."

"won't have to remember 'em, will I?"

"uite unnecessary to remember anything except to go hton the cocktails and save it all up for the Burgundy d ampagne. Old C. D. P. has a cellar furnished en- el with museum pieces. The high spots of the last recenturies' vinting, my boy."

When Bateman had been handed the respective missives m his respected aunts the night before he had been ld amused.

"he old bloodhounds! They can scent prey from here Africa. Of course it's Selwyn; but how the deuce ——" And how it had brought Aunt Martha round, and Dickie s ad of that. He liked to be able, when tired of look- g a dreary world, to drop in and rest his eyesight by k g at Sylvia.

"shall accept, then, for self and friend—providing, of ur , that you are still at large by Friday night. No m unications from the police yet?"

"op rotting—it gets on a chap's nerves. Why the ud don't you think of something for a chap to do about 's your bally old town."

"Go on," said Dickie, laughing; "gently shift the responsibility for your grand larceny on my broad back. Have you watched the advertisements?"

"Yes. Not a beastly word in them."

"I wonder why the old bird doesn't advertise. Got a detective on it, I suppose, and they're trying to play some deep game. Oh, well, cheer up. We'll probably hear something extremely unpleasant from it before long. Have another?"

"Cheer-o."

Terry was less blithe about his adventure than he had been. The continued possession of the bag annoyed him. He didn't want it and felt as though someone had mischievously forced it upon him. Besides, he dreamed of the violet-blue eyes—he had decided on violet-blue—and despaired of ever looking into them again.

To cheer him up Bateman arranged a dinner, theater and supper, followed by a little game with some men, who were, he thought, of a temper to dispel the faint gloom that at rare intervals invaded Terry's serenity.

The evening was a perfect success. When Terry wakened the next afternoon he found a message from Bateman saying that he, Dick, was out of town for the day, but would be back in time to pick him up and take him to the dinner.

After breakfast Terry passed into the Avenue for a stroll before teatime. As he was passing a jewelry store it occurred to him that the fastening of the stolen bag had become loosened. He dropped into the store and showed the purse to a clerk.

"You'll have to take it to the repair department, sir." The clerk, who was young and somewhat inexperienced, turned the bag over and over in his hands almost tenderly. "Odd you came to me. I sold it to Mrs. Cadwalader D. Pott myself."

Terry's cheek blanched. For a moment he was speechless. After the days of uncertainty to have the owner of the bag revealed to him in this casual fashion was almost more than he could bear.

He cleared his throat and steadying his voice with an effort he said: "Quite right, quite right. Er—by the way, do you happen to have Mrs. Cadwalader—hm"—he had forgotten the rest of her name—"her address about you? The beastly number has slipped my mind."

"Yes indeed, sir. I'll just make a note of it for you." The young clerk produced a beautifully sharpened pencil from his right waistcoat pocket and a cardcase from his left waistcoat pocket. Drawing the sharp pencil point through his own name he turned the card over and with a flourish wrote the name and address of Mrs. Cadwalader D. Pott.

"Thanks awfully, old chap; no end obliged."

Terry seized the card and made for the nearest door. He did not connect the name he had just heard with the names of Dickie Bateman's aunts. Most American names struck him as being fabulously odd and he didn't try to remember them. Clutching the card tightly in his hand he rushed to the curb, looking up and down the Avenue for an empty taxi. The traffic was held up for the moment and there were several cabs among the crowd of vehicles. Just then the driver of one of them turned round and Terry signaled to him excitedly. Strangely enough, his excitement seemed to be shared by the man on the box. The policeman released the traffic, but the cab did not start.

At the sight of Terry, whom he recognized instantly, dismay, triumph and panic laid hold of Wilcox. The prize was in sight, but what was he to do? He had a fare, the policeman was waving to him angrily to be gone. He did not dare jump off the box and leave the car and the passenger in the middle of the street. And yet he found himself utterly incapable of driving off and leaving the thousand-dollar reward standing on the curbstone. He compromised. Without actually summoning Selwyn he reached back and opened the cab door. Terry precipitated himself upon the taxi and climbed in. He shouted an address to the driver and had closed the door before he noticed that there was someone else in the cab.

"I say, I beg your pardon. I thought the thing was empty. I'll get down straight off."

"Don't think of it," replied the other passenger. "We're going in the same direction, I believe. If you don't mind there's no reason why we shouldn't share the cab."

"Thanks awfully. Quite sure it's all right?" said Terry.

The other smiled. "Oh, quite."

They glanced at each other for a moment. They were not, generally speaking, unlike in appearance, though a second glance would have revealed a thousand subtle dissimilarities. The stranger was well set up, fair, with a high color and small light mustache. But his clothes fitted too well. His shoes were a trifle pointed; his tie, though correctly subdued as to color, made itself felt in a way the Honorable Terry's did not. His manner, too, was smooth with a blandness that caused the voice of instinct, deep within the Honorable Terry, to murmur "Bounder."

The young man made an occasional remark, to which Selwyn replied civilly. Presently the former tapped on the front window with a light stick he carried.

"I'll be getting off here," he said, taking some bills out of his pocket to pay the driver.

Terry protested, and the stranger tactfully put up his money and thanked the Englishman. He bowed somewhat elaborately, closed the door and disappeared.

"What was the number, now?" questioned Wilcox, turning round and gazing keenly and gloatingly at Selwyn.

"Seven hundred and nine," the latter answered, trying to memorize the name, Mrs. Cadwalader D. Pott. As usual he did not try to formulate a course of action. As usual it would not have occurred to him to try. In lieu of this he experienced a feeling of hurry—as if the house and all it contained might recede like a will-o'-the-wisp before his grasp if he were not quick about it.

He ran up the white marble steps and rang. Almost at once the glass door with its handsome grating of wrought iron swung open, revealing a stout person in black clothes. This individual propelled a rheumy eye over the visitor. It was a knowing eye, however, and as it advanced the butler's haughty face relaxed.

Without waiting for Terry to speak he observed: "The ladies are at home, sir."

Terry followed him into a vast marble hallway and thoughtlessly taking a card from his own case gave it to the man. The card read The Hon. Terence Algernon Pigot Bellamy Selwyn. The butler, with his boiled eyes respectfully gazing at nothing, read the card with deep approval and unctuously withdrew.

Terry rejoiced exceedingly. "The ladies are at home." Ladies—that meant both of them. He was to see her at last. He would look once more into those devastating eyes, upon those parted lips. He would touch her hand perhaps. Mechanically he thrust his own hand into his pocket, seeking the bag. But it was the wrong pocket. Odd—he thought he had put it there. He felt in the other one, and this pocket too was unaccountably empty. Hurriedly he rummaged in all his pockets, slapping them, thrusting his hands over and over again into the same ones. There wasn't the slightest doubt—he did not have the bag.

A feeling of panic overcame him. What on earth could he say to Mrs. Pott—providing she received him? How explain his presence in her house? He had never heard of her or she of him. What possible excuse could he invent for this intrusion? Terry was not good at inventing, and he knew it. Moreover, he admitted to himself that the loss of the bag was a bit thick. It made things awkward, there was no getting away from it. It was inconceivable how he could have lost it. He couldn't have lost it. He had put it in his pocket at the jeweler's and got immediately into the taxi. Then it came to him quite clearly that he had been robbed. That smooth chap in the car was a pickpocket and had neatly transferred the fatal purse from Terry's possession to his own.

An overwhelming desire seized Terry to be gone before he should have to face the owner of the bag. She might be down at any moment now, and he emphatically preferred not to be there when she arrived. He looked about for a way of escape. He dared not try the front door. It might be locked or there might be half a dozen footmen lurking about the hall who would intercept and detain him. Perhaps a window—— But at that moment the approving butler majestically appeared.

"Madame will be down presently. Will you step this way, if you please, sir?"

They walked the length of the black-and-white paved hallway and then Terry was shown into a sort of morning room looking out on a bit of green. The room was filled with flowers, chintz and easy-chairs, and one of the French windows was open. Simpkins the butler pushing his large stomach before him receded slowly and Terry was left alone.

Three steps took him to the window and one stride negotiated the low railing and shallow marble balcony. The yard was surrounded by a high cement wall topped with wicked fragments of broken glass, but luckily the iron door in the wall was ajar and Terry slipped through it into the alley, shutting the door behind him.

A moment later he boarded a Madison Avenue car, southbound. With a somewhat dazed expression he sat down and drawing a fine ribbed handkerchief from his sleeve painstakingly wiped the moisture from his face. It was some moments before he collected himself enough to be visited by any ideas worth recording.

"Terry, old son," he said at last, "you came a bit of a purler just now, you know. You've made a bit of a mess of things, you know. Now why the devil did you send up your calling card, for instance? You know you're messing about with a different name. Then the taxi. When the chap gets fed up on waiting I dare say he'll go to the house and make no end of a row. Confounded bore, losing that purse—just when I was about to see her."

He brooded over this grievance for several blocks and wondered whether she would have come down and what she would have had on. Would she have acknowledged having seen him by a word or a little smile? She was adorable.

Terry ordered a substantial tea at his hotel, and then, unable to think of anything else to do, with Dickie unavailable, went to his room and lay down sulkily.

"I shall have a rotten time waiting till eight o'clock," he said to himself. "Nothing to do but worry my bally head off about that purse. I never wanted the beastly thing."

In a few moments he was asleep.

When his wait began to prolong itself beyond a reasonable time a horrible fear visited Wilcox that he again had been, as he put it to himself, stung. The joy he had felt in stumbling on the man he was looking for had not obscured his caution. He had kept a sharp lookout on the house and all the exits he could discover, so he had every reason to believe his fare was still in the house. Yet, he thought it wise to make sure. Climbing in his turn the marble steps of the Dillingsby Pott mansion he rang the bell. Simpkins, melancholy in his black clothes, with his pot-belly and receding bald forehead, opened the door. On seeing Wilcox his face assumed mechanically a look of hauteur. But Wilcox was not the man to be intimidated by a butler.

"I want to know," said Wilcox, "how much longer that Johnny I brought up here is going to keep me waiting."

Hauteur gave place to perturbation on the countenance before him.

" 'Oo d'ye mean?" he said in a low voice.

"I'm talkin' about the Honorable Lord Lightfinger I let out in front of this house a while ago."

"Lord Lightfinger?" said the other dazedly. "Is 'e a lord?"

"Never mind that. What I want to know is, is he still here and how much longer does he expect me to wait?"

The butler eyed him silently, doubtfully. At last his desire for expression proved too strong for his natural reticence with persons of inferior social scale.

"'E ain't 'ere and God knows where 'e is. I don't."

Simpkins closed his eyes and made a sweeping gesture with his hand as if the recent visitor had soared up a chimney. He sighed deeply and shrugged.

"Say," said Wilcox, restraining himself with difficulty, "this is a matter of dollars and cents with me. He owed me money, that fella. Now where is he? Where'd he get out?"

"Cook thinks over the back fence. The madam is in a boil about it, I can tell you. What she said to me no gentleman would stand, much less an upper servant. I was obliged to give notice."

Wilcox stared at Simpkins without particularly seeing him. He reflected. It was no use bemoaning what had happened or speculating on the behavior of the enigmatic individual he was after. The point was, what to do next.

"Do you know this guy?"

Simpkins wordlessly signified that heaven forbid.

"Well, do you know his name, even?"

"'Is card read," replied the other, lowering his voice to a still more portentous undertone—"'is card read, Hon. Terence Algernon Pigot Bellamy Selwyn."

"Any address?"

"No, but I gather from what I 'eard 'em say before they knew 'e'd cut and run, they thought 'e was someone visitin' Mr. Richard Bateman, 'oo lives at the ——"

"Oh, I know where Dick Bateman lives," said the metropolitan Wilcox. "Well, so long."

Simpkins watched him depart in unrelieved gloom. This had been an evil day for him and he mentally characterized the lady who so unjustly had turned on him, Simpkins, for the extraordinary behavior of her crazy guest, as a 'owling, cankerous she-dervish and 'ell-cat.

However disastrous the day may have been for Simpkins, it had been a glorious one for Dougherty. Early that morning Nifty Harry, who since the day of the robbery had utterly disappeared, had been located in Brooklyn. He had then been tracked to New York. Dougherty himself had got on the trail and had followed him up Fifth Avenue that very afternoon. It had just been a question of stretching out his hand and grasping his prey when someone had blundered. The man driving Dougherty's car had, somewhere along the line, substituted another taxi for the one Nifty Harry was occupying and taken Dougherty and his companion on a wild-goose chase halfway to Yonkers. This had been a bad setback, but Dougherty was by no means discouraged. He scattered a few more men about the Tenderloin, and occupied a strategic position himself. It seemed inevitable that the fish, and a big one at that, should swim into his net during the evening.

If there be anything in the theory of vibrations the perturbed thought waves that converged about the Dillingsby Pott residence that evening must fairly have hummed with violence. There was Mrs. Pott herself, disturbed and annoyed by the unprecedented behavior of her mysterious visitor and her trouble with Simpkins, a butler rather near to her heart; Simpkins vibrating with a sense of unspeakable injury as he moved, a presiding deity, among the napery, silver and flowers; Sylvia, throbbing with expectancy. There were the long-distance waves of Dougherty as he gradually drew his net about the audacious Harry; of Wilcox, shadowing Dickie, trailing his taxi from the club to the hotel where Selwyn was stopping, and then up the Avenue to the very door of the Pott dwelling—Wilcox, with a detective beside him and a warrant for the arrest of the Honorable Terry in his pocket, a little uncertain how to act and palpitating with excitement and the hopes of gaining, the fears of losing the unbelievable sum of one thousand dollars.

Last of all, Terry himself. When he followed Bateman into the familiar black-and-white marble hallway and became appallingly aware that his hostess of the evening, Dickie's cousin, must be the owner of the purse he had taken and would now be incapable of returning, and of the house which he had visited and departed from in a fashion so singularly unrelated to what—conventionally speaking—is done. He had omitted to mention this escapade to Bateman during the drive up the Avenue. His ingenuity was not equal to putting the episode in quite the light in which he would like to have Bateman see it.

Mrs. Dillingsby Pott, crowded into a reënforced casing of white satin and steel, stood before a high pink-marble fireplace. Tapestry ladies and gentlemen, mounted on fat horses, followed by thin dogs with thin tails curled in a perfect loop, pursued elusive stags over the wall. The room was not a comfortable one, it opened too widely onto the hall, but the tapestries were so extremely rare, antique and costly that she felt they must at least once in a while be looked at. Dickie Bateman was standing beside his aunt.

"What did you say his name was?" she inquired, regarding Terry with her sharp choleric eyes. "I don't seem to be able to remember anything, I've had such an upsetting day. A dreadful man came to call and then jumped out of a window and ran off!"

"What?"

"Yes, such an extraordinary occurrence. Some person calling himself the Hon. Terence Selwyn."

Dickie blanched.

"Some mad Englishman or other, I expect. At first I thought he might be your friend, before ——"

"Heavens, no!" Dick regarded Terry uneasily.

"That, on top of detectives, and losing my bag at Helen's ——"

She continued to speak, but Dickie no longer heard what she said. A great light had broken on the situation. The rum old party with the pug nose was his Aunt Martha, of course. Who else could she have been; and what other girl than Sylvia would drive a man to such lengths as Terry had gone to? But what had Terry been doing jumping out of windows, and why hadn't he returned the bag if he had really been there?

Just then Simpkins approached ponderously.

"A telephone message, sir. They say it's important."

Dickie followed him from the room.

Selwyn was among the group of people surrounding Mrs. Dillingsby Pott. On the outskirts of the group stood Sylvia, slender in harebell blue, incredibly beautiful, it seemed to Terry. His eyes were on her and an intoxicating warmth stole through his veins, his ears hummed, his head swam. He was about to make his way to her side when Mrs. Dillingsby Pott wanted to know how he liked America.

Before he could reply, however, an unprecedented complication rose.

As has been said, the tapestry room opened widely onto the hall, and at this juncture a commotion, a thing without parallel in the history of the Pott household, rose in the vestibule. Above the hushed and scandalized p tests of two footmen who had been standing there rose voice of Wilcox, loud in defense of the law, and firm w the determination of a man who sees a thousand dolla mere arm's length before him.

"He ain't goin' to get away from me again, I tell y I don't know who he is—he calls himself Selwyn here another name at the hotel—or what he is, but I know stole a gold bag full of money and jewelry ——"

A scandalized silence was upon the tapestry sal Terry's face flushed and he looked anxiously about Bateman. But Dickie had not yet returned from the t phone. The sound of a struggle was taking place, and t Wilcox, with his collar loosened and his coat torn, b into the hall. Acquired momentum carried him to wide doorway of the reception room.

"There he is!" he exclaimed, selecting Terry with accusing forefinger. "I don't want to make a scene, you dodged me twice, you know."

Simpkins, who stood near him, basking in the scene, emboldened at this moment to interrupt.

"'E's the fella that jumped out of the window, ma'a

The footmen had left their posts, too, and were gap curiously. But the kaleidoscopic drama could not l remain at a standstill.

Dougherty arriving at the Pott dwelling and finding front door open entered just as Wilcox was saying accuse you of stealing a purse out of a dressmaking —

"I guess there's some mistake here."

This new voice startled the already bewildered part pants in the scene. Wilcox whirled about and Dough passed him as he entered the room.

"Excuse me, ma'am. I wouldn't have intruded this myself. I don't know"—this with fierce sarcasm—" this amachoor dick is, but he must be crazy."

Wilcox started explosively to speak.

"Ma'am"—Dougherty with complete assurance him off, and pulled a glittering trinket from his pocke "ma'am, is this your bag?"

"Cadwalader!" she cried weakly.

Mrs. Dillingsby Pott could cope with any of the thi that were done, but that a scandal and a scene should taking place in her inviolate sanctuary was too much she succumbed and became for the first and last tim clinging vine.

"Is that your purse, Martha?" said Dillingsby P sharply.

"Yes, it is," Sylvia answered for her. "Where did get it?" She had moved across the room and stood n Terry.

Dougherty smiled. "Just where I expected to; in pocket of the smartest crook in New York, ma'am. T call him"—he spoke it unctuously, bursting with prid "they call him Nifty Harry. He's having a cozy suppe the lock-up just about now. I just thought I'd come ro for you to identify the bag."

"Now that's very odd," exclaimed Terry with inter "You see ——" But Sylvia felt impelled to stop h laying her finger on her lips.

"You may have got it off him," exclaimed Wilcox terly, "but this here fella took it, and I can prove it."

"Outrageous!" exclaimed Sylvia. "Do you know this gentleman is?"

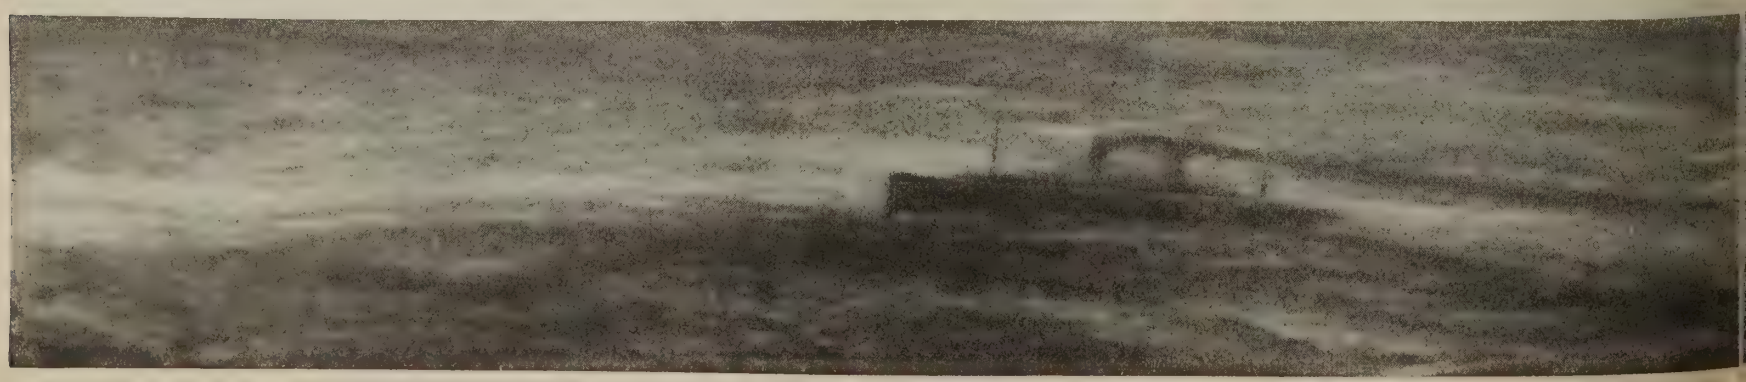
"Do you?" retorted Wilcox. "He's got two names t I know of already."

"And as a matter of fact," observed Dickie Baten jauntily—he had come back unnoticed—"he has just cc into another—name, I mean. Terry, old boy, it's con lences and congratulations too. I've just had it over telephone, a cable sent on from Vancouver. My frier owing to the regrettable decease of an aged person England I have the honor of presenting to you the Duk Worretsdown and Baron Contreville."

Late that evening Terry, weakly reaching for the sipl in his friend's room, observed: "It was a bit of a near th for a moment, Dickie, old son. We were jolly near com a purler. And if you don't mind lending me a bally bl check I'd like to write one out for a thousand dollars."

"In whose favor, if I'm not being indiscreet?"

"I can't let that taxi chap miss the reward, you see. wouldn't be cricket."



Ain't Men So Transparent?

By Everett Rhodes Castle

R. CALPHUS TIDD worked in a very large bank in our thriving metropolis of Bigburg. You will know hus at once. He was a 1902 model done in shiny er-and-salt gray with a steering arrangement that hed to and fro like the tail of the old roan mare. cked door-opening curtains, open plumbing and modern improvements—and mentally he still hard-rubber tires. Calphus was as mid-Victorian pearance as a sepia print of Athlone Castle by light, but in actuality and speech he tried hard to up with the snappy language and happenings of lay.

was a little man with the step and manner of a teacher, but he tried so hard to be brisk and y. Oh, so hard! For let it be known here and now within the withered breast of Calphus Tidd there d a vaulting ambition to show Mrs. Margaret hus Tidd that she had not married a man who in ense of the word could be termed what the boys in oan department were wont to refer to as "a dead " Indeed so great had the longing become that Tidd was gravely considering the necessity of ving away what he had always considered the e requisite of the banking business, throwing it to the four winds, and appearing the next morn- one of those snappy suits where the waistline is up round the armpits by a cute little belt.

was gravely considering it now as he sat clipping ons from a six-inch pile of Clover Hill City six per improvement bonds with a huge pair of scissors adwarfed him in comparison. At first the gleaming of steel clipped away briskly as Mr. Tidd consid- some of the more commonplace aspects of the situ- . For instance, one of those snappy suits cost y—at least—well, anyway thirty dollars. But a had to be up to the minute if he wanted to get in this world. That was why some of the younger of the department had gone over his head and y out of the department. There was Colson fifteen ago—and the coupons he was now clipping ged to Colson. He and Colson had started together, now Colson brought in a half million in bonds at a to put up as collateral. He was the president of the ring house of Colson and Company and people said he was the coming financial man of the town.

en Mr. Tidd smiled rosily. But he had beaten n. He had beaten the financial genius of the town, he proof of the pudding was at the Tidd residence now—probably beating flour into a piece of round for the evening meal, the flour and a certain leger- in of Mrs. Tidd's making it taste exactly like the est tenderloin. And he had taken that away from Jerome K. Colson! He smiled again, and in reliving moment of that triumph his fingers usually so nimble his mind usually so alert passed on to the second on—dated four months hence—and clipped it too ad of passing on to the next bond on the pile.

such fragile hairs as this does the destiny of man sway.

II

TEEN years before our story opens, as Miss Hen- etta Otis of the Bigburg Weekly Study Club would ce it, Mr. Calphus Tidd and Mr. Jerome K. Colson gan as file boys in the Bigburg National Bank. Each been graduated from high school, and in those days ns were rarely graduated before their twentieth birth- . One would think that these two youths coming from ame class in high school, sharing the drudgery of dusty e would cling together in mutual sympathy. But no in the bank were farther apart. When Jerome had cion to speak to Calphus it was with the condescension nar the Tent Maker addressing a rent in the canvas— exactly that.

t that it bothered Calphus—much. In the four years d grown accustomed to the greatness of Jerome K. n. Everyone at North Bigburg High had for that er, and his greatness and priority had become almost tter of course.

the first place he was a handsome boy. His long black lay back in a series of pleasant curly waves. He was all without the thinness of adolescent youth, and as a er he had been reckoned as the greatest thing the l had ever produced. In his junior and senior years d been captain of the football team as well as the r in the musical and dramatic clubs. And he always in funds. Only those who have gone without such things in high school can appreciate the tremendous of that word.

d then there was one more thing—it was the Colson . Gifted with gleaming perfect teeth as a basic ingre- , he had a way of keeping his mouth in a seemingly

There Was Something Regal in the Way He Distributed His Favors—First to One Girl and Then to Another

continuous smile of happy good nature. At all times it was in evidence, and Professor Tweedie even went so far as to refer to it in open class as "the reflection of a limpid soul." But of course on the other hand it was universally known that Tweedie thought there was only one pupil in the school.

Naturally enough, to the girls he represented a figure that took on all the glamour and prestige of a Greek god. And Jerome K. Colson knew it and acted accordingly. He never allowed one girl to monopolize his attentions. There was something positively regal in the way that he distributed his favors—first to one girl and then to another. People beyond the sap age marveled at the charming democracy of a football hero playing no favorites. Of course he did not forget that after all there were social lines—he did not spread his democracy to the point of inviting Ella Rigler, who lived over behind the Fourth Avenue fire station, to any of the affairs. But then of course nobody did—except Calphus, and who minded him?

Calphus had made his first social call in his senior year. As young men go now he was not a sartorial triumph—even as young men went then his little peanut cap resting precariously on the back of his head was not nearly so small and clever as that of Jerome K. Colson or some of the other lights of senior society. Neither were his trousers equipped with half enough peg—ready-to-wear manufacturers didn't believe in using cloth and Calphus couldn't afford Weeks, the tailor on Walnut Street. Necessarily it followed that the tails of his coat didn't begin to flare enough, nor could he have the flaps on his pockets cut in stylish curlicues plastered with buttons. Neither was his manner in the prevailing mode. He did not carry a box of Parson's best under his right arm, and his conversation bordered perilously on the monosyllabic.

But she did not find the fault with all this that some of the other girls might—girls such as Mildred Harmon or Dorothy Hawke. To them Calphus Tidd merely was a shy little youth who persisted in wearing light-colored satin ties. But to Ella, whose mother admitted that she was a trifle large for her age, he spelled opportunity. He called twice a week, varying his light-blue satin with embroidered cornflowers and the light pink plain.

At first Calphus was not irritated at the course the conversation inevitably took—he was merely content to sit and wonder at the figure before him. He was a dweller on the threshold of the big idea. For Ella loved to talk about Jerome K. Colson. She loved to ramble over the happenings of the day.

"Did you notice to-day in study period," she would inquire animatedly, "how he went over an' sat down beside Marjory Herrick? Do you suppose he likes her? An' did you notice the new way he has of brushing his hair—kind of from left to right without a part? Isn't it grand?"

"Uh-huh," said Calphus.

"Anyway, I think he is wonderful."

"Uh-huh."

"He smiled at me so nice on the way to Tweedie's class—honest, the way he is so pleasant to everybody!"

"Uh-huh."

"They say he's going to be one of the big men in town when he gets into business. Professor Tweedie ——"

And so it went on. Naturally when the class came to graduate Jerome K. Colson was valedictorian. Loud were the praises sung in his honor. And for the first time in his friendship with Ella—or his life for that matter—Calphus vaguely resented Jerome K. Colson and his smiling glory.

They were standing in the wings of the auditorium listening to his valedictory address. Miss Rigler was slightly to the fore, her ample arms crushing the roses, that had cost Calphus next to his last quarter to provide, ruthlessly against her bosom in the fervor of her admiration.

"O-o-h, ain't he wonderful!" she thrilled.

It had been growing upon Calphus. He did not like Jerome K. Colson, the idol of North Bigburg High. In point of fact, as his friendship with Miss Rigler progressed the name took on all the subtle irritation of a low fever. It had grown with each visit to the Rigler residence adjacent to the fire barns. Sometimes it almost unbalanced his judgment to the point where he wanted to shout, "Well, if you think he's so darn wonderful, why don't you go an' get him?"

He wanted to shout it as he stood there behind her watching his roses being crushed in a silent tribute to the wonderfulness of somebody else. Then with a rush the poisonous words came out:

"Shucks! He ain't so much!"

Miss Rigler turned in shocked surprise.

"Oh, Calphus!" she began.

And then she smiled—smiled as any girl from nine to ninety smiles at the first peep of jealousy. Then she added softly, "But there are others."

A warm glow suffused Calphus. All the way home he dilated on the whopping big business success he was going to be and how as a natural sequence a helpmeet would be ——

He stopped and Miss Ella Rigler did not get him to proceed for four years, and when she did it was because the experience of that night stood her in excellent stead.

We might just as well be plain in this matter of hearts and Clover Hill City six per cent improvement bonds. Miss Ella Rigler had decided deep in her motherly soul that Calphus Tidd was going to be her Calphus and acted accordingly, which to a woman's way of thinking is exactly opposite—if you know what I mean.

Calphus was bashful, though in later years Mrs. Tidd was wont to refer to it as retiring. During the three years Jerome K. Colson progressed to the post of assistant to the vice president who presided over the department, while Calphus climbed from the files to the ledgers. While Calphus was still clinging to his ledgers Jerome K. left the bank to go with the firm of Fraser and Luce, brokers.

"Isn't it funny," said Miss Rigler when Calphus told her lightly, as one successful wishes another the same, "the way Destiny seems to mark some people from the very beginning with the most wonderful gifts?"

"Uh-huh," said Calphus, vaguely irritated.

"Ain't it simply wonderful?"

"Oh, shucks!"

"And he was always so nice too."

Again the words trembled perilously near the end of Calphus' tongue, "Well, if you think he's so darn wonderful, why don't you go an' get him?"

Time passed—four years to be exact—and Calphus seemed to take his place as a fixture among the ledgers in the loan department. He was the same Calphus in personality, but he was growing grayer in complexion, toward the pepper-and-salt he had adopted as being of the proper conservatism.

Miss Rigler tried hard. She would often say naïvely, "Gee, but you must get lonesome living in that horrid room all alone!"

Calphus had lived alone since his father died the year before. Calphus said that he did—and said no more.

"Poor boy!" she would purr. "Nobody to take care of him."

"Uh-huh."

"Don't he ever wish ——"

A blush so maidenly, head down.

"Huh?" said Calphus.

That was the way it went. And so it went until the big idea came to Miss Rigler. She accidentally met Jerome K. Colson walking along Capitol Avenue, for all the world like an up-and-doing—and smiling—financier. Miss Rigler rushed over and grasped the up-and-doing Jerome by the hand and squeezed it effusively.

"Oh, dear, isn't it just like the old days," she gushed, "to be shaking hands again?"

Jerome K. Colson said it was—rather abstractedly.

They chatted for a time—animatedly on the part of Miss Rigler, abstractedly on the part of Mr. Colson.

"An' you must just come out an' see me," Miss Rigler finished, "an' we will have a nice long chat about old times."

Mr. Colson said that he would be delighted—sometime.

That evening she was slightly abstracted. Even Calphus noticed it after a time.

"What's the matter?" he inquired.

Miss Rigler sighed and her ample bosom heaved.

"It's nothing," she whispered. "Jerome Colson, he—he ——"

For a moment Calphus displayed an ominous silence.

"Well," he inquired finally, "what about—him?"

"He—he ——"

"Yes?" insisted Calphus masterfully.

"He—he asked to come over and see me and—and ——"

To Calphus marriage had always been an abstract proposition based on the day when he would be making plenty of money. To ask such a glorious creature as Ella Rigler to go along on his eighteen dollars a week seemed an idea utterly fantastic. But now the idea became deadly real. There surged up within his breast much the same overpowering that had prompted his outbreak at commencement.

"An' what did you say?" he demanded.

"I—I ——"

"Never mind what you said."

For the first time in all his life Calphus Tidd allowed his voice to rise above an apologetic monotone. In the crisis of his life he shouted in a shrill tenor:

"I don't care what you said! After all these years you an' me, why ——"

Within her soul the sunlight played, but her white brow showed clearly how surprised she was.

"Oh, Calphus," she whispered, "you never said ——"

And then before Calphus could say just exactly what he meant it was all over. He had meant to explain that as soon as he was improved financially he might—but her arms were about his neck and she was calling soft little names that made him blush and stammer.

"Eighteen dollars a week!" he stammered weakly.

"We'll live right here with father and mother," she cooed, and her eyes were as bright as the high lights on the cornflowers that adorned Calphus' satin tie.

We shall touch but lightly on the events and years that followed. After the elder Riglers had passed on to a bourn where fire bells never rang the young couple discovered that instead of a home they owned a first and second mortgage. Interest on these meant practically the equivalent of rent. And Calphus Tidd did not move ahead with the lightning rapidity characteristic of the young financial genius. In point of fact he seemed to lag. Calphus began to grow grayer and more precise. He took more to talking about the past than about the possibilities of the future. And then the soft voice of Mrs. Tidd took on a new form of irritation. Calphus grunted and nodded his head as long as he could. It had started by Mrs. Tidd's seeing Mr. Jerome K. Colson on Capitol Avenue.

"An' he was in the swellest new car! Honest, the brass alone on that car! It was green with a blue line round the top. It certainly must have cost a fortune."

"Zat so?" said Calphus indifferently.

"Success must be a wonderful thing."

"Uh-huh."

"An' to think that I—I had a chance ——"

That got to Calphus. He stirred uneasily and the evening paper twitched in his fingers. He flushed and he rubbed his thinning front hair with his free hand. He felt that he was growing very angry indeed. Then another thought stopped him. After all why should he, Calphus Tidd, be irritated? He had beaten Jerome K. Colson for the hand of Mrs. Tidd in spite of the Colson prosperity—even then transcendent. He had conquered! He softened.

"Aw, shucks!" he said.

But the thing persisted. It actually seemed incredible the number of situations that demanded Mrs. Tidd's mentioning the prosperity of Jerome K. Colson and by sighing inference the chance that Mrs. Tidd had let go by. Often the fateful words trembled on the brink of Calphus' tongue, "Well, if you think he's so darn wonderful, why didn't you take him?" But he stifled them down. What was the use? And then the way she had of sobbing. But the irritation did take one definite step. That was the step that included one of those snappy suits where the waistline is held up round the armpits by a cute little belt. This was to be the first step in the emancipation of Mr. Tidd. Then he was going to cease to be referred to as a has-been. He was going to take his place with the snappiest man in the department. He was going to be ——

He was and he didn't—that is, he didn't until the big idea in turn was visited on him himself, Mr. Tidd.

Mr. Tidd snapped a rubber band about the Clover Hill City six per cent improvement bonds and called the office boy, Raymond.

"Take these coupons over to Colson and Company," he directed, "and give them to Mr. Colson personally."

The boy took the package. Because after all Mr. Tidd wasn't so much in the loan department, he scowled.

"Say," he protested, "how do you get that way? In these big places they never leave you in to the big squeeze."

Mr. Tidd frowned severely.

"Never you mind!" he directed. "You do as you're told!"

"Rats!" said Raymond.

"If you don't," threatened Mr. Tidd, "you may find out how easy it is to have a large customer have you fired."

"Listen, Dandruff," jeered the youth, "how do you get that way?"

"Go!" commanded Mr. Tidd grandly.

Mr. Tidd watched the boy's laggard steps across the room—and there was no grandeur in his eyes. His thin hands grasped the huge gleaming scissors until the knuckles were white.

"Even the office boy thinks I'm a joke!" he whispered to the sheaf of bonds.

He shuffled the papers and glanced nervously at the clock. It was a quarter to five. He looked about the department whence most of the force had departed. Instead of being one of the last to leave he should have been the first. He should have been Force, the head, going out to play golf. Priority entitled him to that. He cleared his desk. A moment later he donned a ragged gray raincoat and a soft cloth fedora. Then he left the bank.

He always walked home, the Tidds now doing light housekeeping in three rooms in an old-fashioned brick house in Prospect Avenue. The rent was less than the interest on the old place behind the fire-engine barns. Their equity of six hundred dollars went into the Texas Gusher Oil Company. In this way Mr. Tidd was certain their old age would be taken care of—the interest amounting to twenty-four per cent a year. But a peculiar thing happened. Shortly after Mr. Tidd purchased the stock the dividend had been taken off temporarily and had never been resumed.

At first the blow had been softened by the hope that the two per cent a month would be resumed shortly. And with the cessation of dividends Mrs. Tidd's enthusiasm had died a quiet death. It had been her sharp eyes which first noticed the opportunities of Texas Gusher, but now she spoke of it as one who had acted against her better judgment.

"If we had only asked Jerome Colson's advice," she often whimpered.

"Oh, rats!" he had said.

"Some men," moralized Mrs. Tidd, "have such better judgment than others."

"It was you ——" Mr. Tidd had started with a rush—and then he stopped. After all he had signed the check for the stock—and after all he —— "Yes, m' dear," he finished weakly.

And Raymond had said, "Listen, Dandruff!"

Reflecting moodily on all this, Mr. Tidd moved slowly along. It was a cold drizzly evening in early November and the thin soles on Mr. Tidd's tan oxfords hugged the damp too close for absolute comfort. Beyond Ninth Street the bright lights of a haberdashery window caught his eye with their warm radiance. Unconscious now of the drizzle, he stood and stared at the center of the window. It was a mixture of light brown and green with the light green in irregular stripings. The waistline was high and the belt had one of those cute gun-metal buckles popularized on trench coats.

To Calphus Tidd, staring through the drizzle, the giddy waistline and gun metal spelled youth and the snappy things that went with progress and pep. It personified there among wild-hued silk shirts and futuristic neckwear the things that he, Calphus Tidd, never had. It visualized for him a picture that was pleasing, a picture that went something like this:

Calphus Tidd strode into the office. Lightly he tossed his hat and raincoat on a hook and made for his desk. He whistled lightly as the office stared. He called sharply for Raymond, and when that youth lingered he spoke sharply, as Force would.

"Get a move on there! What do you think this p is? An institution? Get busy!"

And while the office stared, Raymond did, mouth ag Then in the days that followed a change came over office force. No longer were they laughingly condescend They addressed him with a new note of respect. T asked him for advice—advice which he could give un ingly from his years of experience. They began to use prefix "mister" when addressing him.

And then Force noticed. He called upon him for g ance in a certain matter. Instead of agreeing with Fo idea for the sake of harmony he was firm, he was poli but Force was wrong. Out of his experience he said w He said it in a terse quick way as one whose time is v able, just as Banks, the vice president, might.

With a new note of respect Force agreed. Later called upon him, Tidd, again—and again. A momen matter of policy came up, and Banks, the vice presid was called in. For an hour they chattered back and fo Then Force called for Mr. Tidd. When he had finis explaining Banks broke in.

"Now if we only had a precedent ——" he began.

"You have," snapped Mr. Tidd. "Back in ninety-f a man named Robertson ——"

After he had walked away with the proposition set Banks whispered something else to Force. Later F called him over.

"I think we have been underrating you round h Tidd," he said. "Mr. Banks has suggested that you m across the desk here from me—to act in a sort of an a sory capacity."

A dripping umbrella came out of the semigloom tipped the cloth fedora over one ear. The wet brushed ear and he came back with a start. Then he made the n momentous decision of his banking life. He walked into store and pursued his way straight back to the cloth department.

"I would like to take a look at a suit like the one in window."

"The new Marchfalont model?"

"Er-r, yes," said Mr. Tidd, and blushed.

The clerk was a young man with sleek yellow combed straight back.

"This way," he said.

Mr. Tidd removed the damaged raincoat and the pep and-salt. The clerk held up the new Marchfalont mo Mr. Tidd slipped into it.

"Ain't that classy, Mr.-er-r ——"

"Tidd."

"Just notice"—the young man ran his plump hand Mr. Tidd's spare shoulders—"the fit across the ba Perfect!"

"Er-r, yes," said Mr.Tidd.

The young man decided that he had diagnosed the of Mr. Tidd.

"It makes you look twenty years younger."

Mr. Tidd smiled.

He remembered a story he had read once. It was ab a young man who had bought a dress suit and hov changed his whole life—or was it a movie?

"And that flare to the bottom of the coat—if you beat that for real dash ——"

"That's it," said Mr. Tidd eagerly—"dash."

"Sure!"

Mr. Tidd twisted back and forth before the glass.

"How—how much is it?"

"Thirty-seven-fifty."

With a gulp Mr. Tidd began to remove the fastenin the cute little gun-metal buckle.

"I—I guess I'll look round a little more," he said weal

The clerk had met many such cases, but mostly they been young men.

"I know it's high," he admitted, "but then if you s to consider that your credit is good here and you stretch the payment over a couple of months—in t time it will mean nothing to you."

The silken song of credit made the weekly pay envel nestling within Mr. Tidd's inner vest pocket, fastened the lining with a safety pin, seem almost opulent. Af all, if things went as he planned what would thirty-sev fifty mean to him? With twenty-four dollars in his poc Mr. Tidd held his head up in high hauteur.

"It isn't the money," he began grandly.

"I know," interrupted the clerk to whom the words a the rest of the sentence came quite by rote, "just a te porary need."

"That's just it," Mr. Tidd admitted.

"If you could give me a reference ——"

"Call up the bank." Mr. Tidd said it with the tone one long used to giving gilt-edged references. "May there is someone still about the loan department."

There was. They admitted that Mr. Tidd was in t department and that the voice over the phone was Farther than this they had nothing to say. But the cl was satisfied. He made out a long ticket.

"Could I take them with me?"

H morning Mr. Tidd reached the bank five minutes
d he shuffled nervously from the little cloak room
d is desk. Halfway across the room the voice of
ne to him:

"Mr. Banks wants to see you at once."

It was so unusual he stopped and gaped at Force. Some one snickered. A sickening sense of impending disaster swept over him. He tried so hard to be nonchalant as he moved across the room toward the door. In the office of the vice president he found Banks regarding him carefully. Mr. Tidd changed his foot.

"You have been with this institution a long time, haven't you, Mr.—er-r Tidd?"

Mr. Tidd nodded. It was his best at the moment.

"Therefore you know how ticklish a situation it is to have an influential customer condemning us for carelessness—er-r especially if he is also a newly elected director of this institution?"

Mr. Tidd brightened. He understood now. It had been just as he said. Raymond had broken the peculiar but steadfast rule of Jerome K. Colson regarding interest coupons.

"Yes, sir," he assented. "And I told Raymond to be sure and take them to Mr. Colson personally as are his imperative instructions." Mr. Tidd sighed. "But I am afraid the modern youth ——"

Mr. Banks shook his head.

"It wasn't that," he said. "In clipping the bonds the person who did it carelessly clipped one of the coupons dated February first and included it with the others—and I understand—er ——"

"Yes," said Mr. Tidd slowly, "it was me."

"I know it may seem trivial, because the coupon can easily be returned, but Mr. Colson is peculiar—and, after all, carelessness in a bank, Mr. Tidd, is practically criminal—no matter how innocent."

Mr. Tidd made some inarticulate assent.

"In fact," the vice president went on, "I had great difficulty in persuading Mr. Colson not to insist on your discharge and I thought that it might help things along if you went over to his office yourself and brought back the coupon—and er-r explained that you were sure it would never happen again."

Mr. Tidd nodded eagerly.

"I know Mr. Colson. He—we—went to school together."

"Good!" said Mr. Banks. "Mr. Colson is a fine man—and charitable."

Mr. Tidd got his hat and coat and hurried down the lobby to the street. A block farther up Colson and Company had their offices in the Metropolitan Building. He found the offices of the great Jerome agleam with mahogany and green-plush carpet. He gave his name and sat on the edge of a chair. Twenty minutes later he was ushered into the office of the great man.

Jerome K. Colson looked much the same, except perhaps that he was heavier and under his eyes little puffs of flesh had begun to form. But his mouth still gleamed.

"Tidd," he said, "sit down. What can I do for you?"

In a rush of words Mr. Tidd told him. During the recital Mr. Jerome K. Colson watched him closely.

"So," he said, "that was it, eh? Well, listen, Tidd! For old time's sake it will be all right. But listen"—the blue eyes above the little puffs of flesh grew suddenly cold—"if you or any other clerk in the loan department gets careless with my securities—there is going to be trouble."

Mr. Tidd nodded.

"Thank you, Mr. Colson," he said.

Mr. Jerome K. Colson watched the thin little figure move toward the door and a slight sneer wreathed his mouth.

"And to think that I might have been just like that—if I hadn't found ——"

IV

CHAPTER FOUR is tragedy pure and simple. Black tragedy that curled its ugly fingers about the little figure of Mr. Tidd almost before he had hung up his little cloth fedora. For hardly had he reached his desk when he discovered that the coupon had been lost! Wildly he clapped his hands against his thin sides; with frantic haste he searched first one pocket and then the other. But nothing availed. The coupon was gone!

He sank into his chair and his thin little face went as white as the papers before him. If Colson had been so unreasonable about the mere clipping of a coupon, what would he say if one was lost? And he had said there would be trouble if—with a tired little sigh he slumped back in his chair.

They could say he was a thief! That he had stolen the money too—to gamble with or something. He—he ——

The rest of the day was a haze. Mechanically he performed the routine tasks. Many times he tried to crowd his courage to the point of going to Banks and telling him. But he never could—he couldn't. He read the evening paper without remembering what he read, dreading to go to bed. When he did, under the acidulous suggestion of Mrs. Tidd, he could do nothing but toss.

Toward morning he sat bolt upright in bed. Why couldn't he have the coupon replaced? Why couldn't he write to the city clerk of Clover Hill City and explain the situation exactly? Surely there must be some way of arranging things of that sort! He sighed and for the first time fell asleep.

The next morning he wrote the letter. It covered three closely written pages and bared the troubled soul of Mr. Tidd to the bone. He mailed it special delivery, giving the number of the bond, which was one hundred and forty-six, and the date of maturity. He added the amount of the bond—five thousand dollars. Then he sat back and waited.

Mr. Calphus Tidd will never forget the agony of the next four days. The way he searched the incoming loan department mail for the letter from the clerk of Clover Hill City, the disappointment of finding—nothing.

And then the letter came. With fingers that trembled nearly beyond control Mr. Tidd fumbled with the flap of the envelope, and even with the letter itself before him the typewritten characters jumped and blurred. When they faded back into position Mr. Tidd read the letter:

Dear Mr. Tidd: We have your letter of the other day in regard to coupon lost from Bond Number 146 for $5000. We of course pay interest on lost coupons, providing a suitable guaranty, or security, is given in case the coupon should be inadvertently paid.

However, we feel that some mistake in the number of your bond must be made as Number 146 Clover Hill City sixes is listed and owned by Mr. Johnson Ames, a well-known citizen of this city.

May we not hear from you further on this?

Sincerely, S. J. RYAN, City Clerk.

Mr. Tidd stared at the letter and then ran an anxious hand over his brow. The bond from which he had clipped the missing coupon was certainly numbered 146 and it certainly was not made out in the name of Mr. Johnson Ames. It was made out in the name of Mr. Jerome K. Colson. He went down into the vault and opened the envelope. There were the bonds—Clover Hill City sixes—and there was Number One Hundred and Forty-six with the February coupon missing. With a troubled shake of his head Mr. Tidd went back upstairs and wrote an answer explaining the situation. He mailed it special delivery.

Late the next afternoon Mr. Tidd startled the office by receiving a telegram. The telegram announced the arrival of the city clerk by an early morning train to investigate what was probably a mistake in numbering. With acute grief Mr. Tidd realized that his further inefficiency was bound to come out; that after fifteen years of faithful service he would probably be kicked out in the street—a pauper.

To his mind a confession to Banks was useless—Colson was the only one who would help. With red eyes he thought of the only way out. He would have to throw himself again on Colson's mercy. He—he—she was right—after all he was nothing but a ——

He stumbled to the cloak room and took down the faded raincoat and the cloth fedora.

"I have to go out for a minute," he told the stenographer.

He had to wait longer in the anteroom of the great man this time, and when he was admitted his troubled eyes saw no kindness in the face of Mr. Colson.

"Well, Tidd?" he asked shortly.

"It's the coupon," began Mr. Tidd slowly. "I lost it."

"You lost it!" With a cry like an angry bull Mr. Jerome K. Colson shook his clenched fist in the face of the shrinking loan clerk. "You old fool! Do you think I am going to stand having my coupons laying about the street for any fool to—to—I'll fix you right now!"

With an angry lunge he grabbed the telephone.

"Get me Mr. Banks at the National!" he shouted.

Trembling like an autumn leaf, Mr. Tidd held out his arms in mute appeal.

"Please don't have me discharged!" he cried. "I didn't take the coupon! You won't lose anything by it! I wrote to the clerk of Clover Hill City and he said ——"

"What did he say?"

The face of the broker had grown suddenly white.

"He said you could get the interest just the same—only—only ——"

"Only what?" whispered Colson.

"There was some mistake in the numbers. The clerk says that Number One-forty-six is owned in Clover City—so he is coming here to make an investigation."

"An investigation!"

It was a gasp, but to Mr. Tidd, merged in the details of trying to save his job, the gasp and the clutching fingers passed unnoticed.

"Yes," he said, "he'll be here to-morrow morning."

Jerome K. Colson stood on his feet teetering to and fro like a drunken man.

"The clerk thinks it's a case of duplication," continued Mr. Tidd innocently. "An' when they go over all the bonds the mistake will be found. But—but what's the matter, Mr. Colson?"

"No—nothing." He reeled toward a door behind the desk. "Will you excuse me for a moment—Mr. Tidd?"

In amazement the befuddled Mr. Tidd watched the figure of the banker through the door and watched it close.

A moment later the room was filled with a deafening report. Clerks ran in; girls screamed and to Mr. Tidd it seemed as if the end of the world had come. In the midst

of it all the telephone on the desk jangled. Dazed, Mr. Tidd removed the receiver and said "Hello."

"This is Banks, Mr. Colson. You were calling me?"

"This is Tidd," a hoarse voice whispered back. "Mr. Colson just killed himself!"

v

CHAPTER FIVE is the kind of chapter that every scribbler of fiction loves to write. It is filled with satisfaction and "I told you so's," and also because it is the last. There are many ways to write it, but none is quite so succinct as the account in the Morning Telegram. For that reason we give it verbatim, but much of the glory is lost because the picture of the suicide, the scene of the suicide and the hero of it all can only be imagined:

BANKER CAUGHT IN SWINDLE KILLS HIMSELF IN OFFICE

Jerome K. Colson, head of the brokerage house of Colson and Company, shot and killed himself late yesterday afternoon when confronted by Mr. Calphus Tidd of the loan department of the Bigburg National Bank.

Investigation this morning by officials of the bank showed that Colson, who purchased the entire issue of many bonds, stipulated in buying the issue that he would have them printed himself, giving as a reason that he was interested in a printing company that specialized in this work. He then had two issues printed bearing the same numbers—in the case of the Clover Hill City bonds, from one to five hundred. He then sold the original issue on the market and after a short time used the other issue as collateral at various banks.

MONEY USED TO SPECULATE

According to reliable information, Mr. Colson had been speculating in the copper market for years—but always supposedly on the winning side. Present revelations show this, however, to be erroneous.

SAY LOSS WILL RUN INTO MILLIONS

Reliable information is that Colson has borrowed more than a million dollars on spurious security.

Colson has moved in the best society and was commonly believed to be a rich and successful broker. He was a member of all the prominent clubs and was a director of four local banks.

BANK CLERK HERO

The man to whom goes the vast credit of unraveling the greatest fraud ever perpetrated on local banks is Mr. Calphus Tidd, an old employee of the Bigburg National, whose investigation led to the fact that there were duplicate bonds. Mr. Tidd's investigation undoubtedly has saved many millions to the local banks, as Colson never used the interest coupons from the bogus bonds but burned them after they were clipped.

Colson began as a clerk in the loan department in this bank and it was undoubtedly here that he worked out the plan to fleece his erstwhile employers.

A detailed account of the events leading to the discovery of the bogus bonds could not be obtained because of the absence of Mr. Tidd, who it was reported was entirely too busy to be interviewed. More details will be announced in later editions.

And Mr. Tidd was entirely too busy to be seen, for ever since the scurry over the death—and the arrival of Banks—he had been hugging to his breast the greatest idea ever conceived by man. Banks had kept him downtown at the best hotel in an effort to keep the bank from any unpleasant notoriety.

The next morning when the books of the city clerk were compared with the collateral at several banks and Mr. Tidd and others knew the biggest part of the truth it had come to him full grown.

At last he could go home and answer Mrs. Tidd! All through the excitement and hurry of the day he had thought about it. Little details crept into his mind a him whistle gleefully. He could keep his feet from running all home. He felt that beneath his fe was nothing but air—and more air

He opened the hall door and crep up the stairs; he opened the outs and tiptoed across the room. T was filled with the appetizing s frying pork. At a tiny range th figure of Mrs. Tidd was busy turni

"Don't!" he shouted with de faction. "Don't turn the knife wound! Don't tell me that I mig been the wife—of a thief!"

For fifteen years he had waited satisfaction of saying a thing li Smiling, he awaited the discomfitu better half.

Mrs. Tidd turned and slowly s her husband.

"So," she said calmly, "you thin smart, don't you? But I knew it time—why did you suppose I didn' him?"

Mr. Tidd's mouth sagged as he into the bedroom. There in the si voiced the wonder of it all in a whisper:

"Crickets, but ain't it wonde way a woman can read a man?"

Then he reached under the lou dragged out a dusty package.

WORLD TRADE AND OUR SHIPS

(Continued from Page 12)

that tens of thousands of rivets were slovenly driven; that in instance after instance wooden pegs were slipped in in place of the rivets, in the hope that no one would see. The wooden ships—the revival of the well-famed handicraft of those same grandfathers—were no more like the carefully fabricated clippers of yesteryear, when each piece of timber and each workman was hand picked, than the hastily made paper-soled cheap shoe of to-day is to be compared with the bench-made article of genuine leather. Built hurriedly, in many cases of the greenest of timber, they sometimes had to be calked a second time before they could be launched.

Nor was all this failure to be charged entirely to labor or raw material. A great shipyard organized with some real degree of efficiency found that all its haste in putting its fabricated steel ships over into the water came to naught when they were held in a long line at its outfitting wharf awaiting their turbine gears. And when some of these came they were so poorly executed as to be useless, so that a vital part of the fitting job had to be done over again.

I have set these things down at the very beginning because there is no desire on the part of any of the many men whom I have met in the offices of the United States Shipping Board to have them hidden. These men have been fully cognizant of all of them; they knew almost in the very hours in which they were being put through, but were forced to keep silence because to have done otherwise would have caused further great delays in a work which already was far too much delayed, and even a poorly wrought ship, brought for the time being to a point of safety, would be able to complete at least two or three round trips to Europe and was better than no ship at all. With the very fate of the war hanging upon the question of the food and men and war supplies across the Atlantic we could not be meticulous about the quality of our ships. Any old ark that could be fairly trusted to negotiate the voyage in a fair degree of safety was a prize and did its full part toward hastening the ending of the war.

With that thing actually accomplished the situation changed quickly—almost overnight. The shipping board abrogated many of its contracts; particularly for the smaller craft both of wood and of steel. Others of this last type were sold, many of them to foreign buyers. In a single $80,000,000 transaction a hundred small steel steamships, practically all of them built in the yards along the Great Lakes, were sold, and nearly as many more small ships, both steel and wood, have been disposed of in smaller lots. But our Uncle Sam is taking very good care not to sell many of his ships of more than 6000 tons burden; absolutely none whatsoever to foreign purchasers. He does not propose to be caught in another war without transport facilities. It would be folly and worse to have built a great armada of merchant ships under stress and strain such as the larger part of our new ships were built under, and then permit them to slip out of our hands into those of potential enemies or even none too friendly neutrals.

What is to be the policy as to the future of our ships?

I think that I have just answered that question—in the main at least. Presently we shall consider it in detail. Before we come to this let us take up, for a paragraph or two, the question which we have just seen—the insistent question that creeps up now and then and again, here and there and everywhere these days:

"Where are those ships that were to come dropping off the launchways each calendar day?"

Some of them—not many, to be sure—were in service before the great day of the signing of the armistice. By that time there were already more than 1300 vessels, large and small, in the hastily resuscitated merchant marine of the United States. Since then the total has grown steadily, despite the selling of the smaller craft, the abrogation of contracts and the very sensible determination of the shipping board to substitute a merchant fleet of a little more than 2300 vessels—but ships of individual efficiency and worth—totaling some 13,600,000 tons dead weight—9,000,000 tons gross—for its original scheme of 3000 ships, of every conceivable type and variety and totaling approximately 16,000,000 tons dead weight.

Mr. Rosseter's Plans

Between the time of the driving of the first rivet in this new American armada—away back in the late summer of 1917—and the time that this issue of THE SATURDAY EVENING POST comes to your eye more than 1500 ships of the United States merchant marine have been launched; which is considerably more than one a day. It is difficult to state the total exactly, it changes so rapidly and so constantly. But it should be enough to state that to-day nearly four ships a day—some thirty a week—are being put into the hands of Mr. John H. Rosseter, director of operations of the shipping board, for immediate use. We have become quite easily the second maritime power in the world, with a total registered tonnage at the present moment of 11,933,000 gross, as compared with Great Britain's 16,345,000 gross tons. And remember if you will it is quite possible that, if our shipping board had stuck by its original program of sixteen million tons of new construction, in a year or two more we might have equaled England's merchant marine, if not actually have passed it in size, which really would have amounted to nothing except bombastic pride and a probable bitter demonstration of the operating difference between a slowly and carefully constructed British ship and a hastily and poorly constructed American one. For, when all is said and done, the average Britisher is from the very center of Missouri when one talks of the excellence of our ships matching the excellence of his; which shows that the shipping board was considerably more than ordinarily wise when it began rejecting mere quantity and demanding more quality.

Given the ships—good ships if you please, good in design and good in construction—the next problem that faces our Uncle Samuel is the all-important one of their operation. That problem he has now been facing—and solving—for some months past. It is a job which from the beginning has been delegated to an experienced man. We have had amateur transportationists in other branches of our great war problem; far too many of them if you please. A man like John H. Rosseter is far removed from the amateur class. As vice president and operating head of the Pacific Mail Steamship Company he has had plenty of hard-headed experience. He has been in the shipping game for thirty-one years and has learned it from the bottom up. There is little about a steamship or its operation that he does not know.

One would scarcely expect a man of Rosseter's experience and hard-headed business sense to advocate a direct government operation of the ships; not in the bureaucratic sense, for instance, in which our post office is operated. Yet no one realizes better than he must and does realize the absolute necessity of our Uncle Samuel's keeping a direct hand upon his ships. Practical and efficient as it might seem to be in these times of peace to intrust their operation to companies of friendly aliens—companies skilled by long experience in the handling of ships—our recent war experience—when we were caught almost without water transport facilities for our Army—should tell us quickly of the potential danger of such a course. The question of registry or of the vessel flying our flag is not even in the consideration. No American with the least bit of red blood in his veins would for a single instant even consider the withdrawal of these symbols of our new power.

There are plenty of foreign owned and directed companies that would quickly concede these two points, however. Many of them would consider the retention of American registry and the flying of the Stars and Stripes very good advertising for the rich American traffic. There is, moreover, plenty of capable and experienced foreign capital that would be glad to organize American lines—American in name and in incorporation and with a fair proportion of bona-fide American citizens upon their directorates and stockholders' lists.

Yet none of these lines need apply to our shipping board. It is looking for private ship operators and needs them very soon; for not only are the completed cargo craft coming from the shipyards at the rate of thirty a week, but the Army and th are beginning to turn over to it the eight German passenger steamers—total tonnage of 370,126 gross to terned here at the beginning of the seized for our transport necessities as we were entered upon the conflict passenger ships—their total tonnag tering a little more than half the German and Austrian cargo and pa ships so seized—range in size from t Wyandotte, formerly the Willehad, tons, up to the great Leviathan, Vaterland, with her huge displacer 54,282 gross tons; in passenger-c capacity from the Black Arrow, o Rhaetia, with accommodations f passengers, up to that same Lev with her accommodations for 3958 gers of all classes and description Leviathan of course carried much m ship's company while in our tr service. Her full complement consi 11,600 enlisted men and 1000 offi addition to her own officers and some 2000 in all. And even this gre was upon one or two occasions consi exceeded.

Consider the Leviathan

If we had no other merchant whatsoever the bequest—if one c term it such—of some 687,000 t German and Austrian shipping—in in this figure of course the exclusively ships of our former enemies—would to scratching our wits how to make use of them. They are no mean Start at the very top of the list an sider the Leviathan. She is the g ship in all the world; so very great that even her very builders wond they had not erred in attempting h struction. For it did seem at the ou if she were to be as great a maritin appointment as that other whale, the Eastern of half a century ago. Buil speed of twenty-four knots an ho barely made seventeen in the five trips she made before the first decla of war overseas and the sincere t which her Hamburg owners paid prowess of the British Navy by int her in the stout shelter of her Ho pier.

Little secret was made of the fact t ever she had finished that third roun from Hamburg she was to have gone into dry dock in her home city for cor reconstruction and repairs; in fact, July day of 1917 that our Navy w sured of its legal rights to take ov German ships which had been interne idle in our waters for nearly three and had taken physical possession Hoboken piers as well as the ships fast to them, the Navy Department neers found many hundreds of feet o per piping lying, disconnected and us

hat the suggestion is accepted. othing that will give a traveler, Europe-worn, quite the thrill uld gain at stepping on his home- erican ship at Southampton or or Hamburg—American in every rship, crew, operation—in see- eat scenes of his homeland once hing, unless it is the presence ill of fare of Yankee things to ll recall the day in May when I clambered up on the deck of the Holland steamship Rotterdam in the harbor of Plymouth, England, and finding my way to the breakfast tables in her commodious dining room found them high-laden with great steaming piles of New England wheat cakes and plenty of yellow butter and maple sirup to make them slip down easily. It was a moment of consummate joy.

The outer appearance of these new Yankee liners of ours is to be in full keeping with their interior. The selection of a standard color for so great a fleet was no slight task. Black was the first thought. But no matter how appropriate black may be for ships upon the North Atlantic it has been shown under actual test to raise the temperature of a vessel in tropic seas a full seven degrees. White is too dazzling. Green was considered for a time by the shipping board but was rejected when it was found in use by a privately owned corporation upon the Pacific. A blue-gray color finally was chosen, with smokestacks of buff or gray, surmounted by a double ring of red, white and blue stripes set diagonally upon the stacks—surely a mark of distinction to be seen easily a long way off.

So much for the moment for the mere appearance of these new American passenger liners. Now let us come again closer to the meat of the coconut—the method of their operation. As I have already hinted this is to be accomplished by placing their exact operation in the hands of American steamship companies—100 per cent American, if you please, 100 per cent in ownership and in direction. These companies—it is hardly remotely possible even that any one company would care to undertake carrying conditions so varied as those which must be undertaken by our new merchant marine as a whole—will not buy or even lease the ships outright, but will operate them as agents for our Uncle Sam, probably at a fee of about two and a quarter per cent on the total gross, which in turn will become itself one of the operating costs, along with fuel, pay roll, repairs, wharfage, supplies, and the like. The expenses of solicitation as well as those of the overhead of the operating company will have to come out of its fee.

Here then is an experiment in government ownership, interesting in itself, whether it were to be applied to ships or railroads or the post office. It keeps transportation just a peg outside of bureaucratic inefficiency. It properly makes our Uncle Samuel personally responsible for any large additions in costs which his wage commissions or his groups of busy reformers may develop from time to time, and yet gives him the benefit of the little practical kinks of private business; the selection and rejection of personnel as well as holding it, between times, to the full appreciation of its job, the skill and force and pep of competitive solicitation, the sharpness of marketing—these things our Uncle Sam gains with his very ingenious way of avoiding the pitfalls of actual government operation and still having for himself at a moment's notice his ships when he needs them, which after all is the chief reason for his building and maintaining them. It is interesting work, commercial pioneering, this exploring and laying out new trade routes in every direction across the globe; it is work pregnant with possibilities, but great as these may be they still must remain second to the necessities of our national defense.

The Tourist Rush in 1920

As for the operating company, it gains great experience, with a possible very valuable residue of by-product work, without one cent of risk. If the ships make money Uncle Sam will absorb the profits and count himself mighty lucky indeed. If the ships lose money—which is far more likely at the outset anyway—he will have to make good on the deficit and charge it off to the necessities of national defense. But the operating company will have little cause to worry. And a two and a quarter per cent fee on even a fairly good-sized volume of traffic ought to come to a pretty penny or two.

The statutes under which the shipping board operates already permit it to establish and maintain routes in any direction or to any ports that are not already adequately served by American lines, which in practice permits it to go in several directions.

The most interesting direction to the average American—particularly in this rapidly oncoming year of grace 1920—is toward Europe. There is a little sector in Northern France and in Belgium which in the past five years has become the best-advertised corner of the world; and, in some senses, the least visited. Now the bars are down and both France and Belgium are beseeching Americans to come and see the terrible devastation that the Huns wrought upon them, with a passing thought perhaps that a goodly visitation of American tourist dollars may help their wavering exchanges. In any event I am afraid that it is going to be a hard year for the see-America-first movement. The traffic barometers point toward a tourist movement from the United States into Europe this coming summer that will reach high in excess of even the great peak-load years immediately preceding 1914. The old-line transatlantic companies, despite the great losses that each of them suffered through the war, are making heroic preparations already to meet the superdemands that are going to be placed upon them by midsummer.

Therefore the shipping board is already planning to take three of the larger and swifter of the commandeered German ships—the Leviathan, with her passenger capacity of 3958 persons; the Agamemnon, carrying 2419; and the superbly equipped Mount Vernon, with her accommodations for but 1871 people but almost all of them first-class passengers—in a weekly service between New York and Southampton and Cherbourg. For a similar service between New York and Hamburg or Antwerp, though possibly at a slightly wider interval, the Von Steuben, the George Washington and the America—slightly slower ships but with a great package freight as well as passenger capacity—have been chosen tentatively. And because there is a definite demand for it Mr. Rosseter has promised Queenstown that it may again become a regular port of call, either on the line of the Hamburg boats or of a projected line to the Baltic ports.

With the great ports of Northern Europe reached with service by our own boats those of Southern Europe must come in for proper consideration. A little later there will follow one or several lines to the Mediterranean, to the coast cities of France and Italy and Greece and Turkey and Rumania, with Northern Africa as a further possibility. A line may be established to Spain, and another to the rapidly developing west coast of Africa.

The Corbin Plan Revived

Yet to the average American exporter at the present moment no territory is quite so fascinating as South America. It is well enough, he may argue, that upon the Rosseterian desk the charts may show preferred lines to the Philippines; China, Japan and Siberia in the one direction and the Straits and India and Australia in the other, with even Cape Town as a far more remote possibility. What he really wants to see is far more and bigger ships plying between New York and Baltimore and New Orleans and our other Yankee ports and those of Central and South America. Those ports are not out of Mr. Rosseter's mind for one moment. As vice president of the house of W. R. Grace & Co., he has personally known and studied each of them. And his definite schemes for the operation of our American ships contemplate services from our larger ports of the North Atlantic weekly—semiweekly if necessary—to those of both the east and the west coasts of our southern neighbors.

To accomplish so worldwide and far-flung a scheme of maritime development will require even at the outset far more than the twenty-eight passenger ships which the fortunes of war took from the Germans and delivered into our hands. These are far from perfect ships. The most of them are good ships. Yet they are not the exact kind that we should have built if we had first undertaken the problem of their construction.

A little time ago word emanated from sources close to the then head of the shipping board that the United States was about to begin building at least two great one-thousand-foot quadruple-screw passenger lines that would make the transatlantic run in four days. In connection with these there was talk of the revival of the old scheme which Austin Corbin, the one-time president of the Long Island Railroad, inaugurated more than twenty years ago, for utilizing Fort Pond Bay, close to the extreme easterly end of Long Island, as a huge American passenger port, with direct fast rail connections with New York City, scarcely one hundred miles distant. It would be quite similar to Fishguard, in Wales. That was a pretty scheme—that Montauk Point terminal—but an entirely unnecessary one. Granted that several hours could be saved by turning a fast steamer into Fort Pond Bay and there quickly reloading her passengers, mail and baggage into waiting express trains, over the present rather tedious voyage along the South Shore of Long Island and directly into New York Harbor; the question still remains, if this were worth while why not put these superswift ships into some harbor still farther east, such as Boston or Portland, and save still more time, to say nothing of the expense of constructing brand-new high-speed rail lines to it?

The shrewd shipping men in and round New York laughed when they heard of the one-thousand-foot ships and the revival of the ancient Corbin plan. I think that I can explain why they laughed at the ships. On the vessel which carried me across the Atlantic early in the present year the hard-headed master endeavored to give me some practical ideas of ship economy.

Slow Boats and Big Earnings

"Here we are with this ship," said he, "24,000 tons burden and well-constructed, every inch of her from stem to stern, burning some 350 tons of coal a day and employing some 600 people. Take that magnificent flyer, the S——, of the fine X—— line. She does New York to Liverpool in five days—we take eight or nine sometimes—but she takes more than twice our number of people to operate her and three times the amount of coal. Yet with all her 40,000 tons she carries no more passengers and not quite so much package freight. The X—— line has hard work to pay a two and a half per cent dividend a year. We are paying ten per cent to our stockholders and keeping it up. I think that is the answer. I think that is the reason why our own big new liner, which was commandeered by the British Government when she was awaiting completion in a Belfast yard and sunk by a mine on her fourth trip out from New York, will never be duplicated. Our line is going to build two replicas of this ship. They've good sense, my bosses."

I too think that is the answer. And because of that feeling I have a due sense of gratitude that the new passenger and cargo ships which are actually being built by our shipping board are not whales, but of a size and construction that give them great flexibility and opportunity of service. There are twenty-six of these new craft now under contract and construction—each of them of approximately 16,000 tons gross. Nineteen of these new vessels are 535 feet long and able to maintain seventeen knots an hour. The seven others are slower—about fourteen knots is the best that they will do—but in exchange for speed they give a longer cruising radius: 15,000 miles without a refilling of their bunkers, as against 9500 miles on the part of the faster ships. These last will be designed to carry about 250 first-class passengers, the slower ships only eighty-five.

Yet even these slower, smaller ships have their uses, and very definite uses too. You could not send the Carmania up a narrow twisting river of Siam or of South America; or even the smaller ships such as the old St. Louis or the St. Paul. The Leviathan can never ascend the Schelde to the wharves of Antwerp. Yet there is valuable traffic, and much of it, awaiting American ships in the river landings of far-distant lands and upon the quays of the great Belgian port of Central Europe.

Beyond all these factors too is the underlying one of cost. Because of their labor and fuel conditions the construction prices in British yards already have begun to creep closely alongside those of our own yards. As late as last May Sir Joseph Maclay, the Comptroller of British Shipping, told me that the yards along the Clyde could turn out steel cargo vessels profitably at £24 per ton as against £29 along our Delaware. But that was last May. In the time that has intervened the disparity has decreased. We are now much closer and—this is important to remember—making a much better grade of ships than ever before we have made.

But the fact remains—and remains indisputably—that ship costs have risen tremendously in the past four or five years;

have doubled and nearly tripled. A great supership, like the superb Aquitania, of the Cunard Line, for instance, could not be duplicated to-day for less than $15,000,000. And though the keen-witted British shipping sharps are keenly alive to the possibilities of folks paying de-luxe prices to ride on de-luxe ships, they see nothing in the business with fifteen-million-dollar ships. I think that I can set it down as a fairly safe prophecy that there will be none of these rather extravagant craft built for a number of years to come—on either side of the Atlantic.

In fact, just as the mainstay of the successful railroad is not its showy, high-speed Pullman trains but its grimy and substantial freights, so it is that the mainstay of our oncoming merchant marine is and must remain the cargo ship. The fifty-four new and commandeered passenger ships which the United States Shipping Board has now in definite sight will aggregate only a little more than 750,000 tons gross. The exclusively cargo ships will outnumber these far more than forty to one in number and nearly twenty to one in tonnage.

For these last ships as well as the first traffic must be found—in great and increasing volume, which in turn means solicitation upon a huge scale. Mr. Rosseter's plans for this are definite and comprehensive. In brief, he proposes to utilize the entire widespread organization of our national railroads to gain business for his ships, and he believes that this may easily be accomplished, whether these land carriers remain in the hands of the Federal Government or not.

"Every inland railroad agent in the United States should be a fully constituted agent of its merchant marine," he argues. "In that way and only in that way can these ships be of fullest utility to the American manufacturers and exporters. Suppose, for instance, a tire manufacturer out at Akron, Ohio, wants to send six cases of inner tubes out to-day—two cases, let us say, to Durban, two to Hong-Kong and two to Manila. About the best that he can do under present circumstances is to forward these by rail to a broker in New York and then to trust to the broker's judgment and experience. In the course of time and with ordinary good luck he will be advised of the shipment of the six cases and the name and line of the boat or boats upon which they were exported.

"Now suppose, however, that the railroad agent in Akron had not only the definite sailings and schedules for every United States Shipping Board craft bound from our various coast ports to every corner of the far seas but the through tariffs and the waybills as well. Instead of the maker of tires being more or less at sea in regard to—as a single instance—his cases for Durban, he would be advised by his home-town railroad agency that they would go out of New York on the steamship Algonquin, sailing on the seventh of the following month, and that the rate would be precisely so many dollars and so many cents. Before he left the office he would hold in his hand the through waybill from Akron to Durban, which could be presented at his bank as a preliminary to the drawing of a sight draft upon his customer."

The Wail of the Croakers

The idea seems simplicity itself, most workable at every turn; in fact, so simple and so very practical is it that one must regard it, good as it is, as one of the least of the many operating problems that to-day confront our shipping board. It is in degree in fact even less pressing than the question of personnel for our ships, of finding at the outset seventy thousand men—one-fifth of them officers—for their decks and engine rooms, and each average year some twenty thousand more for the proper renewals of the force.

Those same croakers who said that we could not build good ships in this country and who laughed openly at some of our first pathetic failures under the stress of a great emergency also said that the American boy in this day and generation could not be induced to take to the sea as a profession. They did little credit to the romance and to the idealism of our youth. Richard Henry Dana has hardly ceased to be a best seller. And the enlightened legislation which that great chief of the ordinary seaman, Andrew Furuseth, of San Francisco, has brought about to protect the living conditions as well as the pay envelope of the man upon decks as well as below has been another potent factor. Our new American merchant ships of every type have living quarters for their crews such as hardly would have been available for first-class passengers half a century ago. So do we progress.

And so, too, we shall fill the ranks of our human merchant marine. The great emergency recruiting structure which was built up to a genuine efficiency in our short months of actual warfare is functioning very well indeed as against our peace needs. The boys are coming in in goodly numbers. As the sea called to American boys in the days of our supremacy in sailing ships, so is it calling again to-day. And it is not unheeded.

The supreme, the predominant problem of our merchant marine is, however, as I intimated at the very beginning of this article, that of proper fueling facilities. You will recall that we saw how the foreign policy of Great Britain had been so carefully wrought upon her necessity of keeping coaling stations for her ships the world over at intervals of four thousand miles or less. And because at the beginning no other nation had possessed the vision and the commercial foresight of England no other nation apparently might ever hope even to rival her merchant armadas, for in many sections of the globe she seemingly had preëmpted the only available sites for coaling stations. The other nations were too late.

And so were we too late—for coaling stations. If coal were the only available fuel for our new ships we should find ourselves to-day in a very great impasse. For though England ordinarily is gentle and generous in opening her coaling stations to the uses of the ships of alien flags she reserves for herself—and quite rightly—the privilege of closing them to strange ships should the emergency rise. In fact, at this very moment she is exercising that privilege by shutting off her coaling stations in the North and South Atlantic, the Mediterranean and the Adriatic to all except British ships. The momentary great shortage of coal overseas is her excuse for this drastic step. It is a most legitimate excuse, but the fact remains that the ships of all neutral nations—save ours—are put at a tremendous disadvantage.

Independence of Coal

It is hard to write of our ships and their future and leave England out of the reckoning. Her influence over all the sea lanes of the world in the past is almost incomprehensible for a layman to understand. It has been said, and truly, that because of her control of two marine factors alone—registration and insurance—she was in practice actually able to say when an American ship should or should not leave one American port for another—New York for Manila or Manila for San Francisco. That in the past she wielded this power judiciously and even generously is not the point. The point is that she held the power and that if it had suited her necessities she would not have hesitated to wield it, even though it might have been death to our own maritime success.

Now at last, and through a combination of circumstances not to be regarded, we are free. The pathways of all the seas are as open to our ships as to those of the Cross of St. George. England may have her coaling stations and hold them to her own exclusive use if she chooses. We no longer are dependent upon them, for our ships are ceasing to be coal-burning ships. Instead of the cumbersome machinery and the great human forces of the stokehole have come tanks and pipes, until with the very twist of the hand, the opening of a cock, a boiler may be fired and fed. Our merchant ships, like those of our Navy, are going to burn oil.

Let me repeat this statement and then add a little to it. Oil as a ship fuel has freed us of the quiet sea domination of our cousins overseas. Not that we should bear them any grudge whatsoever in the matter. On the contrary we should perhaps be thankful that Britain with supreme power in her fingers never used it against us. More too—we should be fair and generous enough ourselves to realize that the commercial interests of the two great English-speaking confederations lie more together than apart. Their political interests are even more in common. And so, having gained our marine independence—apparently for all time—we can well afford to coöperate. Such coöperation, indulged in to a reasonable degree, is, moreover, decidedly to our own commercial advantage. We can be competitors—good competitors, strong competitors—and still not forfeit the right of friendly coöperation.

I have shown you how the bunkering plans for a world-flung armada of peace and war necessitated coaling stations at intervals of not more than four thousand miles. Now let me show how with oil as a marine fuel these can be spread ten thousand miles apart and still enable the merchant ships and the fighting navy of a nation to cover the entire globe—all of its practicable ports—and still compete at great advantage over the best coal-burning merchant fleet in the world.

Here is the new bunkerage map of our shipping board. It wastes neither time nor space upon the fuel facilities of the home ports in the United States because they are so universal. But it does show the stations that are available well away from the home land. We should of course find such a station at the Canal Zone, and at it the indicated distances for through sailings—Colon to New York, 1974 miles; to Newport News, 1776 miles; to Savannah, 1607 miles; to Galveston, 1500 miles; to New Orleans, 1403 miles; in the other direction—Colon to San Francisco, 3290 miles; to Valparaiso, 2661 miles; to Honolulu, 4727 miles. It is in turn 4767 miles from Honolulu to Manila, so that a steamer sailing from the Panama Canal to the Philippines, with bunker capacity in excess of 10,000 miles, would not be forced to stop at Honolulu for refueling, though as a matter of actual practice she probably would want to do so. The journey from either Seattle or San Francisco to Honolulu is of course far less, 2409 miles in the one instance and 2091 miles in the other, so that with a vessel of the larger class the necessity of refueling in the Hawaiian Islands becomes even less, even though she be bound straight through to the Philippines. If, as is the more general practice, she first touched at Japan the problem becomes still easier. Yokohama is 1373 miles nearer Honolulu than is Manila.

It begins to look as if, after twenty-one years of existence as a continued question mark in our national policy, the Philippines at last were to justify their real worth to us. As a strategic point in the operation of an international merchant marine Manila is quite the equal of Hong-Kong, and then somewhat better. Its harbor is not as fog-infested. It is comparatively free from the devastating typhoons that sweep the China Sea at so many seasons of the year. Moreover, under the direction of the shipping board the oil-fueling arrangements at Manila have been made to include not only its own specially reserved piers but by pipe line every other pier in the entire harbor side. No other port in the Far East is so equipped, few others in the entire wide world.

The Bizerta Station

Now to begin to see the fullness of the scheme, begin slowly to swing your library globe. New York to Manila. What an easy voyage it is—under oil. Fuel at the Colon terminal of the canal; fuel again—if you need it—in the lovely harbor of Honolulu; now you are clear and set and bunkerful all the way to that Yankee port of ours among the Philippines. But—suppose you should have set your heart on not changing the main course of your ship and want to come back the other way—the Indian Ocean, up the Red Sea, through the Suez Canal and the Mediterranean, Gibraltar ——

"Easy enough," interrupts the skipper who wears the natty uniform of the U. S. S. B. "We will fill our tanks chockfull here and refill them at Bizerta. It's only 7615 miles to Bizerta, which gives us bunker room and much to spare. And at Bizerta ——"

Bizerta?

That name has a strangely unfamiliar sound. Back again to your globe or to your Mercator's map. Somehow it is elusive. Your finger does not fall upon it quickly. The skipper comes to your aid.

"In the Mediterranean," he guides you. "It's a tiny island, right off the shore of Northern Africa, opposite the jutting cape of Tunis. There it is, old boy, the newest little corner of the U. S. A., and just where old Stephen Decatur used to sail the Black Coast and yell into its stupid face: 'Millions for defense, but not one cent for tribute!'"

There it is indeed, a tiny concess
the French Government to us, bu
mensely valuable one, for Bizerta
direct path of all ships bound
Gibraltar and the Suez. That we
to obtain it at all was due in the
stance to the vision and enterpris
own Standard Oil Company. It

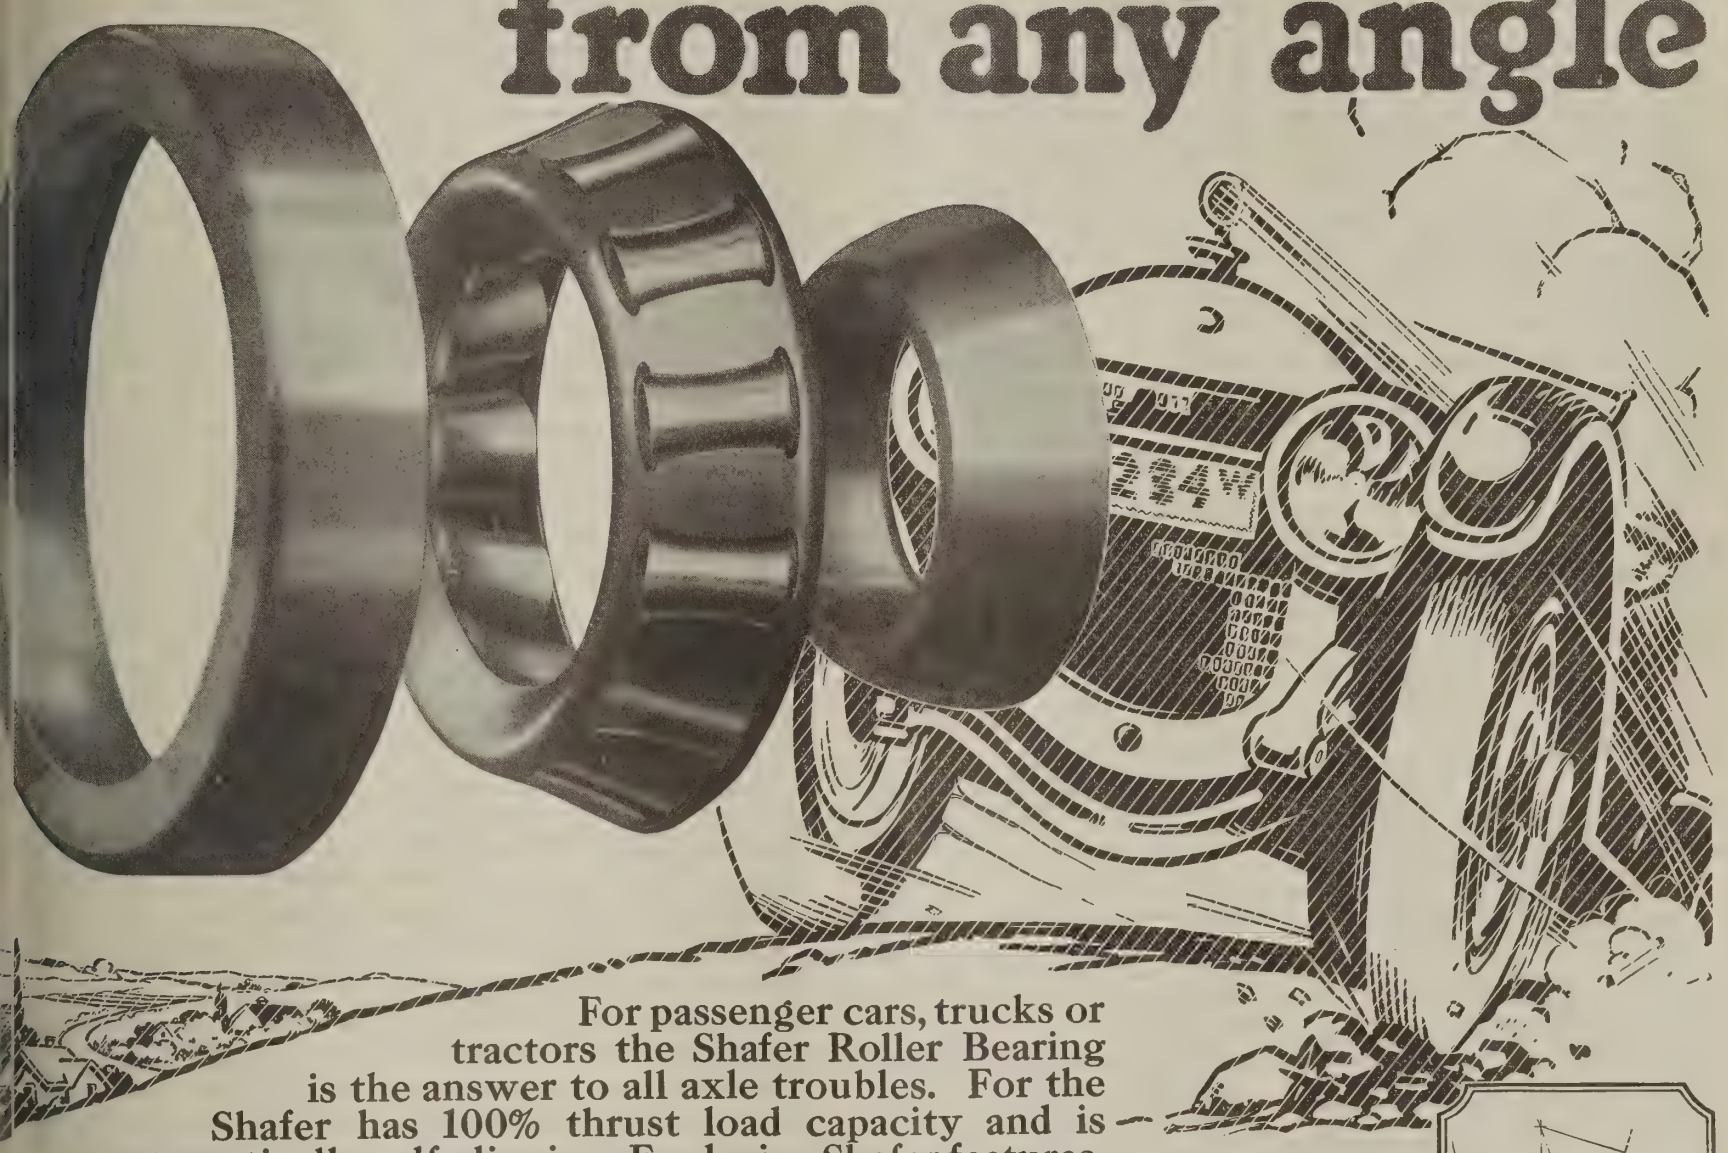
This is almost literal. With coal-
ships refueling is a tedious and a
sive business—and a fearfully disa
business. If the ship can be run a
pier it becomes necessary to close
and cabin windows and ventilato
even then the chief steward is luc
can keep the fine coal dust from
down into his rugs and curtains ar
The job may and generally does t
teen to twenty-four hours.

With an oil-burning ship of e
largest size refueling hardly eve
more than six hours. Granted th
may be a slight odor from the oil its
is as nothing compared with the
the discomforts of the other meth
two men operating a pipe line can
plish the entire job. It has been es
that to refuel a ship like the Leviath
coal requires the services of at le
deck officers and men, to say nothi
vast forces underneath the decks.

Here we are, then, squarely bro
the greatest economy of oil. It is n
cleanliness, in the ease with whi
loaded into the bunkers, in the fac
doubles and more than doubles th
radius of a ship without refueling;
vast economy which it works in th
tion of the ship itself; in that dep
which in these days of the multiply
of human labor requires the most
the fireroom.

100% Load Capacity from any angle



For passenger cars, trucks or tractors the Shafer Roller Bearing is the answer to all axle troubles. For the Shafer has 100% thrust load capacity and is automatically self-aligning. Exclusive Shafer features.

HE side-swipe of a stone in the road, the wrench of a ut or car track, the angular thump where one wheel goes into a hole, the powerful grinding pressure of a rurn, all force upon the axle bearings of your car a strain vhich no ordinary bearing offers lasting resistance.

af Roller Bearings are scientifically built for just such ais. The concave rollers placed at a 20 degree angle against nvex surface of outer race and inner cone, take this oc, regardless of from what direction it comes, upon the full gı of contact surfaces. No cracked, crumbled or chipped rollers, balls, cups or cones, but, instead, perfect performance under any and all conditions of road, load or driving.

Shafer Roller Bearings are automatically self-aligning. The inner race or cone with its sphere section contour fits into concave nest of rollers perfectly. (See sectional drawing.) As they rest in equal contact upon the convexed inner surface of the outer race, the inner cone adapts itself to every deflection. *It cannot be mis-aligned.* It always functions perfectly and is the preferred equipment for all well appointed motor vehicles. ***Write for literature.***

THE FIGHTING MACHINE

(Concluded from Page 23)

A few days after my return he was booked for his first semifinal; six rounds against Young Jeffries, a powerful welter who could hit like a middleweight and move with the speed of a bantam. The papers were predicting that Jeffries would show up the dude.

I think, though he would never admit it, that Pritchard underrated his man this time or that his easy victories over a lot of no-account aspirants had given him an exaggerated idea of the purely theoretical side of his avocation. At any rate I am certain that he came very near being knocked cold that night. Young Jeffries was versatile, had had a lot of ring experience, didn't in the least mind Pritchard's pecking away at his bony features, and kept whaling away with both arms, every wallop a potential K. O.

Despite Pritchard's uncanny judgment of distance, his coolness and accuracy, three or four chance clouts landed, and one of them at least partly dazed him. By good luck the round ended there, and Barnabas' clean living, together with a glass of water some friendly ringside sport threw into his face, put him all right for the final session.

Again it was by good luck that one of his piston lefts found and closed the right eye of Young Jeffries, deep in its bony socket like an anthropoid ape's. As he had scored at least ten times to Jeffries' once, and was himself unmarked, save for a redness about the body where the stronger man had roughed it in the clinches, the referee was obliged to raise Barnabas' arm, sorely against his wish, and to an accompaniment of groans and boos from the disgusted fans.

Since my friend's first patent was sold a few weeks after this, insuring him an ample income, to which he added steadily as long as he lived, his career ended with one more fight; and it is of this last match I must write a little more in detail.

His go with Jeffries had taught him the difference between a roustabout and a crafty ring general, and he was quick to profit by it. The purse of two hundred dollars had been a welcome one, and there was five hundred waiting for the winner of the forthcoming contest.

At this time he had no reason to suppose that he would have any other source of income than fighting; and he brought to his go with Butcher Martin every resource of science. The match was at catchweights; it was certain that he would be outweighed by at least ten or twelve pounds, and this would all be solid brawn. Martin had held the New England championship until he could no longer make the weight in his class, and was a hard nut for anyone to crack. He was noted for his ability to get the goat of his opponents.

There must have been four thousand paid admissions that night; and it is a safe bet that three thousand nine hundred of them prayed for the defeat of the Fighting Machine.

I have said that he never had employed a second. This was one reason why he was disliked. It was believed that he was too stingy to pay the few dollars customary; but as he told me he saw no reason for hiring a man to wave a dirty towel in his face between rounds and give him a lot of unsound advice.

To-night for the first time he brought with him an assistant, a little mild-looking chap named Pevey, who was doing exceptional work in physiology at Harvard. I went with them to the box stall of a dressing room, and there witnessed Pevey produce a hypodermic and give Barnabas a shot in the arm when he was clad in his ring tights.

"For heaven's sake, old man," I expostulated, "you're not doping yourself!"

Pritchard smiled faintly.

"It's only adrenaline," he said.

"Never heard of it!"

"You can learn all about it in any medical textbook dealing with the ductless glands. We don't know much about them yet, but we learn something every day. It has recently been discovered that fear produces certain physiological changes due to a stimulation of the adrenal gland. Briefly the process is as follows: The emotion of fear having caused the adrenal gland to excrete its peculiar principle, adrenaline, this produces increased blood pressure, a strong slow pulse, pallor—due to constricted blood vessels—and a great release of sugar from the liver. Thus terrified people often perform what we term prodigies of strength and agility, as do the insane or delirious. The released sugar and the increased blood pressure, together with the steady pulse, which give such tremendous energy, can be artificially produced, without the accompanying panic, by a dose of adrenaline, administered intravenally, subcutaneously or orally. The quickness of the reaction varies in the order given. I have received a subcutaneous injection, which will act a little later, or about the time I step into the ring."

"But—is there no reaction?"

"None save the normal fatigue that follows all violent effort. The effect is, however, brief, and Pevey here has some adrenaline pills in his pocket, which he will administer from time to time as needed during the fight."

The picture of the old-time second with his half lemon, his bucket, sponge and towel flashed across my mind.

"What else do you carry, Pevey?" I asked him.

"A cylinder of oxygen," he chirped. "It will counteract the beastly air he has to breathe. It works harmoniously with adrenaline. Tried them on myself. Felt just like a bally lamb; wanted to gambol, and all that sort of thing. I've got some strychnine too, in thirtieth-grain tablets; but these are only for emergency. And a bottle of aromatic spirits of ammonia."

"Well," I allowed, "either you'll kill him or he will fight like ——"

The bell interrupted me, announcing the end of the semifinal. A rough fellow knocked on our door, poked his head in and growled, "You're next!"

"How are you feeling, old man?" I asked affectionately, helping Pritchard on with his bath robe, while little Pevey picked up his bottles, pill boxes and oxygen cylinder.

He looked tranquilly at me.

"Why, how should I feel? Very pleased to have five hundred dollars—of course!"

We passed down a corridor, then along a narrow runway banked on either side by sweltering devotees of the historic pastime, through the chairs of the reporters and privileged sports, shirt-sleeved and smoking, and Barnabas climbed up into his corner and sat down on the camp stool. Pevey seated himself fussily below, and I found a chair close by.

One of the methods employed by experienced fighters to get the goat of a novice is to keep him waiting in the ring. That he keeps the thousands of spectators also waiting matters not at all to him.

A beginner sitting alone in the brilliantly lighted square, the focus of observation and comment, wondering why the other man does not show up, is apt to let his imagination run away with him and get all wrought up. Many a fight has been lost thus.

It was evident, as five minutes, and ten, and fifteen passed, that this was just what Butcher Martin was doing. The effect upon our man was simply to bore him. He hated his environment, wanted to get his money and go home.

He had been kept waiting a few moments, before; and had been accustomed to slip a textbook into his bath-robe pocket, in which he browsed unconcernedly until the other man clambered into the ring. To-night his hands fumbled in vain. He had forgotten to bring any reading matter along.

He sat gazing idly about, a strange figure for a prize ring, wearing amber-colored goggles to protect his eyes from the glare. He paid no attention to the coarse badinage, the whistles, stamping feet, shouted wagers that came from all quarters.

I have said that he practically never smoked. Now by some chance feeling absent-mindedly in one of his pockets his fingers touched an old dry cigarette that had lain there possibly for weeks. He drew it out and put it between his lips. He leaned over to where the Telegram reporter was smoking, directly below.

"I beg your pardon, but may I trouble you for a light?"

The man lighted a match and held it up, without comment. Barnabas nodded his thanks, leaned back and inhaled the smoke.

The effect upon the crowd was astonishing. Yells and laughter swept the house, above the general babel. There was not a man present who was not strongly affected by the sight, since it was absolutely unprecedented.

Some regarded it as sheer bravado; others took it as an indication that the match was fixed. The rest were convinced that he was a nut.

At this moment Butcher Martin made his tardily dramatic entrance, and was the most upset of them all. He made certain that his foe was advertising to the crowd that he held Martin cheap. The glare he fixed upon him was positively murderous.

Poor Barnabas was not even aware of what he had done. The act had been purely involuntary; he told me later that his mind had been engaged with the annual parallax, since he was interested about that time in a more accurate measurement of the distance of certain of the fixed stars from our earth.

On the Butcher's entrance, preceded by a hunchback boy—Martin being superstitious—and followed by a small army of handlers, Barnabas threw away the cigarette, from which he had drawn but a whiff or two, removed his amber goggles and rose to his feet.

For a moment, in the center of the ring, the referee rehearsed the conditions under which they were to fight; catchweights, ten rounds, no hitting in the breakaway; and then they returned to their corners and removed their bath robes.

New gloves were laced on. Martin's seconds ostentatiously examined his, and were careful to work back the horsehair padding so as to leave the knuckles as free as possible. Barnabas' mitts were put on without ceremony, and he did not glance at them. The men rose and bowed as they were formally announced, the timekeeper set the automatic gong, and an instant later they were sparring away in the center of the square.

I cannot say whether the adrenaline was working, but certainly Barnabas seemed to have more steam to his jabs than ever before. At the very first crack he drew blood from Butcher Martin's nose, souring an already uncertain disposition.

There followed for three rounds a wild pursuit, with the powerfully muscled Martin never for an instant ceasing to bore in on his slender opponent, to try to work him into a corner, clinch with him, batter him down with blows any one of which, I felt sure, would at the very least break one or more bones.

The little man never permitted him to get him out of position or on the ropes. Always, seemingly by a miracle, and by the narrowest of margins, he slipped away or to one side, without an unnecessary move or an awkward posture.

At the end of each round little Pevey handed up the rubber tube and gave him a definitely measured amount of compound oxygen. While he was taking it Pevey was taking his pulse. At the end of the third round he fed him an adrenaline pill.

The Butcher was puffing when the gong sounded for the beginning of the fourth. He had worked incessantly, and twice as hard because his blows had not landed but had whirled him round out of position. On Barnabas the perspiration had scarcely started. He had emptied his lungs of the foul nicotine-laden air, and refilled them with oxygen purer than the breezes of the mountain or the sea.

Still, as matters stood Martin led, because he had forced the fighting. Now that he was momentarily slowed down Barnabas began pecking away again at his face. His blows carried little force, but they landed clean and straight, and started Martin's nose bleeding again. Also a slight cut was opened over his left eye.

Almost insane with rage and the jeers of the gang—which he heard, though Barnabas did not—he tore in again, before his wind had fairly mended. For the remainder of the round and during all of the fifth he never let up. When the bell sounded his knees were quivering slightly. Barnabas was breathing easily through his nostrils, unmarked, and unmoved. Pevey fed him another pill and doubled his allowance of oxygen. He thrust a clinical thermometer into his mouth, and nodded with satisfaction when he examined it.

"No temperature!" he chirped.

Butcher Martin was obliged to slow up during the sixth. Making no effort to lead he succeeded after a time in clinching; and throwing his entire weight upon Barnabas he leaned his head upon my friend's shoulder, his mouth close to his ear.

From his tobacco-stained teeth [illegible] such a stream of conversational sewa[illegible] I am sure Barnabas was ignorant [illegible] very meaning of most of what he said[illegible] effort to get his goat; but his famil[illegible] was pretty well stripped of branch an[illegible] He looked faintly interested, but n[illegible] noyed. Martin's weight tired him [illegible] ever, and he looked questioningly [illegible] the referee, who seemed in no hurry [illegible] them apart.

As soon as he had done so Ba[illegible] flicked out at once with his left, and[illegible] started Martin's nose. As the B[illegible] tore in he was met with the stiffest [illegible] he had yet received, square in his le[illegible] with the added force of his own on[illegible] drive it home. The eye instantly [illegible] and seemed to puff out like a mush[illegible] The gong sounded, and Martin in h[illegible] would have followed his man and [illegible] him had not the referee thrown h[illegible] upon him and held him back.

Between rounds the Butcher's se[illegible] skillfully fixed him up, stopped his [illegible] bleed once more, and considerably re[illegible] his swollen eye. Even so, when he ca[illegible] for the seventh it was undeniably [illegible] But he seemed to have gotten his s[illegible] wind, and he was as mad as a wild pi[illegible]

But Barnabas now possessed an im[illegible] advantage. With his pecking style h[illegible] like a perfect marksman armed with [illegible] gun against an indifferent performer [illegible] a forty-five. He was obliged, with his [illegible] bore, to find a vital mark. He proc[illegible] to rap the damaged eye a couple of [illegible] more, to make certain that it would [illegible] shut, and then by keeping on the But[illegible] blind side he had him like one gropi[illegible] the dark.

Martin continued to swing as powe[illegible] as ever, but it was much easier to [illegible] his lunges.

It was impossible to talk in the min[illegible] rest, the uproar was so great. The [illegible] had bet heavily on Martin, and had [illegible] given odds on him. They foresaw hi[illegible] tain defeat unless a chance wallop s[illegible] slip past the pale student's defense. [illegible] called on him, each in his own tongu[illegible] deliver that wallop!

In the eighth and last round Barn[illegible] his task cut in half, devoted himself w[illegible] to the one undamaged optic. Martin [illegible] have tin-canned, and saved it, but he [illegible] that as it stood he had lost the batt[illegible] points. His only hope lay in putting [illegible] the sleep punch; and to do this he[illegible] obliged to uncover. Whenever he did [illegible] nabas popped his glove against his [illegible] eye.

If constant dropping will wear a s[illegible] still more will it wear a human eye. B[illegible] the round was half over Butcher M[illegible] was blind. He groped about like a b[illegible] bear, cursing thickly, and making ug[illegible] ineffectual jabs at wherever he fancie[illegible] tormentor might be.

"Oh, boy! Soak him agin in de sm[illegible] lamp!" shrilled a voice.

It was Muggsy O'Brien, who had sec[illegible] for the Fighting Machine his first m[illegible] Barnabas stepped back, dropped his h[illegible] and looked questioningly at the ref[illegible] He abominated the idea of hitting a l[illegible] less victim. The fickle mob now sh[illegible] toward the victor.

"Knock the big stiff out!" it squalle[illegible]

With repugnance Barnabas stepped n[illegible] lessly in and took aim. It is doubtful, [illegible] had Butcher Martin's hands been tie[illegible] hind his back, if he could have knocke[illegible] that iron-jawed veteran; but seeing [illegible] hopelessness of it one of the Butc[illegible] handlers saved him the disgrace by tos[illegible] a sponge into the ring.

An instant later Barnabas' hand was [illegible] up by the referee. It was all over.

"Well, well!" fussed little Pevey w[illegible] we had worked our way back to the dres[illegible] room, "now, I think, you can have [illegible] strychnine tablet!"

Barnabas shook his head impatientl[illegible]

"Don't need it," he said curtly.

"It seems to me, Barney, old chap, [illegible] you are entitled to a little celebration [illegible] night!" I avowed. "It's on me. W[illegible] shall it be?"

Barnabas Pritchard smiled.

"I feel a little devilish myself," he [illegible] mitted. "Let's see—what time is [illegible] Eleven-fifteen? Hm! I have it—the v[illegible] thing! Professor Pickering is giving a[illegible] lustrated lecture on the canals of M[illegible] over at the observatory. Let's go!"

THE LEAGUE OF NOTIONS

(Continued from Page 29)

Ms. Bowker rose as though impelled n behind. She was a woman of slow ıcons, but she was quite intelligent ɔh to know when she had been told to n her own business.

"here is one thing else," she said, fum- n for her lorgnette. "I have heard in- ely a rumor, which I cannot believe, you and Mr. Bangs are circulating a ion to place the managing director of ub on a small salary, with no commis- n And I want to tell you here and now ıoth Mr. Bowker and I would con- hat as an impertinent and an unwar- l action. As I say, we cannot believe you. Mr. Sugden has done nobly. —"

know he has," said Sylvia, "but he's g us next month, and the next man have to do all Mr. Sugden's work over and he certainly shouldn't get a for the members Mr. Sugden got."

If way to the door Mrs. Bowker re- ered politics, and paused. Her ex- on changed, by degrees and by visible to one of conciliation.

lvia, I don't wish to quarrel with you. you too well. But—I'll confide in Listen to me. The club is hardly d. With proper management it will l every Wellington activity. Next ve should be strong enough to elect ty officials. We want to send our rep- ative to the state legislature. We to establish a state federation of re- clubs, with our own club as the model Vellington as the headquarters. And do this. If we do, some of our mem- swill be nationally important. I've thinking for a long time that you have been a councilor."

Sylvia winced. In this very room she made Mrs. Bowker an officer.

nd—and John?"

ntil we heard that he had taken the ers' association as his clients we were led—at the next meeting of the board— er him a very liberal remuneration to our attorney. It isn't too late, even w-but, of course, he can't represent two different associations. Frankly, my you and your husband have possi- ts of importance in this club. And if r. Bangs should be our legal adviser— when he had made the legal plans for ate organization—you can see for your- f he future in store for him." She re- d Sylvia closely. "Don't do anything my dear. Come up to dine with us rrow evening, and let's talk it over i.bly—for the good of Wellington. ot you?"

Absent-mindedly Sylvia said she would , unless Mr. Bangs had some other gement; but that didn't prevent her securing nine more signatures to her tion that same afternoon. Nor did it nt Mr. Bangs from opening a checking nt of three hundred dollars in Sylvia's n. And when he heard of the invitation it back his head and roared with ster. The Bowkers were actually get- afraid of him.

o?" he said. "I wouldn't miss it for fan!"

It was two o'clock on the following after- o that he telephoned Sylvia in great ement.

"rouble, and lots of it!" he said. "By ege! We've come to a showdown! ht handlers, teamsters, machinists and re-car men have gone out, and the tele- operators are going to quit in an hour. et big order over to Sugden right away! ou l have to walk, I'm afraid. Stock up r wo or three weeks anyway."

Sylvia hurried as best she could, but the ubffices were packed solid when she got ei. Sugden, maddeningly composed, as xplaining just what had happened.

"he associate members have quit in a od They must have seen this coming. he tailers have got big stocks, and they've a a private arrangement with the freight ners to bring in four carloads of stuff te strikers' families won't suffer. We n move a finger. And before the as- ciates quit they bought so much of our rint stock that we're down to almost t ng. . . . No, Mrs. Kellogg, we can't o the strike by cutting off the associates' ivege, because they've already cut it hemselves. They don't want it any o . . . I'm sorry, but the by-laws ro de for filling orders in turn. In a day o we'll be out of almost everything. I'll see what arrangement I can make with the retailers to help us out. That's all I can do. I'm sorry. You'll have to buy wherever you can until we're stocked up again."

It was with deep seriousness, then, that Mr. Bangs and Sylvia went up to dine at the Bowkers'; and there was only one topic of conversation.

"If we had a state organization now," said Mr. Bowker, "we could stop this. We could stamp on it. You can't do much locally. Things are going from bad to worse. I want to call for delegates to a state convention. It's just about time. Tie it up to good government somehow. Everybody always blames the present administration for labor troubles, so we can count on antiadministration support. But we'll win out in Wellington yet. Trust me."

This was a trial fire, but after dinner, while Mrs. Bowker was ostensibly showing Sylvia some new fineries, Mr. Bowker opened with fire for effect.

"John," he said, "the time's come to show our colors. We want you for our attorney. Sugden's through in a month, and I want you to support my candidate for his successor. I want you to stand by me. I want you to go in with me for expansion. I want you to stump the state for our sort of reform. You can have all the prestige I can give you; all the glory."

"And all the brickbats," said Mr. Bangs amusedly.

"There wouldn't be any, John. And, of course, you couldn't represent us unless you had an official connection. We'll make you a director."

He produced four good cigars in an envelope, and offered one to Mr. Bangs.

"No, thanks."

Mr. Bowker's face fell. "Why I bought 'em especially for you. Well, never mind. What do you say, John?"

Mr. Bangs eyed him squarely. "You're quite willing for me to get all the glory, are you?"

"Yes, I am."

"So whether the scheme falls down or not I get all the criticism from the retailers all over the state? I'm the man who'll stand out as the one who's trying to put 'em out of business?"

"That won't hurt you any. And I'll make you city counsel, John."

The city counsel was appointed by the mayor, so this was intended to be very subtle.

Mr. Bangs slowly shook his head. "You don't see some of these things clearly, Mr. Bowker, until you've tried 'em. I think I'm seeing clearly. It isn't reform to blackjack the retailer—he isn't responsible. And the manufacturer isn't, either. Or the transportation companies. It's all of us put together. We don't try to understand each other. About all we've done is to start a new kind of fight. And the big question won't be settled until labor can trust capital to play fair, and vice versa, and until all of us learn to economize a little in good times as well as in bad, and until money isn't the only thing in the world we want."

"You're too radical," said Mr. Bowker sourly; and Mr. Bangs, who felt himself to be ultraconservative, looked astonished. "And you're riding to a fall," said Mr. Bowker. "I think you'll find it very much to your advantage to sleep on it."

Mr. Bangs was sorry, but he didn't need to sleep on it.

"I don't like to say so," he said, "but I'm rather opposed to carrying this idea much further anyway."

Mr. Bowker displayed great interest in his cigar. "I'd heard that; I'd heard that. I was hoping it was a false rumor. Well—is it definite in your mind that you're against the present club government?"

Mr. Bangs nodded. "I think it is, Mr. Bowker."

"Then I shall take that, John, as a personal antagonism toward me." This was intended to be a thunderbolt, but it fell harmless.

"That's for you to judge, Mr. Bowker. I haven't said so."

"You're showing it by your actions. And I'll say this: If you're with us you're with us—if you're against us you're against us."

Mr. Bangs actually laughed. "That does sound logical, doesn't it? But I'm not opposing private individuals; I'm opposing individuals who happen to be running the reform club in a way I don't think is very good for the rest of us."

It was from this point forward that the conversation languished. As soon as Sylvia reappeared Mr. Bangs rose and spoke of things to be done at home, and his intonation left no room for doubt.

As the doors closed behind them, and even while Mr. Bangs and Sylvia were exchanging the first glance of mutual hilarity and comprehension, the voice of Mr. Bowker drifted to them through the portal.

"Well," Mr. Bowker was saying, "there's a damn good dinner thrown away on a couple of ingrates."

XI

POLITICAL movements have a habit of collecting, like a snowball rolling down hill; of gathering momentum and bulk, and bursting, whether for good or evil, on a plank which may be fundamentally important, and may be picayune. And the Bowker administration, which had sprung into vibrant being at the will of Sylvia and her two friends, broke apart for the principal reason that Mrs. Bowker, a few days after the railroad strike had waned, and carloads of foodstuffs had come in, gave a large reception and served lobster salad with particularly crisp lettuce.

"Where on earth," asked someone of Helen Everson, "did Mrs. Bowker get this lettuce? The club hasn't had any Boston head for ages."

Helen, who liked to know whatever she wanted to find out, made an inquiry some few minutes later, of the Bowker waitress, who volunteered to ask the Bowker cook, and reported that it came from the Elite Market. The club—through Robinson's Market—had lettuce of its own, and the strike was practically over, and yet Mrs. Bowker continued to buy where she chose instead of through the club.

Within the hour every woman at that tea knew that Mrs. Bowker put Boston head lettuce before club principles, and within twenty-four hours a large number of people were saying that it was a pretty poor example for Mrs. Bowker to set, seeing that half a year ago she had instigated the boycott of local provision dealers, and vowed to boycott them as long as she lived. Simultaneously the story of the twenty-seven resignations went out, and the mayor, who wanted to be a state senator, told a labor meeting exactly why he had resigned.

Thirty women called for the first time upon Sylvia, and asked to sign the petition. In a twinkling there was more opposition than there was administration; and easy-going folk who had discounted the stories of nepotism and discrimination woke to action at the ridiculously lesser evidences of defect. It was remembered that the constitution provided for the recall of officers or directors at the discretion of the council, and there was sudden interest in what was called Mrs. Bowker's hand-picked directorate. The original ownership of the club's realty came out—Mr. Bangs had proof of it in his pocket; and both Henry Kellogg and Rupert Everson fell under grave suspicion, and emerged safely only at the expense of being regarded as dupes. But dupes aroused are lively combatants.

And in the meantime the railroad strike renewed itself, and now that it was fashionable to cast reproach on the Bowkers they were universally reproached for this too.

The Kelloggs spoke bitterly of resigning, but they didn't dare. The blue prints weren't ready, and Henry couldn't afford to lose his time. But Rupert Everson had long since collected his commission, and he told Mr. Bangs, after a touching reconciliation, that he was going to quit to-morrow, and then tell Sam Bowker just what he thought of him.

"Don't!" said Mr. Bangs. "Wait till the end of the quarter. I'm going to need you."

The Bowkers were giving nightly dinners to their wavering proselytes, and forgetting to be parsimonious, but there were some who were brazen enough to decline. Among them the Kelloggs and Eversons, who had been flattered until they had learned that they had been bought. The retailers put familiar names back on their books. Sugden and Mr. Bangs were closeted in many a soft-voiced interview, and when Mrs. Bowker gave a beautiful lawn party to the council there was the strict sex division which Mr. Bangs had once predicted, and only three men came, and they were driven by their wives. Even so, it was held to be an even battle, with the odds on the Bowkers because they still controlled the board.

And Mrs. Bowker, who had learned from one of her satellites what was happening, almost cried.

"I told Mamie to go to Robinson's," she wailed, "but she'd been going to the Elite when the strike was on, and she forgot, and went there again. But I told her to go to Robinson's. I did!"

And the severely retributive part of it was that this was the truth.

XII

ON THE day of the quarterly council meeting the strikes were almost forgotten. Mr. Bangs' petition came in, and was buffeted just once, by a Bowker friend or two; and passed triumphantly. And to the horror and chagrin of all the Bowkerites it carried an entirely unsuspected rider providing that every financial transaction of the club by which any individual member had made a profit should be reported by general bulletin, and a further demand that the directors report at once every such transaction that had taken place.

The directors met on the subsequent evening, and Mr. Bangs came in quietly just as Mrs. Bowker, obviously suffering from nerves, was about to rap for order.

"I'm here," he said, "under authority of a general power of attorney of Rupert Everson."

Mrs. Bowker gasped. "You haven't any right—it isn't in the constitution!"

"No," said Mr. Bangs comfortably, "it isn't, but it's in all the law books, by George!"

He sat down and prepared to listen; he noted with pleasure that the atmosphere was already electric. It was a grim satisfaction to know that though they had deprived him of credit for starting the club they couldn't deny him the credit of being in at the death. The minutes were read and approved, and Sugden's report was ordered.

Sugden stood up. "I'll give you a summary first," he said. "This quarter I handled nearly two million dollars. It's been a terrific mushroom organization—terrific. The difference between market prices and the prices I paid would have been almost four hundred thousand dollars. But—what with retainers to architects, fees for one thing and another, taxes, insurance and a staggering overhead—principally due to incompetent people at high salaries, which naturally drove me to hire competent ones to do their work—and due, finally, to these strikes, when we had to keep running without selling much of anything—our expenses have been just three hundred thousand. That leaves one hundred thousand—or a five per cent rebate, if you vote it." He surveyed his paralyzed hearers, and smiled faintly.

"Ladies and gentlemen, I assure you you're not nearly as disappointed as I am. You've saved a little this quarter; but I've made nothing. And as I can speak very plainly to you now, I'm going to say that it's your own fault. Practically every one of you—no, literally every one of you except Mr. Bangs over there—has been after me for one concession or another, ever since we started. I was supposed to be managing director, but each one of you wanted to be that—and all you wanted me to be was office manager. I fought until I saw that it was no use.

"And now the council, in this amendment which comes up to-day, has demanded a list of these personal deals. I hope you'll provide it. But even if you don't you know among yourselves what they are. Deals in land and professional services, contracts with friends and relatives that weren't quite as good as they should have been, jobs for friends and relatives—you know all of it.

"And you also know how you insisted on our filling small rush orders that cost us more to deliver than what we got for them; you know what it cost to furnish this magnificent room, and who made the profit on it; you know where all the leaks were that make the difference in dividend between last quarter and this. And you can't blame it all on the strikes, either, because

(Concluded on Page 77)

Clean As The North Wind

TO YOU employers of America who recognize the vital importance of providing comfortable and sanitary lavatory equipment, who know the value of safeguarding the health of your employees, Northern Fibre Folded Towels will be instantly appealing. Their a to cleanliness is perfect. Made from the best grade northern spruce in a factory that is itself a model cleanliness, nothing could be more sanitary.

Delivered in the most convenient form, folded, a clea towel is offered for each pair of hands—yet the is no waste.

Northern Fibre Folded Towels have a strength of fib that is surprising—cloth-like in their consistency yet soft and ideally absorptive.

Their effect in furthering the morale of your employe is tribute enough in itself of their value.

Monarch Mfg. Co., Milwaukee, Wis.—One of the hundreds of modern industrial plants that use Northern Fibre Folded Towels.

H. J. Heinz Co., Chicago, Ill.—The Chicago branch of the "57 Varieties" company uses Northern Fibre Folded Towels.

Munsey Bldg., Washington, D. C.—This great office building of the National Capital uses Northern Fibre Folded Towels throughout.

Special Offer

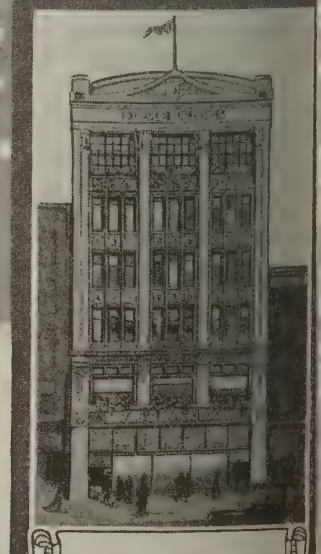
You must use a Northern to fully appreciate its "difference" and superiority. Write us on your business stationery and we will gladly send you, gratis, a neat package of twenty-five Northern Fibre Folded Towels and tell you where to obtain a supply.

Sold only through legitimate trade channels

NORTHERN PAPER MILLS
GREEN BAY. WISCONSIN

Also makers of Northern Fibre Tissue for Lavatories

Farwell, Ozmun, Kirk & Co., St. Paul, Minn.—A great commercial organization where Northern Fibre Folded Towels have proved their economy.



Devoe Bldg., Chicago, Ill.—Another modern building that is Northern Fibre Folded Towel equipped.

Towel Talk

Progressive commercial America long ago discarded the cloth towel as unsanitary and adopted paper towels.

Northern Fibre Folded Towels have come to be recognized as the final word in paper towels.

They are neat, dainty and individual—in entire keeping with the equipment of the most modern lavatory.

They insure comfort and cleanliness to every employee. They prevent the spread of disease through the medium of the wash room.

For factories, offices, public buildings, stores, schools, hotels or any place that towels are used they are ideal.

merely stopped our work for these last ays. This other condition has run te way through. It may be that after rgone someone will want to make me e at; but, ladies and gentlemen, I want aure you that I have a reputation to ect, and I intend to protect it. This had its origin in a spirit of progress, d 's about to crash in a spirit of hoggish- s Will you now have the report?"

he dead, clammy silence that followed r. Bangs rose, and bowed infinitesimally t chair.

"m out of order and I know I'm out of ," he said, "but it seems to me that s as good a time as any to say my l speech. As attorney for the retailers' s ation I offer to purchase from the l all its office furniture, equipment, s on hand and unexpired contracts for thousand dollars more than the in- n ry cost. That's generous, but the re- l s want the club to get out clear, and, s es, some of those contracts are pretty h ble."

F sat down, and as the dead silence n ued Sugden put a thick, typewritten t nent on Mrs. Bowker's desk, and sat w also.

"lection of a new managing director," i someone almost inaudibly.

"onstitutional amendment first," said r Bangs, not inaudibly at all. "And I g to know—I wrote the darned thing y lf."

F couldn't help smiling at Mr. Bowker's c He knew what Mr. Bowker was think- g. The managing directorship offered no n re for his son-in-law, whether on the d mmission basis or on the new salary p posed. Mr. Bowker had done a lot of s r electioneering for nothing.

Ms. Bowker, by dint of enthusiastic a wing, managed to murmur at least e tle of Mr. Bangs' petition.

That was the impasse. One could intui- r pick out the Bowker faction by their p ssions. They weren't so much awed r gden, who could always be publicly n nced, as they were by the presence of r Bangs. The first part of that petition a 't so dangerous, and most of them felt a he manager should have been salaried; t the rider had claws. To accept it was m mn themselves forever; to reject it a ust a bit worse. And there sat Mr. a s, patiently waiting and listening for e ebate. And who could debate? Who u pose as an innocent, father the n dment, and thereby win the eternal nty of all the other directors, equally v ved? Yet until someone made a o n for or against the amendment no h business was possible. And even o who weren't thoroughly pro-Bowker a almost without exception, managed t jole Sugden into putting a friend or v n the pay roll.

Mr. Bangs nodded to the chair. "I o that the amendment be adopted." e ok out his watch.

Irectors began to whisper excitedly. A o an director—she had chosen the deco- t ns of the room and knew how extrava- a they were—began to sniffle.

"ive—minutes, by George!" said Mr. a s.

Mrs. Bowker's mouth was rigidly set, t her nostrils were tremulous. Mr. o er was wriggling his shoulders spas- o cally and breathing hard. Two women e sniffling now. The whispering trailed t nothingness.

"en minutes, by George!" said Mr. a s. He smiled across at a lady director h was verging on hysteria.

"Mrs. Johnson, why don't you sec- n it?"

Now though Mrs. Johnson's husband w d the Herald, Mr. Johnson had never n ght of selling it to the club until Mr. o ker had approached him with plans n involved a division of spoils. And Mr. o son owed Mr. Bowker's bank a good e of money. Mrs. Johnson felt guilty, u t was reflected and not personal guilt. e ptly she always loathed Mrs. Bowker. And Mrs. Bowker's eyes were a challenge, and a terrible threat.

"S-second it!" said Mrs. Johnson and fumbled for a handkerchief.

"Question!" said Mr. Bangs sharply, and he smiled at several of the directors who he knew were conscience-stricken not because of profits made but because of the influence they had exerted to secure good places for their friends—a fault for which the world would forgive them.

Mrs. Bowker looked despairingly at her husband.

"Those—favor—Aye."

"Aye!" said Mr. Bangs. "Aye," whispered Mrs. Johnson. There was also a faint murmur from the rest, which might have meant almost anything.

"I call for a ballot," said Mr. Bangs. "It's a constitutional provision."

As no one else stirred he tore some strips of paper from a scratch pad and distributed them.

"The secretary can finish the job," he said grimly, and brought out his watch again.

Ten full minutes later the secretary got optical instructions from the chair, and drew a long breath.

"Carried unanimously."

From the background somebody said: "But who's to make up the list?"

"The board will direct the new managing director to do it, I suppose," said Mr. Bangs. "And as nominations are now in order I accede to a request from Mr. Bowker made to me several weeks ago. I nominate Mr. Bowker's son-in-law, Mr. ——"

"No!" said Mr. Bowker feebly. "No! He—wouldn't accept. Not at that salary."

"Then I nominate myself."

"Second!" said Mrs. Johnson bravely.

Mr. Bangs laughed outright at the circle of drawn faces. "Thank you, my friends, but I decline the nomination. And I apologize to—let's see—to six of you; it was sort of mean. Only you've got to elect somebody, you know, at this meeting, and declare a dividend, and attend to miscellaneous business. And I'll be in my office all day to-morrow, and that offer of the retailers' association holds good for forty-eight hours."

He went forward and put two sheets of paper on the chairman's desk.

"To make it sound better, here's Mr. Everson's resignation as director and member, effective—wait until I fill in this blank—at the conclusion of this meeting. Here's my own resignation, effective immediately. And I wish you all a very good afternoon."

Mr. Bangs went out, and nobody tried to stop him.

XIII

IN THE words of the late lamented Speckled Beauty, Mr. Robert Fitzsimmons, sometime heavyweight champion of the world, "the bigger they are the harder they fall." And generally the harder they fall the more spectacular the performance, but this was an exception. Mr. and Mrs. Bowker emerging from the directors' meeting went home, and before dinner time had consulted a number of guide books, and decided to spend the remainder of the winter in St. Kitts, where the climate is equable and living cheap. They tried to interest some of their friends also, but the friends were too deeply absorbed in explanations to everybody else to care very much whether the Bowkers went to St. Kitts or to Gehenna. The Bowkers didn't bother to explain. They felt it would be a waste of time.

Six of the directors withstood the storm successfully, and proved that they were chargeable only with friendly influence and had made no personal profit; and men like Henry Kellogg and Rupert Everson, who had at least given value for value, were automatically exonerated. But the nine Bowkerites who completed the directorate, though full of alibi and extenuation, found it difficult to gain hearers. Moreover, they found it difficult to continue their Wellington careers socially, or financially, without putting up bonds, and there was nobody to act as bondsman. And without the Bowker circle society was rather standing on its head.

There was a desultory attempt or two to reorganize the club, but there was no one to manage it. Besides, as Mrs. Johnson put it, even if you really had saved something it was a nuisance to have to do business in such a finicky way, with so many forms and things, and ordering ahead, and all that. It was so much easier to walk into a shop and give an order whenever you wanted to, and have it sent straight home.

So the retailers took over the club property, and—on Mr. Bangs' suggestion—the club presented its land to the Y. M. C. A. for a new building, and Henry Kellogg was to be the architect and Mr. Hendrix the builder, and everyone was as contented as possible.

During those turbulent days everyone seemed to look to Mr. Bangs for inspiration. Committees met at his house, and Sylvia was charming, and bit by bit the story of the inception of the club became common knowledge. And instead of indicting Mr. Bangs for breaking up the organization Wellington seemed to hold that he had wrecked it only to prevent the Bowkers from wrecking it in a far less helpful manner. Mr. Bangs' practice trebled almost overnight, and Sylvia suddenly became an oracle. Having bearded the Bowkers successfully, they all but inherited the den. And it was rumored that they were more prosperous than anyone else on Elm Street.

It was perhaps six months afterward that Rupert Everson came in late one evening and insisted on seeing Mr. Bangs alone.

"John," he said, "you weren't at the ward meeting to-night."

"No—I couldn't get there. Too busy. What happened?"

"They're going to run you for mayor. The ward'll go on a fusion ticket. Even the south end, down by the railroad tracks, wants you. Would you take it?"

Mr. Bangs was no hypocrite. "You bet your life I would!"

"They sort of feel," said Rupert, "that you're about the only man who's seen all four sides of this living proposition, and they think you'll be a good man to handle labor troubles, and try to get a square deal for everybody. I guess it was the way you settled the machinists' strike that did it. What did you do down there, John?"

Mr. Bangs gestured in deprecation. "Why, a couple of manufacturers wanted me to talk to their men, so I simply told 'em the truth. I told 'em that a year ago I felt just as they do now. Couldn't seem to get ahead, everything cost so much. I thought of doubling my fees. And then I decided that wasn't good sense. So I decided to work like hell and not charge any more until I was doing better work.

"So I said to the strikers: 'Fellows,' I said, 'you go back on the job. You and your bosses make a gentlemen's agreement. You agree to stop soldiering, and stop absenteeism, and work like the mischief—and your bosses'll agree to pay you a bonus for increased production. Not a higher wage—but a bonus.' I said: 'What do you fellows want—charity, or to earn your higher pay?' And then I told 'em how I'm running my own house, and they laughed, and then we were ready to bargain. That was about all there was to it. I got the men to agree to work harder and the bosses to go into profit-sharing."

Rupert shook his head. "Wish I could see it that way. Business is rotten, and expenses high, and with all these labor fracases —— Have you got any servants at all now? Has Sylvia got a cook? What does she have to pay her?"

From the doorway Sylvia herself answered: "We give her two hundred and fifty dollars a month to run the house on, and as long as she feeds us decently and keeps things going she can keep all she can save out of it. Nobody minds working hard on a plan like ours—do they, Bruno?"

"My Lord!" gasped Rupert. "Where'd you get that idea?"

"He married it," said Sylvia. "I'm the cook."

MARK TWAIN SALE CLOSES

Many times in the past few years you have said to yourself, "I *must* get that set of Mark Twain. I don't want my children to grow up without him."

But now the time has come when to-morrow will *not* do as well as today. We not only have to raise the price—we have to close the little payment sale.

Before you see another Mark Twain advertisement you will have missed your last chance to get his imperishable work at a low price.

MARK TWAIN

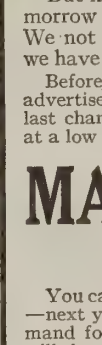
25 Volumes

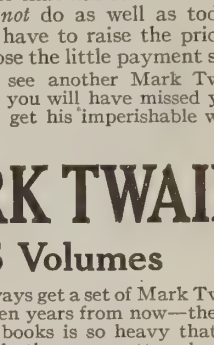
You can always get a set of Mark Twain—next year, ten years from now—the demand for his books is so heavy that we will always make them, no matter what the cost. But we will have to charge a price for them so high that they will become a luxury beyond the reach of most men.

Get your set while the price is low. Get your set now. Go back with Mark Twain and be a boy again.

FREE Paine's Life of Mark Twain

4 Large Vols. Illustrated





Not only does this coupon bring Mark Twain at the low price, but it **brings you absolutely FREE Albert Bigelow Paine's Life of Mark Twain.**

It happens that we have a few sets of the four-volume edition on hand — not enough to dispose of in the usual way—so until the edition is exhausted, we will give you a complete set FREE with your set of Mark Twain.

There are only a few—this coupon brings you one—and never again will you have a chance to get one except at the full regular prices.

Send No Money

The coupon puts you under no obligation. You do not have to think about it until the books are in your home. All that you do by mailing the coupon today is that if you do like the books you get them at the low price.

We take all the chances—you take none. This coupon means money in your pocket—money saved.

Do not wait until next month—next week or tomorrow—today—now is the time.

Send the coupon, now, today.

HARPER & BROTHERS
Est. 1817

HARPER & BROTHERS, 84 Franklin Sq., N. Y.

Send me, all charges prepaid, a set of Mark Twain's works in 25 volumes, illustrated, bound in handsome green cloth, stamped in gold with trimmed edges, and Paine's Life of Mark Twain, in 4 volumes bound to match FREE. If not satisfactory I will return them at your expense, otherwise I will send you $1.50 within 5 days and $2.00 a month for 18 months. For cash deduct 8% from remittance.

The Premier—

EVERYBODY'S BUSINESS

(Concluded from Page 46)

only three rather small groves of the stately redwood trees have been permanently preserved from destruction. As everyone knows, lumber is a most essential natural resource. For hundreds of uses there is no satisfactory substitute for it. Is there not some question therefore as to the advisability of using lumber for exterior purposes in building when clay and other materials—practically unlimited in quantity—are available for the construction of houses that would be more durable, just as beautiful, more economical in the long run and in many cases cheaper in the first cost?

To say that a brick wall is as cheap as a wooden wall is to invite contradiction from many. The lumber people and the brick fraternity have been having a merry time in an animated discussion as to the relative costs of their respective materials. For this reason I have been careful in collecting my figures. Reduced to a lump sum, it appears that with present prices, and assuming that a bricklayer will lay at least 1500 bricks per day—including face bricks—a solid exterior eight-inch brick wall laid in cement mortar, furred, lathed and plastered in a Middle West city will cost $41.31 a hundred square feet. A 2 x 4 stud-frame wall in the same town for 100 square feet will cost $40.90, assuming last August prices for materials. Union-scale wages were used in the computation.

In past years lumber has been cheaper than bricks, but the recent great advance in the prices for all kinds of lumber has radically changed the building situation. Well-informed people maintain that the increasing scarcity of timber will prevent the necessary reductions in prices to permit the building of wooden houses in the future at a lower cost than brick or block. The leading journal of the lumber people says: "That the lumber industry is in a bad economic condition and that a future supply of timber for our wood-using industries is not being provided are two facts beyond doubt."

One thing we must do, and that is use more of the ordinary common bricks for facing as well as for backing up in the construction of walls. This eliminates the extra cost of the high-priced face brick, which adds so largely to the expense of brick buildings. Face bricks now sell at a cost of $25 to $40 a thousand, while the price of common bricks throughout the country ranges from $12 to $18. In many sections the common bricks are suitable for facing and produce effects equally attractive with face bricks. Investigators have found that in practically all states our American clays will burn red, which makes it possible for the manufacturer to produce a range of shades that will give a pleasing effect when properly laid in a wall. Brick producers themselves have been the negligent ones in this matter.

One of the greatest objections to brick houses has been the monotony of long rows of pressed-brick fronts, always of uniform shade. In the future a block of brick houses will show a variety of color, which will be easily possible when brick producers more generally realize the opportunity that lies before them. Though the art of producing a good grade of burned brick dates back to the time of the Babylonians, 3800 years B. C., we are still discovering errors in manufacturing practice that rather encourage the belief that brickmaking is an infant industry.

For some time it has been known that the strength of a brick wall depends not only upon the strength of the individual bricks but also upon the adhesion between the mortar and the brick. The other day the Federal Bureau of Standards stated that the bond depends largely upon the number, size and shape of the pores upon the surface of the brick. The bureau says that the manufacturer by proper control of his process in relation to the consistency of the raw mix and of the pressure used in molding can easily produce pores of such shape as to increase the adhesion of mortar to the brick to a maximum value.

This apparent deficiency in the science of brick manufacture brings up the further criticism that though brick walls are splendid flame barriers, brick buildings are not always fire-resistive structures. Dr. Ira H. Woolson, expert consulting engineer, who has specialized on house construction, says: "I doubt if the average brick building as a whole has a fire resistance of over ten per cent of that of its walls. This is discreditable to our engineering and architectural intelligence. My criticism also applies to hollow tile, stone and concrete buildings. Though brick as a material is specially adapted to withstand flame and high temperature for long periods, the world is full of tottering fire-ruined brick walls, now desolate monuments attesting the fire hazards of buildings improperly constructed.

"The chief structural defect in present-day buildings is the communicating opening. It is these openings that cause the rapid spread of fire. Many so-called fireproof buildings are little more than fire traps. Between March, 1914, and October, 1918, 64 city and town halls in the United States were reported burned. During the same period fires occurred in 37 courthouses, 8 libraries, 8 jails and 15 miscellaneous public buildings. Each was a wayside advertisement testifying to the ignorance or carelessness of the architects and builders. Masonry walls did not protect them.

"The great fire danger in many buildings is from open stairways and open elevator shafts. The number and variety of such communicating channels in most structures would almost lead one to believe that a fire fiend had planned them with diabolical cunning. Open stairways, though built of brick, stone or metal, act as flues to carry the hot products of combustion from one floor to another. Most people do not know that when air is heated to 1000 degrees Fahrenheit or more—which is a temperature quickly reached in most fires—it will ignite instantly everything combustible with which it comes in contact. The actual flames of a fire may extend only a few feet from the point of origin, but the hot smoke and invisible heat waves may easily travel through an incombustible stairway or hallway for 50 or 100 feet and then ignite the whole surface of a wooden door in an instant. At the same time glass door panels and fanlights will collapse by rapid expansion and the intense heat entering the rooms will cause them to burst into flames.

"Only a little more than two years ago in a hotel in Boston a fire started in a bedroom on the third floor. The hot air passed through an open door and up through a stairway and elevator shaft of incombustible construction to the sixth floor and then traveled along the hallway until it found some doors left open by fleeing occupants. These rooms were quickly burned out. At the same time the hot air rushed from the sixth to the eleventh story and burned out a few rooms in the same manner. The intervening floors were very little injured. This action of heated air is common, but a fire is not often extinguished in time to preserve the evidence so well.

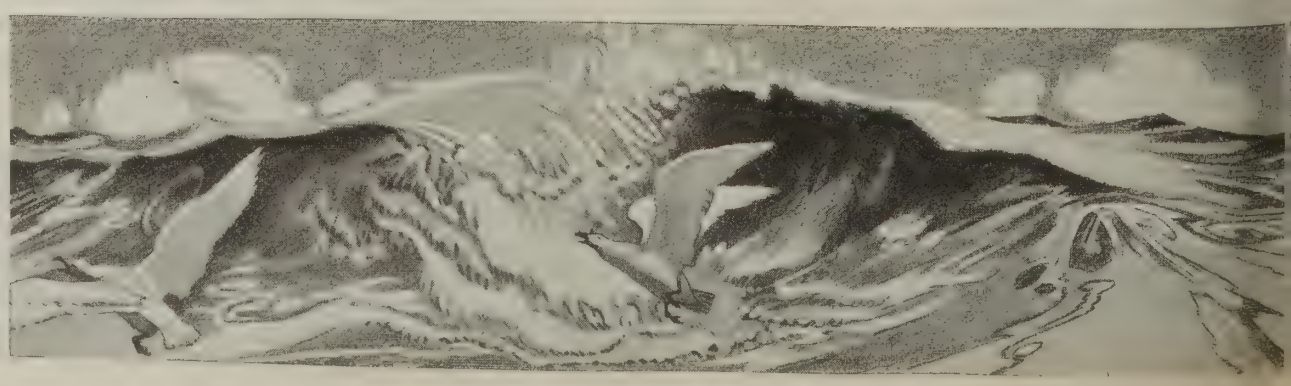
"The remedy is to protect hallw fire-resistive partitions and fire door spective of whether there is any comb material in the hallways or not. Sta and elevator shafts should be com inclosed with fire-resistive material glass doors or windows opening int inclosures from the exterior should l hibited. Similar care should be ex with ventilating ducts. It is sur how small an opening through a w floor will suffice as a gateway for heated air to start a fire on the op side. At Far Rockaway, Long Island entered a concrete building from a joining wooden structure through a inch hole in the concrete party wa then passed to two stories above by a two-inch hole in each concrete where a heater pipe had been remove another place the hot air went thro one-inch hole in the party wall and s to a woodpile. There is abundant that many fires are transmitted th fire-resistive floors and walls by heated air flowing through the small ings round pipes. This occurs even t the opening does not exceed a quar an inch.

"Millions of brick are used each y buildings of simple architecture and est cost. They are undoubtedly less to complete destruction by fire than w buildings, but are by no means as resistive as they should be, nor are th safe as the public is taught to believe.

In the foregoing we have an array tonishing truths. The need appears not only for more brick, tile or stone ings but for the right kind of careful struction. Manufacturers as a rule aloud when anyone criticizes their ticular brand of goods, yet the maj of industries retard their own growt failing to apply the maximum of know to their respective businesses. Just that wooden-shingle roofs are a fire h and you are branded as a meddler legitimate business. But how many ducers of wood shingles are trying t minister a scientific treatment that w make their goods fireproof? The ta certainly not impossible.

Bricks give us a wall that does not to be painted or often repaired. An who doubts its durability need only a look at the Old South Church in B or the Independence Hall group of b ings in Philadelphia. In the old days was some objection to brick houses cause they were damp, but this is no l the case, because modern methods of la bricks with Portland-cement mortar g wall that becomes an absolutely dry impervious shell for a house. Abov else is the fact that this country abo in lands containing clay. Since the material is found in every state it fol that bricks may be manufactured and without expensive transportation. In ing clay from the land no acreage is for the clay pits form convenient dum grounds which all big communities have and which can be soon filled u grade and used for building purp Nothing has thus been lost and our v able timber has been spared for more able and less combustible purposes.

In the meantime if we concede that brick is a splendid building material, w it not be well and timely for the m facturers to give us better bricks of gre variety and shades and temporarily pend the current talk about the firep qualities of brick houses until our const tion practice has been so improved a justify the truth of such assertions?



THE TROUBLE DOC

(Continued from Page 38)

H followed Matt McDonald home and
ır he had invaded a castle whose master
s ayed by two ruling passions—the one
h family, the other for his union. The
et, the floors, the children's clothing
vd the industry of the sinewy, black-
r. little wife. The two boys got off the
e stool to say they hoped only to be
e eir daddy. Ethridge lifted the poorly
n hed three-months-old infant out of
adle and knew that the key to both
ts' hearts was dangling in his hands.
T man's passion for the union was fire-
in his soul. Matt McDonald had
n by serving one after another three
rs of the old school who lumped their
n with their material and cared about
hg except the price metal products
u bring.

'never had a right in my young days,"
d Ethridge. "I was ten years a jour-
un before I had anything but a con-
sn."

A the twig had been bent the tree was
ng. Matt McDonald had found the
the one ring of steel with which the
r could surround himself. Any breach
th ring invited a mortal wound to him-
o his family and to his kind.

T road was easy because of the infant.
e rouble Doc could make babies unfold
e sebuds. While the youngest McDon-
us coming to chirking wholesomeness
nlge was sitting in long evening sessions
h ts father, the president of Machinists'
c 32. When he thought he had a
si stablished the Trouble Doc whispered
t fine things he hoped to accomplish
no the men which would swing from
ss le to probable if McDonald gave his
ɔration. The worker who had given
n is confidence—almost his affection—
rned and stared and evaded committing
nlf by the smallest word. And when
hlge had got at the reason he had
rd something basic about unions.

T things proposed involved changes,
e ore they were fraught with dangers
te union. They would lift the men for-
rto new and better ground, Ethridge
gd. To new ground—that was the thing
at talled McDonald. The leaders held
e ion safe only so long as they felt fa-
li sod beneath their feet. The grass of
w astures was always long and tempt-
g ad the most liquid of quicksands lay
vs at such roots. Yet in his soul
cbnald longed to keep step with Eth-
gs plan.

". would mean bigger production," the
oble Doc declared, "and thus, of course,
ve he worker more money and time."

" sten! It's not just money and time
atnatter," McDonald cried, the world-
d human thirst for self-expression causing
s es to twist and sparkle. "Your plan
g give a guy a little bit more to say."

MDonald helped the Trouble Doc
st by interpreting the vague expression
d vague aspirations of the workers.
hdge glimpsed things that made him
el nat all he had accomplished was the
ert beginning. He saw a way to put his
m ound thousands. He explained his
aro Honey. He made a date to explain it
nes. He did not know things were
p ning which no man could explain.
Ha day there loomed the specter of a
ril.

T Trouble Doc hastened to Ames,
ncighed and explained it thus:

"'s a little bit wages, a little bit hours
d. big bit the plain madness that will
wrs be able to hit plants like a cyclone
th we come to understand that human
irs are human beings and not divided
te terms wage payers and wage earners
tctwo classes of monkeys who must
ris off each others' tails."

Ethridge managed after several attempts
tch McDonald. His union and the
h unions were in joint session and
eeng every day. McDonald was not in
tasing mood. He was about one of the
voreal concerns of his existence. His
ea jaw was iron. His eyes were beads of
ispion. Ethridge touched at parting a
an that was a lump of steel.

O the fourth day there was a deadlock,
n e fifth ultimatums, on the sixth the
egnings of war. Ethridge, finding that
it men dropping out in droves there
en still more accidents than ever, had
ffilty in breaking away from the dis-
enry long enough to catch Ames to
qire the latest news.

"This morning we refused them," said Ames, who was pacing the floor. "They made an impossible offer. Now their agents are all through the shops trying to get every man's promise to walk out. At this moment we hang in the balance. We are licked if the men go out in a body. Without at least five hundred men to do the absolutely necessary things we might as well set the plant on fire."

Ames resumed his walking, banging his fist in his palm.

"So help me, Ethridge, I'd give about everything I own if I could get the workers to agree to arbitration."

"You think," inquired the Trouble Doc, "that arbitration would be the best thing for the company?"

Ames halted and looked at him.

"I don't know," he said slowly. "I don't care a tinker's dam. I know it would be the best thing for the country. I know that every bitter strike is a blow to American industry and puts off by just so much the day when understanding and confidence between employers and employees will make this nation what it ought to be."

Ames had thrown a match into the tinder in Ethridge's bosom. He snatched his hat and shouted: "I'm going to see Matt McDonald!"

As he brushed out the door he heard bitter laughter and Ames' voice—"McDonald! He's the head of the strike committee!"

Ethridge drove swiftly to the cottage far up the hill. Mrs. McDonald, her eyes having now the luster of her black hair, answered his ring. She uttered a strange little cry and as she dissolved out McDonald dissolved into the frame of the door.

"You—you here?" exploded the head of the strike committee. "You double-faced traitor! Some day I'll have time to settle with you for polluting my home with your presence. It's a wonder you didn't murder my baby!"

The words were like shocks from a wire, so heavy that at first the Trouble Doc felt nothing at all. Then he staggered. At length, steadying himself against a post, he uttered the one word: "Explain!"

McDonald—his wrath partly spent in that awful indictment—went on:

"It was a bear trap of course! I was a fool not to know—to be deceived by your rotten slick manner! You were using the dispensary to get a body hold on the men. To think you could nail those five hundred Eyetalians so they've got no mind at all of their own!"

"The dispensary? The Italians? In heaven's name, Matt, what is all this about?"

"It's about the strike that's not going to be won to-night—about the walkout that won't take place because five hundred garlic eaters won't stand by their fellow human beings! And they prove your treachery—they swear they won't budge a step till their Trouble Doc tells them it's the right thing to do!"

The news left the Trouble Doc speechless. He groped forward, his hands stretching outward, as though to plead their own innocence to the eyes of McDonald.

"Git, you skunk!" the big man shouted. "Git, or—or I'll forget about my family and you'll be strangled!"

The Trouble Doc stumbled down the steps and into his car.

It was a strange strike. Some of the workers went out and some of the workers stayed in and the line of battle extended across the town. There were bleatings and beatings, bad blood and bloodshed. What Ethridge called the raw surface of men was smothering all that lay underneath. Whatever caught between the millstones of hatred was broken and ground to powder. The strikers demanded wages and hours and concessions. The company directors, when Ames had converted them to the breadth and wisdom of his view, offered arbitration until they were hoarse.

The Trouble Doc, moved by his indomitable optimism, slighted even the dispensary in his efforts to find what he knew must somewhere exist—a key that could unlock for action the fettered better spirits of men. And when he thought he was beginning to uncover something that Ames and even the others could see, Fate took a hand and ruled him out of the game. As though the destruction that wasteth at noonday had not already brought trouble

enough, the pestilence that walketh in darkness came nearer and nearer and arrived. The epidemic swept down on the plant and the town.

The Trouble Doc brushed the foe first in the dispensary and was immediately swept to grim battle grounds in homes. For two days he lamented bitterly the coming of this diversion when just ahead might lie fruitage of the things he and Ames had wrested out of dreams, but in a week the strike had fallen back to second place in his thoughts. After all, he was soldier to the welfare of the individual rather than to the differences between men. He closed with the foe in a hand-to-hand struggle for this captive or that one in the No Man's Land along the border between worlds.

Before the epidemic came Matt McDonald and his fellows had felt that the strike was progressing satisfactorily for their side. It was an endurance test and they believed the company would be first to wear out. The flood of reports digested at strike headquarters daily showed that the strikers were holding on like soldiers. In spite of the cajoling of company agents, the pinch of sacrifice and the frailty of human resolve defections had not been more numerous than the company itself was sustaining.

When the epidemic arrived it had to be considered without any sentiment whatever, and the strike committee saw it as a liability and as an asset too. It would weaken the vitality of the strikers and it would put an unexpected strain on the slender strike benefits the men had believed would be sufficient to carry them through. On the other hand the epidemic promised to outdo all the persuasive efforts of the pickets in reducing the total of men remaining at work in the plant below that absolute minimum of five hundred.

McDonald, seeking some true barometer of his cause, turned again and again to Hobson Court. Three-story flats, fashionable in a previous generation, stood shoulder to shoulder about a rectangle where grass could not flourish because of the lawlessness of children's feet. The scores upon scores of flats were occupied almost entirely by Consolidated Motors employees. The denizens of the court, working and thinking and voting in unison, had won their ward its nickname of the Solid Sixth. True to tradition, Hobson Court went solidly on strike. At the outset mass meetings lighted by bonfires were held in the rectangle at night, and the leader of the strike had felt his heart assured and quickened when the shouts of the men wedged against the platform were given shrill echo by the women and children, who waved flags and banners from the windows above their heads.

When the epidemic approached an effort was made to save Hobson Court by isolating it. In less than a week these tactics had failed and the very solidarity of the court rendered it easy prey to the scourge. Immediately the suffering became intense. The strike committee came with every resource at its command to support life and morale. The committee was moved by the extent of the distress, but even in such a situation it could not afford to be swayed by sentiment alone. The members realized that at any stage of the game the collapse of Hobson Court must mean the collapse of the strike.

It was difficult to get doctors for the court, but it was difficult to get them for other sections too. There were not enough doctors to go round. The Trouble Doc followed a stricken worker home from the plant and found himself facing a singular problem. A cry reached him from a dwelling adjoining. It came from the wife and children of a man on strike. He steeled himself and pretended that he did not hear his name called—that he did not see anguished hands pleading through a window pane. He leaped into his auto and ordered the chauffeur to be off. Before the engine could respond he had leaped out again and gone hurrying to the aid of the suffering, regardless of the fact that the head of that house was fighting his company tooth and nail.

The scandal of such conduct was wafted along to the company's office. Ames was told. Ames considered and gave his answer: "Well, let him alone!"

Privation began to bear heavily on families whose heads had not deliberately forsaken their jobs. Disease as well as strike could produce idleness, and idleness—however induced—brought a sure train of woes. The Trouble Doc, combating these woes, found himself facing situations beyond all rule and precedent. He knew now he was going to treat a striker's family whenever necessary, but there were graver questions than that. His first thought was to fall back on Ames; but quickly he realized that it would not be fair—even where there was time—to throw the burden of decision on that overworked official. His service with the Consolidated Motors Company had been almost wholly in the nature of an experiment and he could not shirk, now that the experiment had broadened. He must go on as he had begun—an unfearing pioneer.

Ethridge saw that if he was to steer a wise course he must lift himself above the hatred and distrust that was coloring the vision of nearly everybody about him. He established a rule of conduct and he stuck to it like grim death. He put every proposed undertaking to this test: Is it for the ultimate good of the workers and the ultimate good of the plant? He knew that as often as something inside him gave affirmative answer he was going ahead.

The chief of the accounting department hastened to Ames.

"That doctor is spending something like a thousand dollars a day," he reported, "and he doesn't keep a record of expenditures any more than a rabbit. I can't follow his trail at all except through the bills that come in. Will you please tell me what I'm going to do about that man?"

"I will," Ames replied with the staunch adherence to a policy that made him a great executive. "You're going to let Ethridge alone!"

At the end of six weeks of strike and epidemic combined the breaking point seemed to be near. The company urged arbitration again, but it was a more generous offer this time, for it concluded with the words: "We agree to leave the selection of the arbitrators to the governor of the state."

The company wished to avoid the risk of chaos. The other side, however, read in the offer only a sign that the day was at hand when the company could not maintain that imperative quota of five hundred men. The strikers, milling like a mad herd and not waiting for their leaders to act officially, bellowed back their two-syllabled peace terms: "Give in!"

The governor took a hand. When he had the strike committee facing him in the parlor of Linden's chief hotel he demanded: "Why are you men so set against arbitration?"

McDonald's eyes diminished to pinpoints as he stared into the governor's firm but anxious face.

"Why, it's their game!" he hissed. "How can we trust anything those skunks are willing to let us have, even if they hand it to us on a gold plate?"

The best the governor could get was a promise that the committee in deference to the public welfare would give the offer consideration. They agreed to go into conference and to hand the governor their answer before night. McDonald's associates laughed—albeit a little hysterically—when they confided to strikers waiting in the street that they were going to meet at three o'clock and find a new way to tell the tottering old company to go to hell.

McDonald hurried off. He wanted to be alone and weigh the next step. He saw no possible course but curtly to refuse the enemy's proposal, yet he recognized two considerations that could not be ignored. Consideration Number One was: Would the public misunderstand the answer they were going to formulate for the governor and would public sentiment swing away from their cause? Oh, if only the public understood how you couldn't place any confidence whatever in the motives or promises of deceiving, man-eating employers of labor! Halfway up the hill on his way home the big leader took hold of a picket fence to steady himself. He was trembling as with a chill. For five minutes he had been trying to think of words that could express the depth of his suspicion of the men at the head of the plant.

Before three o'clock all of the strike committee but the chairman were assembled at headquarters. They joked heavily and unnaturally and offered suggestions to the secretary, who was pounding out the first draft of their answer to the governor on a typewriter.

"What's keeping Big Matt, I wonder?" remarked one of the men.

"His wife's still pretty weak," observed another.

"You needn't worry about the ol' leader," volunteered the secretary, giving his index fingers a momentary respite. "In view of the fact that he's going to hand those Con Motors guys their knock-out this afternoon, I sent a flivver up after him."

As a matter of fact Matt McDonald was well on his way to strike headquarters when the battered little motor car met him. He was shuffling along as though an invisible load rested on his shoulders. His mouth was set hard, making his heavy jaw appear heavier still. His eyes, roving and inflamed, were like little coals of fire that glinted in one direction and then in another. He was glad when the car picked him up. He could now go a dozen blocks out of his way and reassure himself as to Consideration Number Two.

A few minutes later the flivver rolled into Hobson Court and McDonald stopped it under a tree where it would attract the least attention. Only a few persons were in sight and most of these were fading into doorways. Deserted and silent as the place was, there was something that spoke out of the bricks and the drooping blades of grass. To some it might have seemed only a great agony, but to McDonald—conscious as well of the agony—it was the voice of a great heroism. These people were the backbone. They had hung on when the weekly strike benefits ran out. They had hung on when the grocers said: "No more credit." Thereafter the strike committee had done what it could in the way of special donations, but none knew better than the committee's head how inadequate these donations were in the face of the need. Consideration Number Two outlined itself thus in his thought: Could he rely on the Hobson Court people to hang on still longer when there was hardly anything to sustain them except the knowledge that if they failed the strike failed too?

Yes, he would rely on these overstrained soldiers of the cause—because he must. Their sufferings—he clutched the sides of the automobile—were the true measure of the company's inhumanity!

A clock somewhere boomed three times. McDonald remembered his appointment and was about to give his driver the word to hurry on when a huge auto truck with a yellow cover whirled into the rectangle and drew to the curb just ahead of his car. The truck did not stop—it merely slowed down.

Through the slits in its enveloping cover poured half a dozen young men, and each man made a line for one of the doorways just back of the sidewalk's edge.

What riveted the watcher's attention was that the arms of the men contained cloth-wrapped objects familiar in t form, while swinging from their fin were baskets and pails. Each man p his load on a doorstep and shot back to slowly but steadily moving truck so the hands of unseen men inside the big might fill his arms again. One mon doorsteps were empty, the next mon they were strangely overflowing.

No doorbell was rung, no signal given; it was simply that six men, abe by other men in the covered van, playing a singular game of deposit depart; and the swiftness of their m ments and the steady rolling along of source of supply forced the conclusion a prime concern of the players was tha one should catch them and that no should know who they were. When had decorated every doorstep on the side the van swung along the north side, when no empty doorstep remained th agile ones began on the doors of the

The game progressed so well tha seemed as though the players—if really wished to cover every door secretly and get away—would score cl But they were yet to reckon with the s ears and sharp eyes of a child. The yo ster heard something that caused hi pull back a curtain and look out. A sq burst from his lips, and from half a d windows drawn faces peered. Vo babbled, doors opened.

In ten seconds the residents were fl ing their doorsteps—at least in so fa there was room to set their feet. Hol Court, stupefied and starving, had wake to find a motley avalanche of hams sides of bacon, bags of flour, pails of and baskets of vegetables and fruits t bling into its doors.

The players of the merry game pitc their final offerings, not onto doorsteps into quivering outstretched arms. T the big truck, its mission completed the last of its crew safely under the yel cover, gathered momentum and whirling and roaring away. Though ca in the act, the visitors still appeared have scored, for their identity remai unrevealed. The court people, recove from the shock of surprise, looked a for their good angel. They discovere man they knew hunched down in a batte automobile and they thanked Matt Donald with a salvo of rickety cheers.

The mistaken outburst brought Big M to his senses. He gave a command to driver and put such force into it that little car went spinning out of the recta on two wheels. McDonald could get a from Hobson Court, but never perh would he get away from a fleeting pict that had burned into his brain. Fate made him a witness to the incredible. thing had occurred when the yellow a truck careened past him in its get-a flight. A rush of air had snatched bac curtain long enough for him to recogniz figure clinging to a stanchion in the v It was the figure of Ethridge, the Trou Doc, who had always maintained t preserving the vitality of the workers everything to do with the good of plant.

The six members of the strike committ waiting at headquarters with the ans to the governor ready for the chairma approval, broke into relieved exclamati at the sound of a heavy tread on the sta When presently they caught a glimpse their leader they rose to their feet as man. Framed in the doorway, where halted, he was a familiar picture of streng but something unfamiliar and startling come into his habitually inexpressive fa Staring at him in silence they reeled w the wine of a fresh assurance. They wo follow this man to hell. He, looking acr the table, saw them as no more th shadows. The eyes of his being were bu with things they could not see. What he witnessed in Hobson Court—the succ ing of his famished people by the enemy was something having no place whate in the world in which he had labored a longed and made his fight. Wherefore had felt himself swept along into a wo that was new. The length and breadth a manner of it were bewildering, but th was one thing that gave him his bearin for it shaped into his vision like a gr square stone. It was a sort of corner sto he saw, of the new world's existence. guy could trust a guy!

"Boys, we're going to arbitrate," muttered. "I've found out somethi It's all right to give the skunks a chance play square!"

pl y, lest my young thinker should
e me more and dispute this picture
. Shaw's off-hand millennium, we have at hand an authentic and illuminating example of it. And I do not mean the ants and the bees, who have carried mere unionism to its ultimate perfection. We had in this hemisphere not so long ago a great nation perfectly socialized and single taxed and equalized and unoppressed. It realized an ideal of socialism so nearly perfect that not the most convinced socialist nowadays can expect the world again to achieve its like.

Mr. Shaw's clause of the equal wage was in full effect; and having an equal wage the people became equal; they had equal opportunities and equal rewards. They had free access to the land and they were not in any way exploited. There was no poverty among them. If the crops in one section failed the government tided its people over with stores saved against that mischance.

It was a land of peace and plenty and joy, and the dark shadow of capitalism had never fallen upon it. So perfectly indeed was socialism here achieved that the people had no need for capital in our sense. In that Arcady was no money or any circulating medium whatever. A certain soft yellow metal they found in abundance, but they made it into vessels for their altars or to attest the merit of their king. For they had a so-called king, but his government was of the least possible restraint commensurate with its function of assigning each man his land and seeing that grain was stored against the bad year.

The Great Self-Swallowing Act

No one ever criticised the government. No young man ever got up and called upon the masses to rise and take what they had an inherent right to take. They already had it; each had an abundance and no one more than another. It was a true Utopia for people who had no wants above animal wants. And it might have survived indefinitely could it have remained wholly isolated. But one day a soldier from the outside named Pizarro came in and stepped on the ant hill. And with the familiar result.

But why should it need to be so for the world at large? Why will it need to be so when soldiers are no more?

Well, there's a reason and I'm rather surprised Mr. Shaw didn't at least set it up—if only to knock it down. But he didn't; either because he couldn't or wouldn't. He doesn't explain how the man who produces much is to be persuaded to raise the wage of the man who produces little, and he appears to ignore almost wilfully the certainty that with equal rewards we should all produce as little as possible, even as did our Peruvians. He even avoids any contact with the certainty that I would continue to reward some laborers higher than I rewarded others; with the certainty—to be concrete—that I would pay more to hear and see a zippy musical comedy with forty beauties under twenty than I would to hear a visiting British poet lecture upon the superiority of British poets. In short, he neglects utterly to point out that an equal wage would result in equal tasks and that a task which all can perform with equal merit will necessarily be a lowly task, as it became in Utopian Peru.

To be quite candid, there are moments when I almost decide to believe that God forbore to make Mr. Shaw as wise as he is witty. Or can the wily casuist have meant neatly to expose the basic fallacy of the socialistic dream? In either case the answer to the Peruvian ant-hill dilemma is the same and it is quite as simple as Mr. Shaw would apparently have us believe the problem of human association to be. It is that Nature runs the open shop—and Nature is still a going concern.

The old-fashioned scientist among other reckless generalizations loved to tell us that Nature cares only for the species and nothing for the individual. That of course was in a day when there were believed to be species—to be hard-and-fast lines between species and genera instead of insensible gradations from one to another. To-day we know that Nature doesn't care a hang for any so-called species whatever, but is concerned solely with the individual and goes steadily on producing—and differentiating—individuals regardless of the circumstance that scientists here and there discern a number of individuals nearly enough alike to be described in a book as a species. Nature's only contact is with the individual, from the fairly simple wood tick to the fairly complex G. B. Shaw, and Nature's only message to the individual is a simple one: Go on being an individual or you will become an ant or a pre-Pizarro Peruvian or a union laborer.

You can survive in that state, to be sure, but you will stop growing as surely as the ants did about eight million years ago and you will be stepped on as carelessly and as devastatingly.

When you join a species or a union or anything of that sort you have given up the fight and I have no further use for you. And the message to all of us on this spinning little ball is: "You could become a successful ant hill if you could quit your individual striving, but you never can quit, because I that make you am now and forever against equal rewards for unequal tasks."

All very well as talk, but what ground has Nature for so arrogant a tone in the face of the world's imminent unionization? Well, I think it is something like this: Our one big union is now engaged in swallowing itself. The tail has entered the mouth and is slowly disappearing before our perturbed gaze. No day passes but some little union joins the big union—the feast of self-destruction proceeds with unction and cheers from the gallery. Presently the big union will have swallowed itself utterly and there won't be any more big union, because it will then have to strike against itself. Having swallowed itself the union will perish in the pangs of a monstrous indigestion. Then again we shall have little unions slowly maturing to strike against the newly non-union world. Again the cycle will commence. But Nature doesn't care about that. She has merely provided that unionism sooner or later defeats itself.

Brawn vs. Brain

And meantime? Well, meantime I look for this to be one of the most interesting worlds now swinging through space. I shall try to watch the spectacle as a confirmed neutral, with impartial cheers for each day's victor. That is, I shall remain as neutral as a man can be expected to remain who has no union to receive him and who for the moment perceives that the unions barred to him are making it harder and harder for him to survive. I shall be fairly neutral, I suppose, until wages and the cost of living mount to a point where both will become prohibitive instead of merely exorbitant. Then I may join the stonemasons' union and strike for still higher wages against other strikers, while the cost of living still unaccountably scoots skyward. But I look for it all to be interesting. It will be interesting to observe how long it will take the striking hands and feet and eyes and ears to learn that they too are a part of the body, nourished by the stomach and under the necessity of direction by the head.

Hence meantime my somewhat embarrassed hesitation in advising the young man who accompanied me into this article about the choice of his life work. He talks occasionally of soldiering, but I have had to advise against that. The wife of a captain in our Army lets me know that her colored maid has lately wedded a stevedore of her race whose pay is twice that of her own husband. Yet her own husband was expensively educated to a difficult profession, while the now-opulent stevedore cost organized society very little to produce.

So I am constrained to advise in favor of those callings that demand brawn rather than brain, and indeed for want of education none other presently will be open. Pretty soon no one will be able to choose a profession, for there will be no teachers left to teach them.

Recalling our old friend the law of supply and demand, how long will there be teachers at two dollars and fifty cents a day when window washers or the followers of twenty other trades get two or three or four times that sum? We are now paying ditch diggers more than college instructors and mechanics and trainmen more than professors. The young man won't need college instructors for a dozen years yet, but will there be any left at twenty cents an hour when doing something a lot simpler—and requiring a much briefer training—brings eighty cents? It would seem not. Even now professors flee their academic shades for real jobs, as do our army and navy officers. No love for teaching or soldiering can long restrain them after the easy discovery that they must eat and clothe their nakedness even as the moneyed motorman. So there will probably be no question of a learned profession.

On the other hand I must conscientiously advise him to find an occupation—if that be possible—not yet unionized, for unionism is an insurance of mediocrity and I would rather like to see him with an incentive to excel, even in such a matter as bricklaying at a dollar and a quarter an hour, that being the figure for which the bricklayer's union is at present striking.

The Open Shop of Nature

I might advise the stage, but I should hate to think he was going to be so bad an actor that he would need the power of a union to get him a fair deal. And if he became a good actor I should hate to think he might have to strike because a lot of *ersatz* actors—who wouldn't be actors at all except for the union—decided to strike for more pay than their individual talents could command, or because the scene shifters were having troubles of their own. Yet just now and for some years to come he will probably have to struggle with the union handicap.

So I am back to the locomotive with him. I think he has all instinctively made a wise choice. Nor is it impossible that I shall eventually be in a position to admire him from time to time as he rolls gorgeously by me in his high-powered vehicle. That is, as a stonemason I may fail to achieve even the moderate union requirements, so I shall then have an arm or a leg subtracted from my person—while there are still surgeons—and procure at some pretty grade crossing the task of waving a red flag on the approach of trains. The pay was forty dollars a month three years ago, but is now a hundred and forty, and the labor is not exhausting.

I had thought of going in for elevating, but I see that the elevator person in the Washington home of the American Federation of Labor had to strike the other day to get his inherent rights, so that seems too uncertain.

Let us all join unions cheerfully while we must. The most of us have already joined and been affiliated, which has come to be a lovely word indeed. And when we have joined it will soon be over, for we shall be speedily unjoined by Nature's neat decree, for her law is strong and works not with petty injunctions. Her reward is to the superior, and in every cell with which she has built man she has implanted a striving for superiority that no union organizer can long stifle. It is only by such individual striving that we are people, so-called, to-day instead of polyps and things of that sort. And only by such striving has there been created that wealth which the people would take over. But for the certainty of superior reward for superior effort there would be no wages to strike for, no strikers, no unions, no labor trouble—as there is none in the beehive.

A bee works for nothing and feeds himself. But Nature has seen to it that we shall not become bees. Nature is the original unbeatable scab. Her open shop can't be closed. This is a good thing to remember when orators of high-muzzle velocity seek to isolate the causative bacteria of unrest. Unrest is Nature's one eternal trump card. We must eternally play against it and eternally lose. It may seem harsh; but, after all, what other way was there to keep the game going?

THE SUBMERGED MAJORITY

(Concluded from Page 31)

worthy fathers express regret that they kept children in college and university too long. It is impossible to acquire too much real knowledge, but much taught now is not knowledge.

Orators talk and writers publish, but it all resolves itself into this: Only a few of those who are industrious and fair fail to succeed, while only a few of those who are unfair, idle and vicious fail to score failure.

Life is not only understandable but reasonably agreeable. Nature knows and tells; nothing need be accepted on blind faith. Fire burns; if by the exercise of care you save your house from the flames you have cheated the devil; if by frugality you save yourself from want you have cheated him; if you are careful of your health and of your conduct you have cheated him. And this is the only sort of cheating that is fair. The good things of life are never so good as they might be, but they are better than the bad.

In the old days of the republic citizens held a town meeting occasionally to discuss public affairs, and thereafter gave their attention in peace to their shops and farms; but in these modern times public affairs are the subject of constant discussion and excitement. Congress is nearly always in session; finally, unless there is improvement, I suppose state legislatures, city councils, boards of county commissioners, of education, and so on, will also be in constant session, to add to the general confusion. Almost every day there is held an important convention of some kind, with exciting speeches and resolutions. Our enterprising newspapers report them, and we spend much time in discussing the news. Those who keep up with daily events these days have not much time left for anything else; and in the end the news is exciting rather than agreeable.

It seems to me that after all private affairs are the great concern. The production and distribution of supplies is the first necessity, and that is what business, or private affairs, amounts to. But business is penalized to keep public affairs going vigorously. The Chicago Tribune estimates that the attendance of an official at one public function cost three million dollars; and of course this tax was paid by farmer, factory owner, workman and operator of transportation line. In addition he devoted considerable time to reading the daily news of the public function, which was spread out over months; and which didn't finally settle anything. Indeed it resulted in a second row as fierce as the first.

A Long, Futile Strife

If we should handle our private affairs sensibly public affairs would be a mere matter of meeting occasionally to cheer a good country. Instead of that we meet frequently to curse it, of which sacrilege we should be ashamed. The truth is we have a good country and a good form of government, but are not making so much of either as we could or should. It is a well-demonstrated fact that if we do as well as we may in the United States we do exceptionally well.

Macaulay, in his History of England, says of a certain memorable strife in that country: "It lasted through four reigns. It had produced seditions, rebellions, battles, impeachments, sieges, proscriptions, judicial massacres. During many years one-half of the energy of England had been employed in counteracting the other half; the people had so successfully impeded each other that the state had been of no account in Europe. Not a single flower of the crown was touched; not a single new right was given the people."

We have not lacked interest in public affairs; there has been no lack of remedies proposed, but they have not been new. Indeed, the promises of modern statesmanship are insignificant compared with the promises made in an older time. It is an old game we are playing, and we get nothing out of it except strife, ill humor, promises, impeachments, steadily increasing taxes and exciting news.

Mr. B——, the modern, promised in case of his election that when men become old they should not be annoyed with poverty. But Mr. M——, the ancient, promised that his followers should not become old, that they should renew their youth, and each be attended by thirty beautiful houris who could not if they tried advance a year in age. Mr. B——, the modern, promised plenty of work; but Mr. M——, the ancient, a man of real imagination, promised his followers perpetual idleness, and banishment of all pain and worry. Another gentleman, whose name I do not recall at the moment, not having at hand the details of that very ancient campaign, promised his adherents a happy hunting ground where game would never become scarce; an elk or lion killed to-day would renew itself during the night and be ready for another chase to-morrow.

Meanwhile we are all becoming more ill-natured than becomes good-humored Americans; if we do not have a care I fear we shall finally fly at each other's throats.

It would be easier for the people to bring about such reform as is possible than it is to endure our present ills; and we know better than we are doing. It is actually easy for the people to win; it is foolish to talk of their being powerless. The great newspapers and politicians are always watching the majority, to meet its favor, whether it is sense or nonsense. The trouble is we are asking too much; a worthy people so successfully impede each other that they get nothing at all from their reform work.

The Mistakes of Majorities

Public affairs are not conducted so intelligently, honestly or economically as they should be; and the fault rests with the people themselves. They are in control, and there is no power recommending the faults of which we complain. We have laws providing every possible public blessing; if any are lacking we are at liberty to enact new ones. In this day and country there is neither king nor aristocracy opposing the fullest justice, equality and opportunity for all. Both the rules and the laws beg the people to improve in all the respects named. We have too much intemperance, idleness, impoliteness and lack of thrift, but there is no law, no public sentiment, favoring either of the bad habits named. So far as civilization is breaking down, it is due to the individual faults of the people; we have every public right we can have.

I believe in any system the people have tried a long time and found most expedient. The plans men have adopted are better than plans they have talked about and neglected to put into effect because of doubt of utility. When the majority makes a mistake it must inevitably correct it; the majority cannot afford to follow a bad plan when a better one may be found, and only does so until the better plan appears and demonstrates itself. There is something wrong with every doctrine the majority does not put into effect. I cannot believe that mankind, after experimenting with life thousands of years, finally adopted the worst system, and steadily refused to put into effect a better. We know our present social system is effective because we have created while living under it a country where there is more liberty and prosperity than ever existed before anywhere, in any other period in the past. The best evidence that we cannot afford to throw away this system to try doubtful experiments is the fact that we have not done so. We do not shoot successful men and divide their property, because there is doubt that it is the best way. We may be willing to do it, but have a suspicion that successful men are after all useful; that it is best in the long run to protect a man in the possession of what he has acquired fairly under the old rules. Every man wants this protection, and grudgingly grants it to others.

I believe in the best workmen being made foremen, superintendents and managers or finally starting a rival business. In every place where men work there are inexperienced workers who need direction in order that they may better learn their trade, and themselves advance. There is the same reason for foremen and superintendents and rules and laws that there is for giving a father authority over his children. Workmen are constantly becoming foremen and employers; children are constantly becoming parents; poor men are constantly becoming rich.

Because a workman is advanced to foreman, superintendent or proprietor he does not lose the manhood which distinguished him as a member of his union; he is no less a man because he is promoted on merit. Promotion does not cause him to lose all sense of right, correct living and justice to his fellow men. We all have some of the capital so generously abused. In a degree we are all capitalists, as we are all citizens. Capital changes owners every decade, almost every year.

The question is often asked: "What is the remedy for human ills?" A frank and truthful answer is: There is no remedy. Certain things are wrong, and nothing can make them right. But natural ills may be modified by industry, temperance, patience and sound principles. Socrates is said to have been the most original thinker of antiquity. Yet what did he think or know that the average man should not think and know at thirty years of age? Socrates was an apostle of plain thinking, of plain common sense, of right conduct for its own sake. Who should not be?

I have harmed myself in being too progressive often enough to know such a thing is possible; and in looking back for the reasons I have found that I neglected old and simple principles I was familiar with. I think that is the trouble with the world to-day; it has rushed into big things without considering that certain little things are in the way to prevent accomplishment.

There is much in print about the best and noblest men who ever lived being reviled, traduced, indicted and executed; but I have never known such a case. The noblest and best men I have ever known have been rewarded. Nicolai Lenine is probably as strong a friend of the new order as can be found, yet in his serious moments he recognizes the truth of the old philosophy. In 1918 he wrote:

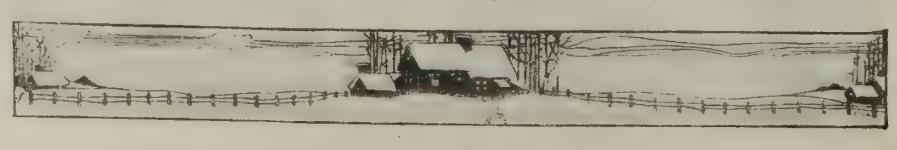
"Keep accurate and conscientious accounts; conduct business economically; do not loaf; do not steal; maintain strict discipline. We must effect a complete change in the mood of the masses and turn them to regular, uninterrupted and disciplined labor. We must purchase the services of a thousand first-class scientists and specialists, and though we pay them a hundred thousand rubles a year they will be cheap at the price."

Here is the chief of sinners acknowledging his wickedness is wrong; here is the leading apostle of the new thought paying tribute to the old religion of common sense. And every other great sinner of the past or present has been forced by the logic of events to recant, and accept the simple principles and lessons of experience.

Success Not Difficult

The best good men can do will not result in prosperity for the shiftless, the impolite, the dishonest, the intemperate or the lazy. Nothing will rid the people of work and unhappiness; the great human betterment so many expect will never be realized. The only improvement we can hope for is for all to do a little better.

Men talk of success as being a tremendously difficult thing, and say that in order to achieve it they must give up the finer feelings, all leisure and enjoyment. Success is actually not difficult; so many dull men have achieved it in this country as to demonstrate that it is easier than failure. Success actually means no more than living life in the easiest and most natural way. The purpose of the man who saves is rarely vicious; it is nearly always commendable. The best we can do is to make the most of whatever talent we draw in the lottery of life. And the poorest of us draw enough in the lottery to take advantage of industry, politeness, temperance and fairness. It is snobbery to pretend that character may not accompany promotion. The talk that the greater the rogue the greater his fortune originated with thieves, and they have failed to make the doctrine good. If you have not succeeded give your son a chance. And he cannot succeed if there are no successful institutions, and no successful men to grow old and require successors.



There is rebellion in every nation, county, city, neighborhood and fam cause of the natural conditions of lif the fire smolders because men have l that playing with fire is dangerous. rebel as I sit before my fire at night ing over my affairs, but return to my next morning, because of the kno that rebellion does not pay; I ma best possible terms with life, take a ping, and in future obey the rules History does not show a single revo that continued without let or hind revolutionists themselves finally adm members of the human race cannot they do nothing but fight each othe

The people have not trusted the simple judgment enough; somethi confused them in considering their affairs. The great questions are not by the geniuses; they are settled, so they can be settled, in the crucible perience, by the real people. The have failed in their big undertaking the submerged majority is now con not only with the right but the duty plying saner methods. Delegate th honest man to manage your affairs w let, hindrance or investigation, and give himself a little the best of it. Ca ness is the besetting sin of all of us; your affairs carefully and you wil many a man from the sin of robbin

A Modern Æsop's Fable

Too many have the foolish hope great reformer will finally come alo rescue them; that a modern statesma find an easier way of living than ha discovered in centuries of honest en in the past.

A modern Æsop relates that a r was once feeding beside the road an ing a fox approach, promptly flew convenient tree.

"Have you heard the great news" fox asked.

The rooster replied he had heard no

"Well," said the fox, "universal has been declared. In future fox play with chickens, and lions with There is to be no more strife in the and no more work or worry. Co down and play with me, and we wil brate the great news."

But the rooster was doubtful, a two argued back and forth. Final fox said: "If you intend to come do play with me and celebrate the un peace you'll have to hurry; I see approaching."

"If universal peace has been decl replied the rooster, "why not remai play with the dog?"

"I am afraid," answered the fox made off, "that that fool dog hasn't the news."

It may be contended by some numerous idle talkers that the fo higher ideals than other foxes; but same the rooster was warranted in suspicious—as was the fox when he dog loping over the hill and rapidly c his way.

There is a certain philosophy kno roosters and foxes; an equal a frankly accepted by the people w sufficient for their needs.

The Rousseau plan, the Marx pla Plumb plan, and a number of other I do not mention because of whol respect for the editor and his readers failed.

The insurgents ask the philosop parents, pastors and teachers: "C save us from unhappiness and work

And the truthful answer is: It c Whereupon the insurgents turn to ne periments, accept any pretty phrase spend a billion in trying it. And a time the old philosophy is better tha new.

Experience is the only reliable guide for thousands of years the best me women have been trying to better tions, with experience as a teacher. losophy, religion, science have done best, and we have the result in the compromise of to-day; which is the we can do with moral conditions. I c have all I want, nor can any man; wisdom of the ages has outlined a promise, and we must respect its limit its rules. All men know more than the ages more than a decade or a cen

HANES

TRADE MARK

ELASTIC KNIT

UNDERWEAR

GUARANTEE—We guarantee Hanes Underwear absolutely —every thread, stitch and button. We guarantee to return your money or give you a new garment if any seam breaks.

Hanes"—the greatest underwear value ever sold at the price!

T the big, *extra*-long-service features of Hanes winter men's Union Suits and Shirts rawers fixed in your mind! Go over the r wear-points brought out in the diagram k shown in the Union Suit above—*guaran*- d unbreakable seams; *guaranteed* tailored a tte that cannot gap; *guaranteed* elastic t rist and ankles; *guaranteed* closed crotch; a *nteed* pearl buttons sewed on to stay; a *nteed* buttonholes that last as long as the m nt!

S ch a wealth of underwear value to spread o any man at the price! If comfort, r h, wear and economy mean much to you w ter underwear, then buy "Hanes"! *Every* r d, *stitch and button is guaranteed!*

You should immediately check up your dealer and get a supply.

Hanes winter weight Union Suits are standard throughout America—*standard* because of extra wear and *standard* because their extra comfort, fit and perfect workmanship make them exceed in real worth any underwear you ever bought at the price!

Your confidence in Hanes Underwear should be based on the fact that every process of manufacture from raw long-staple cotton to the perfected garment is *under direct Hanes supervision in Hanes factories!*

Your choice of Union Suits or Shirts and Drawers is a matter of personal preference.

Hanes Union Suits for Boys

All the quality, extra features and perfect workmanship that make Hanes men's Union Suits so universally popular *go right into Hanes Union Suits for Boys!* We have never laid hands on such value in boys' underwear. Fleeciness and warmth, in particular, meet parents' most exacting wishes, plus *reinforced buttonholes* that will not stretch.

These staunch Union Suits stand up against the stiffest wear-service and wash service. The elastic knitting and *reinforced strain points* allow all sorts of work and play freedom. Made in sizes to meet ages between two and sixteen years. Two- to four-year sizes have the drop seat.

If your dealer cannot supply you, write us immediately

Warning to the Trade

ment offered as "Hanes" is a e unless it bears the Hanes label.

ROSA ALVARO, ENTRANTE

(Continued from Page 19)

Eight o'clock found the hosiery department ready to cope with the special sale of silk seconds. Gwen had sharpened her pencil and stood licking the lead from her thumb, and with a look of incredulity watching Mayme engaged in a conversation at the end of the counter with Mr. Peacock. Mayme's eyes lowered and raised their lids in the most approved manner of female vamps. Gwen nudged her elbow into the fat side of Gertie Gay, who was to relieve during the rush.

"Get onto Mayme, Gert. Second childhood. Talk about Raffle's cherubs! They ain't got nothing on Mayme. Don't it git you? I left that doll playin' tag with misery last night, and here she is this morning playin' baby vamp to Peacock! I like her nerve—me feedin' her deviled crabs and things to raise her spirits! And Peacock's fallin' for it! Can you beat it?"

"Forward, Miss Applebaum. White balbriggan for the lady." And as Gwen shot a look of indignation toward Mayme's back Mr. Peacock added: "Miss Ladd is engaged."

Gwen slammed a box upon the counter and made the sale, never for a moment taking her eyes from Mayme, taking in the fact that Mr. Peacock's eyes were pointed with interest and that he smiled in an unrestricted manner even when trade had demanded Mayme's attention, and that when this occurred he moved away with a show of annoyance. She also saw with widened eyes that Mr. Peacock actually returned to Mayme after a sale and made a low remark to which she listened disinterestedly, smiling slowly and giving a nod, and Gwen caught the word "perhaps," after which Mr. Peacock turned away to unravel a complication in checks.

Gwen waited until she could confront Mayme in the narrow aisle space, then burst forth with: "Say, looka here, Mayme; I ain't no Cleopatter. You don't catch Gwenny nussin' no snakes. What's your game?"

Mayme narrowed her eyes and returned the gaze unflinchingly. Then dejection seemed to creep over her like a gray mantle. She shrank under the accusing eyes of Gwen and stammered: "I don't know what's the matter. I —— Oh, Gwen, I'm tired of being nothing! I just wish ——" Her lips began to tremble and the lazy eyes were brimmed with tears, which seemed to sift ashes over the brightness, leaving her face dull and expressionless. "Gwen, I can't help bein' alive and feelin'. And it's so easy," she added in a smothered reflective tone.

Gwen was nonplused. She slipped an arm about Mayme's waist and delivered a comforting little squeeze as she whispered: "Well, if you feel that way about it go to it, kid! I'm for you! I don't know your game, but if it helps it's O. K. Lord, Mayme, you got me backed. Workin' your eyes on Peacock! I bet you can't pull it."

The rush hour was on. Women stormed the department, wrangling over stock, colors, numbers, service, addresses, change, checks; crowding the labor with torturous incidents, flaying the spirits of their servitors and leaving them with weary bodies and quivering nerves to complete the day. During the confusion Gwen had forgotten Mayme and Mr. Peacock, and when the gong sounded she hastened through the rushing mob of employees to the elevator. On reaching the seventh floor she procured her tam from the locker and jamming it down over her smooth head hastened back, to descend in the packed car to the main floor and push her way through to the entrance, where she stood humming I'll Say She Does, and swaying to the rhythm. Mayme joined her some minutes later, and something in her pathetic expression called out the latent mother in Gwen, for she grasped the thin arm and snuggled her close to her side.

Waiting for the passing L to cease its clatter she said: "Let's go to a restaurant. I'm not hungry. It's rice pudding and milk for me, but you need a feed. So it's me for the gum diet, hon, and you add this to make it a steak for you." Gwen's hand slipped twenty cents into Mayme's hot fingers.

Once within the clattering lunch room they made little conversation. Both were too far spent to waste energy. Later Gwen stopped with her spoon poised halfway and watched Mayme eat the steak with evident relish.

"You know," she said as she contemplated the spoonful of rice—"you know, Mayme, Jim wants me to go to a masque to-night. It's on a Lake liner leavin' at nine. Let's! They ain't nothin' but sweat here, and you might as well dance yourself to death as sweat yourself to death. They ain't no mourners anyway. I'll match you, Mayme; heads we go."

The coins brought forth were placed and Mayme looked dully down at heads.

"Well, that's settled," said Gwen. "Hurry now, Mayme. Oil up your lamps! Go on, kid, just for to-night. That's what they are for: to light the weary boob upon his way. Fling out the life line, kiddo!"

Mayme rose and followed Gwen through the labyrinth of porcelain-covered tables, thence through the tiled entrance and out into the swarming street. They had walked only a little distance when Mayne placed a shaking hand upon Gwen's arm and said: "Gwen, hold my hand."

"What's the matter, kid? Sick?"

"No, I'm scared," answered Mayme.

"What the—why, you're as white as a sheet! It's the darn heat."

"No, it's not, Gwen. I tell you I'm scared!"

"Well, I'll be; if you ain't the queer one! What of? Have you stole somethin'?"

"No, but I feel queer. I'm scared."

"Oh, cut it, Mayme! You give me the willies. Hurry on, we ain't got time to moon, the boat leavin' at nine."

Mayme nodded and they moved on at a swifter pace, to be immersed in the gray waves of humanity that ceaselessly surged the pavements.

At eight-thirty the upper hallway at Mrs. Winthrop's was graced by the appearance of Miss Gwendolyn Applebaum arrayed in the henna Georgette. Her slippered feet paced off the distance from her own room to the hall room at the rear. She was humming and swinging a small black mask. The transom over the door which marked her destination gleamed its wavering light upon the faded ceiling. Gwen pursed her lips and made a soft whistle, listening for an answer. None came. The hand that swung the mask knocked and descended to turn the knob, at the same time pushing open the door. Upon the threshold her figure hesitated, and the light falling upon her face disclosed consternation. Her lips opened, then snapped shut.

In the center of the room a graceful figure stood—a slender willowy girl whose lazy eyes looked out from beneath their lashes like smoldering embers. The scarlet lips were parted over the gleaming white teeth in a brilliant smile. The dark hair was brought up in a fan-shaped knot, leaving the low brow free and accentuating a certain beauty. A bunch of artificial flowers, scarlet, was caught at the side of the graceful head, one spray falling along the neck's curve. The shoulders were bare; delicate in their modeling, but sinuously expressive. The form was draped in the soft folds of a black crape shawl whose border was an embroidery of brilliant shades and fringe of deep-knotted silk, the whole falling over a close dark shirt. The figure moved forward in greeting, the smile flashing invitingly. Gwen batted her eyes slowly several times, then swallowed as though her words would not come.

"Where's Mayme?" she finally gasped. The figure shrugged its graceful shoulders and shook its head, at the same time turning a face whose expression showed the confused exertion of one who strove to understand, but failed.

"Is she gone?" Gwen's voice caught a little as though she was about to cry, yet her eyes were striving to believe the reflection within them.

"Yeaz, Mees Ladd, she gone," came the answer. The voice was delicious. It trailed over the words, clinging to them in a tantalizing manner.

"Where's she gone?"

The dark head shook its inability to answer.

"Who are you?" Gwen was drawing into the room and closing the door at the same time.

"Rosa. Yeaz"—the little chin raised and lowered in its assertion—"Rosa; Rosa Alvaro."

Gwen reached forward, grasped one of the slender arms and pulling the girl toward her said: "Looka here, Mayme, what're you up to?" Then surveying her from head to toe: "Mayme, you're wonderful! Cut it, though; you scare me."

The lazy eyes glittered and the little figure stood defiant, a swift little hand snapped its thumb and finger beneath the nose of the astonished Gwen. Then the purring voice trailed on: "I dance, see?" and setting the words to action she pirouetted about the room and brought herself with a breathless little gasp up before the henna Georgette and Miss Applebaum. "You no like Rosa?"

Gwen caught the shoulders in her firm grasp and delivered her answer, punctuated by short shakes: "Cut it, I say! Do you hear me, Mayme?"

The proud little shoulders shrunk, the scarlet lips drooped, and with a shiver that sent a tremor through the frail body Mayme flung both arms round the bewildered Gwen's shoulders, sobbing out the words: "I told you I was scared! It's her, Gwen; she's got me! Oh, ain't she wonderful? She lets me outa this." She lifted her head and made a sweeping gesture about the dingy, hot little room with a small limp hand.

Gwen encircled her with both arms and stood for some seconds letting the storm of Mayme's tears break upon her; then in a soothing voice she comforted: "You ain't hurt nobody, hon. Don't cry. Come on. Jim's waitin' downstairs and it's too hot to sit home. Come on; dab your nose and fluff up your feathers and let's interduce Jim to Rosa Alvaro. You look grand. Lord, think of the moon and old Michigan! Come on, hon."

III

THE deck of the Erie was a dizzy swirl of dancers. They jostled one another and swung and swayed. The music floated gayly out over the water, splashed with laughter. Youth forgot weariness and was carried away in the arms of amour. Masks surpliced the grim visage of day, making of life but a game.

The henna Georgette reposed in the arms of a stout Pierrot and Gwen's lips smiled beneath her ruffled mask. Goldman's was forgotten. Her voice was saying: "Ain't it grand, Jim?" when she saw a black domino catch the light figure of Mayme near by and speed away to the strains of the waltz. They stopped to look. There was something in the easy grace of the two that caused a run of comment among the dancers; an abandon, a complete sympathy of movement.

The music stopped, leaving the two near the shadow of the stair. The domino drew the slender figure of Mayme into a close embrace, and his lips hung over one of the pink ears, whispering: "Give me the next, please! I can't let you go."

"Yeaz." It was the Rosa Alvaro voice that answered, and Rosa's lips that flashed temptingly, her white shoulders gleaming against the darkness, and the moonlight marking her graceful lines.

The domino grasped one of Rosa's yielding hands and when the music started detained her, to draw her toward the stairway which led above. Rosa followed. The upper deck was bathed with moonlight. A cool damp breeze blew clinging tendrils about the delicate face. Rosa flung her arms high and pirouetted about.

"Eet ees wonderful, ees eet not, yeaz?"

Her voice left the word with hesitance and the lips remained parted in a smile of sheer delight. She leaned over the boat's rail and peered out into the darkness. The city's lights twinkled mystically. Music surged upon the fitful breeze like little waves, booming in, to recede and die. The black domino leaned closer, gathering one of Rosa's hands within his own.

"I weesh, I weesh I nevair have go back." It was Rosa's voice. "I like—I like I dance, dance with you, always! Is it not so, señor?"

"To-night, and you!" The domino drew a sigh and pressed the little hand over his heart. "You, Rosa. Nothing else matters. We will never return. I have tasted wine and am drunk!"

"Eet is so wonderful, señor. I nevair ask who; and you—are satisfy with just Rosa, leetle Rosa. Yondair, señor—men are not so, yondair. Ah, señor, when I think of yondair, my heart break!" And Rosa's little hand waved toward the twinkling shore.

"Where do you hide yonder?"

The black domino had crushed her to him and stopped her lips with his. Rosa's hands met for an instant round h and she stood listening to his hear with a little writhe she freed her stood panting and frightened, o caught to her throat.

"Where?" his voice demanded.

Rosa shook her head and shrug lazy shoulders.

"Señor," she said, slipping a flow her hair and kissing it, "in Espai far! Look, when we come yondai get, yeaz? Maybe; maybe and not. Eet is better, maybe, señor thees." She handed him the clot "Eet is just so real as Rosa. Take me, señor! Rosa would dance!"

They rushed toward the stair an off into the eddies of the surging The joy spent itself as the Erie dockward. The confusion of de blotted out the happiness. Rosa a shadow waiting for Gwen and Ji ing out into the light with feveris when an arm encircled her and th domino whispered: "Rosa, Rosa! hood slipped from the head an looked up into the face of Mr. Pea

She laughed up into the face an palm over the lips.

"Eet is good-by, señor. Rosa ha to-night. To-morrow she is Good-by."

She was free, running down th Gwen called and caught her arm followed dully, Jim's strong hand until they reached Mrs. Winthrop's. threw open the door of Mayme's h room, fumbled for a match and ligh gas, sinking down upon the bed and off her pumps. She watched Rosa slipped her garments, laying them one reluctantly aside and, after s finished, take up the shawl and ho her breast, her face radiant. He flamed as she looked up, catching t of Gwen bent upon her. Then her let the shawl fall slowly from her a flung herself upon Gwen's bosom, giving forth disjointed utterances:

"I told you I was afraid of her Gwen, I love her! She's everything to be. I can't be nothin'. What's of me? Nobody ever sees me. I te you shan't stop her! She has a Didn't I find her? It don't make no ence. I can slave on, but they touch her, do you hear? It ain't m what used to be me before the world it. She don't know I'm all in. She know it, I tell you! What differenc it make? Nobody cares anyway. L me. Look at me! She's gone. L me, and think about to-morrow!" N was clinging to the shawl and he was deathy. Her chin quivered a suddenly went off into wild sobbing.

Gwen stood awe-stricken, repe "Listen, kid, listen!"

"Get out!" Mayme's voice bro the words. "Get out!" She was sh Gwen toward the door. "She's gon you are one of the reasons!"

The door slammed. Gwen back ward her own, emitting a long whistl saying "Can you beat it!" she peared.

IV

DR. McDERMOTT DREW was placently watching the smoke from his cigar as he listened to the p a female of the species which had cur length upon a divan, displaying to th advantage the well-shaped ankles and ing the slim feet as a sign of comfort, as a cat arches its back preparatory t bing its sides over one's shin.

"Do tell us about it, Mac! It's so ing; secondary personality and all th really look upon you as a sort of w Think of being able to look at peopl dissect them mentally."

Miss Rhader yawned and drew s from her scented cigarette, glancing v scrutinizing air upon her delicate wris hand, then looking at Doctor Drew ously to calculate the effect her in had produced. "Fancy, Flo," she we addressing a pale girl who was aim strumming a ukulele; "fancy. He hy tizes them. Really, Mac, it's posit thrilling! I should jolly well like to specimen of the malady. There's a promise that I shall."

"If the opportunity presents itself I have no objections, Gaddy. But," we

oc Drew shook his head to denote
hdid not recognize the name.
hs been there for six years. She's
dwn and out for a year, and I been
n her along, gettin' about as much
ir gement as you might get tellin' a
e good story. She's sick—or was."

Gwen hesitated. "You see, we're from the same town. We come here together and it was me that brought us, so it's up to me to see it through. Mayme's got no folks but a aunt that cares about as much about seein' her as some folks would care to see the devil. They ain't no place for her to go. The kid's kinda like me—no use, but gotta go on. She's all I got and there's somethin' dead wrong and I'm scared. She thinks she's someone else."

Doctor Drew sat up with a new interest, interposing the word: "Indeed!"

Gwen nodded and continued, her fingers picking at the beads that embellished the henna Georgette: "She's Rosa Alvaro—whoever that is—and believe me, she's some kid! You got to hand it to her. Ever since the night that Jim—that's my friend—took us to the masque on the Erie she's been cuttin' it high. Jim says she's loons, but I don't believe it. She comes down to the store gray as a tabby, no more pep than a banana skin. Don't see any of us; acts like she's in Germany sellin' American toys. Honest, I don't see how she gets by with it. But wait till she gets home! You never saw the like. Dolls up like a wop and slips out by her lonely. She's too swift for Gwenny, and that's some swift.

"And that ain't the worst. I found chili peppers in her powder box, and garlic skins on the floor, and they's stacks of tamale cans behind the door. You can't handle Rosa Alvaro like you can Mayme Ladd. I tried it and got stung. She's a swell when she's Rosa and a dub when she's Mayme; and bein' a dub I understand dubs. There's a man in it sure. No woman goes nuts any other way. Now there's the dope. What's the cure? If you got one trot it out."

Doctor Drew had absorbed Gwen's story, and through his amusement at its delivery displayed his sympathetic interest.

"You say the young woman was ill? Do I gather from your story the proper inference that she is stronger now?"

"No, but 'tain't Rosa that needs your sympathy. It's Mayme. She ain't sick—that is, she ain't sick of nothin' but livin' our way. Eight to five-thirty, one grind. Five-thirty to eight, one sweat in summer and one freeze in winter. Over and over again it goes. I can kick a livin' out of life; she can't. If there's any reason in psychology I wish you'd turn it on this. Have they found the reason some folks live? I bet they ain't even bothered to try." The great eyes of Gwen were a little misty.

"Seems to me," she went on, "that the way to lots of learnin' is a private elevator to the top floor. Anyway it's somethin' we hear about, but they ain't no free passes to folks like us. They go on learnin' and learnin' while girls and men sweats limp until some mornin' they come down to work and find some kinda wheel's jiffied off with their job. Why don't they help? I mean help livin' things that can hurt and ache? If they spent as much time on humans as they do on wheels and such, I bet they'd find more about what God made people out of. Mayme's sweat limp and I don't know what's happened. Will you help me?"

"Certainly," said Doctor Drew. "The case is most interesting. I shall be glad to give you any assistance within my power. Of course it will be necessary that I interview the young lady. I might say it would be well that you do not mention your visit here. Could you arrange for a meeting so that I may make her acquaintance, so I can form some opinion of the seriousness of the case? Perhaps you are needlessly alarmed. In any case I shall gladly advise you."

"If you want to see Mayme, come to the store, Goldman's, to the hosieries, and look for the deadest girl in sight. That's her. I think you better see her there first; then I can fix it so you can see her at Mrs. Winthrop's on Wabash. Home cooking; there's a joke in that, but you couldn't see it, it's too deep for you."

"Has the young woman," asked the doctor, "given you any explanation for her strange demeanor?"

"No; she won't see me if she can help it, ever since it happened."

"She avoids you, and you have no idea what might have given rise to the condition you mention?"

"No, sir."

"How long has this condition been prevalent?"

"About a month and a half."

"You say she avoids you; is this during the time that she is her normal self or while she is under the delusion?"

"Most of the time lately."

"Does Rosa seem inclined to be confiding?"

"About as confiding as a dummy telephone."

"I see. I shall call to-morrow at the department and endeavor to see the young lady. Miss ——"

"Ladd; Mayme Ladd. I'll tip you off which one she is. I can count on you to set her straight?"

"I shall do all I can in the case. It will all depend upon how Miss Ladd coöperates in the procedure."

Gwen was elated, and upon the assurance of aid was ready to leave.

"It's cooler," she remarked, "and that may help her some. Maybe it's the heat."

"No," said the doctor, "I think your friend is indeed in need of attention, Miss Applebaum; and some subtle suggestion. Good afternoon." Doctor Drew was ushering Gwen to the door of the living room, where she was met by the maid and shown to the outer doorway.

Dr. McDermott Drew watched the henna Georgette upon its way down the street until it turned the corner, then turning from the window he made ready for departure. Leaving the apartment he hastened to meet the appointment for five-thirty at the Auditorium. He came upon the two ladies in the entrance.

"Mac!" It was the voice of Miss Agatha Rhader. "Late as usual. Flo and I were just growing impatient."

"Late, I admit it, Gaddy, but for a serious reason. A case of disassociation has just presented itself. I shall begin its study to-morrow."

"It's a woman, of course?"

"Yes, a woman; a young woman, a salesgirl at Goldman's. She has become possessed of a secondary personality which calls itself Rosa Alvaro. Spanish, I should judge."

"Fiddlesticks!" blurted Agatha. "Imagine a salesgirl with a personality! Mac, you are such an infant, even in a college chair with a big stick called science. Come on!"

V

AT SEVEN-THIRTY the following evening Dr. McDermott Drew was ushered into the stuffy sitting room at Mrs. Winthrop's, where he awaited the appearance of Miss Applebaum, unmindful of the interest he had stimulated within the various regular inhabitants.

The lower floor was filled with a blue smoke issuing from the kitchen and bearing the scent of burning grease. This, with sundry other scents which intermingled, filled the gloom through which the hall light bleared uncertainly, lighting the dingy appointments and adding to the confused outlines a ghastly pallor.

Doctor Drew sat in a leatheret morris chair uneasily, his position commanding a view of the hall and stairway. He watched the ascent or descent of numerous guests with interest. Each time the outer door opened it marked the appearance of a new form upon the scene, and the gust of raw damp air which accompanied the approach bore an additional scent to the already reeking atmosphere—cigarettes, liquor, perfumes of conglomerate mixture, each giving mute evidence of the personality of its bearer.

At eight o'clock the rustle of silk and the stilty tap of slippers followed a heavy scent of sandalwood down the stairway and the hall light fell weakly upon the henna Georgette.

Doctor Drew rose to clasp the proffered hand of Miss Applebaum, bowing and remarking: "Miss Applebaum, I must thank you for bringing to my attention what I believe will prove a very profitable study."

"Then you think Mayme is dippy sure 'nough?" asked Gwen, sinking into the nearest chair and murmuring, "Poor kid!"

Doctor Drew placed his hat carefully upon the table, then sat once more in the leatheret morris chair, proffering further conversation in the form of inquiry: "Have you seen Miss Ladd since your return from employment?" Gwen nodded affirmatively. "Very good." Doctor Drew's tone betrayed pleasure. "I saw Miss Ladd today at the place of her employment. Is she usually so unwilling to enter into conversation? She seemed ill or melancholy."

Gwen nodded and leaning nearer in a confidential manner said in a breathy whisper: "I know. That's it; Mayme's dead, and dyin' more every day. I tell you she's gone. She slinks round the counters to get outa my way like a alley cat prowlin' alleys. She's not eatin' right. Nine dollars per don't feed no Mrs. Astor, but it keeps your wheels oiled if you're a high financier. You can't buy no spangled fans and Spanish lace. No, sir; and you can't pay rent on togs at the costumer's—and that's what she's up to now.

"It was wheats and coffee at eight, plus ham-and at six, and nothin' more than that for three weeks—for this." Gwen's hand slipped lovingly over the beaded bosom of the henna Georgette as her eyes lowered and her lips grew grim.

Doctor Drew sat silent before this confidence. Gwen lifted her head and the old defiance returned.

"There's lots of things the world don't know, ain't they?" she shot forth; then with a little snatch of a laugh: "Pullin' the sob stuff, Gwenny! Naughty, naughty!"

Doctor Drew laughed, though his eyes were curiously lighted and he seemed ill at ease. "You know," went on Gwen, "I watch them dolls at the store that touch goods like they was nasty—you know, the little-finger-in-the-air kind—and I wonder what's in 'em. Every time I hands out a package I says: 'Gwenny, there's a little bit of you tied up in that. They're gettin' you, girl; little by little they're gettin' you.' Did you ever think of that? Well, they wags off with you and leaves you nothin' to remember but a baby-doll stare or a bunch of callin' down. Do you know what I say then? I says: 'Never mind, Gwenny, she's leakin' sawdust.' That's what's in 'em—sawdust. Mayme's handed over the counter about the last of her, and is sellin' off the remnant. I wonder if she's really dippy or just wised up?"

"I think your friend is under quite a serious delusion, Miss Applebaum," said the doctor seriously, "and that a thorough investigation might prove most valuable to science. From what you tell me I perceive the case bears many symptoms of disassociation of personality. You say you saw her this evening. Was she her normal self?"

"Well," answered Gwen, "I went in to hand her some bananas and she was sittin' by the window starin' out. She was cryin', and when I saw her Rosa togs hangin' on the bedpost I wanted to tear 'em to bits. Seemed like I could hear Rosa laugh and drag out the 'yeaz.' I tell you she's starvin' Mayme. Garlic and tamales ain't no fuel to run her. I told Mayme you was comin' to see Rosa. That's honest. I couldn't do her dirt. I says: 'Mayme, Doctor Drew wants to find out the reason of Rosa.' She looks at me keen as a knife and pins me up with her eyes and says: 'What for?'

"'Well, you ain't right,' I told her. 'How do you know?' she says. 'Well, this Rosa stunt is gettin' serious,' I says. 'I don't mind you spiffin' part of the time, but this thing of you shootin' off like a skyrocket when you ain't nothin' but a firecracker,' I says, 'has got to stop.'

"Well, she ups with a corn-sirup laugh and shrugs her shoulders, dancin' off a yard or two of tongue-tied foxtrot. I knew then I was up against it, for Rosa had got in the picture. I can't quite get the dope. I'll go up and get her, but there's no tellin' whether she will fall for you or not. Like as not she will be Rosa and peel off one of them 'Yeazes' and refuse to come down; or I'll find Mayme, white and shakin', and I won't have nerve enough to put her up against it. Anyway, wait, and I'll be back in a minute."

Gwen rustled from the room, tripping up the stairway with the air of one who had never known fatigue; greeting one of the third-floor dwellers with a familiar "Hello, kid," as she passed, and swiftly going the length of the hall above, to stop before Mayme's door and knock. The door was opened and Rosa was revealed, with her back to the light, her shoulders unevenly poised in a graceful manner, smiling out upon the sober face of Gwen.

"Rosa!" said Gwen.

"Yeaz." It was the voice of Rosa Alvaro exhibiting its usual curious inflection. Gwen pushed into the room, drew the lithe figure up to her and faced her about until the gaslight shone upon the lazy eyes.

"Rosa, old kid," she said, "you're up against it. It's you for the wild and fuzzy. Get it? You gotta tell Doctor Drew the truth, and then clear out. You spoil the film. Get me? Come on down and meet the doctor; and no vampin', remember!"

Rosa leaned her slender figure against the door and smiled. Her eyes flashed

ARMCO IRON

ENAMELED PRODUCTS

Smoothly Beautiful for Kitchen Use

"What put the idea of Armco Iron Enameled Products in your mind?" asked the guest.

"My husband," the hostess replied. "He uses Armco Iron in the manufacture of various metal industrial products, and has had splendid success with it. You see, its purity and evenness make possible unusual durability.

"When my husband told me that there were stoves made with Armco Iron polished sheets and enameled parts, I decided to get one. I wrote the manufacturers of Armco Iron—The American Rolling Mill Company, of Middletown, Ohio—and they sent me the names and addresses of the firms that make such stoves, also of the manufacturers of Armco Iron Enameled Kitchen Cabinets, Refrigerators and Table-Tops.

"As you see, I now use all of these articles and your own eyes tell you how smoothly beautiful and perfect they are. Because of the exceptional purity and evenness of Armco Iron, these kitchen products are remarkably free from occluded gases, seams, scars, cracks spots, pinholes, and other defects, which in less carefully made enameled products show through the enameling and cause ugly spots and rough places.

"After my two years' experience with these products in my kitchen, I can heartily recommend them to every housewife."

Armco Enameling stock is used throughout in the manufacture of such well-known products as the "Sanico" range, made by the Minnesota Stove Company, Minneapolis, the Leonard Cleanable Refrigerator made by the Grand Rapids Refrigerator Company of Grand Rapids, Mich.; the baby highchair, "Sanitray," made by the Vitreous Enameling Company of Cleveland; enamel table-tops made by the Benjamin Electric Co., Chicago, Porcelain Enamel & Manufacturing Company, Baltimore, and The Enamel Products Company, Cleveland.

The trade-mark ARMCO carries the assurance that products bearing that mark are manufactured by The American Rolling Mill Company with the skill, intelligence, and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for them. The trade-mark ARMCO is registered in the U. S. Patent Office.

nr for the interview, preening herself
ailing invitingly at Doctor Drew.
octor was watching intently the ex-
se though veiled aspect of the singu-
y tractive face, not failing to note the
sp ation of the bewildered Gwen.
Co. nodded her head and made a little
cu toward the chandelier, drawling:
ei Gwain, eet ees vera dark, yeaz? Can
dctair have more light?"
Doctor Drew rose and producing a match
te the gas, which light but added to
carm of Rosa. Gwen sat staring at
procedure of incidents as one who
xe upon a dream, turning her head
n osa to Doctor Drew and back again,
tching the eyes of Rosa.
I have met your friend Miss Ladd,
ora Alvaro." Doctor Drew made the
ement, noting carefully its effect upon
a
S." Rosa seemed little interested.
You are very good friends, are you
" questioned the doctor.
Mees Ladd?" Rosa reflected for some
ons and continued: "Mees Ladd ees
s vera, what you call, close to Rosa,
to Drew. Na, na. Mees Ladd ees
t ou call *nada* een my *lengua*. You
, eñor? She no see weeth her eyes."
a ouched hers expressively. "She no
r ad she no feel. Rosa feel, señor.
es add, she cry. Rosa? Na, na! Rosa
e ees Ladd's eyes and they see! She
e lees Ladd's ears and Mees Ladd
r. Rosa take Mees Ladd's heart and
fe. You sabe, señor?" Doctor Drew
de. "Mees Gwain, she no sabe."
a azed between narrow lids at Gwen.
Where is your home, Señorita Alvaro?"
ed he doctor suavely.
Madrid, señor. But eet ees long, long,
t ou call centuries ago, señor. Rosa
ce or Ferdinando. She ees what you
florita. But Rosa, she pay, pay for
b vos she get!" Rosa's hand lifted
d cended over her heart in pantomime
a gger's thrust. From her issued a
e asp. Her eyes protruded and she
k ck helplessly, her head resting upon
her bosom. Doctor Drew was upon his feet and swiftly sprang to the side of Rosa. Gwen stood frightened before the lifeless little figure, mumbling: "My God, doctor! My God, doctor!"

Rosa's eyes fluttered open; her lips laughed; her head tossed and her thumb and finger snapped lightly, and waving the doctor aside and laughing up at the white face of Gwen she continued: "But to-day, señor, Rosa lives! To-day Rosa find what you call a body; not beautiful like Rosa's but"—she made a little deprecatory gesture over the form she now inhabited—"Rosa mak' Mees Ladd beautiful. Rosa look through her eyes and you no see Mees Ladd. Ees eet not so? Yeaz?"

"Lord! The little devil." Gwen broke in, but was silenced by a look from Doctor Drew. Rosa did not heed the remark, but seemed bent upon continuing the conversation.

"Mees Ladd, she vera, vera what you call ambitioned; but for her there is nothing, señor, but days, days, days, all alike. Mees Ladd love Rosa but"—here she leaned closer and whispered—"she jealous." She nodded emphatically and repeated: "Yeaz, jealous."

"No!" Doctor Drew spoke the word with incredulity in its tone.

"I tall you yeaz. She ees jealous of heem!"

Gwen's lips snapped shut and she turned to the doctor, exclaiming: "There! I told you, didn't I? There's a man in it!"

Rosa preened and assumed a look of satisfaction and amusement. "Yeaz," she went on, "she ees jealous of heem. She afraid, señor, afraid he see her and ——" The smiling lips suddenly began to tremble. The bright eyes lost their light. Rosa shrank shivering in a listless little huddle, and Mayme turned hunted eyes upon Gwen, seeming about to rise and flee.

Gwen went toward her and laid an arm about her shoulders, crooning in a soothing voice: "Whatsa matter, hun? Mayme, whatsa matter? Tell Doctor Drew. He's gonna help you. Honest, kid; tell him." Gwen turned her frightened eyes toward the doctor and addressing him, continued: "Now you've seen it. That's it; just like I told you. Can't you do something, doctor?"

The doctor drew a chair to the side of Mayme, took one of her hands and spoke gently: "My dear young lady, your case is most interesting." Mayme would not look at him but buried her head in the folds of the henna Georgette. "You are agitated, Miss Ladd. Compose yourself. Let me assure you that my whole desire is to aid you."

"Agitated nothin'!" Gwen's voice displayed disgust. "She's hungry and wore out, if that's interestin' for you to know. It ain't for me. She can't be bothered no more to-night."

Mayme lifted her head and now looked dully into Doctor Drew's eyes, a pitiful little tortured smile playing over her lips where Rosa's had flashed so brilliantly a moment before.

"I'm all right now, Gwen," she said, "only I feel a little queer. I'm sorry, Doctor Drew," she went on, looking down vacantly over Rosa's flaming costume and letting her hands move lovingly over its folds which illy graced the shrunken form.

"You need not explain, Miss Ladd. I fully understand." Doctor Drew's voice held the note of assurance. Mayme lifted her eyes slyly and lowered them, flushing as she did so.

"Would you be kind enough to answer a few questions, Miss Ladd? Tell me, if you will, just how you regard Rosa. Do you feel an affection for her or is the feeling the reverse?"

Gwen remained standing beside Mayme's chair, an arm about her shoulders and her hand patting the folds of Rosa's bodice. Mayme accepted the contact quite unconsciously; her eyes, shielded by their lowered lids, were obstinately kept hidden. She answered the doctor in a dull voice:

"She is wonderful. Can't you see I ain't nothin'? The world's forgot about me long ago. I used to think a few people cared, and fooled myself through the day, then I found out they wasn't no place to hang to. It's like climbin' a treadmill, just up and up, and never any higher. I ain't blamin' Goldman's. They ain't holdin' nobody to sell stuff. I ain't blamin' them, but—you never could understand. I went gray, dull. When you're young the world kids you. When you ain't young and you see the last of the kiddin' days wavin' good-by they

forget to kid you and—well, just leaves you alone. Then it's—it's"—Mayme's lips trembled—"it's fierce. Half of Chicago's runnin' round in stockin's I sold 'em, and they ain't one that remembers whether I got a harelip or not. I've handed over the counter everything I've got; and I want what it's bought, that's all. If I can't get it Rosa can. I wouldn't know what to do with it. I'm too tired; and if she can enjoy it let her. I don't care." Mayme passed her hand over her brow wearily and repeated "I don't care."

Doctor Drew's face was grave as he watched the weary hand descend and lie helplessly upon the arm of the chair. He let his own touch it and spoke seriously: "If you will allow me, Miss Ladd, I will help you. Of course it will be necessary for me to see you frequently and to have your complete confidence. If you will but trust me I think I may safely say that I can relieve you."

Mayme's eyes were opened swiftly, a challenge within their light. "Relieve me?" she said. "What of?"

"Rosa. I think she would leave you and you might be enabled to live your life out independently."

Mayme's lips curled in a smile that was not pleasant. "You will relieve me, and what will I have left? Independence? What can I do with it? That ain't the cure. Runnin' Rosa off can't change me—much." She hesitated. "She ain't hurtin' me, is she? Ain't I got a right to be what I want to? I tell you Rosa's mine, and I want her!"

Doctor Drew attempted once more to make his appeal. "But, Miss Ladd, you have a most interesting case, which will be very valuable to science, one which may make an important contribution to the data already gathered on the subject. I am very desirous that you will permit me to study your case."

Mayme's eyes were feverishly bright and her answer trembled upon her lips: "Science, science," she said evenly. "I guess they want to empty the box and tag the goods for stock. Well, I don't care. I don't care." She listlessly trailed off the words.

"You will not regret it, Miss Ladd," said the doctor. "Shall I make the first appointment? Say ——"

Gwen walked toward him. "Doctor Drew," she said, "she's goin' to eat; eat for a week, and little Gwenny's goin' to take her in hand. Then if you want to see her, righto! Say, Wednesday; a week from to-night."

Doctor Drew took up his hat and stood looking down upon Mayme's abject form. "I think that will be well, Miss Applebaum," he said in a low voice. "I shall expect you, then, at about eight on next Wednesday evening. Good night, Miss Ladd."

"Good night, señor." It was Rosa's voice which answered, and Rosa who rose alertly from the chair, her eyes veiled and gazing lazily forth. "Good night, señor." Rosa walked several leopardlike paces toward the hallway, shrugging and gracefully inclining in a stately little bow. "Eet ees good that you come. Yeaz."

Doctor Drew bowed his adieu and his eyes betrayed his evident admiration of the little figure before him. "Good night, Señorita Alvaro. Good night."

"Señor," Rosa tiptoed, whispering, "Rosa nevair, nevair weel say to you *adios*. You sabe, señor? Nevair, nevair!"

Doctor Drew smiled and proffered his hand. Rose laid hers within it, then with a little snatch of laughter turned and ran swiftly up the stair, stopping at the topmost step to turn and blow a kiss from her finger tips to the gentleman below.

"Well, what d'you think of that! Can you beat it?" Gwen's face reflected her incredulity and amazement.

"It is serious, Miss Applebaum; quite serious. It is well that you were alarmed and enlisted aid. Miss Ladd does not realize her serious condition. I thank you for bringing the case to my attention. I hope to be able to show you how much. Good night, Miss Applebaum." The doctor was moving toward the door.

Gwen saw him depart, vaguely conscious that she had murmured something by way of a parting remark. After the door had closed she stood gazing up the stairway for some moments, one hand upon the newel post and a foot upon the first step. A dapper youth came down from above.

"Hello, Gwenny," he called; and coming to a stop before her: "What's the matter?"

"Pinch me, Toppy." Gwen proffered an arm. The youth complied. "I'm all there."

Gwen laughed and went slowly up the stairway. At Mayme's door she hesitated, then entered. Mayme sat on the bed, clad in the drab kimono. She turned and greeted Gwen with something of the old affection.

"Come in, Gwenny. Listen, have you got any grub? I'm famished, hon."

"Two pears and a box of crackers, hon. Wait a minute." The door swung open and Gwen sped toward her own room, returning with a bottle of milk added to the articles before mentioned. "Say, kid," she said, "you oughta drink a quart a day. It's fine for you. Listen, hon: What do you think of him? You know: Doctor Drew."

Mayme sat watching the crumbs from her cracker sift down over the drab kimono.

"And they call him smart!" she said, laughing. "Honest, Gwen, he's too easy! Gimme a pear, hon."

Gwen complied, sitting down beside the bed to watch Mayme's enjoyment. "Mayme," she said after long contemplation, "who is he?"

"I can't tell you—yet." Mayme's hesitancy brought another question.

"Will you later?" Mayme nodded. "When?"

"I don't know yet," said Mayme.

"Listen, hon. Don't string me. I gotta go. It's late and to-morrow's lisle sale."

"To-morrow," Mayme repeated the word slowly. "To-morrow's sale day; sure!" Then, wearily: "I don't care. I don't care."

Gwen kissed one of the pale cheeks and whispered: "I wouldn't care, Mayme, but there's just you and me; and it would be just me and Jim if it wasn't just you and me, hon."

Mayme watched her turn the knob of her door and depart, and heard a sleepy voice calling: "Good night, Mayme. Call me when you go in the mornin'. I'll wait till you tell me, hon. Never mind."

Gwen's door shut and Mayme suddenly went to a dresser drawer, taking from its confusion a folded sheet of paper. With it she swiftly crossed the hallway and slipped it beneath Gwen's door and knocked.

When Gwen answered the knock the hall was quiet. She listened and looked up and down its length, but there was nothing but the flicker of the light upon the floor below which showed life. She stepped upon the folded paper and stooped to take it up. Going in to stand by the gas light that she might read the scrawling lines upon it she saw the words: "The world owes you a living. All you got to do is collect."

As she read her eyes opened in a dazed fashion. She read it again, this time aloud, and laying the sheet upon a table she recrossed the hall, calling at Mayme's door softly: "Say, hon, it's all right. You hear? It's all right. 'Night, hon. I'll call you at six."

"Yeaz?" the word came drawling out through the door. "To-mor-r-ra you call? Good night, Mees Gwain."

"Good night, Rosa, old kid. Cheero!"

Gwen's door shut for the second time. Later the darkened transom revealed the release of the henna Georgette, and the tinny tick of an alarm clock marked off night's approaching to-mor-r-ra.

VI

MISS AGATHA RHADER might have furnished in her own person profitable study for a scientist as a complex of personalities. To be sure, her outlook upon life was in her own opinion sane—practical, as she liked to put it; but the practical side of it applied to the world in general, not to Agatha herself. She met the day as a sort of game, never for an instant betraying her next move. In her set men and women played desperately, and Agatha knew how to meet them. She had been watching Doctor Drew with calculating interest. Drew was a man of success and position. Agatha had success, but needed position. The Rhaders had moved into prominence with ease. The world saw Agatha roll about in her limousine and never for one desecrating instant remarked that the power that swept it magnificently by was Rhader's Ratifier, an elixir that had to do with a large field of common complaints.

Agatha had arrived in elegance. Properly turned out at the hands of a finishing establishment she had been accepted as a proper product by society, which petted her accommodatingly in her youth, and found a certain satisfaction in the affectio termed "clever Agatha" now; for, af society recognized its own offspring i Agatha's complexities were her charn might indulge in pet monkeys or any ultra hobby. With society it would nothing; just Agatha. She had gone new thought and had worn it to t She had danced and flirted, had held ing sacred; accepting a new creed as as she might learn the newest step world was a show, and Agatha was bored. What represented her actual ment mentally was not disclosed arguments, which were largely mad stock in trade culled from a rather c perusal of the subject in hand. She talk theosophy from auras to planes; spout on suffrage and other politics polo, neurasthenia. She had gone Red Cross during the war, flitting fr branch to another, garbed in vario coming costumes, until now when all over she had announced that s on the verge of a collapse, and had solace and rest in a personal stu Doctor Drew, whom she had approp

"Really," she had said, "one can tain a perfect poise without a th basis of its psychology."

Thus that dignified science was ad to the depths of Agatha's being, as a to an end.

Doctor Drew had proceeded with periments cautiously, finding in clever and uncertain subject. Agat come regularly to discuss the cas upon this afternoon had arrived carefully and becomingly, perfectl fured, and inclined to be absorbed self and somewhat cynical. She sat b thin ribbons of scented smoke from and listening to Doctor Drew's acc a recent interview with Rosa.

"I have found Miss Ladd very sec for my experiments with Rosa ha trayed a number of facts that she h cealed. Under hypnosis Rosa is ob but childishly trustful, not hesitatin tray Miss Ladd in her evident desir on good terms with me; a sort of as it were, for her own existence. found through Rosa that Miss Ladd leetle book, which she reads. "Oh, Jim, you're wonderful! Get me there quick. There's a moon, and Michigan, and hot dogs! Why, Jimmy, you're a miracle man!"

"Where's Mayme to-night?" asked Jim.

"Over to Doctor Drew's. Do you know, Jimmy, I wonder which one of 'em is the nut. I ain't so sure about Mayme. There's somethin' funny about the way she's turnin' out. Down at the store the bunch is crazy for her. It's 'Miss Ladd, this' and 'Miss Ladd, that' till it gets you sick. Them dames come twitterin' with their lognets tilted and make a fuss over her. She's had a raise. Wilcox sent for her and bragged her up to the skies; scared the kid to death. She thought she was losin' her job when he sent word down from the supe's office. Well, I don't get her dope, but it's workin', and I'm waitin'. Jim, somethin's gonna bust soon, and I wanta be there when it comes off. I been watchin' Doctor Drew and wonderin' what for it takes so long for science to find out things that I knew before he tried to work it out. Jim"—Gwen snuggled her head close to the strong arm—"I'm sure glad you're no psychologist."

The brakes ground and shrieked and the train stopped at the end of the line. Jim hastened to his feet and Gwen placed her tam under one arm and followed. Once without and again descended, they made their way toward the White City, their young faces eager. Gwen swung to Jim's arm as he made the purchase of the hot dogs, popcorn and two cones. They strolled slowly across the park and on reaching the beach found a bench facing their old friend Michigan. The sand was cool. Children laughed and played, running here and there, cooling their pave-heated feet. Gwen sank upon the sand from off the hard bench and holding her arms up let the breeze play over them. Jim removed his coat and sat beside her, letting sand slip through his fingers.

"Listen to the kids," he said. Gwen watched two youngsters rolling over in the sand and laughing musically. "Ain't they cute, hon?" Jim leaned nearer. "Say, Gwen, you ain't treatin' me right. What's the use of me gettin' ahead without you, Gwenny?"

"Not now, Jimmy. Oh, just let me play a little! Ain't it great? But you know, it kinda scares me. Look out there, Jimmy. Just water, water, water. Nothin' else as far as you can see. It's like—like"—Gwen's lips trembled—"like Mayme's life; just gray, Jimmy, that's all; just gray, forever."

"I dunno, kid; yonder's the moon. You never can tell," said Jim.

Gwen's face brightened. "Jimmy, you're a wise one. But goin' back to Mayme, Doctor Drew says it won't take but twicet more comin' till he'll have her straight again. He thinks he's got Rosa backed off, but all I gotta say is the tamale cans is still a-stackin' up. I thought I was onto her, but she plays me. Rosa's too much for me. She shuts me outa the picture and I can't somehow get past her and at Mayme. Well, hon"—Gwen laid her hand over Jim's—"I'm gonna stick till Mayme gets outa this. From what I sees Mayme's learnin', and she ain't gonna be no infant from now on."

Jim stretched his length in the sand, resting his head upon Gwen's knee, looking up to the star-powdered sky. Gwen stroked her hand over his locks slowly as they watched the water play beneath the moon and listened to the wavelets whispering against the breakwater.

"Good old puddle." It was Jim who broke the silence. "Gwenny, let's unchain the dogs." As he spoke he sat up and reached for his coat and taking forth the sandwiches proffered one to Gwen and bit into the other. "I guess you're right, hon, stickin' to Mayme. I like you that way; but, believe me, the flat on Sixty-third listens good to me, and I'm waitin'."

It was late when the two rose and hastened through the chill dampness homeward. The L rattled emptily and the weary occupants slumped in their seats, weakly relaxed in a sort of collapse as though the heat had crushed them and flung them forth, spent. The two descended at Thirty-third and swung over toward Wabash and Mrs. Winthrop's. At the door Gwen turned and laid her hand upon Jim's arm.

"Good night, Jimmy," she said. "Give me a nice brotherly kiss and run along."

Jim leaned down and kissed her honestly upon the lips. "You ain't doin' me right, kid," he said; and as Gwen looked absently out toward the street light he whispered: "What you thinkin' about, hon?"

"Nothin'," replied Gwen; "only, ain't it funny how long we got along without psychology? I don't know no reason why I like you, Jimmy, and I don't want to. It might not be big enough! 'Night."

"'Night, hon," returned Jim, and Gwen tripped up the stone steps and entered the hallway, standing for a moment in the light and waving as Jim went whistling down the street.

Mayme's light was burning as she reached the hall above, and as she passed Gwen made the accustomed whistle. The door swung open and Mayme's face looked out as her voice answered the whistle: "I been waitin' for you, kid. Come in; I wanta tell you somethin'. Where you been?"

"Out to the park with Jim. Did you go to Doctor Drew's?"

"No. Come on in. Now lay down, hon, and listen."

Gwen sank in a limp huddle upon the bed, saying: "Fire away. I guess it's some new Rosa stunt. Say, Mayme, keep her out to-night; I ain't safe."

Mayme laughed and sat down in the rocker, tucking her feet beneath the drab kimono. She seemed under restraint. Her eyes were frankly open. The lazy light was gone. There was a candor in her expression that had not been present of late. Gwen noticed the change and contemplating the bright face before her ventured the remark: "Ain't struck oil or nothin', have you?"

"Not exactly," said Mayme; "but nearly. It's Rosa."

"Now don't start that stuff, Mayme; I'm sick of it."

"She won't bother you no more," broke in Mayme; "but you gotta help me."

"You ain't murdered her and hid her body? What d'ye mean, help you? Ain't I been helpin' you? Ain't I stickin'? What do you want? Just name it and if I can reach it it's yours, Mayme."

"I'll tell you about it, but don't stop me. To-night—oh, to-night's the most wonderful night in the world, Gwen!"

"I hadn't noticed it, Mayme, old girl. E-e-lucidate, e-e-lucidate. Bring on your big film. I'm tired of readin' your titles."

"It's awful, Gwen. I been a yellow cur; I have."

"That bad?" Gwen sat up to listen. "Well, where's the plot?"

"I'm goin' back to when the bottom dropped out of things for me. You know, Gwen, the days I used to have to get a relief and go up to the rest room and stretch out a hour at a time so I could go back at it? Well, then's when I begun to think how long I could keep it up before it got me down for good, and I woke up that I wasn't livin'; that I'd forgot how, and I tried to perk up, hon, but it got my back to wear high heels and straight fronts, and I couldn't starch up, no way I tried. They had my number—everybody; and it was zero, iced. If it hadn't been for you I'd taken Michigan out."

Gwen reached a detaining hand: "Don't do it, kid. Don't mess up Michigan. Go on."

"I'm tellin' you the truth. That last day I stood behind the counter handlin' trade and I couldn't see 'em. The women looked like grinnin' clowns and every stockin' box was red-hot lead. All I remember seems like a dream, a nightmare. My back ached and my heels punched through to the bone. Oh, how I ached! And they kept comin', grinnin' and callin' for more. And I didn't have no more to give! Do you remember this?" Mayme got up and took from the dresser Madam Martin's card. Gwen looked at it and nodded. "Well, just when I thought I'd go mad and let go, you come along, hon. I remember it like as if I had a good cool drink. You hugged me with one arm and said, 'Cheer up, kid; the world owes you a livin' and all you gotta do is collect.' Remember?"

Gwen nodded as she watched Mayme's bright eyes and motioned her to go on.

"That's what started it. Them words got stuck in my brain and it was too tired to throw 'em out. They kept goin' round and round in a kinda tune, and about the time I had 'em learned and could say 'em and write a check at the same time I went to wait on Doctor Drew, and I found this. Well, I read that line: 'Why trust to luck? Know the future,' and I said to myself: 'Why not?' Then my head kept repeatin' 'Know the future. Why not?' 'Know the future. Why not?' And that idea got to chasin' the other one.

"I don't know how I got through the rest of the day. All I remember is that you took me and fed me and that I wanted to get away from you. You remember you went out with Jim. You wanted me to go and I wouldn't. Well, I had thought it all out to take a trip to Michigan and was goin' to get my hat when this fell on the floor." Mayme motioned toward Madam Martin's card. "And I got to sayin' 'Know the future' again. Well, I started out and I don't know why, but I went straight for Prairie Avenue to Madam Martin's and planked down two dollars for a life readin'.

"She was a fake, but I never can forget her. She told me I was psychical and that I had a control named Rosa Alvaro; that she was Spanish and beautiful and that she could make me beautiful and I would find success. With that I went home, with the name under my hat. Rosa Alvaro. The more I thought about it the more real she got. It kept me awake a long time that night. I could just see her, she seemed to be so near. In the morning I got up worse from no sleep, and I had forgot all about Rosa till the conductor on the surface line gave me some lip and I woke up to find out I didn't have no fare with me. Then's when Rosa come. I just worked her on him. It went off without much of a light and I saw red!

"That was the game, then. Well, if the world owed me a living I was going to collect. I wouldn't present my bill in person, but I'd get the returns just the same. Aw, kid, I didn't mean no harm to nobody, and I ain't done none. I don't think I'd gone on with it, but when we went to the masque on the Erie, I—well"—Mayme hesitated—"well, I just didn't want to be me. I was sick of myself. I wanted to feel, feel like a woman that somebody cared about; not like a alley cat. And that's what done it. I just made Rosa out of a shawl and a bunch of rag flowers, but there was somethin' else in her. It was my fight for life! Every rusty hope in me broke loose. I forgot myself in Rosa and commenced kiddin' the world back!

"And the world liked it, hon; honest it did. I found out that night on the Erie. Oh, hon, after that night nothin' mattered! I come back knowin' that somebody cared. That's what I want to tell you."

Gwen sat wide-eyed, listening. Mayme wiped a tear that trickled over her cheek upon the sleeve of the gray kimono and went on: "That's why I went into you when we got home. I got to thinkin' as we come along: 'She knows and she'll tell.' I oughta knowed you better, kid, but you see I'd have killed you right then rather than give up what I had. Somebody cared! Think of it, hon! Then I remembered that it was Rosa and not me he cared for, and I was scared to let him know that I was Rosa. I've seen him every day since and I never once looked into his eyes, for I knew I couldn't lie with mine if I did. Every day, hon, I've seen him, and to-day I had a charge take to O. K., and I don't know how it happened in the jam of the one-hour rush on seconds, but listen, hon: I went to take my book and I happened to look up and he was lookin' at me, and I just forgot everything. But I hears myself sayin' somethin' I couldn't stop: 'Señor, I think my heart will break.'

"And, hon, he just put his hand on mine and says: 'Rosa, Rosa, my Rosa!' And he knows all about it! We went outa the store together and had supper at the Annex and then we took a moonlight ride on the Erie. And there ain't to be no more Goldman's. He says I gotta stop to-morrow. And, hon, he says he's always loved me! Me! You hear, Gwen! And he knew me all the time that night on the Erie. Ain't it a grand old world?"

The astonished Gwendolyn sat staring into space and repeating in a monotone: "Peacock, Peacock. Can you beat it!"

Mayme shook her arm and said earnestly: "Listen, kid, you got me into this with Doctor Drew, and you gotta tell him. You gotta tell him. Will you?"

Gwen sat stupidly upon the bedside and waved a little gesture of despair as she said weakly: "Listen, Mayme, listen. Lemme get this straight. Peacock? You mean Peacock?" Mayme nodded. "And you're goin' to hook up with him?"

"Yes, hon. To-morrow." Then as Gwen made for the door: "Where you goin'?"

"To bed," said Gwen without stopping. "I gotta date to be married myself; and it's to-morrow."

"You'll tell Doctor Drew?" pleaded Mayme.

"Hang Doctor Drew! I just wanna go to bed and put the clock out on the window jamb with the milk bottles; once, hon, just once! And wake up grinnin' and thinkin' what a good joke life is! Good night!"

The door slammed and Mayme stood watching Rosa's shawl sway in the gust of air the slam had delivered, then with a happy little laugh she took it off the bedpost and wrapped herself within its folds, tossed her head and said aloud: "To-morr-ra; to-morr-ra!"

And Rosa's little thumb and finger snapped lightly as Mayme turned off the gas.

VIII

AGATHA had listened long and patiently to an account of Doctor Drew's experiments with Miss Ladd and Rosa Alvaro. He had concluded with: "I have handled the case slowly, as I wished to make record of valuable data."

"I see, Mac," said Agatha. "You prolonged the agony. Poor butterfly! What an enviable death, to die by inches while science takes notes! How is the young woman? Has Rosa departed or has it been a reluctance to relinquish Rosa that has detained the cure?"

"I try, Agatha, to be patient in the face of your disrespect. Miss Ladd, I think I may safely say, is practically well. Indeed I find Rosa is more unwilling to come. Of late she has not imposed herself at all, and I am expecting Miss Ladd at any time to be quite herself. The case was not serious but has proved very profitable. I now hold a complete record of Rosa's coming and her development; also facts relative to her coming which confirm the basis of the disassociation. I think, Agatha, that Miss Ladd is relieved entirely of the delusion, and I feel that the result of the experiment is most gratifying."

"You think, then, that she is really cured?" questioned Agatha.

"Certainly, I——" The doctor's remark was interrupted by the appearance of the maid, who announced: "A leddy to see you, sir."

"Miss Ladd, I presume," said the doctor. "Show her up. Now, Agatha, you may see for yourself."

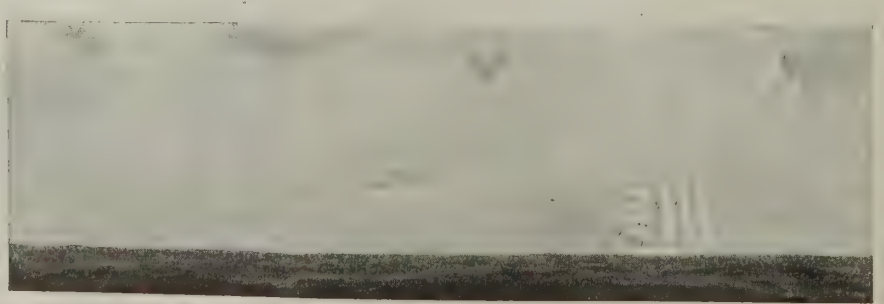
The maid's voice interrupted once more: "Beggin' yer pardon, sir; it's the young one, Miss Applebum, sir, with a gent. Shall I show 'em in, sir?"

Doctor Drew nodded and paced up and down the room in impatient anticipation. He turned as Gwen stepped through the doorway, followed by Jim. "Miss Applebaum," he greeted.

"Deceased." Gwen announced. "Never again! Mrs. James Dolan. This is Jim, doctor. Since this mornin'!"

Jim shifted his weight from one leg to the other uneasily and mumbled: "Please to meecha," accompanied with a feint at a handshake and a salute.

The doctor proffered his congratulations and drew the two into the room, presenting Agatha. "Miss Rhader, let me present Mr. and Mrs. Dolan."



Agatha gaped and viewed the v

THE CROSS PULL

(Continued from Page 27)

hi referring to the unerring ability of nimals to recognize love, hatred, fear and the emotions in man. Moran's naturalist nd was not satisfied with the vague gen-rality of this term. He knew that this so-alled instinct was in reality the delicately anced senses of hearing and of smell. No an who has lived much and understand-ngly with animals but knows that each has a vocabulary of its own—not that f the spoken word, but of the varying in-ection of tone.

It is this that enables a dog to catch the nortone of hidden hate or fear in the oice which does not reveal it to the duller ense of man.. He checks this with his nose, where is no chance for a mistake. Man's ystem reacts to any emotional strain and ispores betray his state of mind to the ighly sensitive noses of the animal world. Moran knew that it was certain knowl-dge that caused Flash to sidle farther from Brent and closer to himself. With his nose flattened between his paws Flash favored Brent with an unblinking stare from his yellow eyes—eyes as fierce and untamed as those of a hawk. Except in color there was little difference between his eyes and Brent's, and a wave of dislike was exchanged between them with the stare.

Not until Moran went outside to feed the horses in the corral did Flash shift from his position on the floor or remove his eyes from Brent. As Moran left him he moved away from Brent to the full limit of his chain.

Irritated by this move Brent caught the thin near where it was fastened to the leg of the table and drew Flash toward him. The pup braced his feet, but was dragged forward, his toenails scratching for a hold. When within a few feet of Brent his tactics changed and he leaped for the hand, his white teeth clashing shut in two lightning snaps as Brent jerked back. He retreated again to the length of his chain and stood there bristling with rage and fear.

Brent's insane temper flared at the sting where the sharp little teeth had grazed his thumb. He stepped over to the pup, raising an heavy glove and bringing the gauntlet down across his head and ears. Flash tried to fight, but the glove bruised his lips and ears and when he cowered down on the floor, half dazed by the rain of blows, Brent kicked him under the table and went outside.

When the two came in once more Milt Harmon, the ranger, was with them. As the three men talked Flash lay in his corner, his head resting wolf fashion flat between his paws, and regarded their every move.

Harmon did not fit in either of his previous classifications, so he classed him by himself. Here in the room were men who represented each of the three divisions under which he would place all men as he met them: Those he tolerated; those he hated with a savage intensity; and those he loved. His present feeling for Harmon typified his later attitude toward the great majority of men. The mass of them would mean little to him and only a very few individuals would ever interest him sufficiently to be classed with either extreme.

Brent finished his business and Moran stood looking after him as he rode away.

"There goes a beast," he said. "He hasn't one decent softening thought. When you look at that blizzard of a face it forces you to believe all those tales you hear of him."

"They're true," Harmon said. "I saw it once myself. I heard a horse scream, and rode down." The ranger swore softly. "Brent was standing there mouthing the same words over and over again as if his one mad-dog fit had left his mind a blank. 'He struck at me,' he mumbled. 'He struck at me. A horse can't strike at me.' Rode right on past. I knew I'd kill him if I stopped."

"Flash spotted that streak in him the minute he came in," said Moran. "It's harder to fool an animal than a man."

The next morning Moran shot a rabbit, skinned the pelt from it while it was still warm and offered the meat to Flash.

This time he took it. From this small start Moran led him on until in a few days he would take anything he offered. It was the first concession of the wild blood to the tame—the turning of the dog in him to Moran. In order to keep the proper balance he presented his wolf side to all other men and would touch not a single bit of food that came from any other than Moran.

His education along all lines progressed. When Moran took long walks he led Flash with a light chain. Later he unsnapped it from the collar and Flash found himself free to wander round inside the cabin. Moran next tried him in the yard with the chain trailing loose. Flash was glad of this new opportunity to trot round, but it did not occur to him to leave. By gradual degrees Moran removed first the chain and then the collar, but Flash followed him as closely as before. His world revolved round Moran. His greatest moments were those that Moran spent in scratching his neck and ears and rolling him round in rough play. But he would let no other man touch him, moving stiffly away at the first sign of this intent.

Brent stopped at the cabin at infrequent intervals and on these occasions the hate flared to a white heat in Flash. From association he had

"Run, Brent!" Moran Gasped. "Run or He'll Kill You Sure!"

lost his early unreasoning fear of men, but had learned also that he must not turn his teeth against them. He showed his dislike of Brent by watching him suspiciously and bristling his shoulder hair at every move. Never once did he make a sound and this silent, deadly hatred inspired a like feeling in the man.

Twice when Moran was gone Brent kicked Flash the length of his chain when the pup bristled at his approach.

Eventually Moran let Flash follow him on long trips without his chain, trusting that his hold was greater than the call of the free hills to the pup. Flash joyously chased the long-eared jack rabbits of the foothills, but always returned to Moran.

Flash had grown and his was the wolf growth, which lacks the awkwardness seen in growing dogs. In mid-August he attained his sixth month and with it the requisite speed to catch his first jack. Thereafter he hunted them tirelessly, killing for pleasure long after his hunger was appeased. The swift chase, growing in excitement and terminating in the wild thrill of joy with the final snap of jaws upon his prey, matched his supreme moments with Moran—and thus both extremes in him were satisfied.

Horses no longer feared him and fled from the dread wolf scent as at first. From living long in the cabin and round the fire at cooking time he had come to smell much like the dog who leads that life, and the horses accepted him as such. Moran then started breaking him to handle stock. He knew that in trying to teach this art to Flash it meant a two-to-one chance of having to sacrifice a horse.

Flash would take one of three holds upon the first animal that Moran worked him on. He might have inherited the strike of a natural-born heeler from his renegade grandmother and go to the heel of a horse or cow. Otherwise he would lunge for a wolf hold—and a wolf strikes either for the flank, ripping a gash through which the heavy paunch drops out, or slashes each hind leg above the hock in turn, severing the hamstrings of his prey.

Even a lobo, powerful as he is, never strikes for a throat hold until after his meat is down, knowing that the battering hoofs would strike him down or the crazed beast would kneel and crush his life out with its own.

Moran gathered a bunch of a dozen horses and headed them toward Harmon's cabin. He motioned Flash after them.

"Run 'em in, Flash," he said, repeating the motion and the words until Flash understood that Moran really meant that he was to chase those horses. Always he had wanted to leap after every animal he saw, but he had known that these were the property of man and that he must not molest them.

He trotted halfway to the horses, turned and looked back questioningly at Moran. Again came the motion and the words assuring him that this was right, and he swept joyously down upon the bunch.

Moran's anxiety as to which of the three holds Flash would take had been reflected in his voice, and the doubt of what he was to do with the horses other than to chase them round was communicated to Flash.

He ran in on the hindmost horse and made a savage lunge for the flank, but even as he struck he withheld the slash, feeling that this hold might not be right. He dropped back and ran behind the bunch. Moran's horse was running swiftly behind him and once more Moran urged him on.

Flash singled out another horse and lunged for the hamstring—but the doubt roused by the anxiety in Moran's voice still persisted and he withheld the snap of fangs that would have hopelessly crippled one hind leg. While he ran on close behind the bunch, a horse lashed out at him with wicked heels, and even as he ducked the kick Flash knew that he must punish those offending feet. He darted in and nipped the heel.

He heard Moran's wild yell of encouragement. It dispelled all doubt—this was the thing to do.

He darted from horse to horse and his was the strike of the born heeler. Not once did he bite as the hind feet struck the ground, when a kick might have brained him, but timed each nip when the hind legs were outstretched to the fullest extent at the end of a stride. Before Moran could recall him he had scattered the flying horses all over the flat.

Moran patiently rounded them up each time Flash scattered them and at last he understood that Moran wanted them to remain bunched and headed for home. From then on no straggler left the horse herd. If one started Flash was after him at a motion from Moran and before he moved far he was headed back for the bunch.

After a few more lessons he knew what was expected of him and began rapidly to learn all the details of the game.

In this, as in all else, the strange mixed blood cropped out. He loved this work of handling horses and performed it well. The dog in him thrilled at the trust Moran gave to him. But each time he darted to a heel something called to him to lunge at the flank. Instead he struck like a stock dog, but put behind it the drive of the wolf.

Under his management the most confirmed bunch quitter on the range would soon be the best of the lot. No horse or steer would chance those punishing teeth a second time.

Men soon began to speak of him as the best stock dog on the range.

III

NATURALISTS have made only incidental mention of the rare swift fox that inhabits a limited area of the bad lands and cedar brakes along the east slope of the Rockies. Moran had searched long for a den of these little fellows, scarcely larger than a squirrel, but an exact duplicate in miniature of the coyote.

The fur markets listed them as kit fox, but locally all men called them swifts. Aside from the fact that each year a few were caught in coyote traps or with strychnine bait, little was known of them.

To study them better Moran shifted his base camp the following spring, moving his outfit into a log cabin used by the Bar T Ranch for a winter-line camp.

On his first day at the cabin Flash had jumped a pair of these tiny swifts in a near-by gulch. Several times since Moran had seen one running like a vivid yellow streak and he knew the den was somewhere close at hand.

The year-old wolf could not resist the call to match his tremendous speed against that of these pygmy cousins each time he sighted them. This was no part of Moran's plan, and Flash to his everlasting disgust spent much of his time chained to a staple in the cabin wall.

Morning and evening Moran lay concealed on some commanding ridge, sweeping the country with his powerful glasses as he tried to determine the locality where the swift family had their home.

Riders from the Bar T Ranch often dropped by, sometimes stopping to see Moran or lolling sidewise in their saddles to exchange a few words before riding on. Those who came to the cabin when Moran was gone always spoke in friendly tones to Flash, but made no move to touch him.

It was known to them that this great wolf dog with the bright yellow eyes would allow no hand but Moran's to touch him.

Long before they came in sight the thudding hoofs and creak of saddle leather informed Flash of their approach. Then the wind announced their identity to his quivering nose.

Thus it happened that on the morning Brent rode to the cabin Flash was standing tense and rigid, his shoulder hair bristling, even before Brent turned the corner of the corral.

As the man dismounted and strode to the door Flash moved only his eyes as they followed Brent.

Finding that Moran had gone, Brent started back to his horse. In his hand he carried a blacksnake stock whip of plaited rawhide and as he passed Flash he flipped it carelessly at the wolf. Flash snapped at it and the pop lash drew the blood from his lip.

Without a sound he launched himself straight for Brent. His splendid body was three feet in the air when he struck the end of the chain and was jerked flat by his own force. His fangs had gleamed within a foot of the man's face before he was snatched back, and for one brief instant Brent had seen death staring him in the face.

The sudden numbing shock from this unexpected move was followed instantly by a blind rage and he swung the whip again and again. The very intensity of his desire to hurt defeated its own purpose as he lashed out in a frenzy of harmless blows, swinging the pliable whip as he would a club, though the deathly sting of the blacksnake whip is carried only in the back snap of the popper.

Brent's gust of reason-shaking hatred cooled into definite purpose and he stepped back.

"You yellow-eyed devil, I'll start you for hell in slivers the size of a horse hair!" he said.

From long and gloating practice Brent knew himself a master of what he was about to do.

He sent the long lash curving toward Flash and with the sudden backward twist of his wrist the pop lash hissed sharply, then cracked like a rifle as the bare tip reached through the hair and drew blood from the chained wolf dog. His only answer to the deadly hurt was to spring the full length of his chain at Brent.

The man settled to his work. Each report of the whip wrung agony from Flash and brought a thrill of joy to Brent. With the pride of an expert the man chose a fresh spot for each bite of the whip. Once it would strike blood from the knee joint

(e hind leg where the hair was short; ex|pluck a patch of skin the size of a m|from the tender flank.

Frning agony racked Flash's frame; hot nes of flame shot through him with re tortured pulse of blood in his veins. senses were beginning to dull under the d and at last the lash cut a half-inch s at the corner of one eye and the flow lod partially obscured his sight.

ent craved audible evidence of pain. the same lash he had often worked e tough hide of a steer until the crazed al bawled. But the glazing yellow of the wolf dog faced him with as y a hatred as before and he surged st the chain which held him back Brent.

"ou big gray devil, I'll make you l " said Brent. "I'll drag a yelp out of u" And he started in again.

Moran came over a ridge two hundred s behind the cabin and saw Brent's g lue roan standing in the yard. As he od the horse jerked his head and sidled f step farther from the house. Again n again he repeated this strange move n Moran stopped to listen. He heard nt hiss followed by a sharp report. r more the horse jerked his head and d stepped. Then came the rattle of a n and a dull thud such as a roped steer es when he strikes the ground. Moran ed running for the house.

"ing for me!" Brent was mumbling. Sg for me! I'll make you sing!"

rough hand seized his collar and he a snatched violently back, dropping the h and reaching for his gun as he fell.

flashed forth as he struck the ground n Moran's boot struck square across his n kles. The gun sailed twenty feet away n Moran ground the hand into the gravel r his heel.

ent wrapped his arms about the tlr's knees, shifted one hand to the belt n literally climbed up Moran against the a of solid blows which rocked his head. Heurched to his feet with his long arms oced round Moran. As they swayed, Man drew up one knee and braced it gnst Brent's chest in an effort to break hhold. The two fell together and rolled nt a deadlock on the ground.

was a silent savage fight. Each man d his breath and spoke no word. Tre was no sound but the shuffle of heavng bodies on the ground, the labored rthing of the two men and the repeated dy slam as the great wolf dog drove tght to the end of his chain.

ach man fought for a hold that would pl the other helpless to the ground. Man writhed on top and freed one hand, lring it full into Brent's upturned face.

hen Brent got his hold. With his right arl clamped round the small of Moran's nek he squeezed down on it with a grip ofleath, while his left arm was doubled irer the other's chin. Slowly, like openn a pair of shears, he lifted the left forear, forcing Moran's head up and back to sno the neck.

Ioran could not break the hold. The ves purpled at his temples as he strained nec and shoulder muscles to resist the teible pressure that was cutting off his wd. Specks danced before his eyes and a nty rattle sounded in his throat.

ix times while the lock held he heard th wicked smash of the wolf against his chin.

lis weight shifted to one side. The two mn turned as one until they rested on thir sides, but the grip still held. Brent arned his back for the final heave that wild snap the neck, but instead his arms flw wide apart and Moran felt the blessed airush back to his lungs.

The slight arching of his back had edged Brnt just one bare inch within the limits ofthe chain and Flash instantly struck jut one inch deep and slashed the full legth of his hip.

The two rose to their knees and Moran bled his fist full against Brent's mouth to dve him back. Brent did not strike, but g ped toward him, trying to regain his hd, and they rolled together in another lck.

Brent used his head and butted Moran inthe face. It was a fast pace and was tring upon both men; the strain of heavin muscles knotted the cords of neck and fce. Their breath sounded in spasmodic gsps.

Fear began to assault Brent from within. The regular deadly slam of the chain vs beginning to shake his nerve. If the wolf would only make a sound! Only growl or rage aloud! Anything but this silent murderous concentration upon one point—to break that chain.

Moran found his chance to writhe on top and force Brent down on his face, stretching him full length, toe locking toe and hands pinioned to his sides, with his forehead pressed down upon Brent's head, jamming his face in the ground.

Both men heard a screech such as a rusty nail makes when drawn from a board and a shape hurtled above them, propelled by the driving force behind its own release. The staple had given way from the wall.

A dog in trying to punish Brent would have fallen in a fighting frenzy upon both men, but Flash would not touch Moran—and Moran was on top.

As he lit sprawling and darted back, one waving foot was all Flash saw of Brent and there was a choked grunt of pain as his long fangs sank through leather and flesh and reached the bones of the foot.

The wolf leaped for the sound of the hated voice.

Moran felt a hot breath fan his cheek and something pressed against his hair as Flash pushed under him and stretched his long jaws as far down each side of Brent's head as he could reach.

There was a sudden scream of mortal agony and fear as he closed the jaws and the savage teeth cut through Brent's scalp and grated along his skull.

As Flash reached under a second time Moran fastened both hands in his heavy collar.

"Run, Brent!" he gasped. "Run or he'll kill you sure!"

Brent scrambled away on hands and knees with Flash after him dragging Moran, and twice more his teeth slashed Brent's legs before he could rise. Then he gained his feet and made a staggering run for his horse with Flash lunging for him and jerking Moran along.

The loss of blood and the long fight to break the chain had weakened Flash by half or Moran could not have stayed with him for a single jump. The wolf dragged him past a hitch post in the yard and with his right hand gripped in the collar Moran reached out his left and made two quick turns of the chain and snubbed him to the post.

The horse flinched away from the smell of blood, but Brent seized the reins and swung to the saddle. He wheeled to run, but pulled and stopped when he saw that Moran had snubbed the wolf.

"That slobbering fiend damn near scalped me!" he raged. "I'll kill him for that, Moran. I'll ——"

Moran waved his arm down the gulch.

"Get started, Brent, before I change my mind and turn him loose on you," he said. "And don't come back!"

After the two had watched Brent out of sight Moran took the wolf's great head between his hands.

"I'm halfway sorry I held you back," he said. "Next time you can have him, Flash."

IV

FOR two weeks Flash had seen no human being but Moran. It was late in June and even in the high passes the snowdrifts had melted down until Moran could put his horses across from one valley to the next all over the Land of Many Rivers. Up in this high country the drifts never entirely disappear.

All through the summer tiny streams trickled from the foot of each miniature glacier that lingered in some sheltered spot and defied the sun to blot out its last few ragged patches before the early-fall snows once more began to build it up.

These were great days for Flash. He had known the stunted cedars of the bad lands, the cottonwoods along the stream beds in the foothills and the willow thickets that marked each side-hill spring, but this was his first trip into the heavily timbered hills themselves.

Now they wandered through solid forests for miles on unending miles; the slopes dense with spruce growth and valleys of stately lodge-pole pines, broken only by the open parks and meadows along the streams or by the bald wind-swept ridges that reared their rocky crests above the trees.

The world of men was far behind them and Flash had Moran to himself. Moran spoke to him as he would have spoken to another man and found a sufficient sense of companionship from the presence of the dog. Often he told him that he was the best stock dog in the world, and though Flash could not understand the words he knew from the inflection that his master spoke in praise.

It was merited praise, for Flash solved the one problem that is always uppermost in the mind of every lonely rambler in the hills—the possible loss of his horses.

The love and understanding between Moran and his horses far surpassed that between most men and their saddle stock, but Moran was also a realist and he endowed no animal with legendary qualities it did not possess.

He knew that when in a strange country a range-bred horse will inevitably make use of every opportunity to break for home—a gelding for the spot where he was born and a mare straight for the range where her first colt was foaled. The fact that he always knew where to find them later had proved small solace upon the several occasions in the past when they had eluded his every precaution and left him on foot in the hills.

But now no worry or listening for a distant horse bell broke his rest at night. Flash knew that Moran wanted the horses kept close at hand and he kept them there. His nose and ears told him things which his master could not know and often at night he raised his head and nosed the air or inclined his ear to catch some sound, then slipped silently away from the sleeping Moran. In the morning the horses were always grazing near.

They saw many animals that Flash had never seen before—droves of cow elk in the valleys and bunches of blacktail does and fawns along the streams, while higher up in the rim-rocked pockets near timber line they met the lords of the same species with their antlers in the velvet. Bighorn rams peered down at them from ledges of the cliffs and their ewes and lambs grazed on the grassy meadows above the timber line.

Moran told Flash why it was that these animals are seldom seen in pairs and how among all the animals of the wild the wolf and his cousins are the only true lovers of the lot; that the males of wolf, fox and coyote are the only ones that help raise their own young and rustle food for the female and the pups.

Moran knew that fatherhood rests very lightly on the antlered tribes and that the bull elk or blacktail buck that remains with the herd and protects his wives and offspring is the hero of legend, not the real animal of the hills, whose wives know him only during the mating moon; that the males of the wandering cat tribes, in common with most of the furry kinds, are even prone to kill their own offspring if they meet before the kits are grown.

Moran told all this to Flash and he listened in dignified silence, drinking in each word without understanding even one. But in his own right Flash already knew these things—and many more which Moran for all his constant research would never know.

As if to make up for the marital shortcomings of other beasts, the wolf lavishes the utmost care upon his mate and pups. Flash combined the love of wolf for mate and the love of dog for man into one of single-hearted devotion to Moran. But even this binding tie did not still the warring cross currents of mixed ancestral blood.

Here, away from the cabin and the works of man, the night sounds seemed to take on a new meaning and as Moran slept Flash lay night after night and listened to their call.

The note of the big gray owls and the quavering howl of the coyotes; the yelping, turkeylike bark of the cow elk and the weird squall of the foxes that traveled the high bald ridges—all these in some way seemed a part of a world which he had known and to which he should belong.

Whispering voices called him and urged him to come. But with it all there was something lacking in the nights—some note for which he seemed to listen, but never heard. At times he felt that if he could but raise his own voice this unknown note for which he longed must surely answer it.

One night when the call grew strong he slipped away and ran for miles. His was not the scrambling gait of the dog, but the swift gliding movement of the wolf. As he ran he learned a new game that seemed in some way associated with the missing sound. After that he played it often when Moran lay asleep in his blankets.

As Flash trotted under the trees it seemed that phantom shapes were trotting with him and that he heard the soft patter of running feet. Some larger shape fled before them and he increased the pace, pressing after it with all his flying speed. He thrilled to the rush of air past his ears as his powerful muscles drove him on. His sole purpose in life was to be first of all the dim forms that traveled with him to reach the fleeing shape ahead.

It always eluded him until one night when he burst from among the trees and sped down a long grassy park. The pattering feet of the shades beside him were as soft and unreal as before, but the shadow out ahead seemed suddenly to take on more concrete form.

He gained on it. The sound of flying hoof beats on the grass and the warm elk scent in the air made the game more real. With a last tremendous spurt he closed with it and while still in the throes of his exalted dream he lunged and struck.

His teeth cut through real flesh and blood and he was thrown end over end on the grass. The dream was gone, but he struck again and the shape fell, both hamstrings cleanly cut. Then he drove at the throat. In less than a minute from the first lunge he was tearing at the warm quivering meat of a dead cow elk. A dream come true in part—he had led a phantom wolf pack to his first real kill.

Often at night Moran noticed his keen interest in every far-off note, and he appeared to nose the air and tilt his ear as if to catch some scent or sound the meaning of which was not clear to him.

Each morning they packed up and wandered on, making a new camp each night. They moved up the Buffalo Fork of the Snake until one evening they stood in Two Ocean Pass. Moran could almost have tossed a chip from either hand, consigning each one to a different sea. They were in the very center of the Land of Many Rivers—the wonder spot of the world—and for fifty miles round there was no evidence of man.

Fifty miles to the south the nearest wagon road skirted the base of the Teton Range; a like distance east of them the Sunlight Gap broke through the Rainbow Peaks to the scattered ranches of the Grey Bull; north they could see the Rampart Pass in a saddle of the Wapiti Mountains, leading down Seclusion Creek to the government trail on the Shoshone, the one dim tentacle of civilization stretching forth into the hills; fifty miles to the west, across Lake Yellowstone, was the Thumb Station on the park road. Between there was not even a path except the network of game trails worn by countless elk and deer.

Moran prodded a white skull from the grass with his toe.

"Here's one of the lost herd, Flash," he said. "This is where they died. Their skulls are scattered through here for a hundred miles. And you come straight down from the buffalo grays that followed them into the hills. You're nearly the last of your line. I doubt if you ever hear that note you listen for every night. I'm afraid the rest of your breed have followed the lost herd, Flash, and have gone this route." And he tapped the skull with his toe.

The whole country here was high, yet the hills were not nearly so lofty as the distant ranges that ringed them in. The bald ridges that branched off from the divide on which they stood were barely above timber line.

That night, as Moran slept, the breezes bore faint vibrations of sound and whiffs of scent that spoke of man to Flash.

He grew restless and uneasy and explored various long ridges trying to find the source of these. Near morning a sound floated up to him as he trotted along a crest and he moved to the edge and looked down. The rim rocks fell sheer away from his feet. From below the scent came strong. He could catch no individual odor—only the combined scent of a number of men, and some way, though there was not a trace of the one scent he hated worst of all, the whole air of the place was suggestive of Brent and he flattened his ears at the thought. These men must be camped in the gulch below.

He trotted back to Moran and looked him over carefully to see that all was right, then found a break and dropped down to the floor of the cañon that ran along the base of that particular ridge. It was a jungle of heavy spruce, but he found no trace of the camp he sought.

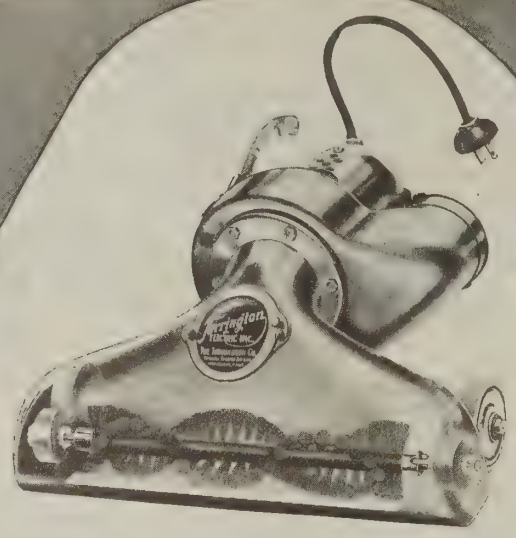
Torrington

Restful Afternoons for You

Long, happy hours to spend with your favorite author, time for music and friends, time for rest, for recreation — or just blessed laziness — that's what a Torrington Electric Vacuum Cleaner will mean to you. You can do better and easier cleaning in less time by using the Torrington.

ELECTRIC VACUUM CLEANER

BIG BRUSH—POWERFUL SUCTION



"X-ray" view showing brush.

THE TORRINGTON has no careless habits, no tired muscles; it never gets discouraged. It is a twelve-pound combination of revolving sweeper-brush and powerful suction, that gets up all the threads, surface litter, and trodden-in dirt—that cleans clean. It hasn't a single human frailty—a single mechanical fault. With its attachments your cleaning is easily, quickly, and thoroughly done, and at less expense for a year than a cleaning-woman would charge for a day's work.

Visit the nearest shop where Torrington Electric Vacuum Cleaners are sold, and have the Cleaner and its attachments thoroughly demonstrated to you. You will find the Torrington prominently displayed by many wide-awake dealers in electric and household goods, where it will catch the attention of Christmas shoppers. The Torrington Electric Vacuum Cleaner is an ideal Christmas gift, for it gives a woman years of comfort, makes possible many afternoons of rest and good times.

Send us your address so we may send you a booklet, also information about a free trial.

(Continued from Page 107)

He stopped often and nosed the wind, but it brought no scent. Dawn was beginning to gray off toward the Sunlight Gap when he finally caught a sound, but the sound came from above. They were on the ridge after all, it seemed. He sat down and peered up through the trees at the sheer face of the towering cliff. The drone of voices came plainer now and there was an undertone to it all that he liked as little as he had the scent. But he had no time to figure it out—Moran would be up and round by now—so he hurried back.

Moran noticed that Flash was uneasy. All through the meal and while Moran saddled and packed up Flash made repeated trips to the break and looked first down the gulch, then far out along the ridge.

"What's the matter, boy?" Moran asked. "Is there a grizzly round somewhere? You've seen enough of them by now to know they don't mean any harm to us."

Not until they were half a dozen miles away did the wolf's uneasiness subside. Even then he continued to turn on every commanding point and look back toward their former camp.

Moran finally decided that Flash had pulled down an elk or deer during the night and that a grizzly had happened along and driven him from the kill.

But Moran was wrong.

V

THE Shoshones, who had once peopled the Land of Many Rivers, had called this season the Short Blue Moon. The lordly blacktail bucks were preparing to renew acquaintance with their wives and must beautify themselves accordingly. They had discarded the long faded hair of last year's coat and the new one had not yet deepened into the dark gray of early winter. For one brief span the short new hair was a glistening blue-gray.

Moran pointed across a gulch to where a big buck grazed placidly in a little open park.

"The deer are in the short blue," he said. "This is the best season of all the year, Flash. It'll soon be love-making time for the antlered tribes. Wait until all the old bull elk tune up. We've stayed too long now, but it's worth waiting another week to hear. You've never heard one of those old boys blow off—but you will."

Flash raised his head and listened to a distant call.

There is no animal sound in the world so distinctive—so impossible to describe or imitate—as the clear, silvery bugle of a bull elk.

"There!" Moran exclaimed. "What do you think of that? He's a small one, a five pointer, and he's rushing the season some. He'll prance round the cows now, because he knows the old herd bulls will come down out of their bachelor nooks in a few days and drive him off."

Each day the pealing bugles of the younger bulls grew more insistent. Then there sounded the fuller, rounder notes of the old herd bulls, the big six pointers. Every band of cows now had a tyrannical male who herded them jealously and bugled his defiance to the less fortunate bulls who tried to cut out a few stragglers from his harem.

The blacktail bucks, casual free lovers of the hills, made no pretense of holding their own bunch of does, but kept ever on the move, philandering from one love to the next.

Rams with great curling horns traveled with every bunch of ewes in the rough peaks above the timber line.

One night, when the running season was in full swing, Flash lay listening to the bugling of distant bulls when his nose detected the first sign of the proximity of man since the night at Two Ocean Pass almost three months before.

Twice he trotted a short way into the wind, then came back to Moran.

"You old rascal!" said Moran. "You're planning a midnight raid. After I'm asleep you'll slip away and interrupt the courting of some old bull. You're a queer mixture, Flash, but you're more wolf than dog after all."

Two hours later Flash stood in a little valley across a ridge from where Moran was camped. The wind was heavy with the odor of a dead camp fire and living men. He followed it up the valley until he knew that they were less than a hundred yards away. He shifted back and forth across the wind to catch each different angle from the camp. There was something that was unlike anything he had chanced across before and it roused an intense desire to investigate.

Little by little, shifting silently from tree to tree, he approached to within twenty feet of three sleeping figures. They lay in a little open park with the moonlight streaming down on them.

Flash did not know that when men slept their minds were not at work, but he did know that at such times their scent was negative. He could identify those he had met before, but that was all; he could not classify them with nose and ear as when they thought and spoke.

One of these he knew was Dad Kinney, whom he had often met with Moran. The other was a stranger to him, but neither of them interested him in the least.

The third was of a kind he had never seen. He knew unerringly that this was the female of the species man—the first woman he had known. She radiated vitality and health and a wholesome friendly interest in all things—and from this Flash knew that she was not asleep.

She was lying awake, enjoying the silvery bugle chorus of challenging bulls that came from far and near—in love with the spell of the Short Blue Moon.

Flash was irresistibly drawn to her. He knew she was watching him and he stepped from under the trees into the moonlit open space and stopped.

Then the girl spoke.

"Come here," she said.

At the sound of her voice the two men beyond her opened their eyes instantly, but made no move. Flash knew they were awake.

"Come here," she said again, and extended her hand.

Flash took one more step and for one brief instant his big bushy tail flipped aloft, then dropped again. Inch by inch he edged up to her, keeping a wary eye on the two silent spectators beyond. His nose barely touched the tips of the extended fingers.

The girl reached out still farther and stroked his head.

"Come on up here. Don't be afraid of me—I won't hurt you," she coaxed.

He crept closer, thrilling to the soft touch of her hand. Then he abruptly raised his head and peered across her at the two men as one of them spoke.

"That's the first time he ever let a soul touch him but Moran," Kinney said.

"You know him then?" asked the stranger.

"It's Flash," Kinney answered. "He belongs to Clark Moran. Did it make you nervous to watch a wolf crawl up to her that way?"

"No," said the other man. "A wolf wouldn't come that close to us in a thousand years. Then I saw him swing his brush up in the air when Betty spoke to him. A wolf never cocks his tail up in the air—and I knew he was a dog."

This stranger with the close-clipped gray beard and close-clipped accent of the East evidently knew the animals of the hills.

Their voices had a friendly ring and Flash lay flat beside the girl.

"Who is Moran?" she asked. "I'm going to buy his dog."

Kinney chuckled and shook his head.

"You can't," he said.

"But I want him," she insisted. "Surely he'll sell him at some price."

"Not him," said Kinney. "Moran seems to have enough money of his own to worry along. It don't mean so much to him as Flash. He wouldn't consider any sum."

Kinney gave them a brief history of the wolf.

"Moran's a queer one—and a good one too," he said. "He puts in his time visiting round after first one animal and the next—studying how they act and all. He even claims they talk among themselves in sounds and smells."

"A naturalist," said the girl.

"That's him. He's a naturalist sure enough. He came in through Sunlight Gap and hit this country near three months ago. No one's seen him since. He's camped round here close. But you can't buy Flash, Betty. Moran keeps him for company when he's out alone."

"Then I won't try to buy him," the girl generously decided.

Kinney chuckled as he rolled over and prepared to resume his interrupted slumbers.

The two men slept, but Flash lay motionless beside the girl. Her hand rested on his head and held him. Her regular breathing soon announced that she, too, was asleep.

Flash heard their horses moving round farther up the valley. He slipped away and went up to look them over. One horse was picketed and the rest were grazing near. He went back to the girl. Twice during the night she half woke.

"Flash," she said sleepily each time. "Flash, old fellow, are you still here?" And she stretched out her hand to touch him.

There was something in her voice when she spoke his name that brought a thrill which was second only to his love for Moran. He waited until almost dawn, hoping that she would wake again.

Then he grew nervous—Moran would soon be awake and waiting for him to bring the horses into camp. Half an hour before the first streak of light showed in the east he slipped away under the trees, stopped and looked back, then started for Mo
There was a crisp cool in the air. As

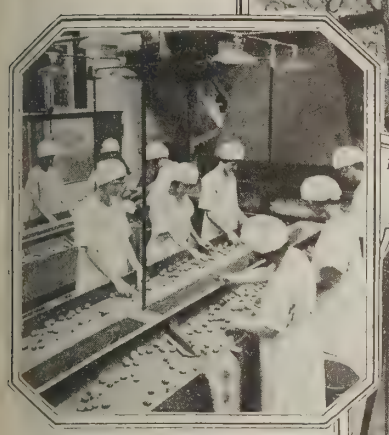
Making walnuts more than just walnuts—making them DIAMOND BRAND

Budding — the first step in helping Nature produce better walnuts.



Hand Culling — Diamond Brand Walnuts are graded by machinery and by hand to insure their quality.

The Vacuum Sorter — a patented suction machine which lifts out all light-weight or partly filled walnuts.

The Final Test— an inspector tests all Diamond Brand Walnuts by actual crack before shipment.

Nature made them good—these tempting, wholesome, fine-flavored walnuts of California. This Association has actually *improved upon Nature*—and the result is Diamond Brand.

From the day the cultivation of a tree begins in the nursery until, years later, we make the final cracking test of its nuts, every step in the production of Diamond Walnuts is supervised by Association experts.

These four illustrations are typical of this constant supervision. They explain why Diamond Brand Walnuts are more than "just walnuts."

Diamond Brand Walnuts may cost a few cents more per pound than inferior grade nuts, but housewives of experience know that they are *worth more*—pound for pound they contain more perfect meats.

At Thanksgiving and Christmas—at all times—be sure you have plenty of Diamond Brand Walnuts. Two kinds—"Soft Shells" and "Budded"—both of tested Diamond Brand quality. The "Budded" cost a bit more, due to their extra plump kernels, extra thin shells and the larger proportion of meats to the pound.

Buy Diamond Brand Walnuts in bulk or shelled and canned so as to preserve all their original freshness. Ask your dealer.

Write for a free copy of "100 Delicious Walnut Recipes" by Miss Alice Bradley, Principal of The Boston Cooking School, and a recognized expert on modern cookery. It is filled with tempting menu suggestions.

SHERWIN

Decorate your home but be sure to protect it

A PRIMARY purpose of interior painting is protection. It is as important as decoration. The wear some interior surfaces get is greater than the wear on exterior surfaces. Consider this when you paint and avoid repainting and duplicated cost.

The Sherwin-Williams Company specialists study each surface and the means to resist the wear it gets. Then we make a product which exactly fits that need.

Cheaper paints or varnishes can be made if no concern is given to their wearing qualities, but cheap paints look cheap in a short time and are very costly in the long run. And they don't protect the property you seek to preserve.

The Cover-the-Earth trademark is your safeguard—assuring real economy.

S-W Flat-Tone—A durable flat oil paint for walls, ceilings, wall board and canvas. Sanitary and washable. Many beautiful shades

WILLIAMS PRODUCTS

You can beautify any surface while you protect it from wear

FLAT-TONE will produce beautiful walls in your home. With a range of 20 colors, you can exactly fit your taste. You have no idea of the wonderful color effects you can get. Consult our Decorative Department.

You cannot get nearly so attractive an effect with wall coverings, except at greater expense, and Flat-Toned walls are free from sweating and spotting. They are also sanitary, durable and easily washed.

You have the same range of choice for woodwork with Sherwin-Williams varnishes.

Mar-not on your floor provides a durable, tough, elastic finish which does not scar with heel marks and does not turn white if the rain comes in from an open window, or the radiator leaks hot water on it.

Scar-not on your woodwork or furniture, will produce a beautiful depth of tone, bringing out the color of the wood perfectly.

Old Dutch Enamel on woodwork will provide a high gloss finish that will stay white and equal the finest Holland Enamel in its original effect and durability. It comes in ivory effects also. It can be used successfully on exterior surfaces. The soil of weather can be washed off easily.

Sherwin-Williams makes many other products for special purposes within the home. Send for "The A B C of Home Painting" and study your need and the way to meet it.

THE SHERWIN-WILLIAMS CO.

Address Main Correspondence Office,
601 Canal Road, N. W., Cleveland, Ohio

PAINTS, VARNISHES, DYESTUFFS, COLORS, PIGMENTS
CHEMICALS, DISINFECTANTS, WOOD PRESERVATIVES

S-W Old Dutch Enamel—The highest grade, long-life enamel for woodwork and furniture. Made in the intense white or popular ivory shades, gloss and dull finish

S-W Mar-not—A tough, elastic waterproof floor varnish. Dries over night. Will not scratch white or show heel marks

S-W Family Paint gives bright color treatment for many jobs in the home. Dries with nice gloss, washes and wears remarkably

(Continued from Page 110)

They made camp in a little side-hill meadow.

"I wonder if she was young and pretty?" Moran said as he sat smoking one last pipeful before going to sleep.

"The spell of the Short Blue Moon is working on me, too, Flash," he went on. "After all, a man can live too much alone. All this we've been listening to—that's what it means. The bucks polishing their horns on the trees and all those bugling bulls. That note you listen for every night and don't know what it is. The wolf season doesn't start for a few months yet—when it does come you'll know what all that means. It's the same way with us all—even man. Every living creature needs one thing to round out his life—a mate."

Moran slept and Flash climbed back to the crest of the divide. A light gleamed from a ridge above the valley where Brent's pack outfit had halted late in the afternoon. It swayed back and forth as if suspended in the air. Far off among the bald ridges near Two Ocean Pass Flash could see a tiny point of fire twinkling through the clear air. This too made sweeps to the right and left.

Flash could not read the message, but he watched until the lights disappeared. From below him on one side sounded the wild pealing bugle of an old bull elk and the whistling snort of a blacktail buck; from the other came the occasional stroke of a horse bell. This reminded him of his trust.

He turned his back on the Land of Many Rivers and trotted down the opposite slope to Moran and the world of men.

VI

EVEN though he held himself frigidly aloof from all men, Flash was a prime favorite at the Bar T ranch. He was a changed Flash; his former springy alertness had been replaced by a drooping dispirited air of complete dejection. Moran had gone from his life—and life had lost its tang.

He could not know that Moran would either soon return or send for him; he only knew that he was gone, and the longing for him was like a sickness.

Flash was often missed for a time from the Bar T. Later they found that he had been several times to Harmon's cabin and had spent a few days at Dad Kinney's camp. Thereafter when he was absent they knew he was at one of the places he associated with Moran.

His handling of stock was a marvel of intelligence, but it was a mere mechanical following out of the tasks Moran had taught him, for he now found no joy in the work.

As he sat on a ridge a few hundred yards from the bunk house he distinctly heard someone call his name. He deliberately turned away and trotted off through the darkness. He had investigated every human habitation for miles round, searching vainly for some sign of Moran. Flash was losing hope and with it his allegiance to the world of men. More and more now he listened to the night sounds that called him and he spent much of his time alone in the hills.

He rambled aimlessly on until sometime near daylight, when he curled up on a ridge seventy miles from the Bar T range and slept. The air was crisp and cold. Except for the drifts in the gulches the light fall snows had disappeared from the foothills, but even this early the peaks were one solid glare of white. A stiff breeze rose with the sun and whipped his exposed position, and he started to seek a more sheltered spot.

Below him a rider was gathering some cows from the rough side-hill brakes. As Flash watched, a steer turned and the rider wheeled his horse and plunged across the draw to head him.

Habit was strong in Flash and he dropped swiftly down the slope to head the steer. The instant he appeared the rider jerked his horse back on his haunches and pulled his gun. Flash whirled and snapped at a hot stab of pain which seared across his rump as the report crashed in his ears. He fled and from behind him the sharp reports rang out in quick succession. Spurts of gravel were tossed up about him and there were whining rushes of air close to his head.

Flash knew well the use of firearms. He had often seen Moran and others shoot and after each report there had been a jack rabbit flopping in his death throes or a dying antelope twitching on the ground. He knew that this man, for no reason whatever, had meant to kill him.

Half an hour later as he trotted across a flat there came the sharp crack that a high-velocity rifle ball makes when it passes close to the ear. The distant report reached him as he whirled to run. Four hundred yards away a man leaned against the door of a sod house and emptied his gun at the gray form that was running with incredible speed across the flat.

Flash entered the mouth of a long valley. A horseman was plunging down the right-hand slope to cut him off. He veered to the left and as the furiously running horse pulled in behind him the rider's gun barked six times at the fleeing wolf.

Flash could not know that to all men but those who knew him he was a wolf. He only knew that all men had turned their hands against him and sought his life.

The next man he saw he avoided and when next he bedded down it was on the crest of a knoll that afforded a clear view for miles.

When night came he traveled on, crossing a low range of mountains and descending into the rolling grasslands of the Wind River Valley. Hunger pressed him and he found no living things but cows. The sense of distance from familiar scenes made the Bar T seem so far behind as to be part of another world. The fact that men had so recently turned against him was bitterly uppermost in his mind—and he was hungry.

Men sought his life. And for the first time he turned his teeth against an animal that belonged to men and singled out a steer. His first snap was half-hearted and did not entirely sever the cords of the leg. The steer fled in a panic and the others, crazed by the smell of blood and this silent wolf shape that had appeared among them, crowded round him in a mad stampede. The one taste of warm blood and the clattering roar of hoofs as more scattered cows joined the frantic rush stimulated the wild blood in Flash and he lunged again, this time with all the powerful drive of a killing lobo behind his teeth.

The steer ran on, one hind leg giving under him. Then Flash struck the other leg and the steer went down. Even as he reached the ground a gray shape drove at his throat and slashed it open with savage fangs that cut in like knives.

Flash stood over his kill, listening to the roar of hoofs and the crazed bawling of cows as the stampede gathered numbers and rolled on down the valley—and he was all wolf, a great gray beast of prey with the tame strain submerged beneath the wild.

He roamed the valley for a full week, sleeping by day and killing by night. Then the old longing for Moran reasserted itself and called him back to the Bar T range. He covered the hundred miles in a single night and approached the Bar T buildings cautiously just before dawn. There was a light in the bunk house; the boys were getting up.

Flash drew near, trying to catch the sound of Moran's voice in the murmur that came from the bunk house. A horrible shock of surprise flooded through him and he wheeled to run as a voice spoke seemingly out of the air and called his name. But the voice was friendly and old habit was strong. Flash stopped.

"Hello, Flash!" From his perch on the windmill platform the early riser had seen the dim form slipping toward the house. "You old rascal, where have you been?"

Flash trotted off to the sheltering gloom of the corral and waited, undecided which course to pursue.

When the windmill fan started to turn the bunk-house door opened and the occupants emerged irregularly and started splashing face and hands with the icy water from the tank. Halfway down the ladder the man above stopped to call out that Flash was back and from the group at the tank there rose an immediate chorus of friendly remarks and whistles for the dog.

Flash trotted near them, his muscles bunched for sudden flight at the first hostile move, but he was greeted as an old friend.

During the next week he reconstructed his ideas of men. Twice he was shot at when far from the ranch. He finally knew that he was safe when with the Bar T boys, but that when off his own range men sought his life. He accommodated himself to this. His two stronger strains were balanced by the coyote intelligence, which except for his eyes was his sole inheritance from the little yellow prairie-wolf grandfather.

The reason coyotes are caught in traps while wolves are not is because wolves avoid all man-scent while a coyote believes in himself—he simply cannot resist the call to pit his intelligence against that of man. This curiosity costs many coyote lives, but his kind has survived in numbers on ranges where man has long since exterminated the wolves.

Flash began to lead a strange dual life, which accorded well with his opposing strains of blood and in which his coyote brain stood him in good stead.

Stock dogs were scarce on the range. They did not long survive the poison baits which wolfers laid for coyotes. The Bar T men firmly believed Flash to be the best stock dog in the world. There was talk of taking him to the Frontier Day Fair in the far-off capitol and issuing a free-for-all challenge, backed by a thousand-dollar purse, proclaiming him the wide-open champion of the world. The Bar T owner had made Moran a standing offer of five hundred for the dog.

The stockmen of Wind River had posted a five-hundred-dollar reward for the scalp of the most savage lobo that had ever showed up on the range and who made periodical forays among their cows, killing more than the price on his head in a single week.

Thus each of the two extremes in Flash built up a reputation of its own, for the champion stock dog of the Grey Bull and the famous lobo killer of Wind River were the same.

His absences, which were attributed to wandering round in search of Moran, were now spent in raiding. On these trips he was all wild. He bedded down with the wind at his back and a clear field of view in front. He feared men, not with blind unreasoning terror, but with a certain knowledge of their power for harm.

His coyote intelligence saved him from panicky flights in the open at the first whiff of man scent; instead he would flatten out and let them pass or watch his chance to slip away unseen. Then old habit would cry out for the companionship of man and he would show up innocently at the Bar T ranch.

In the face of all his cleverness the net began to tighten down round Flash after two months of this dual existence.

Dad Kinney shifted his camp to Wind River. Winter had crept down the mountains until it was one rough white mass clear down to the base of the hills. A full half of the time there was a tracking snow in the foothills and with a relay string of grain-fed horses Kinney commenced his tireless hunt for the five-hundred-dollar wolf.

The wolfer knew well the one greatest weakness of his prey—that of gorging on warm meat and bedding down. A swift horse can often wear down an overfed wolf. It is established custom for any rider who sees such a race to throw himself into it and press the wolf with a fresh horse. More of the big gray killers of the open-range country have been relayed to death on a new snow than by all other methods combined.

Day after day Kinney rode steadily on the trail, his sights set for a thousand yards. Flash learned to watch for the tiny speck that always appeared on his back track and gradually enlarged into a rider on his trail. It was only a question of time.

One morning in mid-December Kinney found a steer that had been killed not two hours before and he swung his horse into a steady trail trot on the big tracks in the fresh light snow. Flash had bedded down on a slight rise of ground five miles from his kill. He had feasted heavily and was loath to leave his bed; not until the man was within two miles did he start.

When Kinney saw a dark speck trotting across the white snow two miles away he lifted his sorrel into a keen run and Flash started in on the first lap of the most terrible day of his life. He felt stupid and sluggish, disinclined to travel fast or far, but was forced to keep on and on. He ran in a straightaway toward the base of the Wind River hills seventy miles away. The country was slightly rolling—almost flat. Often he increased his speed and drew away from the man behind. Always his gait slackened when the man was out of sight; then the wiry sorrel would appear over some ridge close behind, running swiftly on his trail. Each time he saw smoke or the low buildings of a ranch ahead he veered slightly to the right or left to miss the spot by at least a mile. After twenty miles, as he passed a ranch he missed the man; it seemed that he h shaken off his hunter at last. He w deathly tired and slowed his pace. A fe miles farther on he sprawled down in t snow on a little swell of ground. It seem but a few short minutes until another hor loomed up on his back track.

Kinney had veered off to the ranch a changed mounts, throwing his saddle the best horse in the corral. This time was a rangy pinto that was running like greyhound on his trail. So the despera race kept up. Another score of miles a Flash had one more brief respite before tough, smooth-running buckskin was aft him.

His powerful muscles seemed to ha lost their spring. His body was a lead weight almost too heavy for his legs. On the one ever-present knowledge that dea lurked close behind forced him to ke ahead. He ran desperately, the mechani driving of his muscles sending him on a on. From the first roll of the Wind Riv hills he looked back. A blocky mounta climbing bay loped away from the ran house a mile below and buckled sturdily his ascent of the hills.

With heaving sides Flash started acro the low divide for home. His brea sounded in leaky gasps; the yellow ey were set and bloodshot and the savage ja dripped froth which spattered back a dried on his breast and sides.

He kept ahead across the spur and dow the other side. Just at dark Kinney qu the trail at the foot of the slope and stopp at a ranch house overnight. The dim susp cion which had haunted his mind all day to the identity of the wolf now crystalliz into a certainty. The size of the tracks; t fact that no man had ever heard this lo howl; the sense of familiarity he had felt each distant glimpse of the big gray sha that had fled before him all that day; t periodical raids dovetailing with certain a sences from home; all these pointed to o thing—Flash.

Five miles away Flash was stretched o in the snow. After raiding all night he h been ruthlessly harried for more than hundred miles, starting when gorged wi meat, a time when a wolf's endurance is its lowest ebb.

Before daylight he started on, headi for the fancied safety of the Bar T. On there he kept his eye on the low ridge h a mile away over which he had come. I wind had sprung up to blot his tracks a late in the afternoon a horse topped t ridge and Kinney came jogging slowly alo to the ranch on the trail of the Wind Riv wolf.

Flash scratched at the bunk-house do and the lone occupant let him in. From t window he watched Kinney ride up, and he entered Flash knew this was the m who had hounded him and his hair bristl as he backed into a corner, his teeth bar savagely.

"Too bad, Flash," Kinney said. "I sorry it's got to be done."

Flash wanted to get out of the bu house, but was kept there until the rest the men came in at dusk.

Kinney's proof was clear. These we hard men. If a friend turned rustler th regretted it—and led his horse under t fatal tree. Flash was a friend, but justi must be done.

The wolf dog listened to his trial. I could not understand the words, but the was menace in the tones and the loo they cast at him. He knew it was co nected with the race, and a chill dread death shook him.

The men drew lots from a hat.

"I'm sorry it fell to me," said one. "I call him outside and get it over with." I slowly pulled his gun and opened the do "Come on, Flash, old fellow," he said.

With one mighty spring Flash clear the open door and was off, a swift gr streak in the moonlight with a gun barki spitefully behind him.

"He's a smart one," said the man wi the gun. "He knew! He almost made it that, but I got him."

The men crowded out of the bunk hous Fifty yards along the trail Flash had l they found where he had fallen and the was blood in the snow.

"We'll find him to-morrow," Kinn said. "He can't travel far."

But in the morning the trail was blott under half a foot of new snow. When Mor notified them to ship the dog to him wo was sent back that Flash was dead.

Ponselle in Duet With Maurel Sings "Abide With Me"

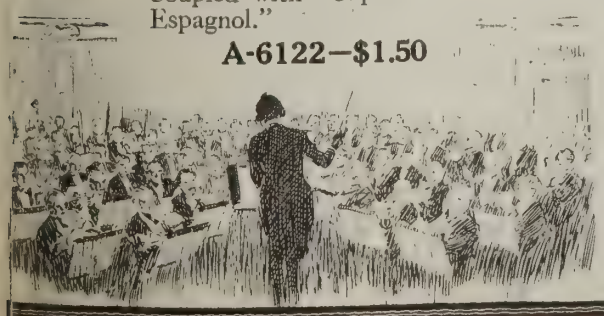
Rosa Ponselle, great dramatic soprano of the Metropolitan Opera Company, in a duet with Barbara Maurel, sings this world-famous sacred song, which many millions love, in a way to make even more millions love it. The solemn, imploring words ring true in their tender, thrilling tones.

78557—$1.50

"Danse Bacchanale" by French Symphony

A superb piece of ballet music is this wild Oriental dance from Saint-Saëns' *Samson and Delilah* rendered by the Paris Conservatory Symphony Orchestra. Rapid and fiery, it foreshadows the destruction of the revelers in the Temple of Dagon. Coupled with "Capriccio Espagnol."

A-6122—$1.50



Varied and Vivid Timely Music

Hackett and Ponselle sing for Columbia this month. Al Jolson and Van and Schenck make merry on Columbia Records. Charles Harrison and Barbara Maurel sing Christmas hymns. Sascha Jacobsen plays the violin. The Ted Lewis Jazz Band and five other famous organizations play dances. Read this list:

The Kiddies Christmas Frolic. Part I, Morning. Descriptive Columbia Orchestra **The Kiddies Christmas Frolic.** Part II, Evening. Descriptive Columbia Orchestra.	A-2800 10-in.	85c
Oh, Come, All Ye Faithful (Adeste Fideles). - Columbia Stellar Quartette **Hark! The Herald Angels Sing.** Columbia Stellar Quartette	A-2788 10-in.	85c
The Star of the East. Barbara Maurel and Columbia Stellar Quartette **TheBirthday of a King.** BarbaraMaurel	A-2790 10-in.	$1.00
Silent Night, Hallowed Night. Charles Harrison **Oh, Holy Night.** Charles Harrison and Stellar Quartette	A-2801 10-in.	85c
Christmas Time at Pumpkin Center. Cal Stewart, Ada Jones and Peerless Quartette **Evening Time at Pumpkin Center.** Cal Stewart, Ada Jones and Peerless Quartette	A-2789 10-in.	85c

"I Am Climbing Mountains" A Harmonious Tenor Duet

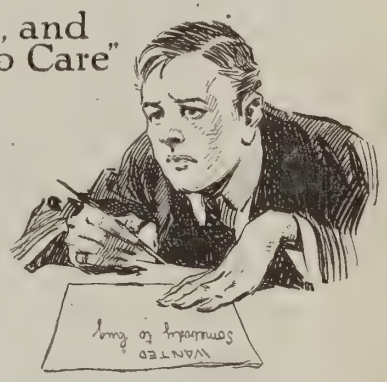
This sentimental song of childhood's and manhood's dreams and ambitions is a beautiful bit of harmony. Both this song and the coupling "Golden Gate" are worthy successors to "I'm Forever Blowing Bubbles" by the same authors. Charles Harrison and Lewis James—a new combination—sing them wonderfully.

A-2791—85c

"Nobody Knows, and Nobody Seems To Care"

Everybody will care a lot for this truly amusing tenor duet by Irving and Jack Kaufman. Lack of "lovin'" is what they lament. Coupled with "I Wanna Go Back to Dear Old Mother's Knee."

A-2795—85c



Ted Lewis Jazz Band Makes Its First Record

The feature of New York's *Greenwich Village Follies* and headliner at *Keith's Palace Theater*, the Ted Lewis Jazz Band plays "Blues (My NaughtieSweetieGaveMe)." This frenzied fox-trot gives you an incredibly swift succession of resounding syncopated shocks. Coupled with "India," another fine fox-trot.

A-2798—85c

IN ENEMY COUNTRY

(Continued from Page 21)

American officers here and also the debonair Count Bernstorff; men and women of rank in Germany and busted refugees from Russia and Austria. Down in the lobby you can see immaculately tailored German officers, rich civilians, flashy war profiteers and women who make their living by their wits. Indeed, the oldest profession in the world is heavily represented. Doubtless a percentage of them are assigned to the job of keeping tab on the Americans.

Was introduced to Sudermann, the great German author—a man of striking appearance, well up in years but extremely vigorous. A mutual acquaintance invited us to dinner. Just my luck that I could not go. There were some happenings in The Song of Songs about which I am curious, having been strictly reared.

Also met the German ace of aces. He frequents this hotel and chums with several Americans. A slip of a boy—shy, almost diffident in manner. It seemed impossible to believe this kid brought down sixty-five Allied planes and led the Richtofen circus after that air fighter's death. Then I caught him sizing me up when he thought I wasn't looking and I changed my idea of him, for never have I seen a keener intensity of glance, where but a moment before had been nothing but mild good nature. He invited several of us to take a flight. No reason why we should not go; no reason why an American should not be courteous to a German of his stamp, for he was a straight, clean fighter.

A number of correspondents had an interview on the peace terms with Scheidemann in Wilhelmstrasse. I went along, not to listen so much as from curiosity to see the members of the government.

We gathered in a room where the cabinet used to meet. On the walls are pictures of the Kaiser and other German war lords. After a few minutes a door opened and the members of the government filed out and passed through our room. I scanned them curiously, paying particular attention to Noske, Minister of Defense. They say he is the iron man of Germany to-day, and he is suspected of being the tool of the reactionaries—the old régime.

None of them was impressive; they all looked like mediocrities, which they probably are. But I have had occasion to note that celebrities are generally commonplace in appearance—or perhaps I should say they resemble any ordinary citizen. When you find distinction of bearing and spirituality of expression, he is usually a clerk in a jewelry establishment or sells lingerie.

As for Scheidemann, he is for all the world like a fatherly Sunday-school superintendent. Nothing about him to suggest force or the capacity to steer a ship of state through troubled waters. The republicans strike me as being hard up for big men.

Noske Gaining Strength

Berlin. The strangest rumors are going the rounds. In certain of the poorer districts of Berlin a report has been spread that two hundred babies have mysteriously disappeared and been made into sausages. It would be laughable if some of the more ignorant did not believe it.

Noske is steadily gaining strength and recruiting his forces. These are the *freiwilligen* troops—volunteers—and as the pay is high and they get the best there is in the way of food the service proves tempting. Before this business is wound up Germany will likely have a formidable army available for emergency.

They will beat the disarmament conditions of peace in some fashion—we all feel confident of that.

The Germans are going in for sports with a vengeance. In their laborious way they seem to have figured out that one of the causes of British and American capacity for fighting lies in the Anglo-Saxon passion for sport. And so to-day they are organizing sports with their customary thoroughness. Instead of gymnasium athletics, to which they have been addicted in the past, they plan to take up football in earnest. Who knows but baseball may one day be their favorite outdoor game, rivaling their indoor sport of beer drinking?

They have horse races at a course near Berlin and big crowds attend. The people are well dressed and appear to have plenty of money for betting. In fact there seems no lack of marks for anything in the way of amusement. The theaters are well patronized. I saw a large audience at the Ice Palace and a show surpassing in gorgeousness of costumes and scenic display anything of a similar nature that you can find in New York. Also the gambling places run to capacity every night. On a lake some miles from Berlin we saw at least a hundred sailboats on Sunday afternoon.

Strange how men and women will persist in diversion on the brink of the abyss. It happened up to the outbreak of the French Revolution—and it is happening here in Germany's darkest hour.

The newspapers assert that a wave of crime is sweeping over the country. That is always one of the aftermaths of war. Crimes of violence and of stealth are more numerous in England and America to-day than for years. Sir Nevil Macready, Chief Commissioner of the London Metropolitan Police, commenting upon the increase of crimes of violence, attributed it to callousness to taking human life and indifference to one's own safety engendered by war.

"In prewar days," he said, "if a burglar was met on the stairs by a householder in his pajamas his first thought was to escape. But to-day under similar circumstances the thief would probably resort to violence and if necessary to murder." And he added a prediction that there would be an increase of women murders.

"Before the war, when a man quarreled with his wife, he would just clip her under the ear and everything would be all right the next day. But now after four years of life taking he would hit her over the head with an iron bar or anything that happened to be handy and there would be no next day for her."

Scientific Soap-Stealing

I assume Sir Nevil was speaking of the lower orders of English society rather than the landed gentry, but it is an illuminating comment on the spiritual uplift of war.

Several Germans warned me to keep everything securely locked away in traveling round the country if I wished to retain my property. Just for experiment, I left an overcoat hanging in the public hall of the hotel all night in three towns; it was there in the morning.

They have stolen cigarettes and tobacco from my room frequently, and you could not guard a box of chocolates if you put it in the safe! But when people have been denied these luxuries for years one cannot regard it as theft. As for soap, the average German would pilfer it out of your hand while you were taking a bath if he could perform the operation without bringing down punishment.

They have reduced soap stealing to an exact science. I have never lost a whole cake; that would be too crude. But cakes which I left out with a view to seeing what would happen mysteriously shrank to nothing. Each day the thief would shave off a certain amount.

Recently a sensational Berlin newspaper has been raising a howl about German girls loitering round the hotel where the enlisted men of the American mission are quartered. It asserts that hundreds of German girls have so far forgotten their pride and self-respect as to cultivate the Americans in the hope of getting chocolate and soap and money. The doughboys just grin.

Berlin. The American officers on duty here are living in a gilded cage. That is to say, they are surrounded with every comfort and most luxuries are available, but they remain virtually prisoners in their hotels. They are not permitted to go out except on business, and places of amusement are barred to them. The result is that they suffer from lack of exercise and chafe under the restraint.

These measures were taken as a precaution against inflamed public opinion. The American military authorities want no trouble, and something serious might easily occur were our officers and men to wander round at will.

However, some of them do get out now and then in civilian clothes, for the average American can pass very easily in a German crowd when dressed as an ordinary citizen. Cits are scarce. I brought only two suits and went to bed at eight o'clock last night in order that a couple of officers could attend the opera. One of them stands about five feet four inches and had to roll up the trousers and the sleeves of the coat. He looked as though he had just arrived at Ellis Island from Poland. The other is six feet two inches, and being of a fine heroic figure my suit fitted him beautifully.

It's queer to watch a city going quietly about its affairs when such tremendous issues are being decided. Berlin is far from normal, of course, but there is little to be observed in the street crowds, in the shops and restaurants and places of amusement to suggest anything volcanic smouldering under the surface.

The other day I drove through the *Tiergarten.* Hundreds of men and women were riding their horses along the bridle paths, sitting their mounts as only Germans can. Even those horsemen who had learned how to hold the reins correctly rode like sacks of meal. I have often noticed that there seems to be no sympathy between the average German and a horse. I wonder how they get along with mules.

But the point I am trying to make is that the world and his wife were out, sunning themselves in the parks and streets and apparently having a pretty fair time—and the peace terms had just been announced. One would have thought they would have been too stunned to carry on ordinary affairs.

Perhaps the full import of the peace conditions has not yet percolated. Every American here has remarked the peculiar fashion in which Germans react—they are so much slower than other peoples. A couple of hours after receiving such news as the Germans heard a French or American city would be pouring its hundreds of thousands into the streets to mob the representatives of the enemy powers. The flareback would be instantaneous and their fury uncontrollable.

But not a sign so far from the Germans. They are probably thinking it over very carefully and painstakingly, and later they will register some sort of protest. Their psychology is such that I verily believe you could affront the average German on the street, and he would go a couple of blocks or more before awaking to the fact and then come stumping back to demand what you meant by it.

We have remarked an odd thing about many signs in Berlin and other cities. It is a trifle in itself, but we have seen it so often that I am inclined to regard it as significant. Scores of beer gardens and cafés and places of amusement were formerly called Kaiser Wilhelm. Their signs are mostly made of electric bulbs. They have recently altered them to suit the times by removing the word "Kaiser," but they did not obliterate it. Instead they have hung strips of canvas over the "Kaiser" portion. It could be removed in a twinkling. I have counted thirty-two such temporary changes since arrival in Germany. Is this a canny caution, with an eye to eventualities?

Russians Wiped Out by Thousands

Had a long talk with Brigadier General George H. Harries to-night after dinner. He is chief of the Military Mission of the United States and of the American Section of the Interallied Commissions on Repatriation of Prisoners of War in Germany.

It appears that the Germans had more than one million two hundred thousand Russian prisoners in camps and commandos and hired out to landowners, farmers and mines last year. They began to repatriate them immediately after the Armistice, but their methods were ghastly. They sent six or seven trainloads a day to the border and there dumped them. To reach the nearest Russian railroad point the prisoners had to walk sixty kilometers in the bitter cold of midwinter. They carried hardly any food—about three hundred grams of bread per man per day, no proper clothing—and they died like flies.

The Germans did not bother about their fate. They shipped officers back also in large numbers, though well aware of the doom awaiting them. Some were sent into the Ukraine—some up north. The red army grabbed all who came, and massacres ensued. Some of the officers joined the Bolsheviks to save their lives. The majority were shot or hanged. On January fourteenth Harries put his foot down and would not permit further shipments. Not a single officer prisoner has been returned since that date.

More than half a million of these R sians were civilians. When the Ger armies made a clean sweep they brou them along for labor purposes.

In Germany were also ninety thous Rumanians. Only forty thousand h ever been accounted for. Where the maining fifty thousand went is a matte conjecture. 'The theory is that they ished miserably without any records b left. Colonel Lupasco of the Rumar delegation discovered that eighteen la battalions of Rumanians had been org ized for service on the Western Fr None came back.

The *Nachweis* bureau, which kept an dex of prisoners, proved utterly inefficie Their records were worthless to the Al commissions. Prisoners were never re tered at the Front, because they w worked there in contravention to in national law. Consequently all who w killed or died at the Front were bur without identification, and figure among missing.

Also shifting prisoners from one camp another caused endless and inextrica confusion. Perhaps the registers were tra ferred—perhaps not. At any rate, a p oner usually vanished from the reco after his second camp.

General Harries remarked that the Am ican soldier's superstition that his ident tag was unlucky resulted in many Am icans going to their graves unidentified. discovered that the Germans had trea American prisoners better than the oth and could learn of no authentic instance brutality.

The Red Corruption Fund

There remain about three hundred th sand Russians to be repatriated of wh they have record, and "We know there nearly two hundred thousand more sc tered round Germany. That makes hal million all told."

The prison camps have been lightly he As a result thousands of Russians repat ated themselves—beat it. Quite a numb went home and then came sneaking back their prison, where they were sure at le of food, for conditions were so bad Russia that they had no security of life, homes and no means of subsistence. T Germans have employed these return penitents as missionaries to persuade t others in the camps to be patient.

Harries is in possession of informati which proves conclusively that Germa engineered and financed the revolution Russia. They sent Lenine across in a spec train and later Joffe became his ambassac in Berlin. The latter spent forty-two milli rubles in Germany—about twenty-one m lion dollars as the ruble was then value

"We discovered a fund of twenty-t million rubles in Mendelsohn's Bank Berlin," he said; "which was to be check out by the Bolsheviks to start outbreaks prison camps. The Interallied Commissi had checking against this fund stopped. is still stopped."

One of the most murderous of the Ru sian Bolsheviks was Radek, who took pa in the January disorders in Berlin and th fled. In March he returned to Berlin a was living quietly there when the Alli agents discovered his presence and report it to the German authorities. They pi tended incredulity, but were obliged to a on the information and arrest him. struck the Allied officials as queer that t German secret service, which trails eve suspect and about every innocent travel as well, should have been entirely ignora of the presence of so dangerous an agitat as Radek.

The Russian prisoners are a serious pro lem to the Germans. They cannot get r of them quickly and they cannot care f them properly. Moreover they constitu a menace. During the Munich riots Ru sian prisoners who had been released by th reds and clothed in German uniforms toc part in the Spartacide defense of the cit against the government troops.

Later. Berlin has been demonstratin against the peace and I suppose the Ame ican newspapers are flinging big heac across their front pages to paint the pi ture. But the real story is very tame.

The demonstration was called for an arranged precisely as we would plan

(Continued on Page 119)

(Continued from Page 116)

rie at home. It did not come fast on
e eels of the peace terms; it was no
oaneous outburst; there was nothing
a ery protest about the affair. The gov-
nent evidently considered that public
nstrations might help their represent-
iv at Versailles and accordingly demon-
aons were held. The Berlin papers
nnced them in advance and more than
t eight hours elapsed from the receipt
tl peace conditions to the mob scenes in
nt den Linden.

I alked over in late afternoon to the big
ue in front of the Reichstag to see the
gt Long lines of marchers were con-
rig there from every street. They
lld quietly, almost in silence, behind
gof the new republic.

Phaps twenty thousand persons gath-
ein the *Platz*. Bismarck in bronze tow-
eabove them. Not far away another
eeng of protestants gathered round the
loal figure of Hindenburg. The march-
: ere fairly well clad. There were men
d omen in about equal numbers and a
i ling of ex-soldiers in their uniforms.
It was about the palest demonstration I
erwitnessed. Various spellbinders ex-
rt l the crowds from vantage points, but
er was little applause, never a sign of
nt. Children played on the gravel
ll or round the fountains which the
nurse did not overlap. Citizens bound
rward paused on the outskirts long
ough to inquire who was doing the wind-
ning, remarked "Is that so?" And
non their way.

It grew so tedious that I returned
ory to the Hotel Adlon. Half an hour
e we heard the murmur of a multitude
Uter den Linden, and there was scurry-
g mong the hotel employees and the
os soldiers on guard, for once during
e arly revolution a mob had invaded
er Adlon's hostelry with a view to
eing the place and he had had a hard
noersuading them that the bust of the
air in the lobby, with its plumed helmet,
sa reality Lohengrin.

The mob—many thousands strong—
arued past the hotel and did some hoot-
g. There was no note of menace in it,
wer, and I saw many a marcher wear-
g half grin as he dutifully booed the
nacans within the hotel. All American
ics were ordered out of the lobby and
rden to issue into the streets. Though
nsure of commendable prudence, this
usl hot resentment among them.

h Should Americans Pussyfoot?

"hy is it we always have to go pussy-
otg for fear it might provoke some-
d?" they asked one another. "The
nican uniform ought to protect a man
y here in the world."

I ave often speculated on that myself
ic this Administration came into office,
r o matter where Americans go they
usneeds walk softly. In Italy, in Ger-
ar, in Mexico, they must take submis-
re what comes to them lest assertion of
eirights should provoke trouble. Brit-
ne may go almost anywhere in the
or without fear of molestation—save in
exo, which is our sphere of influence
d the Monroe Doctrine—because the
or knows that Great Britain will pro-
ct hem with a strong arm so long as they
n their own business and behave them-
lv.

Bu during the past few years Americans
ve earned that they dare not assert their
ddiable rights. Our policy has been to
rr he other cheek. Every pygmy nation
rth knows that now. It will take
an of firm dealing to correct this mis-
ke impression and restore American
esge.

The demonstration did not amount to
y ing until later in the evening. Then
veal thousand, who had returned to con-
egte in front of the hotel, sang patriotic
ng and booed. A friend of mine mingled
th hem in civilian clothes. He told me
at sentiment seemed about equally di-
de on the peace terms, with nearly all
e omen in the crowd denouncing Presi-
en Wilson and America. They were more
m stuous than the males.

"hy don't you smash the windows?
h don't you go and get those baby
lle?" they shouted at their men.

"bout half past eight a German car
ith German driver drove up and Major
ak and a civilian came out of the hotel,"
lid. Jakka is quartermaster of the
mican mission. "Immediately the crowd surged forward and began to hiss and hoot as the major entered the car. A lot of them shouted wildly and women screamed that the pigs of America were living well while their own delegation in Versailles was stoned. Well, sir, it never bothered the major at all. He didn't seem to be conscious of the mob. Stood up very deliberately, stuck his hand in his pocket, drew out a bill which he handed to the door man, returned the latter's salute and drove off. They let him go without disturbance."

After hanging round for a few hours, listening to speakers and arguing in groups, the crowd moved round the corner into Wilhelmstrasse for demonstrations there. My friend went along. He was singing *Deutschland Ueber Alles* as lustily as the others. They had done a deal of singing during the evening, which they varied by howling whenever a slit of light showed in the upper windows of the hotel.

"In one of their quiet spells"—they stood almost without sound for long periods—"a guy yells '*Wilhelmstrasse*,' and the whole bunch turned about and followed him like sheep into the next street."

The German authorities could easily have prevented the demonstration. A platoon of men at the Brandenburg Gate could have turned the procession elsewhere. It had every feature of a frame-up.

Much Noise but Little Violence

What astonished us was the fact that none of them tried to force entrance to the hotel. An American mob would have ruined that place. But the Germans did not resort to any violence, even when an American passed through them. Their only rough tactics that night consisted of knocking a Pole round for a few minutes. He tried to enter the Hotel Adlon, in some manner betrayed his nationality, and they set upon him, but did no real damage. An extraordinary people; they will yell and wave their arms and work themselves up to a white heat, yet such is their respect for law and order that actual physical violence is seldom resorted to.

While Berlin mobs were thus demonstrating, Lieut. William C. Rehn, Jr., of Philadelphia, left the Hotel Adlon as a courier for Hamburg. He was in uniform, but the crowd at the station in Berlin treated him courteously; the railroad officials saluted and all the German passengers were perfectly civil, even showing a desire to engage him in friendly conversation. Which leads me to think that the Berliner's rage was not quite at fever heat.

Frankfurt-an-der-Oder. What is to become of the hundreds of thousands of prisoners still in the hands of the Germans? A considerable percentage cannot return to their own countries because of chaos there; but even assuming that they do return some time, what is to become of them? For most have lost the habit of work.

I have been taking a look round the camp here, where 10,669 Letts, Lithuanians, Tartars, Cossacks, Siberians and Bessarabians are nominally confined. "Nominally," because there are only 4650 of them actually in the camp. The others are in commandos, on farms and in small factories of this district, where they make potato flour, briquettes, sashes and blinds.

Several thousand men were loafing—sunning themselves on the ground or gambling or just lazing round, as they say in Maine. They looked flabby and mean and useless. Nothing on earth demoralizes men so quickly as idleness. Col. E. H. Wagner, U. S. A., the senior Allied officer here, told me that some of the prisoners had not done a stroke of work in four years.

Quite a number of those engaged in outside work did not spend more than a week in the camp after capture but have been living pretty comfortably on farms during the whole of their imprisonment. It is noteworthy that hardly a single Jew is idle. Practically all are out, enjoying the civilian ration and earning the three and one-half marks a day allowed, which is the same rate of pay as German labor draws in this vicinity. Those who stick to the camp improve each shining hour by peddling stuff to the other prisoners.

When the Americans arrived they found the prisoners pale and soft and run down, because no work had been required of them. The Germans never forced the prisoners here to work against their will.

The camp has a fine location—dry and sandy. All the barracks radiate from a watchtower which commands every street. There are machine guns on the tower for use in emergency. The prisoners live in barracks, about a thousand men in each. Partitions separate the tribes and races—a curious plan, according to American ideas. Would the League of Nations approve? But herded together they have race fights.

Each man receives one mark a day for any government work done round camp, and a roster is followed. Also he is required to peel his own potatoes, unload his own coal, make his own bed and help police round his section of barracks.

The Americans have made an attempt to encourage them to self-government, the purpose being educational, and the Russians take to it with the eagerness of children for a new game. However, they are as awkward as children too. Committees for every conceivable thing—having been downtrodden so long they are keen for the chance to exercise a little control.

Likewise having been so long denied free speech, they exercise the right overtime here. Their love of a soap-box meeting amounts to a passion. At any hour of the day you can see a prisoner up on a box haranguing anybody who isn't too lazy to listen to him. None has a clear idea of what Bolshevism is, but most of them can talk socialism.

The central body which directs the interior economy of the camp is known as the Lager committee, but they have scores of other committees too. Last April a prisoner left camp without an *Ausweis*—twenty prisoners are permitted each day to go to town, to picture shows, cafés, and so on—and was arrested. At that time the prisoners were seething with unrest, due to disturbances elsewhere in Germany, and they promptly sent an ultimatum that the camp would be wrecked unless he were released.

A committee waited upon Colonel Wagner to deliver the warning. The guard had been obliged to fire over the heads of the mob, which had handled the guard roughly. The situation looked serious. But the Americans had at hand a weapon much more effective than the machine guns in the watchtower. Colonel Wagner told the committee bluntly that if the prisoners did not submit to the German authority they would lose their supply of beef.

They stared at one another in horror. The strike instantly flivvered. The prisoner under arrest did fourteen days' solitary confinement on bread and water and the mutineers were fined one meal.

Feeding the Prisoners

Upon arrival of the Allied officials at this camp it was discovered that the prisoners were on a purely vegetable diet and three hundred and twenty-five grams of bread a day. That sounds very meager, but it was the civilian ration, and the enemy could hardly be expected to feed idle prisoners better than their own people. However, they managed to give them meat once a week—forty grams on Sunday. This was all the Russians were accustomed to have back home.

They had no fats; the men were fed enough, but not nourished. Consequently they were listless, lethargic. The Americans immediately arranged to give them, in addition to the German ration, one hundred and twenty grams of Argentine canned meat a day, twenty grams of fats and two hundred and seventy-five additional grams of bread. This bread was of German make and very dark, but what the Russians were accustomed all their lives to eat. The Interallied Commission paid for it in good white flour to Germany.

American soldiers supervise distribution of this stuff through channels from the moment of issue until it reaches the Russian stomachs. If they didn't the food would disappear. Each prisoner now gets three meals a day. Added to this are ten grams of tea a week and one hundred and twenty grams of sugar. Tobacco is offered as a reward for good behavior.

They exhibit intense jealousy of the portions served. I saw numerous scales in the barracks which the prisoners had made to weigh the bread and soup. The officials told me that every meal the Russians can be found shaving off thin slices to even up the distribution, and many hot arguments result. These disputes are settled by the decision of the barracks captain.

The Russians are great gamblers. Most of their time is spent in some form of gambling, though the camp provides a reading room, a theater and movie place, the latter being combined with the church. At one end of the church are the altar and pulpit—at the other a stage.

They have small taste for sports and no skill whatever. Teaching the prisoners how to play football and baseball and to box are among the hardest jobs laid on the Americans. A start has been made, but the Russians learn reluctantly. They seem to prefer lying out in the sun or in their bunks. When they do tackle a game they are as clumsy as a bear in a waltz. It is a pity, for the majority are fine, big, husky men.

The barracks are comfortable, all things considered, and are provided with showers, a delousing plant, laundry and hospital. Baths meant nothing in the lives of these Russians, but they are acquiring an interest in them in imitation of the doughboys.

Each cot has a bed bag and two blankets. The prisoners wear uniforms ranging from Russian to English and Italian. They have also fairly good underclothes and shoes. In fact when I saw how well they fared and how much our humanitarian efforts had done for them and then remembered the privations which our troops at the Front had necessarily to endure I grew hot under the collar. We were burning with sympathy for men living in idleness when our own were fighting under immeasurably worse conditions.

Bolshevism Flattened Out

The presence of some women in the camp surprised me. They were brought along with the men when the German armies swept through Russia, cleaning it of both soldiers and civilians as they went. And I saw fully a score of children, some born since arrival of their mothers at the camp.

The prisoners who go out to work have it pretty easy. They live among the civilian population almost as part of it, mix with the Germans, share their amusements and have their love affairs too. There are not a few children of Russian parentage in Frankfurt-an-der-Oder, and numerous applications have been received by the Americans to get them fed.

The German guards are not soldiers but civilians hired to do the work, and they can quit by giving ten days' notice. At one time the camp commandant was elected by the Soldiers' and Workmen's Council and their stamp went on every *Ausweis*; but in the month of May, when the Bolshevik troubles had served their purpose in the peace negotiations—or had failed to serve it—Bolshevism flattened out and a major in the German regular army took command.

Among the Americans on duty at the camp was one of Russian descent whose parents emigrated to the United States shortly before his birth. He gazed at the idle, listless, no-account crowds of prisoners a while and then relieved his mind.

"Just to think," he said, "if I hadn't lived over there I might be on the other side of that fence this very minute, roaring if I didn't get my share of monkey! I wish those guys in Connecticut, where I come from, could see this too!"

Kattowitz, Upper Silesia. There is nothing crushed about the spirit of this portion of Germany. They are burning with patriotism and racial pride. Surrender German territory to Poland? Never! They'd like to see the Allies try it!

For losers they are certainly cocky—but then they don't seem to realize yet that they have been beaten. Much of the old German military arrogance survives in these eastern provinces, for in this direction they achieved their most decisive victories. Indeed the farther east from Berlin one goes the more pronounced the arrogance one finds, the more stubborn the determination not to recognize the facts of their defeat.

"The Allies want to merge a high civilization in a low and it can't be done," is their argument, and when they talk of the Poles it is with a scornful conviction of superiority that finds expression in curt references to them as an inferior breed. A dozen times I have heard Germans of substance and position—even officials of the Foreign Office—refer to the Poles as scavengers.

However, this is typical of the German attitude toward other nationalities. To their way of thinking, they are higher. That opinion of themselves crops out in numberless ways. They give this as their reason for not banning English plays and

(Concluded on Page 123)

PRINTING PRINTING

What a surprise you would receive if y awoke one morning and missed yo morning newspaper. Arriving at the off you found no letterheads, no circulars booklets, no printed forms of any descr tion. On the way home no evening paper car sign met your gaze. The craving of yo eyes for type would be almost as acute as famished stomach's longing for food.

There never were so many people tryi to get good printing as there are today. B it is also true that many people who b printing overlook the value of getting done well.

Cheap printing *is cheap*. Nearly everyo can detect its cheapness. Years of life in nation where printing of every description abundant, have inbred into business men t instinct to detect cheap printing.

Good printing, produced by a reliab printer, is never too costly unless waste has be paid for. Avoid printing material which not standard and shun odd sizes as you wou a pickpocket.

This is an important subject. During t war, our government took steps to limit t

Warren's
STANDARD
Printing Papers

BETTER PAPER

PRINTING

nufacture of paper to standard sizes. Other sociations have tackled the problem with aher varied results. For instance, the Ntional Association of Purchasing Agents, ting with representatives of paper makers, rnters, catalog publishers, hardware, mill, lctrical, engineering, architectural, industrial rd commercial organizations, suggested a Ntional Standard Catalog Size.

Although full agreement is not yet reached, n advantage to all concerned of using standard zes and weights is clearly something to be ought in every printing job you have.

The S. D. Warren Company has standardized rnting paper quality. The printer who adoates standard size Warren Standard Printing abers will increase his prestige and his trade y turning out better printing at a fair price.

Briefly classified, the Warren Standard Printing Papers are

Warren's Cameo
ul oated, non-reflecting paper which gives o lftone reproductions the depth and s ness of platinum prints. Made in white, ivory and sepia.

Warren's Lustro
lo coated paper for fine halftone work. It on nes brilliancy of surface with superior folding and binding qualities.

ar n's Warrentown Coated Book
lo coated paper developed to meet the xa ng requirements of process color printing.

ar n's Cumberland Coated Book
lo coated paper and a recognized standard or talogs, booklets and folders where fi halftone work must be produced at a comparatively low cost.

Warren's Silkote
A semi-dull coated paper made in white and India. Noted for its practical printing qualities. Relatively inexpensive.

Warren's Printone
A semi-coated paper especially suited for large edition work requiring halftones.

Warren's Library Text
An English finish paper of exceptional quality that takes medium screen halftones satisfactorily.

Warren's Olde Style
An antique finish, watermarked paper which lends dignity to type and line reproductions.

Warren's Cumberland Super Book
A super-calendered paper with dependable printing qualities.

Warren's Cumberland Machine Book
A hand-sorted, smooth, machine finish paper for halftones of not too fine screen.

Warren's Britannica India
For thin editions. Bulks 1420 pages to the inch.

Warren's Artogravure
An eggshell finish paper for offset printing.

POWER THE INSTANT YOU NEED IT

There's a lot of satisfaction in driving a car you know you can depend upon.

What a comfortable feeling of security you have, in the tight places, when you know that you have *power*—abundant power—the instant you need it.

Satisfaction such as this comes only to the man who knows he has a *good* motor in his automobile or truck.

For the motor's the heart of the car. Upon its performance—its power, its speed, its economy, its all-'round ability—depends your satisfaction, your security, your pride of ownership.

Look *first*, then, to the motor when you buy a passenger or commercial car. Judge the motor by its record. Judge it by the test of time—by what it *has* done, by the kind of service it *has* given throughout the years.

Apply this test—and your choice will be the Red Seal Continental Motor.

The Red Seal Continental has stood the test of time, and service—during more than fifteen years. It represents nothing untried, nothing experimental. Rather, it represents the coördinated thought of the foremost motor engineers, for more than a generation.

It is a *proved certainty*. It is America's Standard.

* * * * * *

Today 165 successful manufacturers of automobiles and trucks, by equipping their output with the Red Seal Continental Motor, vouch for its integrity.

Upward of 16,000 dealers base their business prosperity, their business future, upon Continental-motored cars.

Hundreds of thousands of satisfied owners are living testimonials that the judgment of these manufacturers and dealers is *right*.

When you buy an automobile or truck, choose a motor with abundant power—power the instant you need it—and identify it by the Continental Red Seal.

Uncle Sam, Financial Angel

Oberbürgermeister of Kattowitz da speech.

'id now," he said, his voice deepening a note of menace, "now for a harsh If this injustice is not righted the s of the German people will follow ica and President Wilson!"

No one of us will lie awake to worry over e outcome of this curse, but as a revela- n Germany's attitude it is significant. e look to America to save them from st punishment of their crimes, and are ready to denounce America the t her efforts fall below their high- ld expectations.

A milar tendency is discernible in prac- al every European country. They ve been encouraged to believe that the ited States will help them realize all ambitions and they confidently look or all necessary credits and food and ther assistance as they may require. dwhenever they are disappointed in eager desire to grab something from neral pot to which they are not en- le they promptly turn against Uncle nd snap at his heels.

I uppose this situation was bound to cu A creditor is never popular, and makes men hate. But after America's irements in the war and her efforts to e peoples in distress, it is rather dis- rging to find that Americans have more dislike than gratitude. Indeed, u expect to see the United States the unpopular great power in the world fo we emerge from this mess.

Weimar. To-day in a session as dull and t-id-dried as any meeting of a county ril for routine business I saw the repre- tatives of the German people give their e to a peace treaty which they firmly ke to mean the virtual enslavement of e ation for two generations. And not a among them struck a high note of tr tism; not one rose above the plane of rt politics. It was as pitiful an exhibi- n s their bitterest enemy could desire. T choice of Weimar for the sittings of e National Assembly strikes the visi- r ith wonderment. What could have or ted the selection? A number of the w apers would have us believe that it ov the new régime's sympathy with e ble aspirations and spirit of broad rnity which emanated from Weimar in e ritings of the immortal Goethe. The pl ation might appeal to a twelve-year- d hild, but is too ingenuous even for o who have been heroically swallow- g ir propaganda for years. Perhaps the sece of agitators had something to do th t, for Weimar claims it has less than ve y Spartacists.

However that may be, the few unruly es they have here nearly played hob. The th rities were taking no chances; they re the whole outfit into jail in order to ah sure of them while the National ssembly was sitting.

But twenty-eight of them contrived to break out the other night and, forming themselves into a raiding party, made an attack on the old castle wherein were housed most of the members of the German Government. It is a huge frowning pile inside the city and the usual precautions had been taken to guard it, including soldiers and machine guns.

In some manner not yet explained the doughty raiders managed to elude the guards and got inside. They penetrated almost to the apartments of the government leaders. Had they taken a turn to the right instead of to the left—so the story goes—they would have bagged most of the cabinet. But they took the wrong turn, brought up at an impasse and were overpowered by the alarmed garrison. It has had one good effect—given the Germans something to laugh at in these dark days.

When Ben Hecht and I arrived in Weimar the town wore such a normal aspect that it was difficult to believe the nation's fate was being decided there. No crowds, no apparent excitement—not even an atmosphere of tension. Citizens were coming and going about their affairs very quietly; the market place was filled with produce and country folk and townspeople; comfortable-looking men and women sat at the tables of the restaurants and sidewalk cafés; idlers sunned themselves on the benches in the squares.

One of the first persons we ran into was Count Bernstorff—well-groomed and suave, but unsmiling. Ben stopped to question him, but I passed on.

At dinner last night we had Erzberger sitting near us. They say he is the brains of the government and is responsible for the formation of a cabinet which will sign the peace. Whatever his ability, he is unquestionably the shrewdest of German politicians, for out of every upheaval and readjustment Erzberger has emerged with a better job. His new post of Minister of Finance is probably the most important in the cabinet.

A smooth, jovial, round-faced, pink-cheeked man who doesn't appear to have suffered from underfeeding, I should say that Erzberger has a fine digestion and a robust conscience, taking things as they come with a light heart. He has a habit of rubbing his hands when he smiles, and he smiles often. Might be a war profiteer from his appearance.

That he is not easily discountenanced he proved at a meeting of the National Assembly which we attended. They were announcing the names of the new cabinet, and when Erzberger's was reached a chorus of jeers and laughter rose from one side of the house. Erzberger, facing the Assembly from the government chairs, beamed at them. The noise continuing, he flapped one hand in good-humored protest, as much as to say: "Here, you guys, cut it out!" And they did.

Making History to Snores

Of an opposite type is Brockdorff-Rantzau, who was in the lobby of the hotel talking to a lady as we came out from dinner. He looks the aristocrat in every line of him. There is a certain spirituality in his finely chiseled features, but it is marred by a suggestion of hauteur, even arrogance, in the poise of the head, and his expression is stern. The impression he conveys is that of a polished diplomat of the old school—the sort of man who might appeal to public opinion when it was necessary, but who deep down in his heart scorns the rabble multitude and the new ideas of popular government.

Never shall I forget the meeting of the National Assembly. It was the most dramatic thing I ever witnessed—simply because it was so routine and prosaic. That sounds like a paradox, but here was an assemblage of a nation's representatives debating whether they would accept the peace, and no apparent excitement, no display of passionate patriotism, hardly a note of protest rising above party politics. Why, two of the representatives of the German press dozed in the gallery not ten feet from me—one of them began to snore! And yet it was one of the great moments in German history.

Everything moved with the precision of a rehearsed performance. The president of the Assembly sat in a high-backed chair on the stage; directly below him the Assembly officials and in two rows below them, facing the house, the members of the cabinet. A gallery and the boxes—for the Assembly met in the municipal theater—were filled with spectators of both sexes.

Though we knew that women had been elected to the Assembly, it nevertheless came as a surprise to see so many sitting in it; for Germany has so long been a country absolutely dominated by men, wherein women played the rôle of *Hausfrauen* and breeders of children—little more than that. We counted quite a number, all dressed in dark sober clothes. They took no part in the debate, and it amused us to hear each speaker begin with *"Meine Herren und Damen"*—gentlemen and ladies—instead of ladies and gentlemen, as in most other lands.

One by one the party leaders stepped to the tiny rostrum and proclaimed where they stood on the peace. Of course they denounced it, but that was merely a matter of form. Everyone knew it would be accepted; everyone could read between the lines of those set speeches: "But we'll have to sign! We'll have to sign!"

Again Politics vs. Patriotism

So there were no great orations delivered that day. It seemed to be each speaker's object to square his party's stand with the public and history—a difficult and thankless task, requiring sorry juggling. Not one of them had in him the sacred fire; not one could rise to Germany's need of a heroic consuming patriotism; not one could strike the deep vibrant note of his country's anguish. In careful bald phrases which left their auditors cold they sought to set their parties right with the nation. They played petty politics when the hour cried out for forgetfulness of everything but Germany's needs and a sublime devotion to them. Had there been in that Assembly one flaming patriot, one great man who could forget his personal fortunes and those of the clique for which he spoke, he could have set the nation ablaze against a peace of might.

It is well for us that there was none—well for all the Allies. For had there been a Mirabeau in Weimar, Germany would probably have risen in irresistible strength behind him. He could have stampeded the Assembly and rallied the dumbly resentful people, for whether they should sign or not sign hung by a hair for days.

Much was expected of Haase, that firebrand of the Socialists, whose clear vision and practical common sense have made him an outstanding figure since the war began. Time and again Haase has risen from his place in the Reichstag to denounce Germany's militarism and the policy of her war lords. At the summit of their victories, when Germany seemed triumphant on every side and men like Erzberger and Dernburg were spouting of terms of peace which would have extended the empire to cover most of the habitable globe and wrung from its enemies an indemnity to cover every cent of her war costs, as well as surrender of fleets, Haase had the courage to sound a warning.

"Yes," he cried in substance, "we have won victories, but we have lost the war. The whole world is arrayed against us. Unless we make peace now in terms which the Allies can accept we will be beaten."

And they howled him down. Flushed by conquest in the East, with Rumania and Russia crushed and Italy at their feet, with smashing triumphs bulletined from the Western Front, Germany was drunk—raving-mad with power. They could see nothing but world domination then, so they yelled "Traitor" at Haase and silenced his lashing tongue.

And now came his day of days. Everything he foretold had come true. All his predictions were now realized a hundredfold; and when the president cried the name of Hugo Haase a stir ran through the Assembly—a murmur of expectancy; men and women squirmed in their seats. It was the little man's hour of triumph and hopes ran high that we would hear a speech such as only Haase can make.

And what happened? Even Hugo Haase, the clearest thinker in the public life of Germany to-day, could not rise to the occasion. All he said amounted to "I told you so." And a ward politician can say that.

An undersized, high-shouldered, almost bent, slight figure, he stepped leisurely to the rostrum after a moment of cheap byplay with another member who had mistaken the call for Haase as his own turn, and faced the Assembly. He leaned his elbows on the rail and regarded them a space. You could feel waves of warm expectancy pouring from the house toward him; the air tingled with pleasurable excitement. Despite his unprepossessing appearance, Haase has a compelling personality, a species of magnetism which draws an audience, whether or not they approve of what he says.

And then he began. In quiet, measured, almost confidential tones he began, and we grew eager; but his voice rose speedily to harshly strident denunciation and he started to lash the government and everybody concerned except his own party. Shaking a finger at the government chairs, he scored point after point with inexorable precision as he reviewed the past.

Nobody could deny the truth of what he said. It was Haase's day of vindication, and he employed it for just that. But the facts spoke loudly enough for themselves, and surely a patriot like Haase might have offered something better in his country's time of stress than "I told you so! I told you so!" But no; he talked of what "our party" had done, seemingly more concerned that his party should emerge with credit from the difficult situation in which it had been placed than for a solution above party fortunes.

Will Kaiserism Survive?

Halfway through his speech the dean of German press representatives was nodding again, worn out by days and nights of staying on the job in Weimar. And men and women were looking at one another in disappointment. Was this the best Germany's leaders could offer in the crisis?

It has been the same with all the prominent men in the new régime. They have exhibited a deplorable lack of greatness. In the caliber of its leaders lies the weakness of the republic. What men among them who can approach in ability the master organizers of kaiserdom? They have failed dismally to measure up to the opportunity. For that reason, among others, I am persuaded that some fine day the old crowd will sweep them all away with "Here, we've had enough of this foolery," and Germany will welcome the coup.

Even so keen and courageous a brain as Maximilian Harden's seems pitifully unable to produce anything but destructive criticism. Indeed Harden, to whom the outside world pinned hopes for Germany's regeneration, long ago lost his hold in the public imagination. They wearied of his constant scolding. When would he have something constructive to offer?

After it was all over we wandered out into the *Platz* where a small crowd waited patiently and in silence for a glimpse of the leaders. And I hired a cab for a ride out to Goethe's garden house.

It seemed good to escape from that atmosphere of petty politics and pygmy men and selfish running for cover to the quiet and peace of the little quaint place in the park where a giant among men had in an older day given with lavish hand to all mankind the products of high thinking and a vision which lifted those who caught it nearer to the Infinite.

When the Western Electric Company Started Fifty Years Ago

MOST modern comforts were unknown a half century ago. To our grandsires the city water supply was the village pump. Urban transportation centered in the "depot hack". And distant journeys were restless adventures on the turnpike stage.

A few folks were just learning the luxury of gas, but most others still read by kerosene lamps or candle light.

In the homes of the "well-to-do" the first tinkle of the electric bell was heard. The telegraph was an expensive means of communication used largely for emergencies. And other signs of the dawn of the electrical age were appearing here and there.

* * * *

Upon such conditions as these does the Western Electric Company look back from its 50th Anniversary.

It began as a small, two-man concern, formed to "carry on trade" in bells, buzzers, telegraph supplies and other electrical inventions as soon as they were perfected. For the Western Electric was then, as well as now, the logical channel through which what was best electrically reached the public.

Evidence of the retention of this leadership is recorded in sales that exceed a half million dollars a day, and a working force of more than 30,000 men and women.

* * * *

The Western Electric Company is both manufacturer and distributor; it is at the same time the world's greatest manufacturer of telephone apparatus and the world's largest distributor of electrical supplies.

Houses well-stocked with standard equipment to meet every electrical need are located in forty-

Western

Everything Electrical Everywhere

two of the principal distributing centers in America, while twenty-one others operate in the capitals of Europe and the Orient.

Thus, when dealing with the Western Electric—whether you buy a push button, lamp, telephone, washing machine, a reel of cable or a train load of several thousand different kinds of electrical supplies—you gain the threefold advantage of high quality merchandise, prompt service and fair prices. And you can use one source of supply for all your electrical needs.

THE CHANCE

(Continued from Page 9)

of me. Maybe the new Old Man will be different from Teller. I hope so. They tell me he's as plain as an old felt boot. He was here last week, sizing the dump up. He met Dave Tinker down at the pig machine and asked him for a chew. Dave pulled out a sack of Puddlers' Perfection. It's the punkest junk a man ever tried to masticate, Tootsy—leave it alone!

"'Why, I used Puddlers' Perfection for years,' said the new Old Man, 'and did well on it too. I always knew there was a lot of cigar stubs mixed up in it, but that didn't worry me. Then I got hold of two or three packages that had stubs in them that hadn't even had the smoked ends clipped off, so I quit it. I didn't kick on the snipes, but I did think they ought to clip 'em at least.' He stuffed his trap full, handed back the package to Dave, and went on.

"What d'ye know about that, Tootsy? I believe he'll make a hit. Imagine old Tellerinsky saying a thing like that to Dave Tinker or to me or to you! I hope he makes a clean-up here. I'd just like to see Lafe Murdock get one good bust, blast me if I wouldn't! Maybe a fellow who deserves a show will get it now. You bet, I believe he's going to be all right. Goodlow is his name—comes from Pittsburgh. Well, I've got to lope on. But cogitate on it, Tootsy, cogitate: Twenty-eight hundred bucks out of us suckers' pockets to buy a present for that old fat slob of a Tellerinsky! What d'ye know about that?"

Goodlow's secretary knew that someone had entered his office, had quietly crossed the room, and was now standing before his desk. But he did not look up from the newspaper he was reading. Film News was exceptionally interesting that morning. As secretary to the general manager of Steelburg Mills, Bridges had his troubles, and not the least of them was trying to make people understand that the mills were not open to the public. Here was another petitioner for a pass; he was certain of it, so he kept on reading. He had to say "No, sir!" and "No, madam!" so many times every day that he had come to hate his callers. For people would come to Steelburg, hoping to be permitted to go inside the great steel plant—all sorts and conditions of people, men and women of all ages, of all professions, of all degrees of inquisitiveness and taciturnity, and wisdom and foolishness, and politeness and impoliteness.

Bridges could not understand this crazy desire of people. Why should they want to see the steel mills? He himself could find nothing of interest about them—a place of noise and dirt and smoke and danger; a place of white lakes of bubbling steel, of red pools of molten iron, of glowing stacks of bars and blooms and ingots; a place of grinding wheels and rumbling rolls and thundering engines; a place of grimy, sweaty, hard-faced men. Bah! Why didn't they visit those places where their real interests lay? Lawyers should visit courthouses, school-teachers school buildings, doctors hospitals, bank clerks banks. But no, they all came here, bothering him. Here was another one of them! Let him wait! Let him ——

"I beg your pardon, sir, but could you tell me if your company has in its employ a man by the name of Wellington Gay?"

Bridges started, dropped his newspaper and looked up. A pleasant-faced, white-haired old man stood before his desk. Bridges was disturbed; he wished he had looked up at first, for evidently this was not one of his tormentors.

"I cannot answer your question at once," he replied, "but I can find out in a moment or two. Just take a chair, please."

This courteousness with Bridges was something unusual—he was somewhat surprised at it himself. His customary reply to a question such as he had been asked was: "What do you want with him?" But there was something about the mild-mannered old gentleman before him that appealed to him. For one thing he reminded him of a fine old character he had seen on the screen a few nights before. He was sorry he hadn't been exactly polite—he wished to make amends.

He telephoned to Bottman, chief timekeeper for Steelburg Mills. Bottman rose from his chair at his big desk in the time office, looked over a room filled with half a hundred busy timekeepers, brass-check men, calculators, verifiers and stenographers, and shouted: "Anybody got Wellington Gay?" And a pop-eyed young man in a far corner of the room answered at once: "Scale wheeler at the ingot mill. Check Number 6489."

Bottman had a good system. Bottman could in a moment put his finger, as it were, on any one of Steelburg Mills' ten thousand employees.

Bridges turned to the old gentleman. "Yes, we have a man named Wellington Gay. What can I do for you further?"

The old gentleman smiled. "This is indeed good luck," he said. "I was not certain that the man was in Steelburg, but I thought I would ask for him at all of the different establishments, and this is my first inquiry. I wonder if I could see your head man, your general manager or general superintendent."

"You will find him in that room yonder," replied Bridges, pointing to Goodlow's office door. "Go in."

The old man hesitated. "Perhaps I should send in my card. If he is occupied ——"

"Oh, no; that will be all right—he will see you now."

The caller walked into the general manager's office. Bridges looking after him smiled as he thought how different it would have been a short while before, with Teller in there. The door would have been shut; he would have carried the caller's card in and laid it before the general manager; that pompous official would have looked at it, mused over it for several minutes, chewed his cigar savagely, read a letter or two, and then grunted: "Show him in"; or, "Tell him I'll see him in a half hour."

But Goodlow was different. On the first day of his coming he had fastened the door open and said to Bridges: "There's no need of my keeping that door shut if you'll keep your mouth shut—when you happen to overhear something that is said in there, you know. If anybody comes here and asks to see me, shoot him in. You shoot people in and I'll shoot them out. I'm not afraid that I shall be bothered."

Goodlow's caller advanced to the table where Goodlow was seated.

"My name is Spencer," he said, presenting his card. "I am of the firm of Spencer & Banks, Grain Dealers, Buffalo."

"Will you be seated?" Goodlow indicated a chair.

"I am here to try to have an interview with one of your employees, Wellington Gay. I was passing through the city and my interest in the young man is such that I could not go on without attempting to locate him and have a few words with him. In fact, I hope to be able to induce him to go away with me."

"Wellington Gay?" repeated Goodlow. "I never heard of the man. But that is not surprising—we have several thousand men in our employ, and I have been here but a short while. What is he—a foreman of some sort?"

"Oh, I hardly think so; but of course I don't know. He was, when I met him and became acquainted with him—but perhaps you would be interested in learning how I came to know him."

And Randolph Spencer began telling the story of his meeting Wally Gay in the wheat country.

Goodlow had not laid down the cost sheet which he had been studying when Spencer entered his room; he continued to hold it, that he might use it as an instrument for shooting out this caller should his business prove to be of no importance. In that case he would become preoccupied, return to the study of the cost sheet, begin to make notations on it with a pencil, buzz for his secretary, and when Bridges would appear he would say: "Tell Mr. Gonsall or Mr. Baum to fetch me last month's Bessemer records, and send a stenographer in here." The caller would take the hint and go. That was Goodlow's way; it was thus he shot out the unwanted. The great majority of them he did, but now and then there was one who wouldn't take the hint. Once a persistent insurance agent ignored three hints. Then Goodlow buzzed again for Bridges. "Send Mike O'Toole in here to clean out this office," he said. The agent slithered out.

But this morning he did not resume his perusal of the cost sheet. Spencer had talked but a few moments when he threw the paper upon his desk, leaned back in his chair and gave his whole attention to the story his caller was telling. Once he reached into a drawer in the desk behind him and drew out a box of cigars, which he passed to his visitor, lighting one himself.

And once he interrupted Spencer to say: "Will you please repeat that? I cannot understand why I have not heard of this man if he is working here, though, as I have said, I have not been here for any great length of time," he stated, when the story had been told.

"I should have thought some one of the heads of departments would have mentioned him to me, for he must be holding a fairly good position. I don't wonder at your wishing to get hold of him, Mr. Spencer. I hope he doesn't go with you—we need his kind here."

He put his hand beneath the edge of his table top and pressed a buzzer button. Bridges came to the door.

"Find out where Wellington Gay or Wally Gay works."

"He's at the ingot mill, Mr. Goodlow," replied Bridges promptly, and he gave a quiet little chuckle. That ought to make a hit with Goodlow—his having the asked-for information right at the tip of his tongue. But Goodlow spoiled the little triumph.

"Bridges, how do you happen to know that fact?"

"I was locating him for this gentleman a few minutes ago, and Bottman told me he was a scale wheeler."

"A scale wheeler! Telephone to Jaster at the ingot mill, Bridges, and tell him to send the man to my office at once."

Ten minutes later Wally Gay walked into Bridges' office, a trifle nervous, a little scared. Mill workers don't like to be sent for by the Old Man—it too often means trouble. He was dressed in a torn and greasy suit of overalls, his hands were black with grime, and his face streaked with dirt. There was something striking and forceful about Wally Gay's face that the dirt from the mills, with which it was smudged, could not conceal; there was a strength in his brown eyes, and as Bridges looked up from his newspaper his artistic self was startled.

"What a face for the screen!" he murmured.

"Are you Wellington Gay?" he asked. And receiving an affirmative reply he said: "Go in yonder," pointing to the door opening into the general manager's office.

His curiosity was roused. What could Goodlow and the white-haired old gentleman want with this dirty wop? Perhaps he should find out. He quietly crossed his office, took a position close to the open door, where he could hear all that was said in the next room, while apparently busying himself with arranging a shelf of books on the wall. He might be able to get a little tip for a good scenario here. For be it said that Bridges' ambitions did not lie along the lines of iron and steel—he aspired to be a writer of moving-picture plays—he wanted to write a scenario that would sell.

Wally entered Goodlow's office hesitatingly, twisting his little cloth cap about in his hands. Spencer turned, saw him and rose from his chair.

"Hello, there, young man!" he cried.

Wally looked at him for a moment in silence. Then a flush showed through the smudge on his cheeks.

"Oh—good mornin', Mr. Spencer!" he stammered. "No, I reckon we can't shake hands—mine are too dirty." And he stepped back.

"What's a dirty hand? There's plenty of soap and water in the world! Shake hands! And how are you, Mr. Gay?"

"Pretty well; how are you?" And then he rushed on: "Say, Mr. Spencer, I've got the money to pay you back that there twenty-five dollars you let me have to get to Buffalo; and for the ticket too. I've been wantin' to send it to you all the time, but I didn't know where to send it to. I lost that there letter you give me."

Spencer laughed. "And what about the money I owe you?" he said. "I've got over three hundred dollars that belongs to you—the wages due you from John Peterson. I succeeded in collecting it all from Peterson's nephew, after considerable difficulty, and it is now in a Buffalo savings bank. You can have it whenever you want it. How are you getting along here?"

"Gettin' along fine."

"Why didn't you go on to Buffalo after I had started you there?"

"Oh, I got back here to Steelburg always lived here and I liked it he thought I'd stay here."

"Then I suppose you don't care t with me now? That little office mine, that I told you about is empty I haven't yet found the right man t there, unless you'll go. What do you

"No, I like Steelburg; I like the

"What are you doing now?" Goodlow.

"Wheelin' scale at the ingot mil

"How long have you been there?

"Quite a while—two or three y guess."

"You've always lived in Steelbu say?"

"Yes, up in Vinegar Gully."

"Who are your folks? Is your living? What does he do?"

Wally did not reply at once, and an instant a glint of anger showed brown eyes. Then he discovered som in the faces of the two men before hi reassured him.

"I reckon I haven't got no folk said, smiling faintly. "I was a nobod I come here in a car of pig iron. J found me and raised me, and I just growed up in the mills."

Outside the door the eavesdr Bridges clenched his fists, raised t the level of his face and tensed h muscles. "A plot! A plot for a pic he muttered.

"Well, if you don't want to go to to take a position with our firm, Spencer, "I'm sure I wish you succes Shall I send your money to you?"

"Why, no—I guess not. I don't now. You might leave it there in the I'll send for it some day. Much o but I'll stay on here."

"Very well. I was at Wheato through the country thereabouts last I met a Miss Creeth there—Miss Creeth. You remember her, of cours

"Sure, I do!"

"She asked me to give you her k regards, should I meet you. Young I were you I believe I'd write to Creeth. I'm pretty sure she'd be g hear from you. She is going to te Wheaton next winter."

"Aha! Appears the woman!" ch the listening Bridges.

Again a red flush showed benea grime on the cheeks of the young wor and he stirred uneasily and twisted hi cap more tightly.

"I reckon I'd better be gettin' b work," he mumbled.

"All right, Gay; that's all," said low.

Spencer rose and shook hands wit

"Good-by and good luck. Maybe you again some day. Take one of my and whenever you wish me to send y money I'm holding just write to n have taken out what you owed me, s need not worry about that. Write sometime and tell me how you are. take my advice and write to Miss Cr

In the adjoining room Bridges wen ping back to his desk, and he was pe the opening lines of a new photopl Wally passed through his office.

"I like that young fellow," said Sp "I liked him the first time I saw There's something in him. I wish I have him with me; I'd like to watc develop. He's sadly handicapped, true, by his unfortunate bringing up, believe he will overcome that."

"I'll keep an eye on him; I'll see th has given him a chance to get on. mighty glad that I could meet you Spencer, and I'm glad, too, that I le about this man. I am interested alrea him."

Goodlow shook hands with Spenc the latter rose to go, walked with h the door of his office, and then retu to his desk and sat down and picked t cost sheet. But it did not get his atte He sat gazing out of a window, drum the table before him with his finger whistling softly, and he was so occ when Lafayette Murdock walked int office.

"Murdock, what do you know ab young man in the mills by the name of lington Gay?" he asked quickly.

"Wally Gay? Oh, he's a scrubby scroot that works down at the ingot

(Continued on Page 129)

ebody's bastard that was shipped in
in a car of pig iron ——"
e broke off suddenly in his speech. He
seen something jump into Goodlow's
; he had sensed some subtle change in
attitude of the man before him that
led him, scared him. He coughed,
ed to speak again, but Goodlow's
is came first:
"Murdock, that's pretty mean talk! It's
, contemptible talk! A scurvier utter-
I never heard from a man of your sup-
d intelligence!" There was a wire edge
oodlow's voice and Murdock winced
cut him. "Hereafter when I wish to
re about an employee of this plant I
not ask you! What do you wish to
e about?"
Murdock finished his business in a very
minutes and hurriedly left the office.
ad not been getting along well with
llow; he was conscious that from the
he had not made a favorable impres-
with him, and now he had stirred his
eeply.
I was in the dining room where the
s of departments met each day for
, a few days later, when Goodlow's
edge voice cut into Murdock again
caused him to wince. The meal was
cigars had been lighted, and the daily
ness meeting was in session. But
llow did not enter upon the regular
ne.
"Gentlemen," he began, "when I came
elburg to take charge of this plant I
med you that I was strictly opposed to
we speak of here as favoritism. I told
that I wanted every man working in
eburg Mills to have a square deal, and
ven opportunity to advance to better
sion and better pay. I told you I
t give a two-penny damn how reli-
you were at your work in the plant, but
you were to leave your churches out-
how much you were inclined to in-
in professions of brotherly love, but
there were to be no lodge meetings in-
the gates; how much you loved your
ons—your cousins, your brothers-in-
your step nephews—but that you were
to slop over about them in these mills.
may have thought at that time that I
simply talking for diversion, making
ersation. Some of you evidently did,
have discovered that in certain de-
rments conditions along the lines of
I have been speaking are about as
n as they could possibly be. Tell me
the men in Steelburg Mills are to get
are deal, how they can hope to get
el, what there is for them to look for-
to if you heads of departments and
foremen under you are to determine a
s fitness and qualifications for some-
better by the church he belongs to,
e lodge button he wears in the lapel of
bat or by the nearness of his kinship
it you. I want you to understand me
istime! There's going to be a sudden
age in these conditions and practices,
cyou and your foremen are going to
that change—either you will or I will!
"here has been brought to my atten-
the case of a young man who has
led here for years, who has given prac-
y his whole life to this company, and
has been a steady, faithful, willing
man. I have learned, too, that this
possesses mental qualifications that
d probably have enabled him to forge
el had he been given a chance. Some
u undoubtedly knew of this fact. But
e is he to-day? Wheeling scale! He
t belong to any church, to any lodge,
e had no family whatsoever—he was
s a nobody, a nobody without a pull.
aps this is why he didn't get on, why
s never given a show. But I may be
g; there may have been good reasons
is failing to advance—he may have
e wholly incompetent. Maybe some of
now.
"Ackerman, I have learned that you
led Wally Gay for several years. Why
e never get any further with you?
h did you hold him down as a rousta-
u?"
Ackerman started and began to squirm
ily in his chair. "Why, I—he never
ld—he never asked—I had no place
—" he began.
"Quite so!" snapped Goodlow. "Your
s were so choked with your cousins and
s and aunts that there was no place
h outsider! Do you hold your family
ons in these mills, Ackerman? If you
been you want to look about for
er picnic grounds this year!

"Jaster, you've kept Wally Gay in that scale hole at the ingot mill for two or three years. Why?"

Jaster dropped his eyes and stared at a pickle on his plate. "Well, Mr. Teller sent him down there and said I was to put him in the scale hole, and I—why, I never thought he ——"

"Exactly! You, Jaster, came from County Clare—or was it bonny Scotland?—or was it lovely Wales? County Clare men—or bonny Scotlanders—or lovely Welsh—they're the men you have been boosting along; not the nobodies from Vinegar Gully!

"Calla, what do you know about Wally Gay? Didn't you get a hint once that he might make a good man in your department?"

Mr. Cecil Calla flicked a fleck of dust from a flawless cuff. "Er—I believe a shipping clerk of mine told me once that this man knew something about figures, but he was, I understood at the time, rather uneducated and somewhat crude and coarse ——"

"Say that again, Calla!" broke in Goodlow. "That's interesting! Crude and coarse! Calla, you ought to get down on your knees every night and thank God there are crude and coarse men! It's a fine lot of silk shirts you'd be wearing if there were no crude and coarse men! If my first boss had been a man like you I might yet be a pig wheeler in a Pittsburgh furnace! Crude and coarse! Rats!"

Mr. Calla passed an immaculate handkerchief over a pink face.

"Manning, could you find a place in the Open Hearth for young Gay?" Goodlow asked, addressing a man seated at the farther end of the table.

"Oh, yes; I've always got a place for a good man."

"Then you may tell Gay to report to Manning at the Open Hearth, Jaster. And, Manning, I want you to forget that I spoke to you for him. Don't consider him a protégé of mine, for he isn't. Give him a chance, that's all I'm asking. If he makes good you'll know what to do; if he fails to qualify let him go. I don't want any one of you to handicap yourself with some inefficient man merely because you think I am interested in him. That is all for to-day."

There was a scraping of chair legs on the floor as chairs were pushed back.

"Did you say something, Murdock?" Goodlow snapped. He was leaning forward, his fingers resting on the table, looking straight at the assistant manager, who had sat by the side of Jaster at the farther side of the table.

"No, I said nothing," replied Murdock, and fourteen flashing gold teeth suddenly disappeared from view.

But he had said something. He had muttered to Jaster: "That's the tommiest tommyrot I ever heard! He's an old woman! You keep right on as you've been doing, Jaster—I'll take care of things!"

It might have been a week or two weeks or three weeks after the long-remembered meeting in the superintendents' lunch room—somebody has tampered with the chronology of the history at this point—when a shipping clerk halted Aquilla Moseley, a steel inspector, as the latter walked through the yards to his office.

"What d'ye know about that, Quill?" he demanded. "Here I've forgotten my plug and you don't chew! Got a stogy in your pocket that I could bite the end off of? Well, Quill, old rooster, it looks like house-cleaning time in the mills, eh? Three of Ackerman's kinsfolk, four of Jaster's and two of Hannigan's have gone out into the cold, cold world, and it is rumored about that a lot more of our bench-warming Willies are in for a bump. What d'ye know about it? Didn't I tell you that Goodlow would make a hit? Hit? Call it a smash! I heard he landed on Lafe Murdock the other day so hard it almost jarred Lafe's fourteen gold teeth loose. Goodlow's secretary told somebody and somebody told Skinny Thudd and Skinny wigwagged the glad news to me. That's good.

"And Wally Gay's gone over to the Open Hearth to learn to make steel. What d'ye know about that, Quill? There's the right place for a fellow to start in at to get to be a steel man. The Bessemer process will be a dead one in a few years, and then the Open Hearth man will be the big cheese in the steel business. And say, Quill, what d'ye think? Calla Lily told me the other day that I am to come over to the main office the first of the month and go on the books! What d'ye know about it? Honestly, I thought I was stuck on this job for the rest of my days. But I'll bet Goodlow had a whole lot to do with it—I wouldn't give Calla Lily credit for anything—not for three cents if I saw him giving four with my own eyes. Well, I've got to keep moving, Quill. I'm breaking in a new man to take my place, and say, Quill, he's a proper dub. Yesterday Lum Moochener told him to go down to the north yard and card out a car of gumgollies, and gave him a car number on a piece of paper, and I'm a sucker, Quill, if he didn't go looking for it! Gone an hour or two and then came back and asked Lum what gumgollies were. And when Lum told him they were mildewed pretzels he said 'Dear me!'—and nearly fainted with humiliation. What d'ye know about that, Quill?"

In the Open Hearth Wally Gay was sledging and carrying and wheeling and shoveling, breaking test pieces of steel and running with them to the laboratory; bringing in to the furnaces back-breaking loads of manganese and spiegeleisen and the various refractories used; spelling the hands, helping them to make bottom, taking hold and tugging with them on a splasher, riding the tapping bar, gasping and cringing before the blistering heat that poured through the hoisted doors of the furnaces; heaving, into the seething white lake within, great bowlders of red hematite and heavy pigs of iron, and then stooping at a peephole to watch them bobbing about in the bubbling bath as bits of cork bob about on agitated water.

Behind the furnaces, too, he worked, sweltering over a tapping hole, digging and gouging in the fused magnesite with which it was plugged until it was broken through, then stepping back to gaze with fascinated eyes at the white torrent bursting through the uncovered aperture, rushing down the long runner and cascading into the set ladle in the pit below with the roar of a hundred waterfalls.

In the pit he labored, fastening the chain hooks to the slag bowls, dumping the ladles, cleaning the molds, setting the overflow pans, and when the tap was made watching Big Mary, the huge electric crane, come slipping out of the overhead gloom, rumbling along the runway, and dropping down her long, slotted and deformed black hands, to seize the brimming bowl of molten steel—seventy tons of it—and go slipping back into the gloom with murmuring motors.

"Isn't it great? Isn't it great?" he would say to himself. And he would chuckle over the good fortune that had come to him when he was shifted here, and he wondered why they had changed him—why they had taken him out of the scale hole and sent him to the Open Hearth. And he would laugh as he recalled the cries of dismay of Nicker and Dicker when he told the old men he was going to leave them; how they raged and swore; how they put on their coats, took their pails, and stamped out of the mill and through the yard, arm in arm, stopping at The Morgue in Vinegar Gully to drown their anger in many a hip-and-a-beer.

"How is that Wally Gay making out, Ed?" Manning asked one of his foremen one day.

The foreman laughed. "I can't figure out whether Wally's case is one of nuts or of overambitious youth. I never saw a hand more willing to do his part and the other fellow's part too, but that kind of a man ——"

"Has he been second-helping yet?"

"Oh, he's done everything there is to be done here; lending a hand, you know; but I haven't had him on a furnace yet."

"You might try him out. Put him on with Red Face; I believe Red Face could get along with him."

The next day Wally went to work with Red Face, a big Pole, a very giant of a man. He was ill-tempered, excitable, quick in quarrel, and in his moments of anger dangerous. Because of his mean and ugly disposition, his quarrelsomeness and his constant petulance it was difficult to find a man who would work with him for any length of time. Sometimes he would show pronounced signs of insanity, and then the workmen on the floor could not be induced to go near him. Had he not been one of the best furnace men in the plant he would have been discharged long before. But now, to the surprise of all, he showed a decided liking for his new helper, and was as quiet and easy-going with him as he was harsh and violent toward others.

Again Wally rejoiced over the good luck that had come to him—he was now on the way to learning the mysteries of steel making, under the tutelage of one of the best of furnace men. And with the same zest and enthusiasm that had always been characteristic of him he entered upon his new job.

It was but a short while before he was watching the roof of the furnace for Red Face, to see that the nipping tongues of flame pouring in through the furnace ports did not touch the brick arches and start "icicles." He was soon learning to read the carbon in the ends of the broken test pieces of steel, with Red Face carefully pointing out to him the different appearances in the grain of the steel, calling his attention to certain worm holes and explaining their significance, and making clear to him the effects of slow cooling and rapid cooling. He was observing the action of the various materials he was throwing into the furnace from time to time, as they went into the bath, and asking innumerable questions. He learned to put a test bar into the bath to try the temperature of the melting steel; how to splash out a puddle hole in the furnace's bottom and how to patch it; how to break down a honeycombed bank and how to rebuild it; how to make up a tapping hole and to mud up a runner; how to reverse and regulate the gas.

The big Pole would chuckle as he watched his helper laboring in his enthusiasm, relieving him of so much of his own work, and something like affection would now and then show in the dull fishy eyes of the giant.

"You watch 'em, Wally! You watch 'em!" he would say. "Some day you get a furnace, you bet! I show you—I show you ever't'ing!"

It was hard labor, that second-helping, exhausting, killing labor, and often after a long twelve-hour stretch, when the work had been unusually severe, he would stumble into his miserable little shack in Vinegar Gully, where he continued to live alone, too tired to prepare himself a meal, too worn out to sleep, and he would throw himself upon his hard cot, to lie there through the long night, gazing at the black ceiling, until the whistle blew again, calling him back to his furnace.

So the winter wore through and the work pulled him down until he was thin and lean. And his face was burned to a fiery red by the fierce heat of the furnace, to which he was always exposed, and the skin on his nose peeled and rolled up into little rolls, like tiny bits of tissue paper; and there were blisters on his legs beneath the thin overalls he wore; and on his breast, where his shirt fell open as he worked, the searing heat had branded a great red wedge.

One day Red Face stopped Manning on the floor and spoke to him. "Boss, I guess dot Wally make one fine furnace man now. Dot Wally is one damn goot feller, boss."

Manning smiled. "All right, Red Face, I'll see about it," he said.

A little while afterward the Pole came to Wally. "Dot Meester Mannin' is ver' fine man, but dot odder feller, dot Lafe boss—poosh! You watch 'em, Wally—some day I get dot feller! She's no goot, dot Lafe boss! You watch 'em!"

The speech disturbed Wally, for he had been noticing for several days that the man was acting queerly. He had had fits of wild, unreasonable anger, and had turned on the other workmen when they approached him and threatened them until they fled from him. Once a craneman had roused him to a state of frenzy by dropping a box of limestone where he did not want it dumped. Screaming and cursing he had seized a sledge, swung it about his head, and hurled it aloft with all his mighty strength at the craneman in his cab. It fell far short of its mark and the craneman had jeered and laughed, exciting and infuriating him still further.

"Next time, Wally, dot feller do dot I go up!" he roared. "I go up, I pitch dot craneman out an' I run dot crane, me! I run dot crane goot!" Some years before he had worked as a craneman, and it was said about the mills that there had never been a more efficient one.

Wally sought his foreman and told him he thought the man was going insane, relating to him what had occurred, what Red Face had threatened to do with the craneman, and speaking about his threat against Murdock. The foreman laughed.

"Oh, he'll be all right in a few days. He has those spells now and then. I've known him for years and he has always been as he

(Continued on Page 132)

TIMKEN

DETROIT

The Margin of Safety

Too often there is a mighty small margin of safety in passing a street-car either at a crossing or between crossings where cars are parked along the curb.

How big or how little that margin of safety shall be is largely in your own hands. If automobile drivers do not regard this and exercise care with the ever-increasing number of vehicles on our streets, then the authorities will take it in hand.

There is another margin of safety which should be ample, if life and limb are to be protected, and that is the margin of safety which the manufacturer of your car puts into the axles which have so much to do with the support of the load under all conditions, with safe steering and with reliable and efficient stopping of the car. *In traffic in the rush hours brakes must be absolutely dependable*—pedestrians are careless; they disregard the margin of safety far more often than the average driver, and he must be on the alert ready to stop his car dead in its tracks if need be. And brakes are but one of several axle features that are absolutely essential to safe operation.

After seventeen years of experience in building axles for every size and type of motor vehicles, we are unalterably of the opinion that the axles should be built to outlast every other part of the car or truck. They must have an abundant margin of strength in reserve, so that if some day the unexpected happens, if in the case of one out of every thousand cars a moment occurs, through no fault of the driver, when a sudden and most unusual strain is put upon those axles, they will stand the test.

So we say to the motorist, "Don't take that chance; drive as carefully as you know how, and be sure you buy a car that is built with regard for human safety, beside which every other factor in the designing of an automobile sinks into insignificance."

THE TIMKEN-DETROIT AXLE COMPANY
Detroit, Mich.

(Continued from Page 129)

is. Let him have his own way, don't stir him up, and he won't cause any trouble."

It was a week later, and Murdock came walking down the floor one morning, his gold teeth flashing, his little eyes darting to the right and to the left, intent on discovering something about which he could complain. The Pole began to mutter as soon as he caught sight of the assistant manager.

"But what's the matter with him, Red Face?" Wally demanded. "What did he ever do to you?"

"She? Dot feller, she come an' she say: 'Hey, you beeg Polack, how much for mooney for presents for dot beeg boss? Two dollar, hey?' An' I say: 'Sure t'ing, Meester Murdock!' I no can lose my job. I work lak hell for dot two dollar an' she come an' takes 'em for presents for dot beeg boss! You watch 'em, Wally—I get dot feller!"

Wally left the man and walked off. He was afraid of him now—he had never seen him in a state so bad as this. He thought he should warn Murdock but he hesitated, for he knew it would result in the discharging of Red Face. And the foreman might be right—perhaps he would recover from his derangement in a day or two. But the longer he gave thought to the matter the more he felt he should speak to either Murdock or Manning. He went on toward Manning's office, into which he had seen Murdock go. He would tell him, and then suggest that Red Face be given a chance—that he be sent home for a few days. Just outside the office door, where he paused for a moment, he overheard Manning's voice, and then Murdock's.

"I'm going to give Wally Gay a furnace."

"What? That Vinegar Gully mongrel? Say, Manning, why don't you pick out a decent man for a good job like that? Somebody's cast-off, somebody's ——"

An electric crane rolled by overhead, the noise it made drowning out all other sounds thereabout. It passed on and Wally started to move away when he heard Manning say: "I'm not giving the job to your nephew because he's not capable of taking care of it. That's exactly why!"

Again Murdock's loud voice broke out, and the few ugly words Wally caught as he hurried off told him he was still Murdock's subject. He had heard too much. He walked rapidly down the floor, the hot blood of uncontrollable rage rushing through his veins, tugging at his pulses, pounding at his temples, flooding the chambers of his heart till every nerve of his body ached with awful anger. He stopped. He had heard too much. He had heard himself spoken of in words he loathed, in scurrilous, contemptible terms, in terms he had heard no other man use, which he would permit no man to use!

He turned and went back toward Manning's office. He would go in, confront Murdock, make him retract, make him apologize. Failing in that he would fight him then and there!

On the threshold he checked himself. That wouldn't do, in Manning's private office—he must consider Manning. He would wait here, outside the door, and when the man came out he would smash him—a blow, just one, on that protruding jaw, and he would go down! He would leap upon him, stamp upon his ugly face, kick in his flashing gold teeth, make him howl like a beaten dog!

With fists clenched, with muscles taut and corded till they were hard as rods of steel, he stood and waited, ready for that forward lunge. And as the fighter in the ring feels for the foot grip on the resined canvas so he felt for a foot holding on the smooth iron plates on which he stood. His shoes slipped over it, and he stepped quickly to a box of sand that stood by a crane track close by and scooped up a double handful, which he sprinkled over the polished floor. And again he took position and waited.

Behind him he heard a yell, a cry of rage, a maniacal scream. He turned and looked and saw a craneman in a small, speedy electric crane, dumping a box of ore at the side of the big Pole's furnace. He saw the man at the furnace waving his arms and shaking his huge fists, and he heard him yelling and cursing. Then he caught the sound of the jeering laughter of the craneman as he moved his crane away.

Suddenly the maddened furnace man started to run along the floor in the direction taken by the crane overhead. He came to a great steel column, one of the building's supports, to which was fastened an iron ladder. Without pausing or slackening his speed he sprang upon the ladder and ran nimbly up it, hand flying over hand, foot over foot, hands and feet taking the rungs with unerring accuracy. At the ladder's top he climbed to the flat spread of a girder, along which he sped, fifty feet above the glowing furnaces, still following the flying crane.

A hundred pairs of eyes were turned toward the running man. They saw the craneman leaning from his cab and gesturing to his pursuer, and they could see he was laughing. Then they saw the laughter go from his lips and a look of fear succeed it. Near a safety exit from which a stairs led to the outside of the building he brought his crane to a jarring stop, clambered from the cab, and disappeared through the exit. The runner came to the crane, climbed upon one of its girders, rushed across its sixty-foot span and dropped into the cab.

Then he began to race the crane up and down the runway, laughing and chattering in maniacal glee. A foreman had hurried to a telephone to order the electric current shut off, but a storm the previous night had put the plant's telephone system out of commission. A man was started running to the power house, but that building was nearly half a mile distant. Up and down the runway, back and forth went the crane, with its hoist running in and out and with the chains rising and falling, as the mad operator played with the controllers. The sudden startings and stoppings of the machine's motors had set the chains to flying wildly, rattling and clashing against themselves and against the slag pans and ladles and molds in the pit below. To one of the hoist chains a smaller chain had been attached, for moving light loads, a chain of small links, flexible and sinuous. Like the steel cracker of some Gargantua's whip it curved and twisted and snapped at the end of the flying hoist chains.

Murdock coming out of Manning's office and hearing the shouting and the yelling of the workmen, and seeing them staring upward, walked rapidly across the floor, passed between two furnaces, and came out on the tapping platform behind. He arrived there just at the moment the crane passed over that spot, just as the flying chains, describing a long arc, came sweeping past.

With uncanny and devilish accuracy, as though guided by invisible hands, the smaller chain shot out, curved and encircled his body at the waist, and the hook fell over the links, making the loop complete. Jerked from his feet at the same instant the man went swinging out over the pit. An awful cry of terror came from his lips, a louder scream from the maniac in the crane cab.

Then began an exhibition of horror so terrible, so appalling, so sickening that men groaned and hid their faces from the sight, ran from the building and fled away through the yards, trembling, looking back with fearful eyes, aghast at what they had beheld.

Up and down the runway raced the crane, guided by the hand of the madman. In and out ran the hoist with the cable drums spinning, now taking up the cable to which the chains were fastened, now letting it run out. And in long arcs swept the shrieking man with the loop of steel chain about his body, now over and very close to a red pool of molten slag, now above a great-mouthed ladle still aglow from the hot steel it had contained, now high in the air, now all but dragging on the slaggy ground of the pit. And above the noise of the grinding wheels of the crane and the humming of the laboring motors, above the cries of those who remained to watch the fearful sight rang out the frenzied cries of the suspended man and the screaming laughter of the madman.

Wally was standing at the opposite side of the furnace when the chain had looped itself about Murdock's body. Horror-stricken by what he was witnessing he stood for a moment as though paralyzed. Then he acted quickly. Running to the edge of the platform he let himself over it and dropped to the ground below. Rushing across the pit he came to a column to which was fixed a ladder, up which he climbed with all his speed, and reached a girder, the runway for four wheels of the crane. He was now on the same side of the building as the crane cab.

He knew his way up there, knew every foot of the girders and beams, knew where the danger spots were and where the safety platforms and ladders, for many an hour had he spent up there in the long night shifts when, with his own work caught up, he would leave the floor and go above to gaze down on the magnificent sight below—the white smoking rivers pouring out of the furnaces and into the black-mouthed ladles; the great pools and huge bowls of red and yellowish slag with the little blobs of purple and green flames dancing over its crackly scum; the long unbroken line of glowing molds filled with the molten steel, with the sputtering sparks of yellow fluttering about their contracted tops like swarms of golden bees seeking somewhere to alight; the leaping tongues of flame licking the port joints and the furnace doors.

But nothing of all this did he behold now, for his eyes were on the crane ahead of him, and his brain was busy with the plan he had thought out for deceiving the maniac and saving the man dangling at the end of the flying chain. The crane was coming back, it was approaching him—now it was very near.

"Hi! Red Face! Red Face!" he shouted. "Take me in! Take me in with you!" He began to wave his cap and to leap up and down on the safety platform to which he had climbed. "Take me in! Let me go too, Red Face!"

The madman saw him and heard him, and he ran the crane nearer. "Sure! Climb in, Wally!" he yelled. "Hurry up; hurry up!"

Wally climbed to a crane girder, climbed down a short ladder fixed to the side of the cab and slipped in.

"I got 'em, Wally; I got 'em!" gloated the crazed giant. "Watch 'em, Wally! I fix dot feller now!"

"Show me, Red Face, show me how to run the crane!" begged Wally. "You showed me how to make steel, now show me how to run the crane!"

"Sure t'ing, Wally! I show you. Rack 'em out—like dot; rack 'em in—like dot; hoist—so; lower—so. You try."

With trembling hands he took hold of the controller handles and began to turn them, Red Face watching him as though he suspected him, and keeping his own great hands near. If they would only shut off the power!

"Ha, ha, ha! I got 'em, eh, Wally? Dot feller, she say: 'How much for presents for beeg boss? Two dollar, hey?'" The voice of the madman rose to a scream. He leaned far out of the cab and gazed down at the struggling man on the chain. "Hi, you!" he yelled, "how much for chance to get loose? Two dollar, hey?"

Would they never shut off the power? Wally lowered the chains until the trapped man was very close to the ground, but the big man at his side was watching him, and he reached over and threw back the handle.

"Keep 'em up; keep 'em up!" he shouted.

Three hundred feet beyond them a furnace that had been left to itself while its crew watched the tragic scene before them, or fled away in horror, suddenly tapped itself, and its seething flood came tumbling out and pouring into the ladle that had been set some time before. The maniac's laughter was redoubled as he saw what was happening.

"We dip her! We dip dot feller! Maybe we spoil dot heat, eh, Wally? Maybe we give dot heat too much carbon, but we dip her!" He shoved Wally to one side and seized the controller handles.

"Let me, Red Face; let me!" begged Wally, tugging at the handles.

But the madman chuckled.

"No, no, I do dot, Wally—I do dot goot!" The crane leaped forward, running toward the tapping furnace. And again the giant leaned from the cab to shout down: "How much you give for chance? Two dollar, hey?"

Before he could straighten up Wally sprang upon him and sank his fingers into his throat, forcing every atom of his strength into the grip of his hands, hoping and praying he could choke him and prevent him from moving the crane farther. The maniac grunted and began to push back, twisting and struggling. As he did so he unintentionally checked the moving crane, but it continued to creep toward the filling ladle. The man dangling at the chain's end was now on a level with the stream of molten metal—he would strike it where it leaped from the runner's mouth into the ladle.

The madman was gasping for breath under the pressure of the two hands about his throat, but he continued to push steadily back, with the great muscles of his back and arms standing out, through the thin shirt he was wearing, in lumps and cords, a with horror Wally realized that in anot minute or two he would be crushed agai the cab's side. The splash of the steel ca to his ears, and the odor of the yell ocherous smoke floating from the l metal smote his nostrils. Would th never shut off the power? The giant h now worked his elbow up until its po was pressing against his face; his head v being forced back; black spots began dance before his eyes—the light was f ing—it was gone.

With a noise in his throat not unlike t snarl of some angry and hunger-madde beast of prey the madman straightened and reached for the controller handle. the same moment a black and dirty ha came in at the cab window, holding in grasp a heavy iron wrench.

The hand rose, wavered just an insta and the iron tool crashed down upon t head of the madman. An electrician slipp into the cab, stumbled over the ft crumpled-up forms on the floor and seiz the controller handles.

When Wally returned to work a few da later he was given a furnace, the sa furnace where he had been working unc Red Face. And that same day Goodl came through the Open Hearth, we straight to him and shook him by the har

"Gay, that was a magnificently cou geous thing you did up there the oth day," he said.

A flush showed through the dirt a dust that covered the new furnace ma face. "Aw, that wasn't nothin'," he mu bled. And he dropped his blue glasses ov his eyes and went to peer in at a peeph in one of the furnace doors.

A steel melter! A furnace man! A fi helper! He could hardly believe it—it w too good to be true. Now he would som times wake up in the middle of the nigh in his shack in Vinegar Gully, to stare t at the black ceiling and muse over his gre step forward. Why, he was somebo now! He was a steel maker—he was doi big work. Who could sneer at him no call him a wop, a roustabout, an India And he was drawing big money too! I might live in better surroundings now, a wear better clothes. Why not? Why n leave Vinegar Gully? He had begun have a dislike for the place—since he h returned to Steelburg it had never seem the same—and he was not frequenting T Morgue and The Bucket of Blood as i once did. Sometimes he would half resol to buy some books and attempt study, t to acquire that something that he knew h did not possess, that he had failed to secu to himself, that mysterious something th he had found in Peterson, in Spencer, Amy Creeth that made them different fro him, superior to him.

Amy Creeth! It was very pleasant t think of Amy Creeth. He would picture h as he saw her that last time—running alor the station platform, waving her handke chief at him. Then, with humiliation in h soul, he would recall how he had been u able to write a letter for Peterson, but mu ask Amy Creeth to compose it, after whic he would copy it in his perfect manne of writing. Ignorant—he was ignoran Spencer had told him that day in Goodlow office that Amy Creeth would like to hea from him, and advised him to write to he He wished he could—he wanted to tell he how well he was getting on in the world, bu a letter—he couldn't write a letter! H couldn't spell correctly, he couldn't forr sentences as they should be formed, he ha refused to study his English lessons whe he was going to school. What did he kno about writing letters?

Sometimes as he shoveled and sledge and sweat before the hot furnace thes thoughts would recur to him, but they di not dwell long in his mind there before th furnace, for his work demanded his whol attention; and because he gave it tha attention which it demanded, because h found joy in his job, because he believed in his soul that now had he found his life' work, he became a good steel maker.

"My steel!" he would murmur as h gazed at the white cascade at the runner's mouth, taking its leap into the seventy-ton ladle. "My steel!" he would whisper a he watched the steel pourer filling the tal red molds, the mold capper capping them and the narrow-gauge locomotives dragging them away. "My steel!" he would chuckle as he stood in the billet mill, whither he would sometimes run for a few minutes,

m !" She was speaking not to Bridges
bu o herself.

her hotel room—it was after midnight
wh Bridges bade her good night in the
ot 's lobby—she sat down to write, and
wh daylight came she was still writing.
An more than once she had paused to
wh per: "This is my chance, my great
op rtunity! I know it!"

he next day Wally burned a huge pile
of ds and ends in the street in front of his ramshackle cottage in Vinegar Gully, hung a For Sale sign in a window, locked the doors, said good-by to the Gully, and moved his few personal belongings to the Falls House, a poor second-rate hotel, but the best there was in Steelburg. He considered it a continuance of the good luck that had been running with him so long when he was given a room adjoining that of Major Fronk, whom he had known, but never intimately, all his life, whom he had always held in a kind of awe—venerable Major Fronk, whose life pursuits were apparently no more than three: Playing old tunes on his old violin, reading bound volumes of old magazines and breathing anathema against the swart-faced sons of Europe who had made of Steelburg the ugly, hideous hole of a place it was.

"Ah, Wally, but I'm doosed glad to see you coming up here to live!" was the major's greeting as he met Wally coming out of his room that first evening of his residence at the Falls House. "It's a sad old dump of a place, I know, but it's the best there is, and the best is what you always want to go after, Wally. It was time long ago for you to get out of the Gully. You're making decent money now—you see, I've been keeping tab on you—and you ought to live decently. A man should be just as decent as his income. What you want to do now, Wally, is to tog yourself out in a modest way and slick up a little bit, and you'll feel yourself somebody, which you are if you'll only think it. Thinking oneself somebody helps to make somebodies out of more people than any other thing. You've got to believe in yourself. What do you say we saunter down to Sam Sternberger's and take a look at some of his latest styles in clothes?"

Wally soon found he preferred the atmosphere of the Falls House to that of Vinegar Gully. He found he enjoyed a mild drink in the Falls House bar with the major more than he did an iron cocktail in The Morgue or in The Bucket of Blood with some of the boys. The major's old violin made sweeter music than did the piano at The Bucket of Blood, played by Lum Moochener.

There was something about the music that flowed from the major's violin that puzzled him. He could not understand why he should be so strangely stirred by it. The singing of Bulger the Bat at The Morgue had never stirred him, nor had Lum Moochener's piano. But when the major played There is a Green Hill Far Away a lump floated up into his throat and choked him; and when the old man began on another favorite of his, which he had told Wally was The Serenade, he thought of Amy Creeth and John Peterson and the broad prairies where the wheat rustled. And he felt very lonely then.

Amy Creeth! He was thinking of her often now, for the major liked to play The Serenade, and not infrequently he would ask the old man to play it. And then one evening in the major's room, after the old man had laid his violin aside and he had sat silent for several minutes, picking at the calloused spots in the palms of his hands, he looked up and started to speak, stammered, and was again silent. But there was a friendly smile on the major's face that reassured him, and soon he was telling his old companion about Amy Creeth.

The major's eyes sparkled as he listened, and when Wally had finished his tale he smacked his hands together, got up and paced the floor.

"Wally, you write a letter to that girl—write it at once!" he said decisively. "I'll look over it when you have it ready and lick it into shape for you if it isn't just as it should be. You write that letter."

There was so much of a command in the major's speech that Wally felt he must obey, and he agreed to write the letter. The next day he made a trip into the big city, where he purchased a letter writer's guide. A couple of days later he handed the major a letter to read.

The major put on his spectacles. "Say, did you have this thing engraved?" he inquired as he ran his eye over the sheet. "Wally, you certainly can sling a pen. Ahem! *'Dear Madam.'* What the Sam Hill! I thought you said that you two were sort of chummylike! Well, by Godfrey! Ahem! *'Dear Madam:* Having had for some time a feeling of great admiration ——'

"By all the gods of Greece if he hasn't begun a letter, his first letter, to a girl, his only girl, with a participle!" shouted the irate major. With a snort of disgust he tore the letter across, put the two pieces together and ripped them across again, crumpled the whole in his hand and hurled it to the other side of the room.

"Wally, my son, when you write a letter to a girl don't dawdle with any prefatory claptrap. Never mind about fine phrases; don't bother about any rhetorical tommyrot. Get right into your letter—get yourself into it, get the girl into it. Listen now and give ear, you precious young simp! *'Dear Miss Creeth.'* Do you get that? *'Dear Miss Creeth:* I heard the other day that you are now living in Wheaton. I just wish I could be in Wheaton to-night—I'd hunt you up and say howdy if I got arrested for it. I'd hunt you up and ask you if you remembered the time you tried to get me to go to your Sunday school, the time you and I wrote letters together for John Peterson, and that time we drove across the broad prairies together ——'"

"But we didn't drive across the broad prairies together," interrupted Wally.

"Well, what if you didn't? Say so, anyway. She's probably forgotten, and when she reads it in your letter it will refresh her memory. I was just giving you a sample start-off. Now get busy. But first throw that letter writer's guide out of the window. I know you've got one hidden some place about you."

"All right, major," laughed Wally. "I'll have it ready to-morrow, maybe."

But he didn't have it ready, for the next day a splash of steel burnt his hand and he could not hold a pen. He was rather glad to have an excuse—the major had made the task seem an almost impossible one for him. "Dear Miss Creeth?" He could never bring himself to write that to her—he didn't know her well enough. What would she think of him?

It was the slight burn he had received on his hand that was the cause of his name being brought up in the general manager's office the following day, for Goodlow noticed on his desk among other papers an accident report.

"What's this—has young Gay been injured?" he asked Manning, who had come into his office on business concerning his department.

"Oh, no, a trifling burn—it doesn't amount to anything. By the way, Ed Lister told me yesterday that he is going to leave the mills the first of the year. That is a good way off—nearly six months—but I have already decided that I'll put Wally Gay into Ed's position as assistant foreman. What do you think about it?"

"I approve. But of course, Manning, you are to decide that yourself."

"He has made good, more than good. I consider him one of the best furnace men I have. He is on special steels all the while now."

"I have understood that he is startlingly clever at figures."

"Yes, I have discovered that. He figures out all the charges for his own furnace and I have found out that the foremen frequently consult him when they are puzzled over proportions. Several times he has caught errors in my clerk's calculation, thereby saving himself a lot of extra work. Oh, he'll do—he'll get there."

Outside the door in the next room the listening Bridges struck at the air with a clenched fist. "It's the dirty little wop again! If I could only bring in the woman as she should be brought in! But I'll get it yet—I'll make a go of this one!" He returned to his desk and lifted some production sheets from a number of pages of manuscript which he began reading.

He was busy over this same manuscript a day or two later when Goodlow approached his desk. He had barely time to thrust his papers into a drawer when his employer spoke to him.

"Bridges, you're elected," he said, smiling. "You have some delightful work ahead of you. I imagine you'll jump for joy when I tell you what it is. You've been reading in the papers, of course, about the coming annual convention of the Teachers' League of America, which meets in the big burg next week. The city is going to be overrun with school-teachers from all over the country. The league's secretary has been to see me about their visiting this plant, and from what he said I suppose ninety per cent of them will wish to go through the mills."

"Heaven bless the other ten per cent!" interjected Bridges.

"I knew you'd be glad, Bridges. I don't like to do it, but I've decided to open the gates to them for two days. You and twenty-five or thirty other good-looking young men will act as guides, guards and entertainers to the bunch. I want you to take charge of things. See Calla to-day. He will furnish most of your men. We'll have them here on Thursday and Friday. Fix it up—I haven't time to bother about it."

They came, as Goodlow had said they would—came by the hundreds to look upon the wonders of the steel mills. Bridges had been through one awful day, and the second day was at hand. He had piloted his tenth party of twenty teachers each through the yards and mills, answered a thousand foolish questions, called out a hundred warnings, directed his charges' attention to various details of the work, listened to cries and exclamations, and was weary and disgusted. And now the eleventh party of twenty chattering visitors awaited him at the gate. He sighed resignedly—it had to be done, it was part of his job.

"Follow me, please!" he called. "Keep as close together as you can, and let no one wander away from the party. Don't approach any moving machinery, and please touch nothing. The ladies should be careful that their skirts and coats do not come in contact with railings and floors, as there is a lot of oil and grease scattered about wherever we shall go."

He started off. "It's the same old bunch!" he grumbled. "They'll all ask the same silly questions and make the same silly remarks and have the same silly thrills, and when I have brought them out they won't know any more than they do now!"

"I suppose you have seen all the school-teachers you will care to see for the remainder of your life. I know you are worn out—I can tell it by your eyes."

Bridges started. For some distance he had been walking by the side of a young woman, but he had hardly glanced at her. It was she who had spoken to him. Now he turned and looked at her.

Why, she was pretty! She didn't wear glasses, and the rosy flush of health was in her cheeks. Her tiny ears beneath her rich brown hair were very pink, her lips were full and ruby red, her eyes were beautiful eyes, and her voice was a pleasing voice. Bridges had collected these details in an instant. "She's deucedly attractive, but she hasn't a screen face," he told himself before he replied to her remark.

"Oh, no, miss; I rather enjoy this," he lied pleasantly.

"I am so glad I could get to visit the mills," she went on. "I'm from the West, from the wheat country, and I never saw any of the great industries such as this. All that I know about metal working I learned in Dan Miller's blacksmith shop, watching him shoe a mule or cut a wagon tire. I knew a young man once who had worked in the mills at Steelburg. His name was Gay, Wellington Gay. You don't know whether he is now working here, do you? But of course you wouldn't."

Bridges gasped, then stopped short—stopped so suddenly that somebody behind him bumped into him. "Is—is your name—er—Screech?" he asked as he moved on.

She laughed with great amusement. "Goodness! Am I shouting so loud as that? But the wheels make such a racket! Not Screech, but Creeth. But how do you know—why do you ask?"

He did not reply; they had come into the mills, where conversation was impossible.

"The woman herself appears!" he chuckled. "Now I see it—I'll finish that play! Why couldn't I get it before? I'll bring them together pretty soon! Heavens, what a chance this is for me!"

He moved away from the girl and did not try to speak to her again. But he shortened the route which he had been following that day and the day before, and soon brought his party into the Open Hearth.

A furnace was tapping. He conducted the visitors to a point where they could see the steel pouring out of the furnace into the ladle, where they could see the giant crane lift the brimming ladle from the pit, where they could watch the teeming of the molten metal. And then he led them to the front of the furnace, where a crew of workmen were making ready for the recharge. They saw the men cringing and shrinking before the terrific heat in which they worked, saw them sledging and shoveling and barring, heard them grunt and pant. One of them went closer to the door openings than did the others and stood there examining the bottom of the furnace through the purple-blue glasses he wore, then stooping to peer

(Concluded on Page 138)

Something You Talk About Every Da

David Wark Griffith

SOMETHING that is a part of nearly everyone's daily life! You want to be sure you *talk well* on the subject.

When you say you saw a good motion picture, or a good play, *what do you mean?*

Are you sure your judgment *is good* in this art—so old with the centuries—and changing faster than any other today?

Many persons devote their lives and genius to a study of the good and the bad in plays. There is Amy Leslie, of the Chicago News, probably the most famous woman critic of the drama in the world. She and others of her difficult profession are favored by study, research, and unlimited opportunities for observation, to discriminate with accuracy.

And these trained critics, in New York, Chicago, Philadelphia, Paris, London, and all large cities, have declared that only four pictures of the tens of thousands made, have universally appealed to the *intelligent* persons of all lands. These four are "*Birth of a Nation*," "*Intolerance*," "*Hearts of the World*" and more recently, "*Broken Blossoms*."

Miss Leslie says that "*Broken Blossoms*" is *an eloquent and decisive flight beyond the spoken drama.*

These are the *only pictures* for which the people of all lands have been willing to pay the *same admission as for the highest class theatrical productions;* standard in the same theaters with the best plays.

It is interesting that Griffith motion pictures were the only entertainment the King and Queen of England saw for two years during the war.

And the very best artists in America have gone again and again to study Griffith Films for their artistic newness that has distinguished them from the beginning.

In a Griffith Film was the first "close-up."

Do you know the meaning of the various terms in common usage regarding motion pictures?

The close-up changed acting as definitely as automobiles changed transportation. It brought the greatest single development in dramatic art.

Before its adoption, players had been photographed from a distance, indulging in most violent gestures to indicate emotion. David Wark Griffith, a young man just entering the study of this art, desired the faces of his players close to the camera so their expression could be effective. His cameraman calmly told him it was folly, an impossibility, scorned by his craft, and that he didn't wish to be a party to such madness.

In a little theater on lower Broadway, New York City, the close-up was first shown. The audience hissed, and shouted, and stamped its feet; and called "*Where are their legs?*—They're cut in two," thinking there was some accident in the projection.

But it changed acting *from false, exaggerated gestures*—ranting—and mugging (overdone facial expression)—to normal, effective, and controlled movements. With this device, the face of a great player reveals such astonishing depths of emotion, *that it seems you look* into *his very soul.* An experienced critic told Mr. Griffith, he often felt he should turn his head aside in embarrassment as though he were looking into the very secret chambers of the player's soul.

With the close-up, art entered the films. But still there was no suspense. One set of characters was shown in complete action, and then the film took up another set of characters. The film was accepting the same limitations as the stage.

Griffith, the restless genius, resented this handicap. He destroyed it by creating "The switch-back." He took several groups through the story, switching from one to another, showing the change that each passing moment brought to all.

That creation was the first great challenge to the stage for supremacy in dramatic art. It revolutionized motion pictures, making them entertainment of such power and mounting interest, that now critics, once so hostile, admit they move and thrill beyond the power of the stage.

But there were other crudities for Griffith to surmount. "Amazing his rivals," as Current Opinion says, by startling them always with greater and greater improvements, he decided to correct the awkward, sudden jumping on and off the screen of the players. Again others had been content to follow the limitations of the stage, and stop the action as crudely as by dropping a heavy curtain.

It was then that Griffith devised the "fade-out," the slow dissolving of the figures as delicate and beautiful as the twilight dies into the night. You have become used to it now, for it is in universal use.

Had Griffith patented these inventions, controlled them for his own productions, or demanded tribute from his imitators, he would have become one of the richest men in the world. Instead he gave these tools freely to his followers, satisfied to be always doing something new, leaving the host in the van behind him, to use what they could as well as they could. generosity alone has permitted motion pictu as an industry and an art, to improve so rapi

Many other things has he done, for insta the mist photography—as beautiful as the a rose petal were used for a lens—which is now coming into common use. As far bac "The Birth of a Nation" Mr. Griffith used perfected it further in more recent films; now that he has brought it to perfection it pears as his gift in the films of those who fol

...t there were beautiful women. And the ...e—Spaniards with untamed eyes; young Vir...ns on a long adventure for swiftly seized ...rtunes—convicts, hard devils, from Australia—...ills swarmed with them; and the little ...ws roared with the tide of them.

...wn in the red hills of Sonora, where hangings ...rred at high-noon, like some solemn judicial ...ret for dinnertime, was Bagley's dance hall. ...ce of high spirits and low deeds. Down the ...e hillside, pitted with mines, was a beautiful ...lly where the Tuolumne River roamed, gleam ...nlight on the ripples, the glow of gold ...kling in the sands beneath. Mother of ...r, many fortunes—even now.

...at was where Rosie Nell was entertaining. ...ey's Hotel, she called it, when she sent the ...lar allowance of money to her daughter in ...Boston Boarding School. She liked to call ...daughter Lady Fair—carried an old daguerre...e of Lady Fair in a locket always swinging ...the neck—a beautiful girl, certainly. Face ...er, tight, aristocratic—tall, a sort of a ...s girl—eyes bright and large—curls to her shoulders—and a light graceful step that blessed the health of her clean-cut ancestors.

The men, many of them splendid fellows—west on a wild chase for gold that was so plentiful—called Rosie Nell the queen of Bagley's. They came for rollicking dances, or drinks that drilled away the loneliness in their hearts.

Alvarez the Spaniard used to call frequently. Said he was a cattleman, but that was pleasant fiction. His slender body had the grace of Castile. His hair, middle-parted and straight, was draped in sort of lovelocks, low about his eyes. It was his way—and he was handsome. A slow smile of easy courtesy. Silk brown eyes that roved everywhere but never jumped—that twinkled, smiled, sighed, wooed, challenged and defied—the eloquent eyes of a Spaniard. Spurs chimed at his heels when he wooed the soul of his guitar—in some woman's honor—and they seemed to toll again, like the bells of hate, when he whipped away, after some desperate fray.

Brother in courage to Joaquin Murietta and Tiburcio Vasquez, born to be a darling to women and living to be a dread to men; at least Alvarez was of the stuff of which heroes are made!

Somehow he wasn't attracted by that little Mexican girl down in the old adobe district. Little Flameheart, they called her because she loved Alvarez so much. And she never thought of washing her face as an aid to win him!

But that was the time Rosie Nell's daughter came,—unannounced, unexpected—out of the Boston boarding school, searching for Bagley's Hotel and Mother.

And that afternoon a dreadful thing had happened at Bagley's. Rosie Nell saving her earnings—the women secure and respected by the men—yet jealous of each other—frantic blows—and then a chair was swung.

Rosie Nell, the veteran of so many experiences — accused, mob-frightened — and her daughter within a few miles of the meeting and aglow with the first thrills of romance.

It was that meeting, and what followed that made Alvarez, and Randolph, the boy of the white heart, and the little girl with the washed face, rallying with all their resources even unto life itself, names to live forever on the friendly tongue of Romance in old Sonora.

Many years the story slumbered—when the gold and its mad patrons vanished.

And one day in London, Lloyd George, the famous Britisher, said to his guest: "Mr. Griffith, you have made your Civil War a new and living history to me with 'The Birth of a Nation.' Why don't you bring to the world that old California country, the most romantic in your land—the Bret Harte country?"

So when David Wark Griffith was relieved of his labors in making the war epic, 'Hearts of the World' for the British and French governments, he went to California.

Out to the very banks of the Tuolumne River he went, with Jack Ass Hill just beyond. As the one American who has created, single-handed, the only distinctive American art—motion pictures—he began a picture, for Lloyd George and the World.

With cabin, mine and stage coach trail, he set the scenes again with absolute accuracy to portray the life that is of the past. He took with him many of the most talented members of the Griffith Players: Richard Barthelmess, the Chinaman of "Broken Blossoms," as Alvarez; Ralph Graves as John Randolph, Carol Dempster, former solo star of the Denishawn Dancers, as Lady Fair; Clarine Seymour, the Cutie Beautiful of "The Girl Who Stayed at Home," as Little Flameheart; George Fawcett, stage star in "The Great John Ganton," as The Sheriff; Walter Long, who played Gus in "The Birth of a Nation," as Bagley; Adolphe Lestina, who earned fame with E. H. Sothern; Kate Bruce, the mother in "Hearts of the World," and others.

More vivid and as accurate as history, this work of the supreme film genius acquaints you with the geography, the life, the romance, adventure and deeds of love and outlawry of old California as never before has been possible.

It is called

SCARLET DAYS

—a tale of the olden west. It will be released next week in many of the first class theaters.

A. L. Grey, General Manager,
Griffith Productions,
720 Longacre Building,
New York City.

Send for illustrated booklet of the life and work of D. W. Griffith, and the history of motion pictures.

All Griffith films are marked by the initials D. G. and the written name, Griffith. None others genuine.

(Concluded from Page 135)

up at the snow-white roof, shouting out orders to the shovelers and to the men with the bars and the long-handled spoons with which they were working, and then picking up a shovel himself to work with the others, throwing in the finely crushed stone that lay scattered over the standing.

"Lower!" he shouted suddenly, and the three doors dropped down, and there was a rattle and clatter as the men hurled their shovels and bars and spoons to the iron floor and walked away, flipping the sweat from their brows with curved fingers, mopping their streaming faces with their little cloth caps, running their hands through their wet hair as they went.

Bridges touched the girl on the arm and drew her to one side, to a bench that stood near a group of gas valves.

"If you will sit down here," he said—and he reached up and took down a coat that was hanging on a post near the valves and spread it over the black bench—"you will find more of interest, I believe, than you would if you continued with us. We shall be back this way presently."

"Thank you. I should like to stay here."

She sat down on the bench.

The man who had been giving orders at the furnace was walking toward her now, but he was not looking at her—he was peering over the tops of his blue glasses, with his eyes on the gas valves near which she was sitting. His grotesque appearance made her smile. Then he raised his hand and removed the glasses.

An inarticulate murmur broke from her lips as she leaped to her feet. Then she ran forward, crying: "Why—why, Wally—Mr. Gay!"

He stopped and looked at her, and the glasses fell from his hand, the lenses shattering to pieces on the iron floor.

"Amy! You?"

She came to him with her hand outstretched. He raised his own hand and looked at it. It was sweaty and dirty and stained with iron ore. He rubbed it vigorously up and down the leg of his trousers, then shook hands with her.

"Well, how are you, anyhow?" he asked.

"Why—I—I'm so surprised! I'm so glad to see you ——"

"You just set down on that bench, won't you, until I get that there gas to goin' again. I've got to keep the furnace hot, you know," he said.

He went to the valves, opened them, walked back to the furnace, watched the flow of the burning gas through the ports for a moment, and then returned and sat down by her side.

"Well, how are you, anyhow?" he asked again, and there was a tremor in his voice.

"Why, how you're trembling, Wally!" she exclaimed.

"I've been workin' pretty hard, gettin' that heat of steel out," he mumbled.

"And how red your face is! Have you been burned?"

"No, it's the furnace—watchin' the roof and the bath all the time."

"And your hands!"

He turned them up as they lay on his knees, and she reached over and touched the calloused spots in the palms. "Why, they're hard as rocks! And there's an ugly burn!"

"Pooh! That's nothin'."

"Wally, you're working too hard, just as you did for John Peterson."

"I'm workin' hard, all right, but I'm gettin' ahead, Amy. I'm makin' steel now. That's my furnace there, Number Four, the best and fastest furnace in the plant! And that's my steel in that there ladle they're pourin' yonder—seventy tons of it—I made it!" There was a note of pride in his voice that thrilled her.

She asked him questions about his work, and then they began talking about the wheat country where she lived and where he had worked, and he had a hundred questions to ask her—about Ike Dooler and Pete Peddy and old Katy Podkins, and about Peterson's nephew and about the elevator, and about the old horse with which he had made his trips to Wheaton.

Suddenly she cried out: "Oh, dear, here they are coming back! Now I must go, and I don't suppose—I don't suppose I shall see you again! I'm going to start home to-night. My train leaves at ten o'clock. Oh, how I dread that long trip—two days and two nights!"

He got up and went to the gas valves, with which he worked for a minute or two. Then he came back and took his place beside her.

"Couldn't I—couldn't I ——" he began but stopped, confused.

"Why couldn't you come down to the hotel this evening and take me to the train?" she asked quickly.

"I'll come," he replied. He smiled at her in a way that made her cheeks go a rosier red than they were.

"That will be just fine! I'm at the Hotel Weston. Ask for me at the desk and they will telephone to my room. About seven?"

"I'll be there at seven."

"Without fail?"

"Oh, sure!"

"Good-by till then."

Bridges came with his party, and there was a satisfied look on his face—he had not been so cheerful for two days. One of the group, a young woman wearing thick-lensed glasses, looked sharply at Wally as she passed him, and her thin lips were crooked by a sneer as she went on.

Wally continued on with his work, bantered and jollied the remainder of the day by his fellow workmen. But he was unresponsive to their gibes—he seemed not to hear them. Never had he given closer attention to his furnace, never had he kept it hotter, its roof nearer the dripping point, never had he pushed it along at such a rate of melting speed. And that day Number Four broke the record for running time.

An hour before the quitting whistle was due to blow he asked his foreman for permission to leave. Taking his lunch pail he hurried out of the plant and to the Falls House, where he sought out the major and told him what had occurred that day. The major swore joyously, he laughed, he smacked his hands together.

"What luck, Wally! What luck you're running into all the time! Why, this is delightful! Think of that girl coming here and finding you in such a manner! It's romance! It's poetry! Now then, I'm going to dell you up and get you started toward the city. I'm going to be your valet this evening. The first thing on the program is for you to trot downstairs to the barber shop and tell Jimmy Jiggers to give you everything he's got, and to give it to you quick. Hurry up, son; hurry up!"

Wally grinned and obeyed, and while he was gone the old man went into his room and laid out the two suits of clothes he had helped his protégé to purchase, brought out the four new shirts and the two ties and the four pairs of socks and the two pairs of shoes, chuckling over them as he worked with them. And when the younger man came back there was much arguing and disputing and threatening, with the major having his own way and selecting the suit, the shirt, the tie, the socks and the shoes that were to be worn for that wonderful occasion. And he fell to with a zeal unheard of in the major, assisting in the dressing, smoothing out imaginary wrinkles in the new black suit, helping to tie the flowing tie, with his own hands setting the tie pin and adjusting and readjusting it, poking at the cuffs, brushing the shiny shoes, smoothing and creasing the hat. Once he ran into his own room to fetch a box of powder.

"Your face is altogether too red, Wally—I'll touch up the bright spots again. Jimmy Jiggers didn't put enough on." And he dabbed the fiery-red skin, where the furnace heat had touched it, with the white powder.

"Now put on your hat," he ordered. "Put it on straight! That's it! Now keep it on straight—you're not going up to Vinegar Gully! There! By gad, Wally, I'm proud of you! Turn round—so! You'll do. Now then, beat it—get down to the Hotel Weston just as quick as a street car will carry you. And say, son, keep your hands out of your pockets; don't pick your callouses; keep that hat off your ear; and when you talk use a 'g' now and then. Don't say 'goin''—say 'going'; don't say 'walkin''—say 'walking.' Ing! Ing! Ing! Don't forget! Wait a minute—hand me that powder. Golly, Wally, what a beak! Why don't you wear a nose glove of some kind when you're working at that furnace? But she'll think you're blushing. Now, don't forget ——"

There was a knock at the door. The major swung it open. Butch Magee stood there, Butch Magee from the Open Hearth.

"Say, Wally, Manning wants you should come out to-night and work Four," said the messenger, peering into the room and grinning at what he there beheld. "Felding is sick and can't come out, and Four is charged with a special."

The major exploded in awful wrath. He raved, he foamed, he swore, he threatened. "Tell him he won't be there!" he shouted. "Tell him he can't come! Tell him he won't come! And you light out of here, Butch—get out of here quick!" He advanced upon the messenger with clenched fists, and Butch Magee retreated down the hallway, grinning and chuckling.

Wally stood looking at the floor for a moment. Then he walked to the door and stepped out into the hallway.

"Hey, Butch, tell them I'll be down there in ten or fifteen minutes."

The major sat down heavily, folding his arms and saying not a word. In grim silence he watched Wally disrobe, watched him put on his old stained working suit, watched him lay his finery on the bed. Then he rose and went out without a word, and a few moments later from his room floated the strains of The Serenade.

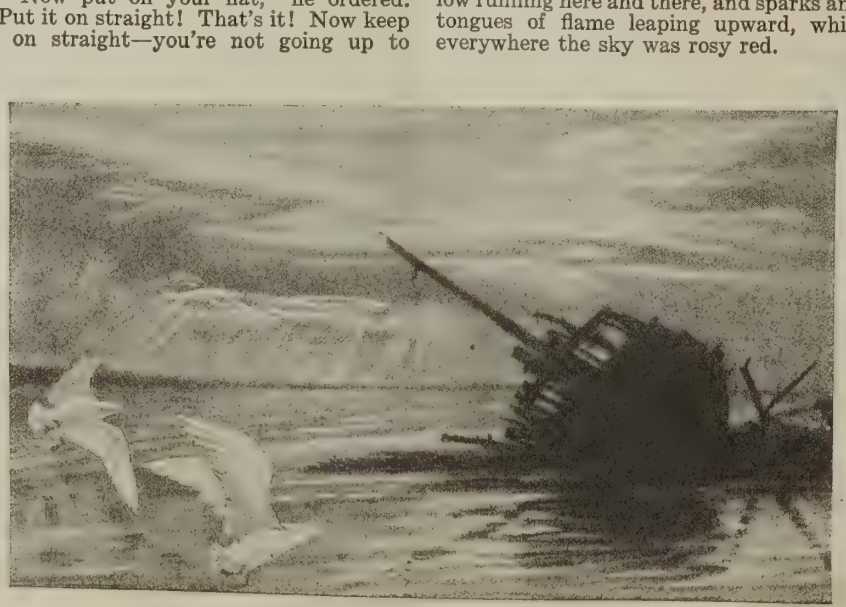
Wally went to the hotel's kitchen, had a pail of lunch packed and trudged off to the mills.

In the Hotel Weston Amy Creeth sat and waited, watching the clock—saw the hands point to seven, to eight, to nine, to nine-thirty. Then she sighed, had her baggage brought out, and departed for the railway station.

"I suppose he doesn't care," she murmured, and she was so silent that her companion, a young woman wearing thick-lensed glasses, became irritated.

"For goodness' sake, Amy, say something!" she complained. "You're as glummy as a mummy! Or are you preoccupied with thinking about that red-faced lout with whom you had such a long tête-à-tête at the steel mills this morning? I wish I hadn't gone there. What a hideous place it was! Why doesn't that porter hurry and make our berths down? Why weren't they ready for us?"

Amy Creeth did not reply. With her face pressed close against the car window she was peering out into the darkness through which the train was now rapidly moving. Soon, by the appearance of hundreds of lights and spots of fire in the blackness in whatever direction she looked, she knew the train was approaching Steelburg. She caught glimpses of towering black stacks, and she saw great clouds of smoke and steam, and there were rivers of red and yellow running here and there, and sparks and tongues of flame leaping upward, while everywhere the sky was rosy red.



The steel mills! She pressed he closer to the window, wondering if were the mills she had visited that mo and in what part of them she had b where it was she had talked with Gay. And as she looked she noti square frame of light up in the side o black building, and just then the hea shoulders of a man moved into and oc the lighted square. What if that Wally Gay! But it couldn't be h would not be working to-night. Bu pose it were he! She glanced a companion and seeing her eyes clos raised her handkerchief and wav dropping it quickly and blushing foolishness. Then her heart gave a for, by the light that streamed out square from behind the man, it seem her—yes, she was certain of it—he wa ing his hand! She watched him another building shut him from her

Up in the Open Hearth, Wally Gay to a window near his furnace and t out his head. He was very hot and tired, and the night air was cool and ant. Down below, just outside the fence where the Midline tracks skirte yards, he saw the lights of a movin senger train. He wondered what tr was. Could it be Amy Creeth's trai might be, it might not be—hundre trains of different roads left the bi over the Midline tracks. But what ence? How could he think of Amy C any more? He had failed to kee appointment with her, and had sent h excuse. What would she think of him might have telephoned to her at least he had not thought of that. Anyway was he? A roughneck, a lowbrow! H not of her class. How did he dare thi such a woman? Still, he wished he have seen her again, could have tol good-by. Maybe she was on that down there. No harm about it, an body would know—and he took o little cloth cap and waved it at the speeding away through the darl waved it until the lights of the last had disappeared.

At that same hour Bridges, in his was feverishly writing the last lines photoplay. Walking up and down his he read the pages of his finished manus chuckling over them, gloating. "It's It's bound to go!" he told himself ove over.

"It's the best—it's really the onl cent bit of work I've ever accompli It will take!" And as he folded the n script and addressed an envelope, and addressed another envelope—this o himself—he muttered: "No use o sending that self-addressed envelope-manuscript is not coming back!" B put it in.

And at that same hour Randolp Jackson, stock clerk at Susie Blast nace, known about the mills only as To who for some reason never determine fallen behind with his work, and was v ing overtime trying to catch up, sat a desk listening to the talk of a sad-f young man who sat near by.

"Yes, Tootsy, I'm back on my ol again, and they've stuck off a lot of work on me. But that's all right—I' a day or two off later on," the sad-f young man was saying. "You see, To I didn't seem to fit in over there at th office. I was a little bit out of my elen I guess—something like a fish in a bin. I made two or three little bulls balled things up a trifle. Under the bush, Tootsy, I made some pretty da big bulls. . . . No, thanks, Tootsy not chewing to-night. But Mr. C treated me mighty white. Mr. Calla is bad sort of scout, Tootsy, and he has a lot of young men on his force. He sa me: 'Robert, if you care to return to old position I shall indeed be glad to you there. You were the best ship clerk I ever had.' Pretty decent of Calla, wasn't it? I'm glad he did t Otherwise I would have had to go ou here on the tramp, letting it be known I was leaving to take a bigger, better with a bigger, better company, as the say when they fall down and get the C Now I am letting it be understood that lungs are weak and the doctor ordered out of the office into the open air. between you and me and the henh door, Tootsy, I simply couldn't cut cheese."

Editor's Note—This is the second of a seri stories about Wally Gay. The next will appe an early issue.

MELANCHOLY MALLARD

(Continued from Page 15)

He had a hen a-settin' for five years, come
ixnow—she's about to hatch or I'm a
Dutch missionary. You'll see if she ain't!
I'll see!"

III

THE Twister—so he was known to his intimates and to certain of the police—of the penitentiary with his plans definitely nclearly worked out to their conclusion. fe had had four years in which to perfect ne—now there remained only their conmination in action. As far as human inenity could contrive, he had anticipated ery contingency, safeguarded every step. e rode into the city on a local train, ing his ticket through to the Central ti on, but dropping off unobtrusively at a ing in the suburbs where all trains e compelled to slow down. From the oit where he alighted to the old room in ird Place was but two short blocks and e vered them without encountering anyn who gave him so much as a glance. He nd Dorgan gone, but he knew where the e was. In his ill-fitting suit of clothes plied him by the state, in his heavy ks creaking of prison and prison ils, and his coarse blue shirt he entered e amiliar place. Everything was there s hand just as had been agreed when Dgan's wife, his sister, had visited him months before.

An hour later he came out, locked the or and hid the key. Presently Dorgan or is wife would come and carry away for esuction every trace of the ex-convict. Meantime the latter was moving confiently out into the street, dressed now in a ui, tailored business suit, with his shoes nid, with a neat broad cap covering his only cut poll, with money in his pocket nd with a heavy suitcase in his hand. A ro-town car line took him to the railroad a on four miles south. There he bought a cket through to Salt Lake, accepting an pr berth with the philosophic observaon that when business compelled a man s across the country on an hour's notice naman must take what accommodations e ould find. Presently he was in his car, uging in the smoking compartment and lling for himself one of those brown-paper garettes which he found he needed rather acv and craved rather extravagantly. n almost as he drew his first deep whiff ne rain began to move westward.

Two hundred miles short of Salt Lake he ft the train at a small junction, caught a ou-bound local; changed again; travled in another direction; and four days fte his discharge from the penitentiary an the bustling, thriving little town of ret Bend—his immediate destination. Without difficulty he rented a room exactly he he had been planning to rent it ever n; he had seen this plant for a robbery—n six years before. His room was in the cnd story of a low frame lodging house. Its windows looked out on the main street te town, and across that street was the a of business of the State Trust and aring Corporation. In his walk from he tation he had gone by its big plate-a windows and had seen with satisfacon that the directors were still postponing he purchase of the new steel-lined vaults e had been quarreling about for years. n the old-fashioned safe still stood there, elback in the room and in full view of no front windows which he remembered well.

The Twister was forty-eight and well circntanced. All he needed was another ften or twenty thousand. With that and is wn accumulation he could settle down n fruit ranch he had decided on, free on suspicion, worry, risk or the need for ni: action and long jumps. He had owed pc:y a definite debt—for being caught at j in Illinois—but now that debt was ai with his four-years-and-three-months ern. This time he would not be caught. hi time he would owe society nothing. e as perfectly frank about it; perfectly us esslike; perfectly confident. And, as he police would have testified sourly, the wter had reasons for his confidence.

His room was a clean, plain, rather pleasnt partment, with a wide, deep-set winovat which he spent much of his time eang papers and magazines. When he laed out, as he did occasionally, he ou see the bank and several of the buildgidown Main Street and he could look up ai Street to where it went over the hill owrd the river and the bottom country. He dined in quiet little restaurants, unnoticed and unnoticing; and he went to bed usually about ten o'clock. After his lights were off he always raised his window sash and curtains—he liked air in his room and, besides, he was often sleepless, and from his unusually high bed he could see the street in front of the bank and all that went on therein.

Lying thus comfortably on his sleepless nights, the Twister became familiar with the following facts—more or less unrelated but of a certain potential import to himself:

That there were two entrances to the bank—one double-doored on Main Street, one a small private entrance on Bates Street, at the rear of the building.

That from the front doors and the plate-glass windows flanking it anyone on the street could see the whole interior of the bank except such as was masked by counters.

That the high, old-fashioned safe stood well to the back of the counting room on a platform and that by night the safe and the rest of the room were lighted by two lamps—an electric bulb over the cashier's cage and a big gas light above and a little in front of the safe.

That a counter used by the bank's trust department ran from a point forward from the rear door across the back of the room almost to the safe, so that by stooping one could creep from that private entrance to a point within a few feet of the safe without exposing himself to the view from the street.

That a night watchman, privately employed, tried the door of the bank at fifteen minutes past the hour every night with mechanical exactness and regularity.

That there was a police telephone box on the pole at the bank corner a few feet from the front door and directly opposite one of the big windows, thus occupying a position from which any person could see the inside of the bank and the face of that big safe.

That two policemen, one having a beat lying to the westward of the bank and the other to the eastward, met each night at the police telephone box and stood there for a few minutes talking and laughing.

That these meetings were not regular or fixed as to most of the night, but that there was one hour at which it was the custom and habit of the two patrolmen to meet without fail. That hour was two o'clock; and immediately after ringing in to the central station they always strolled westward half a block to the Acme All-Night Restaurant, where they regaled themselves—as he discovered by following them one night—on sandwiches, pie and milk, and exchanged rather obvious jokes with the bright-eyed little Greek who was on the morning shift of the place.

To these physical facts the Twister contrived to add others; as, for instance, that the burglar alarm in the bank was connected with the police station and the private watchman's office by only one wire, which wire he located without great difficulty; that the bank carried only comparatively small amounts of currency as a rule, being in a country where gold and silver were most generally used; and that its largest currency budget was in the safe on or about the first of each month, the oil-field employees to the south of Big Bend being paid off in bank notes on the fifth.

It must not be supposed that the Twister was idle all this time. On the contrary he was very busy. A day or so after his arrival he bought a piece of plain oilcloth, two yards in length and fifty-two inches wide, and stretched it on an ingenious frame he carried in his suitcase that could be extended or contracted at his pleasure, like a camera tripod's legs, by the use of set screws. After he had stretched this cloth he turned the reverse side toward himself and placed the frame on end near the window. Then from his suitcase again he brought oils, turpentine, rags, brushes and a square palette, and that evening, much after the fashion of a sign painter, he proceeded to paint a picture—crude but not wholly without merit.

When this picture was completed and dried The Twister folded it up with its frame into a small neat bundle and put this into his suitcase, which contained—among personal articles—many small, dull-finished steel instruments of peculiar shape and unusual character; a small bunch of beautifully executed and neatly arranged keys; several pairs of cheap cotton gloves and a physician's stethoscope—the delicate instrument with which examinations of the heart and lungs are conducted. The Twister glanced over these varied articles thoughtfully, made a trifling rearrangement thereof, and then closed his suitcase with a little sigh and rolled a cigarette.

He had now been in Big Bend for ten days. It was the third of the month in the dark of the moon and the night weather was warm but murky. On the day after the completion of his picture he busied himself with a new enterprise. In an air-tight stove that was in his room he first burned every scrap of paper in the place and several pieces of clothing. With them—which expedited his work—he burned all his paints, oils, brushes, rags and painting appliances. Thereafter he donned a pair of his cheap cotton gloves, took out a bottle of furniture polish he had bought that morning and with a piece of cheese-cloth began going over his room with the most meticulous care. Every piece of furniture and woodwork in the place was wiped clean—nothing was overlooked. He even wiped the stove lightly and with great particularity the stove lifter. After that he burned his oily rag, opened his windows to air the place, took off and burned his cotton gloves, put on another pair, put the half-empty bottle of furniture polish into his coat pocket and went out for a walk. On the walk he threw the bottle of polish into a street drain. Not until this was done did he take off his cotton gloves.

The afternoon was waning before he went to a little out-of-the-way restaurant that he had found and there he ate a satisfactory meal. Thereafter he returned to his room, putting on his gloves as he approached the place and buying an evening paper from the boy at the door. At home once more he made a thoughtful inspection of the apartment, satisfied himself that everything was as it should be, pulled up a chair to the window and sat down to read his paper. At ten o'clock he turned off his lights, raised his curtains and lay down on the bed without undressing.

He dozed off after a time and it was one o'clock when he rose. He did not turn on his lights, finding the darkness cut by rays from the street lamps at Main and Bates Streets, but sat down by the window, took off his gloves for a moment and rolled a cigarette. He lighted the fag cautiously in a corner of the room and smoked it while cupping it carefully between his hands so that its glow would not be seen from the street. Meantime he stared reflectively at the brightly illuminated bank front and interior. At fifteen minutes past one o'clock the watchman passed, trying the bank doors and peering in punctiliously. Half an hour passed, then forty minutes. At five minutes before two the Twister rose, flipped his burned-out cigarette aside, pulled on his cotton gloves, picked up his suitcase and went quietly out of the room. He paused a moment at his own door, was reassured by the stillness of the place, crept down the stairs, took a precautionary peep into the street through the glass of the outside door and let himself into the street. A quick glance showed him the place deserted on every hand save for a policeman, who a block away was just turning up a side street. Boldly then the Twister crossed Main Street and entered Bates, taking from a side pocket in which he had placed them his ring of beautiful keys.

At two minutes before two the Twister had cut the burglar alarm wire and was inside the bank, crouching behind the counter that protected him from view from the front windows. Almost immediately he heard one of the policemen come up with measured footbeat; presently there was the sound of a laugh and some remark, and the second arrived. Their voices came in distinctly to him. He smiled. He had chosen this particularly dangerous hour for his job in the bank on an old theory of his that that hour was really the safest when your enemies are where you can be sure of them. At any other hour they may be far away—but his experience had taught him that they may not be. Now he knew exactly where they were—and what in all human probability they would do next.

They met his expectations. He heard them report in over the police telephone line, slam the box door, exchange a few heavy sentences and move away. He allowed them a full minute in which to go, looked out from behind the end of the counter, found them gone and opened his suitcase. In an incredibly short time he had extended the collapsible frame on which he had painted his crude picture, had crossed the intervening space between the counter end and the safe and had set his picture up there in front of the safe and two feet away from it with the aid of a pair of steel angle braces such as stage hands use in theaters to secure flats of scenery. In the narrow aisle formed between the picture and strong box he put down his opened suitcase. From it he took his stethoscope. Hidden from the street by his painting, he went quite deliberately to work. With the rubber nibs of the stethoscope in his ears and its sounding box pressed gently against the safe door just above the combination knob he began turning that knob very softly and slowly. Three times, after breathless work at the task, he tried the safe-door handle in vain. But on the fourth trial the handle gave. The Twister nodded and opened the safe door.

He tried two or three keys on the inner door, but they failed him. With swift decision he chose a flat steel tool from his case and with his cheap cotton gloves giving his clever hands a ridiculous appearance of awkwardness he inserted the appliance, gave it a quick jab and twist and wrenched the door open. It was only a matter of a moment then for him to force the two large metal-lined boxes within—in a breath the bank's treasure was exposed to his eyes. He wasted no time in gloating—in debating a desire to take it all. Without a thought for the gold and silver he chose the bank notes, taking six thick packages of them and placing them in capacious inner coat and vest pockets. Then he closed the inner safe door on the returned strong boxes; shut the outer door. It jammed for a moment, but he worked patiently. At last it swung home—and he twirled the combination twice. Returning his tools to his suitcase, he straightened, listening.

Footsteps echoed in the street outside. They came nearer—stopped. The door was tried—tried again. The Twister, standing behind his picture, awaited this test of his artistry. What the watchman looked in to see was the well-known face of that old-fashioned safe—just as he had seen it year in and year out for a decade. The artist—concealed behind his work—smiled with a pardonable pride when the watchman's footsteps sounded once again as he moved deliberately away—his picture of the safe front had passed for the real thing; no praise could be higher than that.

A few minutes later, having passed both from the bank and from the town without encountering anyone, the Twister stood on the river bank more than a mile away. His picture frame was in his suitcase with all his tools and his used cotton gloves. Standing in the black shadows of the willows, he disrobed to the skin. His underclothing, his collar and tie, his garters and a clean handkerchief that he found in one hip pocket he put into the suitcase weighted with its steel tools. Removing the bank notes he had got from the safe, he stuffed them uncounted into a wide money belt that was strapped about his waist. Then he rolled in the mud, dragged his clothes there, dirtied his socks and cap, beat his excellent shoes against a rock until they were shapeless and torn and dressed himself. Having finished this task, he closed and locked the suitcase and threw it into the river, where it sank without a sound. He stood a moment checking things up. He could not see his hand before his face, but he knew what he had done. With great deliberation he rolled a cigarette, crept out of the brush and took the river road southward, moving clumsily. As day began to dawn he was revealed—the shabbiest, dirtiest, most ragged and ill-conditioned tramp that ever begged a meal or purloined a ride. He walked in the heavy river-road dust for seven miles until he was gray with it. Shortly after daybreak he picked up a west-bound freight moving warily across the bridge and so was carried out of the Big Bend country and the picture.

IV

BEN PORTERSON, of the Pendleton Detective Bureau, claimed familiar knowledge of more professional crooks than any man in America. He did not pretend

(Continued on Page 144)

An answer to the question of—

Labor Troubles and Production

The Du Pont Chemical Company offers the Petersburg-Hopewe the Industrial District of Virginia, to manufacturers of the wor as a solution of their big problems of production and distributi

Are These Your Problems?

Are excessive power costs or high wage, tax, water and insurance rates cutting down your profits?

Is your production hampered by adverse labor and housing conditions?

Is your business suffering for lack of cheap and adequate transportation facilities?

Are you without room to expand your plant to take care of the increased demand that's coming?

Would a branch factory located at a place of greater strategic value help to solve your marketing problems?

Do you have to fight a hostile local government to prevent harassing restrictions on your business?

Does it require cheaper power and lower factory costs to make your business a greater success?

Do you need greater financial aid for expansion, or the help of technical and traffic experts to work out your particular problems?

Are you looking for a suitable place to begin a manufacturing business?

How Hopewell Solves Them

Steam and electric power, light, heat and air pres below standard prices.

Rail and deep water shipping facilities that are unsurpa in point of service and cost.

Freedom from labor and housing troubles. Houses plentiful, rent is cheap, and living costs are approxima on a pre-war basis.

Factories are already built and splendid sites for buildings.

Abundance of purest water for all domestic and indus purposes at low rates. Best fire protection in the world, consequent low insurance costs.

Climate never too hot or too cold for out of door w Health conditions such as to make Hopewell a pote health resort.

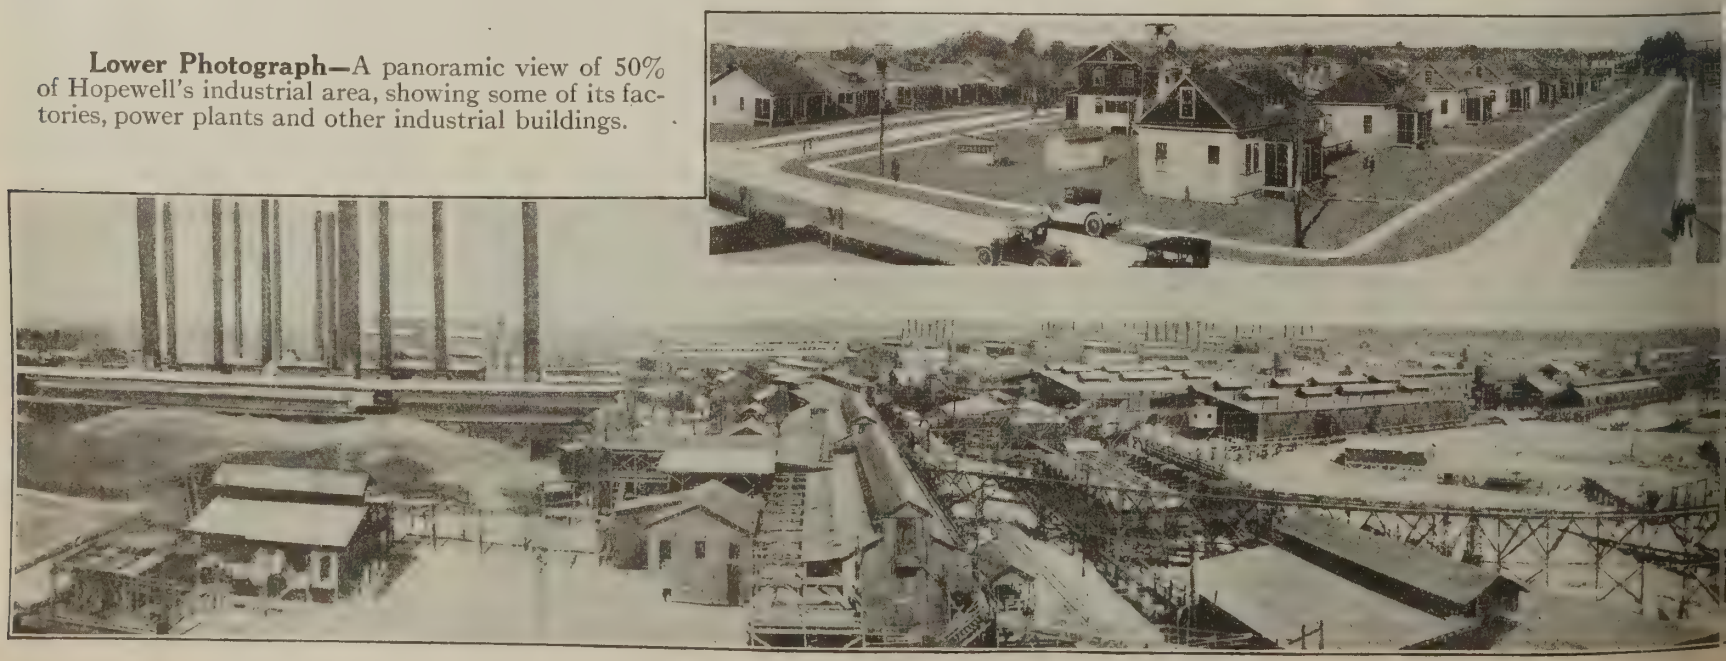
Civic environment that makes Hopewell a good plac live and rear a family.

Adequate financial help to take care of legitimate deve ment or expansion and expert technical advisors and indus engineers to aid in solving your problems.

In short, the essentials to make your business a gre success are at Hopewell.

Hopewell Has No "Housing Problem"

There are hundreds of bungalows, cottages and houses, with lawns and gardens bordering on well-paved streets, as shown in photograph below. These homes, equipped with all modern conveniences, are ready for immediate occupancy by Hopewell work



Lower Photograph—A panoramic view of 50% of Hopewell's industrial area, showing some of its factories, power plants and other industrial buildings.

An answer to the question of—

Factory Costs and Profits

Tidewater Port

This Industrial District is about eighty miles west Norfolk and twenty-three miles south of Richmond at junction of the Appomattox and James rivers,—in ly part of Chesapeake Bay.

It is a railway centre with trunk-line connections points North, West and South. It is a tide- port with steamer connections with trans- tic, South American and coastwise ports. Its ing facilities compare favorably with those of g port cities.

Low Fuel Costs

The Pocahontas and New River coal fields, which ce the best steam coal in the world, lie within a hauling distance and assure a constant supply of riced fuel.

Raw Materials

Hopewell is in the centre of a region rich in natural rces. Iron, manganese and nickel ore mines are ent to the district. Close by lie important deposits ck, tile and pottery clay, mica, soapstone, tita- green sand, shell marls, moulding sand, mineral and Virginia limestone.

Within a radius of fifty miles are produced annually 00,000 feet of timber available for lumber or for and paper making; 25,000,000 pounds of tobacco, 000 bushels of corn, 2,000,000 bushels of peanut other crops valued at over $5,000,000. Each of products offers opportunities to manufacturers.

Labor Problem

Labor, both skilled and unskilled, male and female, be recruited from the surrounding territory to all needs. Within the space of a few weeks, the Pont Company recruited 30,000 workers. Low costs have kept and should continue to keep at a fair level. Strikes are unknown.

NOTE

As its name implies, the Du Pont Chemical Company is not a real estate concern. We have these factories, factory sites and other buildings—a limited number—which we offer for immediate sale ***direct*** to manufacturers, at attractive terms. We are employing the most powerful and the quickest means of disposing of our peace surplus and of acquainting the public with the opportunities Hopewell offers. It will be a matter of first come first served. Quick action is advisable. Write or wire today for data.

Climate

Hopewell's climatic and general health conditions are unsurpassed. Mean summer temperature is 75° and the mean for the entire year, 58°. Annual rainfall, 46 in. Hopewell is never ice, snow or flood bound, being entirely free from extremes of weather that interfere with business.

Factories and Sites

Hopewell was designed for the production of gun cotton on a colossal scale. In less than a year it rose from a quiet little town to an industrial city of over 40,000 population.

Hopewell now presents opportunities to manufacturers unique in history—factory buildings easily adaptable to many kinds of manufacturing—1200 acres available for factory sites with ***railway sidings already built.***

Great Power Plants

Hopewell has three gigantic and modern power plants; a total capacity of 60,000 h.p., ready to supply manufacturers with steam, electricity, heat, light and air pressure in any quantities at a surprisingly low cost.

Pure Water Plentiful

Water of hygienic purity is drawn from filtration plants with a daily capacity of 50,000,000 gallons—more than enough to supply a city of 500,000.

Best Fire Protection

Fire protection is the same as when the manufacture of gun cotton made extraordinary protection imperative. Maximum fire protection means low insurance.

Homes for 12,000 Workers

Hopewell has cottages, bungalows, apartments and dormitories sufficient to accommodate 12,000 workers. In addition, it has clubs, hotels, churches, schools, commissary operating on a low cost-plus basis, stores, Y. M. C. A., Y. W. C. A., and all the public utilities and civic improvements that constitute a modern city.

Hopewell is a city without a "housing problem"; a city where profiteering is unknown; a city where, compared with some cities, the workers' fifty cents buys a dollar's worth of goods; a city where living ceases to be a losing struggle. In brief, Hopewell is a city where the average man would like to live and rear his children.

Write or Wire Us!

Our experts—Technical, Industrial, Traffic—will gladly study your specific requirements, investigate your problems of raw materials, manufacturing processes, transportation, and give you an unbiased report as to the adaptability of Hopewell (plant sites, present available equipment, raw materials, etc.) to your special needs. This service is free. It may lead to the solution of your problems. Get in touch with us promptly.

(Continued from Page 141)

to be a great detective in the sense that he could take a clew and build a case from it or take physical facts and build a clew from them. He was modest about his abilities in investigation and deduction, and there were others who surpassed him in the ability to name a crook from the crook's handiwork. But hand Ben Porterson a slip bearing the identity of a wanted man upon it and give him money and time enough and he would bag that wanted man unless death beat him. The man was doomed, because Porterson would go into his usual haunts, locate some faithless friend or some enemy, employ force, politics, pressure, blackmail or threat, find out his victim's whereabouts and shortly pounce upon him. With his prisoner shackled then Ben would conduct him back to the county seat where his presence in criminal proceedings was demanded and on the way chat reminiscently of the crook's past, of which it often chanced Ben could remember even more than he himself.

Porterson was strictly a specialist, with what might be termed nothing more than an occasional sphere of usefulness. Therefore the Pendleton Bureau—which not only thought highly of Ben but also believed in getting value received for even a good man's services—kept him busy when there was no fresh scent for him to follow as a sort of chief clerk in its correspondence department. There he was a figurehead, however. The brains of the department and the active official in discharging the work thereof was a slight, fair-haired, neat and swiftly moving young woman known as Lucia Galloway. Lucia knew the outside business of the Pendleton Bureau better than anyone in the whole staff, save perhaps old Jerome Pendleton, its head. Because of Lucia the place of chief clerk in this department was a sinecure. Ben Porterson employed his ample leisure therefore in playing practical jokes, sometimes spreading them over two or three continents, just for the sake of handing himself a laugh. Lucia did not approve of some of these jests—such of them as she could were oftentimes curtailed adroitly and their aim defeated, much to Detective Ben Porterson's mystification.

Lucia was beginning to believe that it was about time to assert her censorship again. Partly her feeling was due to the fact that the Big Bend bank robbery was keeping her busy and ought to have been keeping Ben Porterson busy, even though it was not; but mainly she was moved to interfere because she had conceived a warm feeling of interest in Porterson's latest butt. This was a man named Bodie Mallard—postmaster at a small and hitherto unheard-of desert point called the Two Buttes. This Mallard had written in weeks before asking modestly whether the Pendleton Bureau had place for a new man who desired to show what he could do in the finger-print department. Porterson, to whom that first letter had come, had roared with delight and had seized upon this opening for his favorite pursuit with avidity.

One morning when there was a particularly heavy mail and when replies were beginning to pour in from the four quarters of earth reporting no trace of information that would assist the Bureau in identifying or arresting the mysterious man who had robbed the Big Bend bank of $38,000 in currency, Ben Porterson leaned back in his chair, waving a sheet of paper he had just perused and breaking into a shout of glee.

"It's the humpbacked hick again, Lucia!" he cried delightedly. "The bird with the finger-print bug and the towering ambition! Listen to this!"

"Haven't time!" Lucia objected a little tartly, slipping a new sheet into her machine.

"Take it then! This is fat! You can't beat this bird! Hand him a line of chatter about how good he is in his favorite brand of nuttiness and he swells up like a cop after his first pinch. He says ——"

"I don't care what he says, Mr. Porterson. I think it's a crime the way you treat that man."

"Man? Listen, dearie! I can describe this Mallard duck to you so's you can see him without shutting your eyes. A freckle-faced kid, with a big mouth and plenty of use for it, that gets his ideas of detective work from the magazines and his hunch on crime from the movies. He's the kind that sits in the tenth row every time they put on a new show; and when he's off duty delivering the eight letters and two Fireside Friends that come in in the mail he goes out in front and tells the world how good he is. I'm giving this guy what's coming to him."

"I don't think you've got him right at all!" Lucia snapped, jerking her typewriter carriage over crossly. "I'll say he's a man—which is more than I could say about some people I know that aren't as far away as Two Buttes."

"Ouch, there! That's my wife's husband you're jabbing, I'll bet. But here!"

He spread the letter out and read above the clatter of Lucia's machine:

"Gentlemen: If you haven't time to put me on there right now it doesn't matter. But I have been thinking you might send me any news you get about criminals coming this way or some finger prints or descriptions of men you want to locate, because even if Two Buttes is off the map such things have happened as fugitives beating it into our country at times.

"I don't know as I wrote you before that I took a course in detective training. It was in the Royal and not much, I'll say, but even if it isn't in the same class as the Pendleton, I am a two-fisted guy and feel like I might do your business without having to yell for help. So send me anything you would like done, especially in the finger-print line, which I sort of specialize in. Hoping to hear from you,

"Your friend,

"BODIE MALLARD."

Ben Porterson waved the letter aloft.

"Whoops—and three whoops!" he cried. "Come on, Lucia, I'll lay him a line of chatter this time. Take a letter."

Lucia hesitated for just a moment. Then deciding that strategy would be better than defiance, she crossed with her notebook dutifully and pot-hooked Ben Porterson's message.

It began with acknowledgment of Mallard's generous offer of assistance and stated that the offer was accepted in the spirit in which it was offered. In proof thereof the bureau was inclosing circulars concerning criminals very much wanted by the authorities and also a few cards bearing reproductions of finger prints of men who were in particular demand for particularly heinous crimes. Mr. Mallard was urged to do what he could at once and report progress. Lucia sniffed and went back to her typewriter to transcribe. To be more exact, she went back to translate the message from Porterson Chicagoese into intelligible English—also to edit it warily. And meanwhile Porterson, kneeling over a dust-covered file, was exhuming a batch of ancient and worthless advertising matter, reward circulars and finger-print files.

"We've got the duck wabbling!" he cried, purple with his posture and his amusement. "Here's a lot of paper that's been dead almost as long as the men it's about—and here's some finger prints that must have been made when the angels were looking for Cain in the Garden of Eden. Be-lieve me, when the hard-boiled duck of Two Buttes County gets these he'll pinch the village schoolma'am for complicity in the Haymarket riots and next thing we'll hear he'll be wiring that he's got the town constable in the jug for helping to blow up the Maine in '98. Whoops, my lamb! This is going to be good!"

Lucia Galloway was frowning.

"I don't see that this Mr. Mallard has done anything to you," she argued wrathfully. "Lay off him."

"Done anything to me, my dear! Say, hearken to me—he's got me scared for my job, that's what he's done! If the chief ever gets this Mallard in here out I go. Bodie Mallard, the boy terror of Two Buttes Gulch. Well, I should say yes! That's why I'm doing this—I'm jealous. Ho! ho! ho!"

"I believe that you're telling the truth for once."

"Sure I am! I admit it!"

"Mr. Mallard is probably twice the man you are. You make me sick—hanging it on him this way."

"Don't kid yourself, little one. He's a hick with a hump, this bird is. If I thought he was human I'd let him down light; but I know his breed. Come on through with the letter—we'll gaff him while he's breathing hard."

Lucia typed in a rage. Porterson returned to his desk, chuckling and dusting his hands. As he sat down an office boy came in with a special-delivery letter.

"It's from the chief—in Big Bend," the boy volunteered, showing his excitement. "Maybe they've got something."

"Maybe your widowed mother will be walking to the graveyard behind your corpse if you don't clear out of here, young fellow," Porterson responded cheerfully. "Beat it now—I'll read my own mail."

The boy disappeared on wings. Ben Porterson slit the envelope. His interest was as keen as the errand boy's had been, however much he tried to conceal it. As a matter of fact, the whole Pendleton Bureau was on tiptoes. The Big Bend robbery had done it. And the reason lay here: Just when most of the dangerous safe crackers and burglars of the world had been catalogued, identified and safely placed and when it began to appear that nothing new under the sun could be worked out by that branch of the criminal element, along had come some person out of thin air who had robbed the State Trust and Banking Company of Big Bend, under the very noses of two policemen and a night watchman, without leaving a trace or a clew of any sort on which to operate in his pursuit and without dropping anything that could be construed or translated as a hint of his identity. This in itself was unusual but not astounding until the Pendleton Detective Bureau's biggest client took a sudden interest in the matter.

This client was the Federal Casualty and Liability Company. Its officers reasoned more deeply than did the police. The Federal carried most of the burglar protection insurance of the Western and Middle-Western banks of America—in round figures a staggering total of half a billion dollars of it, to be exact. The Big Bend robbery was baffling—apparently its contriver was dangerously and alarmingly clever and daring. If he could walk into Big Bend under the eyes of the authorities and walk out unscathed and apparently unhurried with $38,000, what was to prevent his repeating the performance in other banks, under the same circumstances, month after month indefinitely until the Federal Casualty and Liability Company would be compelled to get some insurance written for itself? The answer from the turmoil made over the matter appeared to be—"Nothing!" At any rate, the alarm of the Federal had communicated itself in terms of the most concentrated and widely organized activity to the Pendleton Detective Bureau. Big Bend had been visited in person by one representative of the firm after another, and finally when the subordinates could find nothing at all the superiors went. Now there were in Big Bend, as Ben Porterson had excellent reason for knowing, no less a party than one comprising Jerome Pendleton, chief of the bureau; E. B., his younger brother; Mortimer Bridge, former Scotland Yard man and the highest-salaried detective in America; and S. S. S. Nairn, the man whom the magazine writers glorified because—they said—he could deduce a complete crime from a spot of blood or describe the scenes of a bomb outrage by examining a piece of cloth torn from the body of one of its victims. These incomparables had been in Big Bend for two weeks without finding anything. They confessed as great confusion of mind as any who had gone before them. But now in the special-delivery letter Ben Porterson held——

Ben momentarily forgot Bodie Mallard, the hick with the hump, and read:

"B. L. P., Chicago Headquarters: Bridge has found a cigarette butt in rooms across the street from the bank that may lead to something. We have a description of the man from the landlady, though a poor one. Inclosed you will find copies we have had made of cigarette-butt print—get on the job with them at once and wire if you can check them up with anything in our records.

"Don't waste time looking up petty-larceny thieves—this fish is a big one.

"Nairn and J. P. are leaving for Chicago in the morning and that will leave you free to get out on the case if you can connect up this print. Federal Company offers $5000 and we double it. If you net this crook one-half the reward is all yours. Hop to it.

"E. B. P."

Ben Porterson dropped the letter and reached for the finger-print copies. There were four of them, photographed on thin paper. He clutched at them, picking up only three. Shouting something unintelligible over his shoulder at Lucia, he dashed from the room and ran toward the bureau of identification. The stenographer concluded that he had directed her to mail his letters, so she crossed to pick them up, carrying the one just written to Bodi lard with her.

Under the two or three she r stamped and sealed up Lucia ca the brief note from the younger Pendl the one that had sent Ben Porterson ing from the room. With growing i she read it through. Then she g down. On Porterson's desk were the old documents he had been prepar send to Bodie Mallard in pursuance stupendous practical joke. Lucia them up impatiently and threw the the wastebasket. Then she saw a graphic copy—marked "Bridge—B.—Big Bend"—of a fingerprint. paused, frowning.

Then quite deliberately she too photograph and put it into the en addressed to Bodie Mallard. On th tom of his letter she wrote in her fine, hand:

"In place of finger prints refer above we are inclosing print found scene of Big Bend bank robbery. Th wanted is a burglar and there is thousand-dollar reward for his Good luck, Mister Man on the Dese

And then, hesitating between the r stamped name of Porterson and no ture at all, Lucia was suddenly seize an irresistible impulse. She bent ov desk, initialed her postscript "L. sealed up the letter and its impude unauthorized addendum and the in Big Bend robbery finger print, ran in hall before she could have time to what she ought to do and mailed the It shot by her in the dark mail chu disappeared.

Lucia caught her breath.

And then, laughing defiantly, she back to find Ben Porterson in an doorway bellowing:

"Got him! Said so all the time. man that turned the Big Bend t Charley Adams, alias the Twister! watch my smoke!"

V

"TEN twos," the man at the w said laconically.

Bodie Mallard reached for the dra

"Nice day," he ventured sadly.

"Yes."

"Not so hot."

"No."

"Hot enough to make stamps though."

"I suppose."

"Put 'em in an envelope for you?

"Go ahead."

Bodie fumbled under the shelf.

"Stranger here?" he asked.

"Yes."

"Going through, or stopping?"

"Going through."

Bodie fumbled with the flap of t velope into which he put the ten tw stamps and dropped it.

"Dog-gone it!" he complained lu ously. He stooped to reach for the p "Get clumsier all the time, seems lil

He recovered the envelope and pa over, holding the stranger with his

"Like the country, do you?"

"No. Came on business."

"Going on into Gould Valley?"

"Don't know yet. Maybe."

Then the postmaster uttered an mation with an aggrieved note in it.

"Drat it! I've given you the envelope. Here's your stamps. My take."

The other eyed him suspiciously moment. Then:

"Oh, all right!"

"Hope I'll see you round."

"You may."

"Anything I can do for you any time

"I'll let you know."

"So long."

The other man did not seem to hea walked out. Bodie chuckled.

"Got your finger print, though, bor," he commented half aloud.

He took with him the envelope h handed out first and walked to his where he dusted the surface of the tainer with lampblack.

A sharply delineated finger print ju out at him.

"Dandy!" he ejaculated. "Jim d Hm-m-m!"

He was bending over it, magni glass in hand, when George Munroe prietor of the Eagle House, came in. roe was always jocular.

How Famous Movie Stars Keep their Hair Beautiful

PRISCILLA DEAN
"I find Watkins Mulsified Cocoanut Oil Shampoo very beneficial to my hair. It is a fine shampoo."

ALICE BRADY
"I consider Watkins Mulsified Cocoanut Oil Shampoo an ideal shampoo and can be used with such little effort and keeps my hair in wonderful condition."

NORMA TALMADGE
"You may use my testimonial to the value of Watkins Mulsified Cocoanut Oil Shampoo."

PROPER Shampooing is what makes beautiful hair. It brings out all the real life, lustre, natural wave and color, and makes it soft, fresh and luxuriant.

Your hair simply needs frequent and regular washing to keep it beautiful, but it cannot stand the harsh effect of ordinary soap. The free alkali, in ordinary soaps, soon dries the scalp, makes the hair brittle and ruins it. This is why leading motion picture stars, theatrical people and discriminating women use

WATKINS MULSIFIED COCOANUT OIL SHAMPOO

REG. U.S. PAT. OFF.

This clear, pure, and entirely greaseless product cannot possibly injure, and does not dry the scalp or make the hair brittle no matter how often you use it.

Two or three teaspoonfuls will cleanse the hair and scalp thoroughly. Simply moisten the hair with water and rub it in. It makes an abundance of rich creamy lather, which rinses out easily, removing every particle of dust, dirt, dandruff and excess oil. The hair dries quickly and evenly, and has the appearance of being much thicker and heavier than it is. It leaves the scalp soft and the hair fine and silky, bright, fresh-looking and fluffy, wavy and easy to manage.

You can get WATKINS MULSIFIED COCOANUT OIL SHAMPOO at any drug store. A four-ounce bottle should last for months.

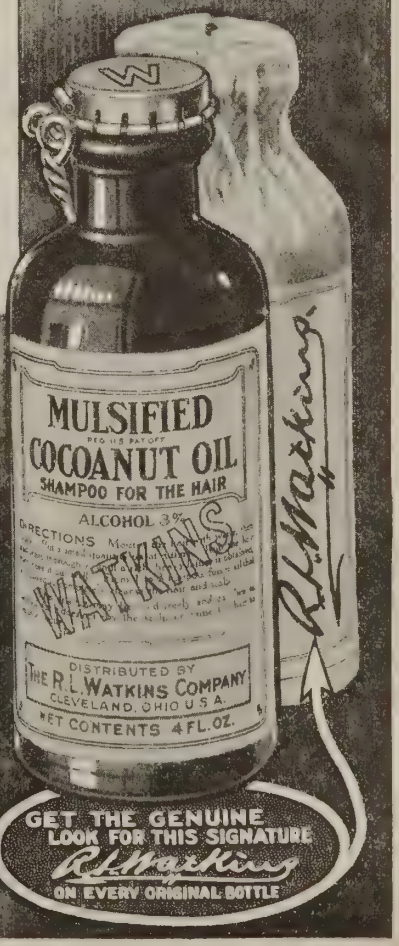
Splendid for Children

THE R. L. WATKINS CO., Cleveland, Ohio

PAULINE FREDERICK
"I find the stimulating after effects of Watkins Mulsified Cocoanut Oil Shampoo very delightful."

LOUISE HUFF
"If my hair is light and fluffy, it is because I use Watkins Mulsified Cocoanut Oil Shampoo."

MABEL NORMAND
"I never knew that a shampoo could be so delightful until I used Watkins Mulsified Cocoanut Oil Shampoo."



(Continued from Page 144)

"Well, old Hark-to-the-tombs," he opened up in his vigorous manner, "how's stamps to-day? Gone up any?"

"Not in wholesale lots," Bodie responded heavily.

"Not in—haw-haw-haw! I'll take ten cents' wuth then. Any news?"

"Not much. Stranger just in."

"Oh, Mr. Smith? Yes, saw him coming this way a while back. Quiet fellow, Smith—capitalist, they tell me. Looking at borax properties most likely. He don't have much to say round the ho-tel, but I got the idea he just happened through. Said something about missing a train at the junction—cussed, too, pretty neat. Wanted to know if you could make good connections on the narrow gauge south-bound."

"Well, he can't."

"I told him so. But as I said to him—about the only way a fellow can see the world these days is between trains. My uncle Mort, now, was that way. Ever think of that, Bodie?"

"No, can't say I have."

"Wuth thinking about. Uncle Mort was seafaring. Maybe I've told you——"

"Yes, several times."

"Oh, I have, eh? Uh-huh! By the way—Smith get any mail?"

"No."

"Send some off, maybe?"

"No."

"Peculiar fellow, Smith. Wouldn't wonder if he was quite a man in his line. But I don't aim to pry into guests' business at the ho-tel. Better be getting back there too. So long, Bodie."

The postmaster returned to his desk. He picked up his magnifying glass again and frowned over that finger print. It was almost the first time that he had had one belonging to a man he did not know. Occasionally commercial travelers or railroad officials or mining men passed through Two Buttes, but such were known almost as soon as they alighted from their trains. Now Bodie had a print belonging to a man of whom no one knew anything at all. And for once he had a chance to test his theory. If he could determine the man's profession from the configuration of that print and prove it——

The evening mail came in. Bodie rose with a sigh and with that finger print still fixed on his mind and dumped the contents of the bag onto his sorting table. Almost the first envelope that caught his eye was addressed to himself. It was from the Pendleton Bureau. But Bodie was postmaster first—dilettante in science afterward. Faithfully he distributed the mail; with long countenance he delivered it through his wicket. It was several minutes past six before the queue outside was dissipated and he could close his window and give himself up to this letter. He stretched himself before sitting down, picked up the letter deliberately, opened it slowly.

Three seconds later he was at his small safe in the rear of the room, the safe was opened, and he was frantically pawing out his revolver, his star and his handcuffs. He stuffed them all into his pockets and ran. Breathless and perturbed he reached the Eagle House—bolted through the front door.

Proprietor Munroe gazed at him with round eyes.

"What the rinktum-diddle!" he cried. "You look like you'd seen a speerit! Don't know as I ever——"

His words were like a dash of cold water to Bodie Mallard. In his first emergency he had betrayed himself. He settled his collar nervously and drew his face down to its wonted melancholy.

"Oh, I'm all right, Munroe," he answered, trying to control his panting breath. "Just glad to get out and get a spell of air. Smith round?"

"Smith? What about him?"

"Nothing much. Thought I'd look him up."

"What for? Got something for him in the mail?"

"No. Seems to me I've known him somewheres."

"That's funny, Bodie. You didn't say anything about that at noon. Small world, ain't it, though?"

"Yes. I'm not sure, of course—about Smith."

"Well, maybe you have knowed him. My uncle Mort, now, was in Shanghai once—or maybe it was Hong-Kong—anyway, it was one of them Chinese towns—and he looked up from his tea, or whatever it was, and——"

"I remember. You told me that a couple of times, Munroe. How about Smith?"

"Oh, yes—Smith. What'd you want to know about him, Bodie?"

"Happen to know where he is now?"

"Well, right now"—George Munroe snapped his big watch open and studied its face thoughtfully—"right now I'd say he was somewheres between Warm Springs and Sandoval."

"He's what?"

Munroe straightened up with a jerk. Two or three loungers started and looked round, eying Bodie Mallard with gaping mouths. His electrified shout had stricken them dumb. Even the garrulous hotel owner was speechless. Bodie colored and grinned foolishly.

"Excuse me, Munroe," he said with a sepulchral laugh. "I thought Smith was here and you sort of surprised me. When'd he leave? Two o'clock narrow gauge?"

Munroe swallowed.

"Well, Bodie, you certainly did give me a su'prise! Never heard you yell out that way in six years, going on seven. Didn't know you could do it, you might say. Yes, Smith went down on the two o'clock. Got a telegram, I heard tell."

Bodie laughed again—that doleful laugh.

"Don't matter then," he said feebly. "See you to-morrow, like as not, Munroe."

He went out, Munroe and the others following him with their eyes.

"Somethin's wrong with Bodie," the proprietor said solemnly. "Knew that when he came in. Can't be the heat—he's used to that by this time. Wonder if he could have loaned that fellow Smith money. Just like him, that is. But if he had he wouldn't have come round yelling about it. Remember when he got roped in by that slick minister—with his yarn about his wife and children at Manitou Springs? Cleaned out of two hundred, I heard tell. But Bodie didn't yell. And this Smith, now—well, I'm dumbed!"

All Two Buttes was dumbed before the day was over, in a manner of speaking. Bodie Mallard engaged young Tom Heffner and an automobile and began careening through Two Buttes in defiance of all law and custom. In an hour he had engaged Miss Watson, Duke's sister, to take temporary charge of the post office, had paid up all his current bills and ordered his daily supply of milk stopped by the Nielsons until further notice, had waved Two Buttes a saddened farewell and had gone roaring off into the desert.

At Warm Springs he was almost peremptory toward the storekeeper—who was also station agent and lone citizen.

"Anybody get off here this afternoon on the down train, Stringer?" he demanded.

The old man cut himself a piece of black tobacco, inserted it into his mouth, rolled it reflectively, chewed for a moment, spat and then responded:

"Yep. Ladd Adams and his wife. What Ladd thinks he's a-goin' to do with that quarter section of his out by the red butte beats me. I wouldn't give him five dollars for the whole——"

"Nobody else off here then, Stringer?"

"Nope." The Warm Springs autocrat stopped to expectorate, doing it lavishly. "Not to-day. Yesterday there was a couple——"

"All set, Tommy?" Bodie interrupted. His driver nodded.

Stringer rose.

"You ain't goin' through to the junction, air you, Bodie? Well, I declare to David! What's the excitement?"

"Just looking for a friend. So long! Go ahead, Tommy!"

They went off in a cloud of alkali dust, leaving Stringer alone and disgusted. Into Sandoval Junction at midnight Bodie went straight to the station. Milt Ferris, the agent, was pulling on his shoes preparatory to making smooth the progress of the one o'clock overland—Number Twenty-two. He stared at Bodie, standing long framed and sepulchral in the door frame, with open amazement.

"Well, Bodie, what you doing here?"

"Business," Bodie answered as melancholy as ever. "Had a deal on with a man in Two Buttes and he got away before it was finished up. Got to reach him. Anybody get off here to-day—stranger, I mean?"

"From the down train? Two. Drummer from Omaha and a little quiet guy. The little guy went on out."

"West?"

"West. On Number Sixteen."

"When did she leave?"

"Seven-ten."

"That was my man, all right. Fellow named Smith. Forgetful cuss."

The station agent crossed to his door and lighted a lantern. Bodie spoke again.

"He bought a ticket, I suppose."

"Yep. San Berdoo."

"Dog-gone it! Guess I'll have to go on there."

"Must be important, Bodie."

"Is, sort of."

"Big deal?"

"Round ten thousand."

"Gee krikes! I didn't know you were in the land business—or is it a mine?"

"Don't know what you would call it exactly, Milt." Bodie sighed heavily. "Kind of more like renting apartments, I guess—for a long term."

"You old son of a gun! I always heard you had an income somehows. Folks said you had plenty to squander on fool enterprises, anyhow. Apartments, eh? East?"

Bodie scratched his head thoughtfully.

"Not exactly," he said. "And they're not my apartments." The idea tickled his fancy and he grinned slightly. A grin always looked surprising on Bodie's gaunt face. "I'm just arranging the deal, you might say. Another party has the empty apartment—I'm going to talk Smith into taking it. That's all."

Milt Ferris, puzzling profoundly, moved over to his telegraph key and opened a call for the end of the division. Over his shoulder, while the key clicked loudly in the shadowy room, he said:

"Well, you're certainly the old mum effigy, Bodie. Hope you make a million—that's me. Want me to get you a berth?"

"You might," Bodie said after pondering. "I expect I'll need sleep next few days—better get it while I can."

Tommy Heffner was dismissed presently with orders to return to Two Buttes and say nothing—and with a silver dollar as token of esteem. Presently Number Twenty-two came in, thundering. Bodie Mallard boarded the third car and presently she went westward, roaring. Bodie doubled up his long legs and arms and crowded himself gingerly into his berth, guided by an ungracious and sleepy porter. When he had switched on his berth light and kicked off his boots, Mallard drew a quilt over his long frame and lay back contemplating this unwonted activity of his. Not until then did he have time to remember that letter from Chicago. Something about it had caught his eye at his hurried first reading. He tried to remember what it was. Finally he drew the missive from an inner coat pocket, unfolded it and read:

"In place of finger prints referred to above we are inclosing print found on scene of Big Bend bank robbery. The man wanted is a burglar and there is a ten-thousand-dollar reward for his arrest. Good luck, Mister Man on the Desert! L. G."

Bodie frowned. Who was L. G.? And wasn't that a strikingly unprofessional twist at the end thereof? And wasn't it all in a woman's handwriting? Indubitably. L. G.—Laura, Lizzie, Leila, Lindy—no, not good enough! "Good luck, Mister Man on the Desert!" Why?

Bodie felt his ears burning curiously. His heart beat faster by at least three pulsations to the minute. He closed his eyes, holding the sheet of paper carefully beside him. Here was a new mystery—mystery for a detective. He smiled, and as his mouth relaxed and the smile spread his face lost momentarily its wonted cast of melancholy. Drowsily Mallard tried to bring his mind back to the pursuit of the stranger whose finger print tallied with the one the Pendletons had sent him. He was the man who had robbed the Big Bend bank, was he? That quiet little guy? Where was he now? Whither would this chase lead? And at its end would there be any explanation of the postscript from the Pendleton office? L. G. L. G.

Ten thousand dollars reward! Too much money. And yet with ten thousand dollars a man could buy a little place, build a little home, make it comfortable for a woman—a woman like L. G. perhaps.

Bodie Mallard slept—with a childlike smile on his big homely face.

VI

FRANK E. SMITH, alias Charley Adams, alias F. B. Forbes, alias many other names, but most familiarly known as the Twister, was almost fanatic fident of the infallibility of his pla had operated with precision and ness at Big Bend; they operated for a fortnight of leisurely progr his departure therefrom. Even incident occurred that momentar rupted the calculated plot of his v was not disturbed. Now that he h his getaway from the scene of his b and that without leaving a trac for the most vigilant of pursuer were of no consequence. So he ch itinerary without qualms.

What happened was that at New Mexican railroad junction t er's roaming glance from his car suddenly lighted on the familiar form of a detective he had known very favorably—in Philadelphi named Bowden. Bowden was onto the Twister's train with a he case in his hand. The burglar superstitious, but he did believe was bad luck to travel in the sa with a detective whom he knew on sight would know him. The gathered his belongings together etly left the car—for good.

But five minutes later he found in a regular hornets' nest of offi train robber, whose activities had several Western lines for months, traced to this locality and the cl gathering. The Twister sought office, made a few careless inquirie he could get a narrow gauge out int uninhabited desert country in ten or such a matter and bought a ticke Gould Valley and Eastern on t He was told that by lying over a d town of Two Buttes he could get train northward connecting with S cisco lines or that he could come far as Sandoval Junction and res southwestern trip. The Twister ch Buttes as a very likely place in rest and commune with his soul- communicate with his friend and in-law, Nat Dorgan, on important Thus he became the guest of Geor roe and the Eagle House and flashed across the ken of Bodie Ma

Meantime, however, he had sen to Dorgan which had brought hin arrival at Two Buttes the following telegram:

"Frank Smith, Two Buttes: Yo located by company. Better postpo ments until present flurry passe rettes poor buy. Money forwarded destination eleventh. Dor

The Twister frowned as he re message. The police had picked trail at Big Bend. They had their r The cigarette sentence was a puzzle had something to do with the clew t tripped him. His bank account h sent to the Los Angeles bank pr agreed upon. But in the meantime was necessary. He wired Dorgan i ing him to report any new develo immediately.

Two Buttes knew him—sketchily be judged from Proprietor Munroe ments in the matter—for three day there came a telegram from Dorga read:

"Porterson of P. D. B. Company t compete in your market, but seem having small success. Safe to ship original plan. N.

The Twister laughed quietly.

"That big stiff, Ben Porterson, ha much chance as a dollar in a crap ga mused. "He'll grab off some stool yeggs and razz 'em and betwee they'll turn up all the old roosts an everybody sore—and get nothing. son hasn't got any imagination. Me desert? It wouldn't penetrate with a lifetime and a half. I can move n

As a matter of fact the burglar s Detective Porterson's method accu The big man's success depended tale-bearing of other criminals an despised characters known as stool —inhabitants and familiars of the world who, for a few doses of their h drug, for a bottle of strong drink o hundred dollars will tell anything know or can find out. he the Twister had been accustomed to
dout. The infallible plan, built so
ir akingly in those four years of peniten-
r experience, had taken this very fact
o ccount—therefore the Twister in the
ld of the Southwestern deserts.

T tell the truth, however, Dorgan's
rngs worried the burglar. If he had
e going back to his old life of crime he
u have been less careful; would have
oded more on the luck of the reckless
u Now everything in the world was at
k because he was determined to go
a it and he wanted to do it peaceably
l uietly and without having to cover
y acks. Dorgan had access to police
o ation that aforetime had proved ac-
ra. Unquestionably some slip had oc-
r.—the Twister racked his brains to
e ine wherein the impeccable plan
l illen short. He decided finally that
a his cigarette butts had fallen into the
h of the astute dicks of the Pendleton
v e. They might be able to identify
a probably they had done so. After
a nding him was another matter. And
e 'wister had a certain respect for Ben
r son.

"he's hep," he communed sourly, "it's
f a hide out. Damn the cheesy luck!
dhe turning straight too!"

He left Two Buttes at once, determined
m ke connections at Los Angeles with
. ter Dorgan would have waiting for
h ere containing all the news. Out of
h val Junction, roaring westward, he
ga to reconstruct his pet plan. One idea
w n him. He had never been through
e sert before—had avoided it on his
e Western trips, as a matter of fact. But
w e began to be fascinated by it. A man
il lose himself here. With his eye he
r ed the country as they skittered
o h its baking wastes, looking for pos-
le efuge. He got into conversation with
br vn and taciturn mining man in his
s d from him extracted a good deal of
or ation about water holes far from
il ation and visited only by occasional
in incurious desert men, always content
m d their own business. His acquaint-
e hen discoursed on some possibilities
r were in this country for reclamation
a nall way; described isolated spots he
e of where a man who did not mind
el ess could make himself a garden in
w ste.

Th Twister turned this over and over in
m nd. It was what he wanted—a gar-
in the midst of this desolation where he
ul loaf and read a little—as he had
wa wanted to do—and live, and where
w uld not have always to be watch-
in ir pursuers—watching and dodging.
Ma e, he thought, that this idea had
ne occurred to him before. And he
wa such interest that the desert man
di him a rough sketch map, locating one
th articularly adapted to this project.
He the Twister reached Los Angeles he
in Dorgan's news the very worst pos-
le Ben Porterson was headed westward
th another of the Pendleton sleuths.
Te porarily the stuff was off. The best
in lay in hiding out.

Fi days later, outfitted for two months
m re and guided by a grim, scowling,
an old man answering to the name of
Jo my Joe, the Twister was in the midst
th desert north of Barstow, bending a
co toward the oasis the man on the
ma ad described and which Dummy Joe
di ith a snort of scorn that he could find
by. As Joe understood it, this tenderfoot
wa til to prospect for land with a spring
it Joe himself wanted nothing better
mu ch a patron. After months in cities,
an searching for a stake, he was once
re punching it behind heavily packed
co in his own country and with his
ou secured. The partnership was mu-
ll satisfactory. And the silence be-
tw the two silent men was as heavy as
th nd of heat that lay on the land they
ve d.

At the end of a week they had penetrated
th ilderness to its deepest part. They
re ar to the northwest of their point of
en Dummy Joe waved a lean claw
st rd and indicated that they were
no equally distant from another line in
th rection where lay scattered outposts
m n. When the burglar saw the place
wa which his glum guide had been lead-
in he laughed quietly. It was what
he dreamed of finding. A squat line of
is either hand of a wide desert cañon—
ro y a valley—narrowed down to where
ra sverse outcropping of rock formed a
hidden reservoir for winter waters. These waters bubbled and boiled in a clear spring round which lush grass grew, and two or three green though wind-bent trees. Northward the fastnesses of desert mountains, forbidding and deadly, rose as a barrier to travel—southward was the desert over which a man could look until his eyes wearied and still not see the outermost rim. Dummy Joe made camp; drew a crude map of their location and its distant supply points on those two far-away railroad lines. The Twister folded the scrap of paper, put it inside his shirt and then said abruptly:

"I've got what I need now, Joe. Guess you'll be traveling."

The old desert rat started—stared.

"How's that?"

"We're through. You can have one burro and plenty of food to get you back. Then you'll be drifting."

"Hell I will!"

"The hell you will! I don't need you. How much do you want for your work?"

Dummy Joe tried to argue. His castles were falling about his ears. But he found the city man self-reliant, cold, ready with a black automatic gun that seemed hair-triggered. In the end, naming his price and receiving generous payment promptly, he repacked a burro and left—glowering but helpless—over the track they had come.

There began then for the fugitive burglar a life filled with a vast stillness such as he had never imagined—a life of soothing calm and monotony and yet of absorbing interest and occupation. In his clumsy, unlearned way he started to make a clearing round the water hole, to plant some seeds he had brought, to move rocks and form a sort of shelter—half cave, half tent. He gloried in his strength and resourcefulness. He was king of a domain so wide that his eyes ached to contemplate it. He was competent to care for himself, was independent of all mankind, was free from all necessity for watchfulness. It made him laugh aloud to think of the weary round the authorities were going, wherever men of his stripe usually secreted themselves, searching for him—endlessly searching and finding no trace. At times the desert awed him—frightened him a little. But he controlled himself, reasoning that this very awfulness and frightfulness of desolation and magnitude were his salvation—earnests of his permanent security. And so he outfaced fear. When the sun came up in the early morning, leaping out of the horizon and hurling its heat and white light against chill and velvety darkness, this city criminal would stand up naked, with arms outstretched, and feel new strength and a glory of freedom roused and sent pounding through his veins. In a week he was drunk with the desert.

A thin, straight ribbon of smoke, gray against a turquoise sky, brought the fugitive upstanding one morning. He watched it intently, all his senses acute. But when it had disappeared, melting in the fierce sunlight, he laughed at his own surprise and consternation. Nevertheless, he was conscious of it all day and when evening came he began looking off in the expectation of seeing it again. Instead he discovered at last a sort of film of dust—a smudge against the tawny color of the sand. It did not seem either to move or to rise—rather it flattened out and was presently lost. No smoke column rose in its place. After darkness fell he looked in vain for the vivid spark of a fire in the distance. Exhausted by a day of hard work at his water hole that he was gradually enlarging and lining with stones, he ate his hearty simple meal, tidied up and fell at once into a sound sleep, dreamless.

A glare of light wakened him. At first he could not remember where he was—seemed to feel four stone walls crowding in round him once more. Then he sat bolt upright, his hand clutching the stock of his gun.

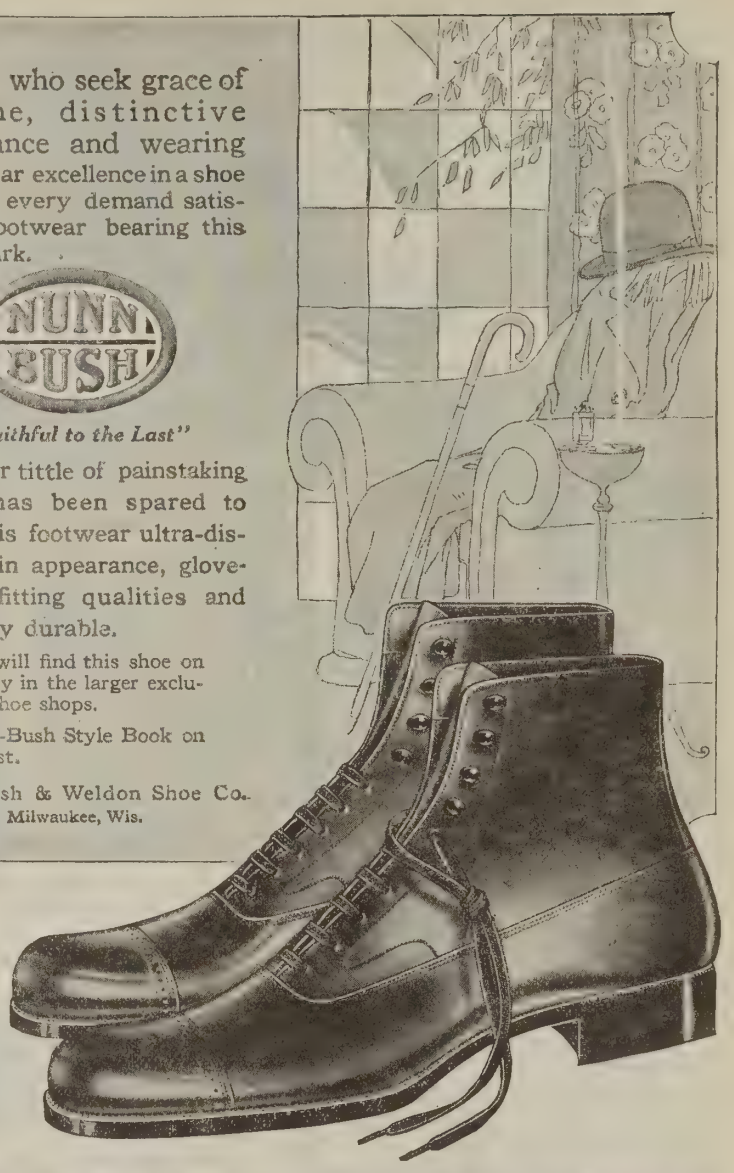
"Who's there?" he demanded harshly.

A slow voice—quiet and almost sorrowful—answered him:

"It's all right, neighbor. Just bedding down."

The fugitive leaned forward from the shelter above his head and then he saw his visitor. The latter had stirred up the fire and was bending over a roll of blankets to spread them out. A tall, gaunt horse was beyond—unsaddled and nosing greedily into grain thrown down on a sack. The city man became suddenly angry—with an unreasonable anger not unmixed with fear.

"What's the idea of horning in here, you?" he demanded. "I don't need company."



YOU who seek grace of line, distinctive appearance and wearing quality par excellence in a shoe will find every demand satisfied in footwear bearing this trade-mark.

NUNN BUSH

"Faithful to the Last"

No jot or tittle of painstaking effort has been spared to make this footwear ultra-distinctive in appearance, glove-like in fitting qualities and unusually durable.

You will find this shoe on display in the larger exclusive shoe shops.

Nunn-Bush Style Book on request.

MILLER OIL HEATER

BUY DIAMONDS DIRECT

FROM JASON WEILER & SONS,

Boston, Mass., one of America's leading diamond importers

For over 43 years the house of **Jason Weiler & Sons of Boston** has been one of the leading diamond importing concerns in America selling to jewelers. However, a large business is done **direct by mail** with customers at **importing prices! Here are several diamond offers—direct to you by mail**—which clearly demonstrates our position to name prices on diamonds that should surely interest any present or prospective diamond purchaser:

1 carat, $145.00
This genuine one carat diamond is of good brilliancy. Mounted in Tiffany style, 14k. solid gold setting. This ring usually sells for $200.00. Our price direct to you **$145**

Ladies' All Platinum Diamond Ring $248.00
Six blue white perfectly cut diamonds set on sides of the ring. Large center stone is fine blue white color. Ring is exquisitely hand-carved and pierced.

Men's Green Gold Diamond Ring $270.00
Fine blue white perfectly cut diamond, embedded in solid platinum. Ring is handsomely hand-carved Grecian design.

A few weights and prices of other diamond rings—

¼ carat . .	$31.00
⅜ carat . .	50.00
½ carat . .	73.00
1½ carats .	217.00
2 carats . .	530.00
3 carats . .	795.00

Money refunded if these diamonds can be purchased elsewhere at these prices.

Ladies' White Gold Diamond Ring $125.00
Perfectly cut blue white Diamond in center of richly carved and pierced Ring in the fine lace-work effect, in which are also embedded Four small perfectly cut Diamonds.

We refer you as to our reliability to any Bank in Boston

If desired rings will be sent to your Bank or any Express Co., with privilege of examination. Our diamond guarantee for full value for all time goes with every purchase.

WRITE TODAY FOR THIS ☞ VALUABLE CATALOG ON *HOW TO BUY DIAMONDS*

This book is beautifully illustrated. Tells how to judge, select and buy diamonds. Tells how they mine, cut and market diamonds. This book, showing weights, sizes and prices ($15.00 to $20,000.00) is considered an authority. A copy will be mailed to you FREE on receipt of your name and address.

"No, I supposed not," the newcomer answered in his sad voice. "Kind of guessed that. But I'm here."

"Well, you won't stay."

"No? Think I will. I won't need to keep you up."

The fugitive leaped to his feet, cold with rage.

"You're going on—and you're going on now!" he cried.

The other merely glanced at him without turning. The firelight fell dimly on a big homely countenance that seemed inexpressibly sorrowful.

"That's no way to act, man. You see, it kind of gives you away."

The burglar shifted the heavy gun at his side.

"I count five," he said distinctly, "and if you're still here then I plug you. Now can you understand that?"

"Yes, but that wouldn't help you any. So many people know I came this way and what I came for. I'm not going on—and you don't want to get tangled up for murder too."

There was no question in all this—it was a statement of fact. And what made it almost threatening was its melancholy. This stranger was like the voice of the land. The city man's rage ebbed.

As though against his will he blurted: "What did you come for?"

"For you."

"For me? But I don't know you. What's the game?"

"Oh, you'll know, all right! You see, Smith—if that's your name—the desert is big, but there aren't many people in it. It's just like you wore your right name on your face—out here."

There was something in this declaration that was as cold as the law. The fugitive looked round him—shivered slightly. Then seeing the utter indifference with which he—and his weapon—were accepted, he laughed sourly.

"You act as if you could get me—as if you thought you could."

The newcomer turned from his blankets.

"Why, I've got you! You can see that."

"I can't, though. Here." He stepped forward. "Let's have a look at your map!"

"My map?"

"Your ugly face. What's bothering you, anyhow—you're as sad as a funeral—why, it's the postmaster!"

"Yes. Mallard's my name. Two Buttes."

This time the burglar's laugh was amused—relieved.

"Oh, you're that bird! Seems kind of pitiful for you to get out here—up against me this way. Because you ain't going back, you know."

Bodie Mallard sighed, but there was a heavy smile on his face. He said nothing—went on with his bed-making.

Quick as legerdemain the burglar ran his hands over the narrow hips of the stooping man; continuing his search he embraced Mallard's waist lightly, then his chest. Mallard stood quietly.

"I don't carry them on me," he explained as though answering a question. "Never did carry a gun. It's in my pack with the other things."

"What other things?"

"Handcuffs and my star."

"Oh, you've got a star, have you?"

"Sort of one. Royal Detective Agency. Don't know as you ever heard of it. Kind of a fake outfit, I guess."

The fugitive burglar stepped back, completely nonplused. The child in this big visitor of his amused him, but back of the gawkiness and ineptness and innocence of this great boy there seemed something lurking—menacing. It was like the menace the Twister had felt once or twice from the desert. The desert, too, was ample, generous, unthreatening—and yet intangibly powerful, omniscient and implacable. He felt no fear for himself—knew that he could snuff out the life in that great frame in any instant—but he did feel a mysterious and indefinable nervousness and apprehension. It was quite evident that he was going to have to kill this blundering postmaster. The killing itself was nothing. But killing this overgrown child, who with gun packed in his outfit, with a tin star was playing at being a detective, seemed small game somehow—petty and—and really useless. That is, if it could be avoided. The Twister was baffled.

Bodie Mallard sat down on his spread blankets and began tugging at his shoe laces.

"I'll be turning in, I guess," he remarked as though in apology.

"All right," the burglar said helplessly. "You're tired out, eh?"

"Some. Been on your trail three weeks now. Kept me going pretty lively."

"What started you on my trail, as you call it?" the burglar inquired abruptly. "Some city bull, or something?"

"No. Sort of specialty of mine. Finger prints."

"Oh!"

"You left a cigarette at Big Bend and the Pendleton detectives found a finger print on it. I've got a picture of it in my things. And then the one I got from you on that wrong envelope—the day you bought stamps—ten twos. Maybe you don't remember."

"I don't know what you're talking about, of course."

"All right. It isn't worth arguing. You don't happen to know anybody in the Pendleton Chicago office, do you? A woman, I mean."

"What the devil are you driving at now?"

"Nothing. You wouldn't understand." Mallard went back to his shoe laces with a sigh. Then he asked unexpectedly: "What was it you did in Big Bend? I mean, what kind of a burglary was it?"

The Twister laughed.

"You seem to have that part of it settled—that I'm a burglar. If I was, wouldn't I be a bright guy to cough up? You're a queer fish!"

"I suppose so. But I'm going on the finger prints, remember. They are the same as a confession and a name and all that. And out here—on the desert—bluffing don't get you much. Ever think of that?"

"You're a queer fish, all right. We'll make a deal of some kind in the morning."

"We'll start back in the morning," Bodie Mallard answered calmly.

And he hitched about and was covered to his ears against the sharp bite of the desert air with a lugubrious "Good night."

The Twister did not sleep. He faced a problem new to him—in a country that suddenly oppressed him with its illimitable resources, its inscrutable wisdom of men, its transcendent mystery and its power over them and their affairs and their lives. He could kill the postmaster, or he could surrender to that solemn man and let himself be taken back—fettered with those toy handcuffs. But there was no other alternative. The thought that he had harbored for a moment, to buy off this melancholy Mallard, at once dissolved itself in its own essential absurdity. As well try to bribe the desert. The situation swept the burglar with hot rage and then cold fear. All his training and experience, all his desperation and his low valuation on human life were discounted here. The big child breathing deeply and regularly there in those blankets beyond the fire was not dangerous in himself but for what he represented. He was the force of the desert country—the strength, the patience, the implacability, the serene confidence. In such hands a mere armed man was pitiful—helpless. Suppose he killed the postmaster—what then? Flight or the erection of a barricade for defense here in this wilderness, with a two months' supply of food and a handful of cartridges! Because it was true—what Mallard had said. Many knew that the postmaster had come out here seeking a fugitive. He started with a sudden angry thought. Doubtless Dummy Joe had pointed the road. If Mallard did not go back soon there would be a search. And if Mallard had found him so easily—and there was Dummy Joe to guide others! That was where he had made his mistake—in thinking that in the desert a man would be safe! The place for the city criminal was in the city.

It dawned on him. And a plan began to form slowly in his mind.

In the morning, almost without words, the two started back toward Barstow, driving the pack burros before them, and—on Mallard's insistence—taking turns at riding the tall, gaunt, slow-footed horse.

VII

TO USE her own expression, Lucia Galloway was a very busy young thing. The Pendleton offices had been topsy-turvy for a month and things were getting worse. It all came of the mysterious disappearance, apparently off the very face of the earth, of a little rat of a burglar known to the police as the Twister. Not only was the concentration on this search making loads of work—especially for the correspondence department—but the irascibility of old Jerome Pendleton, the chief, over reau's complete failure had commu itself down the line until nerve fray-edged. For Lucia there had bee mentary relief that morning whe Porterson, the infallible, came in fre the Pacific Coast, reporting all scent and all trails lost. Ben was in the office now—in there for a very b hour, Lucia concluded. Her type smudging the page, and Lucia sna herself, pulling a lock of hair angril her eyes. But that hurt. She ca glimpse of herself in the mirror tu her desk top and laughed with a g

"I thought I didn't have any n she exclaimed, putting herself int porary good humor. And a messen entered. She signed for his telegra slit the envelope. Then read:

"Pendleton Detective Bureau, Chico rive Sante Fé two o'clock with m robbed Big Bend bank. I may have this guy if he tries any more fool Caught him sending telegrams. T trying not to muss him up before him, so please meet train and take him. BODIE MALLA

Lucia Galloway leaped out of he overturning it and squealing so shril two inner doors opened simultan From one issued the chief and a re detective named Ben Porterson; fr other came S. S. S. Nairn, with h hair much tousled and his eyes blo

"What the—what the ——" Per spluttered angrily.

Ben Porterson guffawed, glad of cuse for mirth.

"A mouse!" he cried with "Climb on a chair, Lucia!"

"Mouse!" There was infinite sc Porterson in Lucia's voice. "You'll Look at this! The Twister! Bodi lard! Two o'clock on the Santa Fé! so! I knew it! Oh, you big boob!"

She had passed the telegram to Pendleton and was now teetering down in front of Porterson, her ha her hips and her pumps shuffling lig the floor.

"He wrote me from San Bernardi he was on the trail. That was ten da And I didn't say anything. But you t he was a humpbacked hick! You t so! You—you ——"

Jerome Pendleton's eyes widened extended the message toward Nairn terson crowded in and read over the shoulder. The chief of the burea slack-jawed with amazement.

"Well, I'm damned!" he said slow

"Do you suppose it's correct?" asked.

Porterson snorted.

"Correct? Crazy! A chalk-heade try postmaster—this Mallard! St us! That rube!"

"You're just jealous!" Lucia Ga cried, wheeling on him angrily. true—I know it is! I've been telling a year that Mallard ——"

"Wait a minute!" Jerome Pendle terrupted. "Who is this man M What's this chatter all about? I heard of him before."

"No, you haven't, chief," Lucia re "He wrote in here asking for a job. I postmaster in a little town calle Buttes. It's on the desert. I—I lo up on a map. It's way out at the jur off place."

"I don't care about that," Pen snapped. "Where does he get in on t Bend case?"

Ben Porterson answered lamely: wrote in—said he was a correspon school detective—and asked for in tion about crooks that might come hi I took him for a rube. He is a rube. all I know about him."

"No, it isn't, Ben Porterson!" cried. "You thought you were funn you strung him along. What you wan do was to send him a lot of circulars criminals that had been dead or in th tentiary for years, but I threw them wastebasket. I don't care, either."

"Somebody will be fired in abou other minute," Jerome Pendleton r "How does this lad get in on the Tw case? That's what I want to know."

Lucia colored, but came up bravely

"I kept out a copy of that finger you found in Big Bend and I sent Mallard."

"Oh, so that's where the lost copy Hum-m-m! Go on, Lucia."

(Concluded on Page 153)

(Concluded from Page 150)

"hat's all—only look what's hap-
n!"
"m looking." Pendleton studied the
le am, smiling. "I guess you'd better
t own there at two, Nairn—and you
g take Porterson with you. If he can't
d crook he may be able to protect him
ie some humpbacked hick brings him
. may have to hurt this guy if he tries
y iore foolishness,' the boy says. Prob-
ly ucia's gentleman from the jumping-
ace has had his hands full with the
ier. But if he's got that burglar Mr.
illard can have anything in the shop!
gs all there is to that!"
Nrn went out, followed by Porterson,
ey scoffing. Pendleton himself was
o to close his door. Lucia raised her
ik
" ind if I go to the depot with them,
ie " she asked, coloring.
" ood Lord, no, child!" the big detective
ieshouted. "It's your case. Go on and
a up on it. Go anywhere you please."
A l he closed his door.

A a minute or two before two o'clock a
w ful automobile drew up to the curb
: ide street which the baggage rooms
t big station faced and three young
rn caps alighted. A fourth remained
tl machine, keeping his engine purring.
ehree went into the station by way of
:orn Street and mingled with the
ig crowds. Almost at once they saw
n'orterson and S. S. S. Nairn, whom it
s heir business to know even though
eyhemselves were unknown to the de-
t es.
" ho's the skirt with 'em, Slick?" one of
e uths asked another under his breath.
" on't know. She won't bother none.
tlm damn dicks wasn't here ——"
" ou notice they are here. We got to
vfaster—that's all. The Twister's luck
vas breaks good, Dorgan says. We'll
. Shut your yap now!"
" es, and move on up!" the third put
Here's the rattler!"
Itwas the train for a fact. The three
g forward. One left them and dis-
p red in the direction of the baggage
m. The two who remained worked up
tithey were pressing in on either side
t two detectives. Dorgan would be
t train. His part was to create confu-
noutside the gates—when the moment
r d. They were ready.
Lcia Galloway was tiptoeing as the
ii stopped—straining to see. A word
n Porterson to Nairn conveyed to her
e ct that the party of two, which they
r awaiting, had left the car. She fol-
w their eyes—saw a tall, stooping,
ai faced man with a set of melancholy
a ng him. He was speaking to some
o er man by his side, but Lucia could
t e his companion in the crowd. They
v d slowly down toward the exit.
a igh a momentary gap then she caught
g hof the prisoner—a small, tired-looking
a n a rather worn suit of rough clothes
d ith a cheap cloth cap on the back of
s lad. Even as she looked the little man
d nly whirled about and raised his
n . He was handcuffed, but from some
m e he had procured a short heavy bar,
d nis he clutched desperately. That bar
m up, flashed down—struck the tall
a heavily and caused him to falter in his
r . Lucia screamed out.
Ilitantly there was commotion—shouts,
n ision, commands, running. The two
t tives just before her started forward,
t they stumbled and fell against each other, pressed in and down by two excited young men in caps who plunged up to see. One of the detectives recovered and struck out with an oath, and someone fell back. But in the second thus gained one youth was through the gates, shouting vociferously and drawing part of the incoming crowd toward himself. At the same time a passenger beyond there caught at the tall sunburned man who had been hit and pinioned his arms, yelling something unintelligible. Meantime the handcuffed man had broken asunder the links that held the two steel bracelets together and was running through the crowd round the end of the train and toward the baggage rooms, where a side door was being slowly opened from within. Lucia watched that door, fascinated. When it swung wider she could see another open door beyond—and through that the street and a big automobile. Lucia started that way.

The whole scene was confused to her. She knew that something had gone wrong; that the Twister was escaping. But the thing had happened so suddenly! She cried "Stop him! Stop thief!" without knowing what she was doing.

Then she saw the big man who had been hit with the bar fling out his arms, send spinning the man who checked him and run with great strides toward that side door. The Twister dodged through before him and an effort was made to close the barrier. But the tall man hit it with his shoulder and it went crashing back with a splintering noise. He plunged through. As he did so a revolver barked—once. Lucia gasped. In a breath she had reached an inner side door and was leaping over trunks and baggage—was out on the street.

The little man with his broken-linked handcuffs was leaping for the running board of the automobile with a companion steadying him. The machine started with a violent jerk. But the man in the wide hat who had been struck in the train shed went catapulting after them. He flung himself on them as they tumbled into the tonneau. He was like an avalanche. He smothered them.

One of the fleeing pair fell off into the gutter. Another shot came—very loud and sudden. But the pursuing giant only shook his head. He leaped back from the machine, dangling in his arms a fighting little prisoner from whose wrists broken handcuffs depended. Policemen appeared suddenly—then Nairn and Porterson. Porterson was dragging a white-lipped youth with a low-pulled cap. Nairn ran to the curb and jerked straight the boy who had fallen there and who lay as if stunned. Two officers were on the running board of that fleeing machine—it was being forced in toward an opposite curb.

Lucia ran toward the big man and his armful of prisoner. The former was gazing down, with a slow smile on his homely face, at those broken handcuffs and chuckling a little. She heard him say: "Tin, most likely. Well ——"

Then she caught his arm.

"You're hurt, Mr. Mallard. You're all blood!"

He looked down at her, his homely face, melancholy and solemn, changing ever so slightly and his smile spreading.

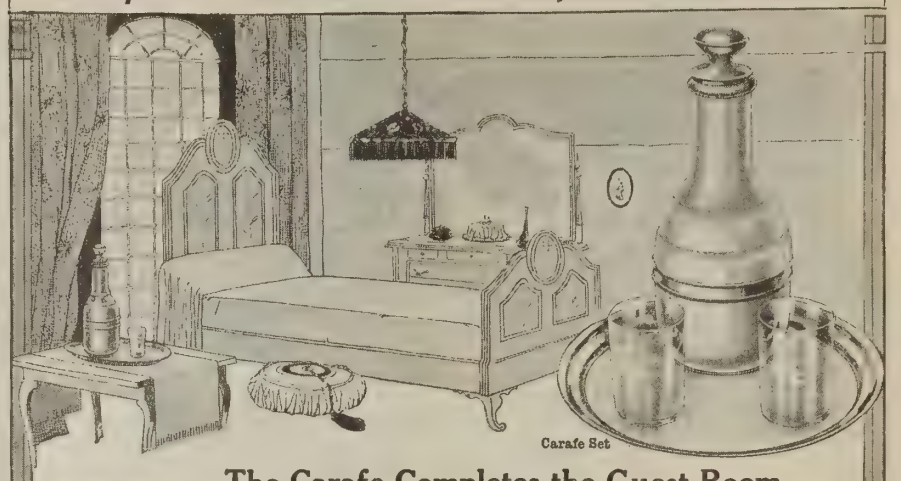
"Who are you?" he demanded slowly.

"Look—you're all blood!" Lucia repeated. She wanted to shake him.

But he did not notice.

"It's nothing," he said. "Scratched—that's all. I guess I know you, don't I? You're L. G., aren't you? I don't know what makes me think so—but you are!"

Keeps Contents Cold for 72 Hours; Hot for 24 Hours



Carafe Set

The Carafe Completes the Guest Room

ICY-HOT

No bedroom is complete without an Icy-Hot Carafe. If the home is properly supplied with Icy-Hot Bottles, Jars, and Carafes, cold or hot drinks and food are ready when wanted without inconvenient preparation. Babies, invalids, old folks, guests—the whole family—need these sanitary, easily cleaned vacuum products.

Bottle No. 44

Protected Against Breakage

The glass bottle inside the metal case is so scientifically cushioned as to be practically unbreakable by jolts and jars.

Icy-Hot Lunch Kit

keeps lunch clean, fresh and moist while Icy-Hot Bottle in kit provides steaming hot tea or coffee, or fresh cold milk, lemonade, etc.

Ask your Dealer for Icy-Hots. Look for trade-mark Icy-Hot on bottom. Send now for our new catalog showing Icy-Hots from $2.25 up. If your dealer can't supply you, send direct to us giving your dealer's name.

Guaranteed Vacuum Products Made in America

1919 ATLAS WITH LATE WAR MAPS GIVEN

To the readers of *The Saturday Evening Post* who *take advantage of this offer* now made in connection with

Webster's New International

THE ONLY GRAND PRIZE

(Highest Award) given to dictionaries at the Panama-Pacific International Exposition was granted to Webster's New International and the Merriam Series for superiority of educational merit.

WORDS OF RECENT INTEREST

Anzac, ace, barrage, Bertha, blighty, Boche, Bolsheviki, camouflage, Lewis gun, Liberty bond, Sammy, soviet, tank, war bride. These are but a few of the thousands of late words—all clearly defined in this great work.

"THE SUPREME AUTHORITY" The *MERRIAM* WEBSTER

A Complete Reference Library in Dictionary Form—with nearly 3000 pages and type matter equivalent to a **15-Volume Encyclopedia**, all in a **single volume**, in Rich, Full Red Leather, or Library Buckram Bindings, can now be secured on the following remarkably easy terms:

THE ENTIRE WORK (WITH COMPLETE 1919 ATLAS)

DELIVERED *for* $1.00

and easy payments thereafter of only a few cents a week (in the U. S. and Canada) ON SUPERIOR INDIA PAPER.

REDUCED ABOUT ONE-HALF

In Thickness and Weight

"To have this work in the home is like sending the whole family to college"

India Paper Edition

Printed on thin, opaque, strong, superior India paper. This edition is only about one-half the thickness and weight of the regular edition. Size 12⅜ in. x 9¾ in. x 2¾ in. Weight 8⅜ lbs.

Regular Paper Edition

Printed on strong book paper of the highest quality. Size 12⅜ in. x 9¾ in. x 5½ in. Weight 15¼ lbs. Both editions are printed from the same plates and indexed.

Over 400,000 Vocabulary Terms, and in addition 12,000 Biographical Names, nearly 30,000 Geographical Subjects, besides thousands of other references. Nearly 3,000 Pages. Over 6,000 Illustrations. The only dictionary with the NEW DIVIDED PAGE, characterized as "A Stroke of Genius."

The ATLAS is the 1919 "New Reference Atlas of the World," containing nearly 200 pages, with 128 pages of maps beautifully printed in colors with marginal reference indexes, late Census Figures, Parcel-Post Guide, Late War Maps, etc., all handsomely bound in red cloth, size 10¼ x13⅝.

To those who mail this Coupon at once!

G. & C. MERRIAM CO., Springfield, Mass.
Home Office Dept. S
(Publishers of Genuine Webster Dictionaries for over 70 years.)

Please send me free of all obligation or expense a copy of "Dictionary Wrinkles" containing an amusing "Test in Pronunciation" (with key) entitled "The Americanization of Carver"; also "125 interesting Questions" with references to their answers, and striking "Facsimile Color-Plate" of the new bindings. Please include specimen pages of India and Regular paper with terms of your Saturday Evening Post Free Atlas offer on Webster's New International Dictionary.

FORTY YEARS OF A DIPLOMAT'S LIFE

(Continued from Page 25)

from personal experience and observation. It had been my good fortune shortly after having completed my studies at the Imperial Law School to be sent to the Caucasus as an attaché to the chief of the civil administration of Transcaucasia, where I spent half a year and had ample opportunity of gaining a reasoned insight into the condition of things in that outlying dominion of the empire.

Under the wise and enlightened rule of the viceroy, the Grand Duke Michael, youngest brother of the Emperor Alexander II, the country had attained the heyday of its prosperity. The hill tribes in the mountain region had all been subdued and pacified, and everywhere in this beautiful land, blessed by Nature with a fine climate, a fertile soil and inexhaustible mineral wealth, reigned law and order; and the perennially warring races—Georgians, Armenians and Tartars—were dwelling side by side in peace and amity, all of them proud of calling themselves Russians.

The viceroy, himself a liberal-minded prince, brought up like his brother, the emperor, under the tuition of one of the most distinguished writers who graced the golden age of our literature, had as a ruler the invaluable assistance of the chief of his civil administration, the Baron Nicolay, descendant of a family of the Alsatian nobility, a branch of which is still flourishing in France, who was in every respect a real statesman in the European sense. Both their names will be forever identified with the memory of the golden age of the Caucasus, now vanished, never to return, engulfed in the awful catastrophe of the Russian Empire, to the bringing about of which the deluded revolutionary sons of the Caucasus have contributed more than their share.

I wonder whether they realize now the whole meaning of the crime they have committed against their own country and people in helping to destroy the only power under whose shelter they had found and could ever hope to find prosperity and security from internecine war and such a fate, too awful to contemplate, as seems to be in store for the pitiable remnants of the unhappy Armenian people, abandoned by all the world to the tender mercies o hereditary enemies and oppressors.

What I have said above about the fits conferred on Transcaucasia by t pansion of Russia in that direction with equal force to our expansion in C Asia and the gradual absorption of th ous khanates whose populations un edly fared better under the sway Russian bureaucracy, whatever its and shortcomings, than they ever did the tyranny of their native rulers. F more, the expansion of the Russian to the east by the gradual absorption whole north of the Asiatic continent simply the creation of a civilized s what had been a gigantic waste merely as hunting ground to roving of savage aborigines.

It could not be gainsaid, I should that the only criterion of the justifiab of expansion as has been practiced times by powerful states at the expe weaker neighbors must necessarily degree of the benefit conferred on t sorbed territories and their popul As to the ways and means employed achievement of such expansion, a can say is that in this respect all exp nations are living in glass houses neighborhood of which indignant throwing is a practice hardly to be mended.

If now we come to examine fro point of view of international m the attempt on our part of expansion direction of Manchuria under the g pacific penetration by railroads, ban so on, as contemplated by Witte, w admit that—this expansion never been carried through to the end and fore not having shown results which have served as a criterion for the mination of the justifiableness of th tempts—no impartial verdict can be in this case and an *a priori* condem would be manifestly unjust.

There was, however, another and more important point of view from the whole matter had to be examine that was the point of view of the vi terests of Russia herself, independen

Primitive Method of Grinding Corn in Manchuria

(Continued from Page 154)

ght in which her contemplated ex- sh might have been regarded by the si world. In this respect several ques- ns necessarily presented themselves. st ould territorial expansion in the Far t rve any real interest of Russia and nd to any pressing need of the state? o , could the colossal expenditure in- e in the prosecution of our plan of ex- si in Manchuria be justified in the se e of infinitely more pressing needs a ing unsatisfied in Russia proper? r could the plan adopted—industrial mmercial penetration by means of rds, banks, and so on—really secure imate aim of such a policy; that is a the pacific conquest of Manchuria? r, whether we would be justified in ac- ri even the risk of war in the defence in all comers of the vast interests we quired and created in Manchuria; or hether we would be justified in sacri- g them for the sake of avoiding an e conflict with Japan.

The first of these questions I had treated atively in the memorandum I sub- i to the government in 1897 and an- r categorically in the negative. Since however, events had taken a turn c enders it necessary before approach- t examination of the remaining four s ns to revert to the origin of all our s n regard to Manchuria, which date i o the negotiations with Li Hung a at the time of the coronation festivi- i Moscow.

r of the concessions obtained from n on that occasion had been, as men- e in a preceding chapter, the permis- use in case of an emergency the port K o-Chau as a naval base for our fleet t Eastern waters. No one seemed to e tached any particular importance to a rangement, nor does it seem to have n ept secret. At any rate the Emperor l in was aware of it, and having con- e the plan of acquiring Kiao-Chau s as a naval station for his fleet and c pensation for the murder of some n missionaries in the interior of n is said to have asked in a casual way Emperor Nicholas, with whom he had in rview in Russian waters in the sum- 1897, whether he would be willing f go in his favor his priority of the t to the use of that port and suggested t e might acquire instead the use of t rthur, the latter port being in every t tuated more favorably than Kiao- a within easy reach by land from Rus- n ssessions.

Th Emperor Nicholas appears to have e his unreserved consent to this ar- g ment, and the new Minister of For- n ffairs, Count Mouravieff, seeing his n for consolidating his position by a l at diplomatic coup, undertook to l the matter with China. In this he s tirely successful, the result being the e ance at Port Arthur of our Pacific a on under the command of Admiral u ssoff for the purpose of wintering r with the consent of the Chinese Gov- m t. Then followed the conclusion at ri of a convention by which China s to Russia for a period of twenty-five r Port Arthur as a naval port and l e-wan as a port to be open to the com- r of the world, with the adjacent terri- y n the Peninsula of Liao-tong.

All his did not come about without some d iction with the British Government t subject of the future status of l e-wan, leading to *pourparlers* in the r s of which Count Mouravieff had oc- i to display his ignorance of the dif- n between an open port in the sense r ited to this expression in the Far st nd a free port, or porto franco, in the s of freedom from customs duties, e y he brought down upon himself the t unmerited reproach of intentional b-dealing.

In his matter of the projected acquisi- n Port Arthur the emperor had seen t all together and to consult some of m inisters, who, however, proved all p d to it, and among them principally e inister of Finance, Witte, and the n er of the Navy, Admiral Tirtoff, the n l impression being that it was an ad- n ous undertaking which could only d b serious complications with Japan. e ader will remember that in a preced- c apter I have shown, basing my asser- n h documentary evidence which was en n the possession of our foreign de- rt nt, that the Japanese Government el had seized this very opportunity of our acquisition of Port Arthur to show us how such dreaded complications could have been avoided, provided, of course, we had been willing to accept its perfectly fair and reasonable proposal.

However, the general opposition which the plan of the acquisition of Port Arthur had encountered on the part of all the heads of the most important departments of the government did not lay down their arms, as true patriotism would have demanded in the presence of the sovereign's decision and of the fact that this decision had actually been carried out. It took the form of a very lukewarm support of the policy, which by the exercise of the will of the sovereign, to whom alone in an absolute monarchy rightfully belonged the decision in such matters, had become the policy of the state and the nation and therefore could lay an indisputable claim to the unreserved support of those who approved it as well as of those who did not, this being the essential condition of its possible success.

The attitude of the dissenting ministers, aggravated later on by serious dissensions among themselves, sometimes leading to proceedings or abstentions bordering on underhand sabotage, not only constituted a grave embarrassment in the prosecution of the policy determined upon by the sovereign but also was the cause of the emperor's losing faith in his legitimate advisers and the regular organs of the government and ending by placing his trust in irresponsible outsiders whose backstairs influence and interference in the gravest affairs of state was bound to lead to the most disastrous consequences. For one thing, this deplorable state of affairs was perfectly well known and discounted by the Japanese Government and therefore rendered an entirely hopeless task the conduct of negotiations such as I was subsequently intrusted with.

One of the effects of the absence of unity of policy in the activity of our government departments, which made itself felt as soon as we had taken possession of Port Arthur, was the neglect of the naval department to provide at once for the urgently needed deepening of the western basin, in which there would have been ample space for the largest fleet, and for the cutting through of another channel, which would have prevented the bottling up of our fleet in a harbor with a unique and extremely narrow outlet to the open sea. The urgent necessity of such precautionary measures being taken was so self-evident that—as I was told on arrival in Japan—a Dutch firm of contractors and hydraulic engineers had at once come forward with an offer to undertake the needed works on very reasonable conditions of time and cost. Their proposal, however, had not been accepted and nothing further had been heard of the matter.

The explanation of this inactivity may have been that the naval authorities were reluctant to sanction any considerable expenditure for the improvement of a port the choice of which had not met with their approval, and that they were still clinging to the hope of some day being able to secure, after all, Masan-pho as a base for our fleet in Far Eastern waters. The result, however, of their inactivity proved to be one of the contributory causes of our defeat in the war with Japan.

I do not wish to comment adversely on their failure to have transferred our Baltic fleet to the Pacific before it was too late—a measure which if taken at the proper time might have prevented the outbreak of the war, as without the absolute command of the sea military operations on the continent could not have been attempted by Japan. Considerations of our general policy in connection with the state of affairs in Europe and with perhaps obligations undertaken by us in our treaty of alliance with France, of the contents of which I am ignorant, may have been standing in the way and rendered such transfer of the fleet possible only in case of extremity.

In approaching now the subject of the part Witte had played in the conception and direction of our policy in Manchuria, I am bound to say that though subsequently during the Portsmouth conferences we spent several weeks in daily intimate intercourse that particular subject was never discussed between us and that all I shall have to relate here is based merely on facts of common knowledge and such deductions as may logically be drawn therefrom.

Summer and its blossoms *all Winter in*

California

Here children laugh at play, and age lengthens its span.

Miles of flower-bordered, sun-lit boulevards. Upland slopes, covered with the green and gold of orange groves.

Luxurious resort hotels and rose-bowered bungalows.

All under the spell of a summer sea.

En route visit the National Parks, National Monuments, and other winter resorts. See Hawaii, too.

Please indicate the places you wish to see en route. "California for the Tourist," and other resort booklets, on request.

·UNITED·STATES·RAILROAD·ADMINISTRATION·

It stands to reason that his opposition to the projected acquisition of Port Arthur was inspired mainly by the purest motives of patriotic apprehension that this adventurous enterprise might lead to an armed conflict with Japan, which—he rightly thought—it was the prime duty of our policy to avoid by any means compatible with Russia's honor and dignity.

His was a constructive and creative mind. By his fostering care and powerful support he had succeeded in creating and developing industries which he intended should raise Russia from the condition of a merely agricultural state to a higher plane of economic development. He had succeeded in placing our monetary system and circulation on a solid gold basis. He had conceived and set in operation a grandiose plan of a pacific conquest of Manchuria by means of industrial and commercial penetration—railroads, banks, and so on—and he knew that the permanence of the success of his life work depended on the maintenance of peace.

What could have been more natural than that he should have looked askance at an enterprise which not only threatened most serious complications in our relations with a powerful neighboring state but also meant the intrusion of an extraneous element into a sphere he had theretofore monopolized as exclusively his own special sphere of interest and activity, where he reigned supreme with the aid of his railroad, his strongly financed Russo-Chinese bank—a hybrid politico-financial institution, which in reality was but a slightly disguised branch of the Russian treasury—and even his own army in the shape of so-called frontier guards, of which he was the commander in chief, in occupation, for its protection, of the strip of land leased to the Eastern Chinese Railroad?

The appearance on the stage of a naval commander in chief at Port Arthur invested with extensive powers and necessarily foreshadowing the advent of more or less considerable military forces required for the defense of the newly acquired, though formally only leased, territory—in other words, the advent of a rival power in a sphere theretofore exclusively his own—could hardly have been welcomed by the still apparently all-powerful Minister of Finance. Nevertheless, determined evidently to make the best of the newly created situation, he applied all his wonted energy to hastening the construction of the branch line from Harbin to Port Arthur and Ta-lien-wan, to the construction of extensive harbor works at the latter port—intended to be made one of the leading commercial ports of the Far East—to the erection of a very large number of model buildings of variegated architecture in the newly laid out, extensively planned town of Ta-lien-wan, or Port Dalny—which means far-away port—as it was renamed. In the midst of all this feverish activity events occurred that brought about a radical change in the situation, which could not but be most unwelcome to Witte, whose plans for the pacific conquest of Manchuria they rudely disturbed.

The so-called Boxer rising in China, the siege of the foreign legations in Peking, the sudden attack on Blagovestchensk on the Amur by Chinese regulars, who bombarded the town from the other side of the river, the massacre of several thousand Chinese inhabitants of that town, who by order of the panic-stricken commander of the small garrison were driven into the river, the subsequent invasion of Northern Manchuria by the troops of General Grodekoff, the governor general of the Amur Province, the further dispatch of large bodies of troops which overran Manchuria and practically achieved by force of arms the conquest of the whole vast region known by that name—all these events created a situation as embarrassing from the point of view of our international relations as it was threatening to the supremacy of Witte in Manchurian affairs, a supremacy which was henceforth bound to be gradually superseded by that of the military element represented on one side by the Minister of War in St. Petersburg, General Kuropatkin, and on the other side by Admiral Alexeieff, commander in chief of the naval as well as of the land forces in the Liaotung Peninsula and of the expeditionary

troops sent to Peking to assist in the raising of the siege of the legations.

In this way it came about that Witte found himself engaged in a kind of triangular duel with his rivals in which he had to contend sometimes against one, sometimes against the other, and occasionally against both of them. At the same time, though he had in the person of the new Minister of Foreign Affairs, Count Lamsdorff, a perfectly willing and devoted instrument, he was very far from being in a position to direct our foreign policy, as his substitute, Count Lamsdorff, possessed neither the ability nor the personal weight which could have enabled him to influence the decisions of the sovereign in the direction of his patron's wishes.

It might not be improper to introduce here a few remarks in defense of the memory of the late Admiral Alexeieff, who when I left Japan in 1900 was praised in the Far Eastern press as the "empire builder," later was dubbed the "notorious Alexeieff," accused of having brought on the war with Japan, made the scapegoat for all the disaster that overtook us in consequence, and who died in the beginning of 1917, if I am not mistaken, in one of the first weeks of the revolution, at Kislovodskai Caucasus, where he had gone for a

Contrary to the generally accep lief, he was an entirely self-mad born in the Crimea in a moderate to-do family of the local gentry an lieve, of Armenian extraction. Ha relations or protectors whatever great world of St. Petersburg, he o promotion exclusively to his own m early acquired reputation as one ablest and most promising officers navy. As such I had known him i in the early eighties, when he was mand of one of the vessels of our s on the Far Eastern station, and h since kept up friendly relations wi He was a man of great intelligen liberal and well-balanced mind, ar insight and sound judgment in affairs.

As far as I could judge, the praise bestowed upon him as an "empire b was not unmerited, or rather wou been fully merited by him if his c viceroy had not been cut short by t What I can vouch for is that he ha been and in fact never could ha occasion to be mixed up in court i of any kind, least of all with that n clique of lumber-concession adve whose nefarious proceedings on th River played such a conspicuous the development of events leadin the outbreak of the war.

In the Council of the Empire, of w was a life member, he had earn general sympathy and high esteem fellow members by the reserved di his bearing. He remained to the en fully loyal to the sovereign who had him, and though made the victim c kind of calumnious obloquy and ha his possession documentary evidenc entirely exonerated him from all bl never wrote or spoke a single wor own defense.

The great number of troops v thrown into Manchuria during the the Boxer rising—190,000 men, ac to what I was told later on, when in by our military agent—and who ha run the country down to the sea, cupation of Niu-chuang, rumors intended conclusion of a treaty by China was to concede to us the m ment of all custom houses in Man and so forth, did not fail to attra attention of those powers who were hensive of our intention of ultimat nexing the whole country and replac open door by Russian custom hous the application of the Russian high tective and almost prohibitive tariff exclusion of foreign trade.

Whether it was from a desire to diplomatic complications, or because was anxious to have as great a part sible of our regular army of occu removed from a country which he ered as his own special sphere of infl or because the War Department pr not to leave too large a number of under the command of Admiral Al I am unable to say. As a matter o however, the greater number of troops were quietly withdrawn—pa was told, even by sea—so that befo war broke out there were—accord the information that reached me i kio—no more than about 40,000 men regular army, not counting the garri

rt Arthur, besides Witte's frontier guards, ually present in Manchuria, scattered er an immense territory about double e size of France. Nevertheless and evi- ently as a result of some insistence by ina, backed by the powers to whom she d pledged herself to provide for the open- g to foreign trade of three places in anchuria—one of them being Mukden the very heart of the country—we cluded a convention with the Peking vernment by which we undertook to hdraw all our troops from Manchuria in ee installments, each step of evacuation be accomplished by a fixed date.

Whether or not this convention was cluded with the knowledge—or rather nivance—of the Minister of War I can- say. It stands to reason, vever, that no more fatal p could possibly have been en, unless we intended to ttle. And even in that case would have been most im- dent to have done so be- e having come to a definite angement with Japan, eguarding at least some of vast interests we had ac- red and created in Man- tria.

Such was the situation as found it when I arrived in Petersburg. It was per- ly plain to me that the anese Government—en- raged by the visible vacil- ons of our government, our voluntarily weakened itary position, disclosing a avering disposition as re- ds the defense of our in- ests, and by the vigorous pport with which the ited States and Great Brit- had joined them in back- up China in her endeavor regain her lost ground in nchuria—would not fail to empt by an energetically nducted diplomatic cam- gn to oust us not only from Kea but from Manchuria well.

s a matter of fact, we had ady been approached by Japanese Government a tentative proposal shadowing their ultimate ntion in this respect, as I to learn later when the stion of my reappoint- nt as Minister to Japan s been definitely settled. hort, our position had be- e one of extreme embar- ament due to the fact that had plunged into a far- hing forward policy in the East, totally oblivious he necessary corollary of er a very large display of e needed in order to sus- it against all comers or s of a friendly understand- with either Great Britain apan.

t this point it will be er to turn to the exam- ion of the remaining four of the five questions out- d above. The reader will ember that the first of e questions had already en answered by me cate- ally in the negative as back as in 1897. Subse- nt events, however, had ed this question from the ground of retical justifiableness to that of prac- ic desirability in view of altered circum- ces brought about mainly through our activities in Manchuria. It was con- ently from this point of view that I to regard the second question—namely, question whether the colossal expendi- incurred in the prosecution of our plan pansion in Manchuria could be justi- to the neglect of infinitely more press- needs which remained unsatisfied in ia proper. For instance, we had been ding hundreds of millions of our treas- funds in providing a foreign country railroads, whilst the most crying un- fied need of our own country was isely the glaring insufficiency of our ad mileage, not to mention the al- total absence of good country roads, eficiency which was most seriously hampering the economic development of our rural population—that is to say, of about eighty per cent of the Russian people. It stands to reason that such a waste of the people's treasure on helping to build up the prosperity of a foreign country would be unpardonable, unless indeed it had been intended as a means to pave the way for that country's ultimate annexation.

And that leads us directly to the consideration of the third question, whether the plan adopted—industrial and commercial penetration by means of railroads, banks, and so on—could really secure the ultimate aim of such a policy; that is to say, the pacific conquest—to use this convenient and popular slogan as a euphemistic circumlocution for annexation—of Manchuria. To this question only one answer could evidently be returned, and that a negative one. We had, as a matter of fact, achieved already the conquest of Manchuria, not indeed by pacific penetration but by the old reliable method of force of arms. It came about in this way: Chinese regular troops had attacked the open town of Blagovestchensk with artillery fire from the other side of the River Amur.

We might have claimed this to have been an unprovoked act of war on the part of China and replied to it by a formal declaration of war, or we might have sought satisfaction by means of diplomacy in the usual way. We did neither. Instead, General Grodekoff, the governor general of the Amur Province, invaded with his troops part of Northern Manchuria and proclaimed its annexation to Russia, so to speak, on his own hook. Further, we poured large numbers of troops into Manchuria, fighting the Chinese regulars wherever we met them, at the same time maintaining the fiction that we were hurrying to the friendly assistance of the Chinese Government in their struggle against the Boxers, and having overrun victoriously the whole country down to the sea we halted at Niu-chuang.

Thus was completed the military conquest of Manchuria. Now we might either have claimed its annexation by right of conquest, or have negotiated with the Chinese Government some such arrangement as that by which Great Britain secured and to this hour maintains her hold on Egypt—to the unquestionable benefit of that country and its people, be it said.

This time again we did neither the one nor the other. Instead, we concluded the above-mentioned convention for the evacuation of Manchuria in three installments at fixed dates, thereby disclosing a weakness and vacillation which could not but be extremely encouraging to our adversaries. At the same time we had thus contracted an obligation which in view of the threatening attitude of Japan and the exposed position of Port Arthur it was plainly impossible to fulfill, as indeed it actually never was, thereby gratuitously earning us the additional reproach of faithlessness and deceit. Still, a way had to be found to extricate us from the embarrassing muddle in which absence of a well-defined policy, dissensions among our leading bureaucrats and consequent vacillations in our political action had landed us.

This led naturally to the examination of the remaining two questions: Whether we would be justified in accepting even the risk of war in the defense against all comers of our newly acquired and created vast interests in Manchuria, or whether we would be justified in sacrificing them for the sake of avoiding an armed conflict with Japan. Neither alternative appeared to me to be acceptable, for the following reasons:

To begin with there could not possibly be any doubt in the mind of even the most superficial observer of Russian conditions that war with Japan would be not only most unpopular but would appear incomprehensible to the overwhelming majority of the masses of the people—that is to say, of the peasantry—for the simple reason that the very existence of such a country and its people could hardly have been known to them except in the vaguest way from mere hearsay. Nor could they be expected to understand why they should be called upon to fight an unknown enemy. The importance of this circumstance could not possibly be overrated, considering the influence it would necessarily have on the morale of the troops in a war with Japan.

I must observe, however, that what I have said here does not apply to the population of Siberia, which being geographically so much nearer to Japan could have an instinctive comprehension of the possible necessity of fighting a neighbor who might have made himself in some way troublesome. I would add in parenthesis that the Siberian troops in the ensuing war actually did show a morale distinctly superior to that of the reserve troops from Russia proper, with whom mainly the war was fought and lost.

Likewise the educated classes—the intelligentzia—were undoubtedly opposed to the idea of a war in the Far East; even the extreme jingoistic press organs, such as the Novoe Vremia, in all their bellicose bluster were probably thinking more of bluffing the Japanese than of preparing public opinion for actual warfare, not realizing all the while that with their pair of deuces they were up against an expert player discreetly smiling behind a full hand of aces.

As for our military authorities, they seemed to be exclusively preoccupied with the idea of the coming war with our western neighbors and were obviously not making any preparations whatever for a possible war with Japan, having even withdrawn the greater part of the troops we had thrown into Manchuria in the year of the Boxer rising and having apparently consented to the conclusion of the convention with China regarding the total evacuation of Manchuria. The naval department had indeed as far back as the year 1897 prepared a program of naval construction to match the program of the Japanese increase of naval armaments, the completion of which latter was scheduled for the beginning of the year 1904, but had not been able to secure from the Ministry of Finance the required appropriation of funds in full, it having been spread over a number of years considerably beyond the term fixed for the completion of the Japanese armaments, evidently in the expectation that the Tokio Government would prove unable financially to fulfill their program as originally laid out.

In this calculation, strangely enough, the fact seems to have been lost sight of that by guaranteeing the interest on the Chinese loan, the proceeds of which were to have been paid over to Japan as compensation for the retrocession of the Liao-tung Peninsula, we had ourselves facilitated the acquisition by the Japanese Government of the funds needed for the completion of their program. Moreover, another and most

Women Are the Judges
On Every Van Camp Soup

Men-Chefs in Paris
Perfected the basic recipes used in Van Camp's Soups

Culinary Experts
In the Van Camp kitchens then compare countless blends and methods

It is true that men created and perfected Van Camp's Soups.

But a woman—a domestic science expert—selects the best blend and adds the final touches.

And countless women—givers of fine dinners—have placed Van Camp's in the queen-place among soups.

All to Please Women

We bake beans to please men. But all our 18 Soups are made to please women connoisseurs.

They were first made by French chefs to please Parisian women. Then a chef from the Hotel Ritz in Paris brought us these prize French recipes.

In the Van Camp kitchens, scientific cooks perfected them—men with college training. They fixed standards for every material. They tested countless blends and methods to add new delights.

But a woman expert decided which was best. A woman added many final touches. And a woman watches, day by day, to keep Van Camp's the finest Soups created. Men do the work but women have the say.

New-Type Soups

The Van Camp methods have resulted in these new-type Soups. They result from infinite cost and care. Yet they cost no more than ordinary soups.

Get a few cans and compare them with the soups you know.

VAN CAMP'S Soups 18 Kinds

Other Van Camp Products Include

Pork and Beans Evaporated Milk Spaghetti Peanut Butter
Chili Con Carne Catsup Chili Sauce, etc.

serious consideration does not seem to have been taken into account at all—namely, the supreme importance of the presence on the spot and in time of a naval force of sufficient strength so as to render the transfer of a Japanese army to the Asiatic continent an enterprise too risky to be contemplated; in other words, so as to serve as the best preventive of a war between Russia and Japan.

That a great statesman such as Witte should have neglected—as he seemingly had—this most important consideration can only be explained by supposing that he was too strongly convinced of the possibility of preventing an outbreak of war with Japan by timely far-reaching concessions to have for a moment even admitted the probability of such an armed conflict and consequently the urgent necessity of military and naval preparations. Besides, we are not a seafaring nation, and a Russian statesman, remembering the fate of our fleets in the Crimean War, when our Black Sea fleet was sunk by ourselves in the roads of Sebastopol and our Baltic fleet never ventured out to sea beyond the shelter of the fortress of Kronstadt, may well be pardoned for not having very clear ideas as to the value of sea power and the way to use it.

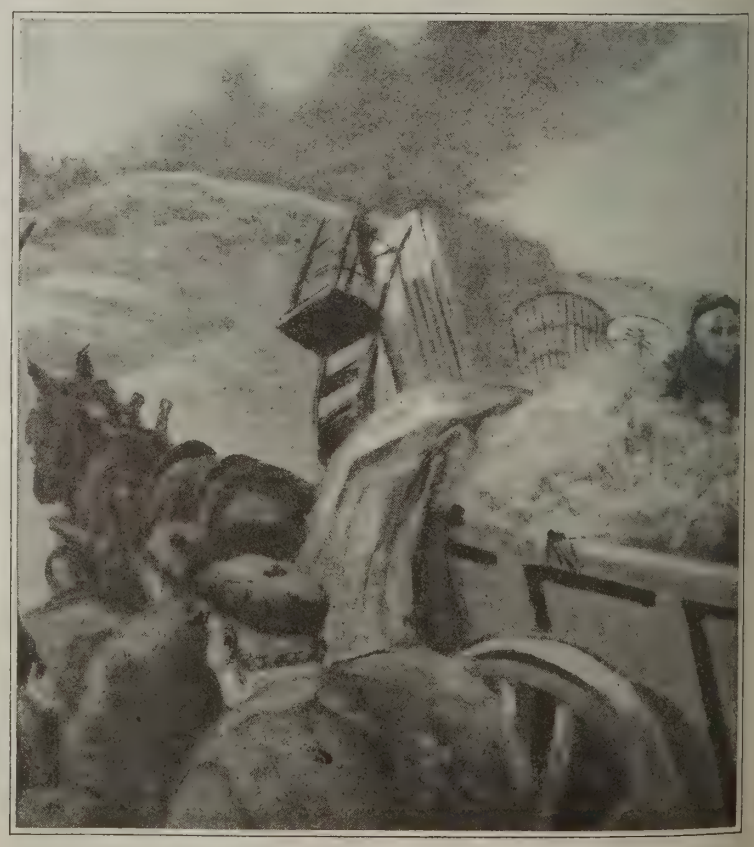
Under these conditions I felt sure that for us to face the risk of war would mean to court disaster. Nor could I contemplate with equanimity the remaining alternative—the sacrifice of our vast interests in Manchuria so recently at such enormous cost and such great risk acquired and created by us, for that would have been the ultimate outcome of an eventual surrender to Japanese exigencies, which would be sure to include the evacuation of Manchuria by our troops; in other words and among other things, the abandonment of Port Arthur in an exposed and utterly defenseless position. Moreover, an unconditional knocking under to Japanese pretensions would have dealt a fatal blow to our prestige; that is to say, to the only—albeit very unsubstantial and precarious—mainstay of our position in the Far East.

It was necessary therefore to find a compromise which would enable us to, so to speak, save our face and at the same time to safeguard at least our most important interests in Manchuria—the possession of Port Arthur and of the railroad we had built at such great cost to the Russian people. In order to reach such a compromise the necessity imposed itself to resign ourselves to certain sacrifices, which after all would be but the not-undeserved penalty we would have to pay for a p pursued with such reckless want of sight and such fateful inconsistency.

The task confronting us was the co iation of both parties—that is to sa Japan as well of the powers whose sup emboldened the Tokio Government to up an attitude decidedly adverse to the Manchurian question.

In regard to Japan we would hav satisfy unreservedly and to the fu extent her pretensions to exclusive dom tion in Korea, which could be don reverting to the offer the Japanese Go ment itself had made to us in M 1898, on the condition, of course, of that ernment's agreeing to leave us an equ unreservedly free hand in Manchuria. conciliation of the other two powers were giving Japan their support in the M churian question would necessarily den of us the renunciation of the plan of pacific conquest of Manchuria in the s of making of that vast country a do reserved for exclusive exploitation by own commerce and industry, and the reserved opening not only of three pl as provided by their convention with C but of the whole country, conditioned upon the establishment of fixed and tirely moderate customs duties—m moderate even than those levied in open ports of China under internati treaties. The interests of these po being mainly—though, of course, not clusively—commercial, these concess accompanied by a frank and open read to agree to any reasonable settlement o vexed question of jurisdiction, might sa them and cause them to desist from gi their support to Japanese pretensior support of which, besides, the Japa Government would no longer stan need if we had succeeded in reachi friendly understanding with them as lined above.

Such were the views I entertained and expressed succinctly in a short me randum presented to the Minister of For Affairs, Count Lamsdorff, at his req after my reappointment as Ministe Japan had taken place. This reapp ment had been facilitated by the fact Mr. Iswolsky had requested for fa reasons to be transferred to some pos Europe, and it had been possible to g his request by appointing him to the m coveted post of Copenhagen, which become vacant through the transfe Count Benckendorff to London as Am sador, vice M. de Staal, who had resig on account of his great age.



MYSTERIES OF MAKE-UP

(Continued from Page 16)

law the sketch of my costume and was isppointed to find that it was not the a suggestive of comedy, being of dull reish-gray cashmere with a gray and ule short loose jacket, a white nondegt head covering and a white kerchief eunder the chin in the fashion of early ys. Of this latter I was very glad, as it od help me in disguising my youthful irt, a difficult problem for a woman, of hh more anon.

Jiring rehearsals I had found that the dreature I was to portray was avaricious nstupid. The part consisted mostly of oi, with not much to sing, but they were oc holes and I anticipated a thoroughly oc time when once in costume. So I ught out just what I would do at reegals, in the bath-tub—always a good ning environment—and in bed at night. Th I got to my dressing room the morngf my first dress rehearsal I had only rry out my mental picture.

Jenter my dressing room in the cold a light of morning, allowing at least an n and a half for a first tryout of a charet make-up. My dresser has laid everyih ready on my table; in front of me is b mirror surrounded by electric bulbs. I Germany I used to hang sheets round ewalls of my dressing room so that a ays had a sharply defined silhouette ı very side of me. At the Metropolitan nhow I do not feel as frilly as I used to Jrope and the dirty green walls of the o I usually dress in absorb one's reflecon an unpleasant way.

Fashioning a False Nose

Vell, I sit me down, dressed in a loose w, one of several I have of varying eits. First I brush out my hair and a it in two braids, which I then twist t round my head, or I just swirl it osy round with no bumps and pin it ow. The idea is to keep the size of the a as nearly normal as possible and to stbute the increased bulk evenly. Then bid a strip of coarse muslin on the line he the hair grows—this to keep all short ai away from the face and to make a ulation to pin to.

Iake up my nongreasy cream and rub y ice with it. Over my knees lies a soft nish towel on which I wipe my fingers he I want to. Another soft towel rubs f y face. I use a nongreasy cream, beu I am wont to get warmed up in my or and a greasy cream induces perspiraor This is also induced by grease paints, is well to encourage it as little as ssble.

Nw is the time for my false nose tip. ywn nose is short and I regard it merely a nvenient foundation left there by a ny Providence. A peering old woman ou have a peering nose. So I make an qsitive sharp point, standing well out d little up in the air, for this is broad ndy and I need not be too squeamish oo my effects. I knead the putty first tween my fingers, shaping it a little into bad flat diamond with most of the it at the bottom. Then I see that re bit of grease is off my nose, if necesrwarming the inside of the nose putty ake it stick, and then clap it in place. piss it well on, a somewhat painful opatn; then I begin to shape it, dipping y ngers in cold cream so that it shall not ic to them. I elongate the point, watchg carefully in the glass—with an eye to e istance the spectator will be from me. Th it is awful enough I smooth it down tla tiny smear of cold cream, making a erict surface, and blend it into the skin a sides. I must leave the nostrils absote free, for we singers depend on breath, nd hat must never be hampered as the et might hamper his.

Nw I'm ready for my foundation. I kn thick stick of sallow yellow and mark n y cheeks, chin and forehead enough ai to cover the face. This I then rub elin and over the new nose, into the ps everywhere. A pale, hideous person owooks out at me from the mirror, which a t should be.

Ten I take my gray stick and rub an cti's paper stump on it. With this I make hg, or V-shaped line, under each eye, nd outline this in turn farther down the ne. I edge this with white on the upper de Now follow forehead wrinkles and ne isual crow's feet; also I rub a little gray well into the cheek below the cheek bone in a triangular shape to make the cheek appear sunken. A line from the inside corner of the eyes, where our black rings start when we are tired, I pull down almost to the corner of the mouth in an outward sweep. This I shade and blend with the finger tips until it is a shadow, not a line. I make gray beard marks on chin and lower cheeks; then I take up my scarlet with a flash of exultation, for it is to do deadly execution. I make the bags under the eyes scarlet, so that they look like the eyes of an old hound. The nose tip is also scarlet, gradually lessening up its length, and a little red smear under the nose looks like a perpetual cold. Now a huge, floppy red mouth. I use my wettest red for this and exaggerate it, as the stage is to be full of comedians, all with brilliant make-ups, and this red mouth will be my most deadly weapon in the things I have to do. Now the last touches—high-pointed, inquisitive eyebrows and white eyelashes. I bead them as I would with black, only I use melted white instead, for that gives an old peerie look of blinking imbecility.

This is all powdered with sallow yellow-white just before the eyelashes and red mouth are put on. I mark out several front teeth with black paint and my face is ready. My neck is covered so I don't have to make that into an old hag's, but I make one ear very red and pull it out from the straggling gray wig I wear.

The hands are then done with a little brush and some black stuff, or brown, that comes in a cake and has to be wet. I smear this between the fingers and down the backs of the hands to make them long and pointed; and dirty up the wrists a bit, and the knuckles.

A horrid-looking creature I certainly am, but quite simple and effective on the whole.

Often an actor will forget to paint behind his ears when wearing a short wig, and I know of nothing more disillusioning than that bit of unmatching pink. I always admire the two-a-day people who get into a full make-up twice a day with unflagging interest. It must be drudgery.

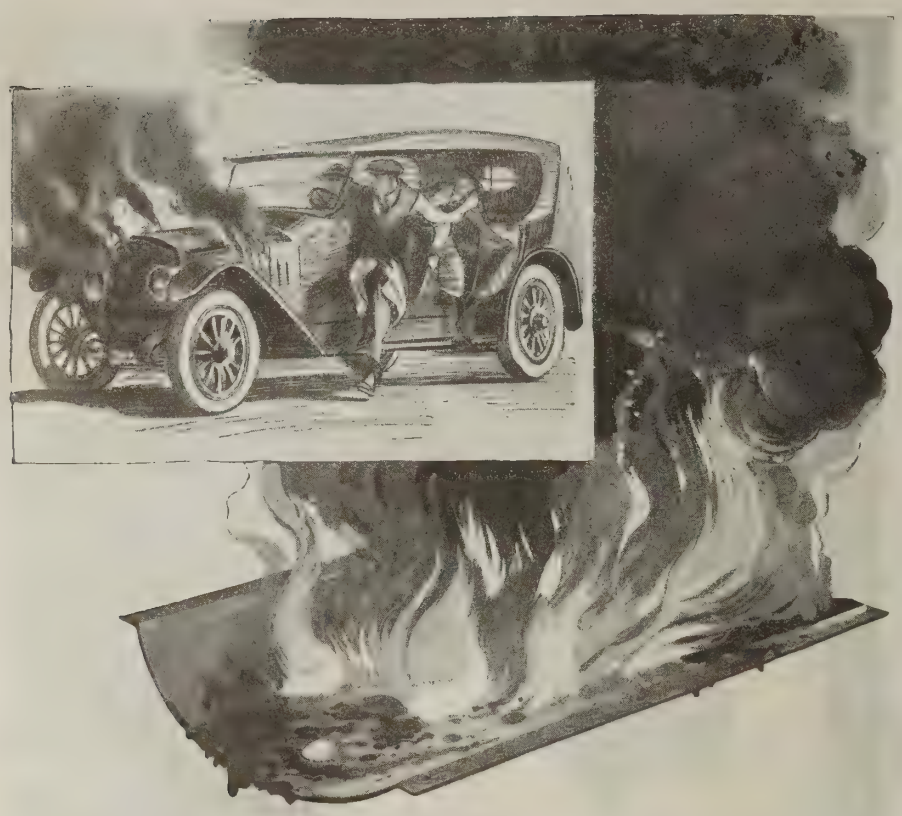
Rouge is vitally important of course, but nothing is more abused. So many chorus beauties take a dark raw-liver-colored red and make themselves impossible hard mouths with it, all pursed up in the middle. A lighter scarlet is much more vivid.

When Youth is Middle Age

The greatest dancers of the Russian ballet used a greenish pallor with not a suspicion of red cheeks in some of their rôles, and cut a vivid scarlet flash of a mouth across it, covering the lips with red well into the corners, creating at once an exotic and fascinating effect. Red on the upper eyelid sometimes adds great brilliancy to the eye, and the ear should be rouged delightfully—pale ears are so unattractive and old. For age it is best to use no rouge. I once attempted an apple-cheeked old peasant woman, but the stage manager mistook my effort for an attempt to be young and beautiful; I had to powder them out. Pale old lips are most important. In fact I always think pallor more naturally old than a mass of wrinkles. They at best are only gray or red-brown lines, but look at any old face—the outstanding feature of it is almost always its pallor.

Almost the most difficult make-up for a young woman to achieve is that of a woman of forty-five or forty-eight, before she is a mass of wrinkles. Just think how subtle and indefinable are the encroachments of age! How are you going to depict them? You must achieve a matron, perhaps handsome, with no haglike accents, comparatively easy to add, but still a possible mother of a girl of eighteen or twenty. Of course gray hair and mature dressing will aid you, but the face itself requires great skill. The nose may be made a trifle sharper by adding a white line down its length and slightly shading the sides; hollows between the eye socket and nose bridge may be made with gray, the curve of the cheek made to appear concave with a rightly placed shadow, and the throat a bit sunken in places. All these things help.

Never use black for your wrinkles. They are rarely if ever black. Just look at them in the next old face you meet. Some people turn the inside of the nostril into a fiery-red cavern. I could never see the sense of



This is the fat your car may fry in

GREASE, oil and gasoline, gathered in your grease pan—highly inflammable and inviting the first spark to burst into flames beneath your car.

For fires like this and also of electrical origin, the Johns-Manville Fire Extinguisher is particularly adapted because of its non-pumping feature.

Its stored air pressure discharge allows of aiming a steady non-pulsating stream at the most "hard to get at" fire, where elbow room for pumping is impossible. Or under easier conditions, it can be operated by pumping as with ordinary extinguishers.

Car and truck owners have been quick to appreciate this added factor of safety in their fire-fighting equipment.

The Johns-Manville Fire Extinguisher is examined, approved and labeled by the Underwriters' Laboratories, Inc., under the direction of the National Board of Fire Underwriters.

Equip your car or truck with the Johns-Manville Fire Extinguisher and save 15% on cost of fire insurance.

this. It is supposed to give an effect of transparency, I believe, and to lessen the effect of two black shoe buttons, but to me it always looks like a snorting horse.

The scarlet dab at the eye's point is also often overdone into a gob of paint. But it does give fire to the glance when well applied.

How I love the judicious use of blue for the eyelids! Dark for the brunette, light for the blonde, and almost turquoise for the redhead. Infinitely suggestive, languorous or naughty they may be, seductive and fascinating. Someone has said, "If you have only a half hour for make-up spend it on your eyes," and he comes very near being right, especially for the dramatic stage.

I wish we might do what the movie people do, and paint our double chins red, meaning a shadow, or fill up our wrinkles with yellow ocher and look blandly youthful as they do till the dreadful fourteen-foot stare comes.

The Germans had a deadly way of putting red straight across the nose, uniting the cheeks as it were. I fought against this for years, they always assuring me that it added untold beauties of expression.

I once had to take the place of a singer at short notice. She had always worn a false tip to her nose to make it retroussé. I was rather nervous and did not wish any hampering make-up, as I was doing the part wholly without rehearsal. So I replaced the false tip with a gray line drawn sharply across the nose just above the top of the nostrils and reddened the nose tip. The effect from the front was just what the first singer's false nose had made.

Men have a great advantage over the more deadly sex, because they have all sorts of queer hideous arrangements of hair that they may appear to let grow on different humps and hollows of their faces. Personally I have never thought the face just the right place for hair, but apparently others think differently, for "just look at the damned thing."

The range of beards and mustaches is infinite and all-disguising as to color, shape of the tufts, and length. You may turn a mild bleating weakling into a fierce brutal Cossack with no more trouble than cutting off some tightly braided crêpe, fuzzing it out and applying it with spirit gum.

If you are lean and would be fat for the perfect Falstaff you bring your plantation well round under the ears and spread it out as it would be spread if rolls of bulging fat lurked beneath it. From there on up to the eyes you may let your fancy run riot, and a pair of shaggy bunches over the eyes will complete the effect.

A Wandering Chin

Shakspere's bumpkin exclaims immediately—what beard shall he play his character in? He wants to hide behind something—it takes away self-consciousness. We've all seen it in daily life—sternly effective statesmen and monarchs who would probably look like ex-waiters if they were sheared.

It is almost impossible for a woman to disguise her throat. When I first went on the operatic stage my whole appearance was very youthful and I had to play the usual line of elderly women that falls to the possessor of a contralto voice. It was most difficult to overcome the young lines of my throat. My face and hair could be easily aged, but I had to invent a series of neckcloths, kerchiefs, shawls and coifs to make my head sink into my shoulders in the manner in which an elderly woman's usually does, particularly if she is of lowly origin, as most operatic elderlies are.

I've seen comedians who glued big silk chins on, who pasted pink cotton in fluffy mounds on their cheeks, smoothing the surface with some liquid preparation, none of these being particularly successful.

A tragedian in the first theater where I was engaged once played a somber rôle in a heavy putty false chin. Halfway through the chin began to melt off from sheer weight. Agony of mind on the part of the actor, vain turnings of his back to the audience and pressings of the false chin in place. Back to face his audience with one hand nonchalantly pressed to the tip of his chin while he recited his thundering lines. More wabbling of chin, one corner altogether loose, then a crack in the middle. Hasty disappearance of actor and miserable sneaky reappearance—chinless and in his right mind. I suspect he was cured and used more brains and less make-up in after life to get his effects.

I've heard tell of noses tied down with a thread of silk, which is carried round the head, noses tilted up with silken tied to the wig in front—all things might indulge in. One good blast o ful lungs and pop would go the all-im connecting link.

A past master in the art of chan parently the very build of his fra Richard Mansfield. He could g appearance of robust hearty yout did in Prince Carl, as easily as shriv age, as in his decrepit Baron Chevra his arms seemed to have shrunk u sleeves, his legs became stringy, a Ivan the Terrible he looked an en bag of bones. This is art in a very h and I don't pretend to know wha details went to make up the perfect

We all use these means in a greate degree, but here again the actor h at his command to aid him than actress. He may and—whisper—of have false calves to his legs, an times—whispering does no good no slip, right in meeting, and muscl from their bony surroundings at and alarming angles. Otherwise footmen may go very queer in the fore the evening is over.

In one German theater where I gaged we had a comedian with inor long legs. He seemed to be bifur least a foot farther up than the c male. The effect was wonderful in sibilities, and he used to twist his th round from the knees up without mo feet, in a solemn, inquisitive man was really funny. But alas! When to charm those toothpicks could disguised in all their length, and he he never hoped to be loved—no could love a man with such comic le

Make-Up of the Aborigin

I have a large fat stuffing that when I feel I ought to look comfort holstered, and mighty hot it ma This and several odd bits, such as frontal balconies and tummies, I ca as I will, but that embraces almost tire range of a woman's aids in this

It is all a fascinating game. E savages love it, and the aborigin untold shades of meaning in the monial war paints. Indians do things to their faces and bodies wi colorings, and savages of all kinds a or less given to this practice. G arrangements they achieve, startl bizarre, and all very solemn and meaning to the initiated.

I know of nothing more amusing think up a new costume and make work it all out. Too much attention be given the head. Even if your small one and you feel sure it swamped in the general line of the p ance, you can make your bit stand creating an original, historically a head silhouette. Your headdress seen from all angles and will undo be the most noticed part of your c if you spend time and thought on variety is infinite. One otherwise passed actress of our time makes th mistake of almost never wearing a her Shaksperean characters. She w own delightful hair, more or less acc dressed, but one misses the sharply tuated line of head carriage given different typical historical hair dr The variety is great and they all made becoming. Through the adep wigs the contour of the forehead changed and many traits of charac much psychology suggested. For in as Ortrud I wear my red flaming wig high on the forehead, leaving a broa surface exposed. Ortrud was a wo brains, a student of magic arts, and unsuccessful was no frivolous lowbro

When one is creating a new ch anything theatrical and stereotype be avoided. Typical ideas are bet carded if you have the wit to find son more subtle, and never forget th stage lighting may dwarf your mos esting effects.

The stageful of purple-visaged glers that greets me in the third Carmen, when the scene begins with blue light from the footlights, is o horrible than the flattened starin that are thrown into relief by the lighting, which is such a great fav stage managers for scenes of seducti oriental orgies.

But whatever they do to you, m is endlessly fascinating and one of th absorbing branches of theatrical stu

"YOU NEVER CAN TELL——"

(Continued from Page 43)

'Only the one in black and the girl in re'—which wasn't Rowena; she almost jumped. 'I only came,' he went on, 'be-ese friends of mine whom I'm visiting nsted on it. I kept her away, however, ong as I could,' he laughs. Her! Then adds in a serious kind of voice: 'I'm ll, very glad that I didn't miss coming rely!' His eyes were fixed passionately owena, and gee, she felt fluttery! 'Are e staying in town?' he goes on. 'I don't eve we've met.'

And all at once it dawned on her that e taken her for somebody—for a society of the same class as his own! Say, she ly does a flop right then and there at thought of it, until she recollected what al would it do her if he had, because he'd find her out afterward; and then—ol night! But oh, how handsome he s—slim and blue eyes and tall! Class? rles Vaughn wasn't in it with him. He ked like a king. Well, he murmurs some-ng about sitting down, and she went him in a kind of funeral joy and sat on on a tapestried sofa in a little alcove nd a pillar.

'Have we?' he asks when the music ped playing.

'Have we what?' she said, looking at with that gone feeling like when you've without a meal, only there was some-ng delicious about it too.

'Met?' he answered. 'I—if not I think ould be remedied.'

'A society girl! Well, Rowena thought night as well play it out, for one night way, like the fairy story you read where 're changed into princes and queens rn hour or so. Only the waking up d be kind of bad. She tried not to k of that.

'I must, I fear, remain a woman of ery, shrouded in the shadows of ro-ce, living only in the hearts of my cle,' she says to him, quoting the speech ueen Sophia when she bade farewell to oung American who asked her to leave e and country and fly with him.

'e looked kinda surprised. 'But—are opping in town?' he insists.

'Oh, yes,' she returns nonchalantly; 'I stopping.'

'Then isn't there somebody here who ntroduce us?' He starts up but she ed him. There was nobody but the obe mistress; and she wouldn't do.

'I came alone,' she answers in a low but ful tone. 'There is no one. I desire to in incognito. Even my servants I for-d to come with me. My father refuses ow me to go beyond the portals of the e gates. If he knew now he would kill

'e looks kinda funny at her, then smiles grand smile and says chummily: re a darling! But how long are you ' he asks.

'ifteen minutes,' answers Rowena ut thinking.

'e looks astonished.

' mean, I have an engagement that is important,' she adds hastily, 'in fifteen ites.'

'But to-morrow—you must let me see again?' he pleads thrillingly.

' was an awful struggle. But she ght of Charles Vaughn and what would ably follow when this rich man found he was nothing but a cigar-counter

' am going away to-morrow,' she re-haughtily, trying to think of some place.

'Where?' he asks quickly.

'urkey,' returns Rowena, remember-he place where the most popular co came from. 'I mean—Jersey,' rrects drowningly.

'ersey!' he exclaims eagerly. 'Then drive you over in my car!'

'owena put her hand to her throat. , only he wasn't rich or if she were rich ow beautiful life would be! She n't tell him the truth. She thought of aes Vaughn Allenton, Vincent's uncle, e tall one, his wife—and shuddered. ight as well play the thing out; she never see him again.

' am taking a trip to-morrow to some estates on the island,' he was saying. drive you ——'

'm so sorry,' she says firmly, 'but I ake the train. It's of course a special she adds elegantly. Train sounded mmon.

"'A special?' he repeats, astonished. 'What for?'

"'Why, I am taking over—a party that I've adopted from a poor family—and they're going to Jersey—for the air. They have trouble with their lungs,' she hurried on. 'So I engaged a special train in order that they wouldn't be too long on the road.'

"'How far are you going?' he asks.

"'Hoboken,' answers Rowena, being the only place she could think of with him looking at her.

"He smiles as though he couldn't help it, and she at him, then they both laugh at each other—and for a moment there were no crowds nor noise nor chattering women nor orchestras playing jazz; nothing but those two, him with his black hair and her red one, gazing at each other as though they'd found a gold mine that was going to clear up the national debt.

"And then, right over their heads, the chime of a clock penetrates into Rowena's ears and brought her out of her daze with a sickening thud.

"Eleven! She gave a jump. It had been ten-thirty when she'd left the dressing room. She was fifteen minutes late! She sprang up, her face white. Any minute a detective might come darting round the pillar hunting for her and the dress she'd borrowed, and it would be a terrible moment, to say the least. He has jumped up too, and asks her what on earth is the matter? She tells him to cover up, that she just remembered her engagement; and held out her hand, darting scary glances all the time for a cop.

"'Do tell me what's the matter,' he says tenderly, holding her hand longer than he'd ought to.

"'My duenna,' answers Rowena. 'She's after me.'

"'Your what?' he repeats, kinda puzzled. 'But I thought your servants did not ——'

"'I'll have to go,' interrupted Rowena, trying to get her hand away. 'It's eleven o'clock.'

"'But what does that matter?' he returns. 'Cinderella didn't leave until the clock struck twelve. That's who I believe you are.'

"'And you're the prince!' she exclaims, then gets red, remembering that the prince married the girl. He just smiles kind of heavenly and starts to speak. 'I must go,' she says hurriedly. 'Good-by!' and moves away from him.

"'You forgot to drop your slipper,' he says, coming after her. 'Please tell me where you are stopping!'

"'The Giltmore,' she gasps, meaning to say the Ritz. 'The Ritz,' she corrects quickly, feeling as bad at leaving him as though she was assisting in the funeral of her entire family.

"'I'll find you,' he says in a low tone, that she heard, however, above the moan of an orchestra that was just starting up Kiss Me Again.

"She runs round a corner out of sight and hurries for dear life down the corridor in the direction of the dressing room.

"'He'll find me in the kitchen where I'm going back to,' she thinks as she's apologizing to the old lady, who'd been having an awful stew. 'Cinderella!' she almost sobs. And then she remembers she told him about the Giltmore; but he'd never look for her at the cigar counter, that was certain. And she'd read plenty how criminals can hide right in New York and nobody be able to find them, so she feels better and thinks maybe she'll get away with it after all. Womanlike, however, she gets to feeling terrible at the thought of never seeing him again, and between the two she gets into her old duds and starts home with the sensations that king had when they told him to be up early because he was going to have his head cut off the following morning.

"Of all the luck, to fall in love with somebody she couldn't have! Why couldn't it 'a' been George Jennings, who was as steady as old Dobbin even if a little nearsighted and inclined to squint? If only he wasn't rich—but he was, there was no doubt of it. Once bitten, twice shy, as the saying goes, so Rowena trips into her house with a beautiful feeling of renunciation, and gets up the following morning a little white but perfectly resigned to the cruel exigencies of class and class.

"Busily engaged in polishing the glass cases of her counter and thinking how sad life is about ten o'clock that morning, she

Giving Grip to Power

That's how truck owners maintain haulage schedules

Giant Grip Traction Equipment ends "mudhole lay-ups" and "time out for bad roads." It keeps trucks operating in all weather and on all roads.

Clamps are permanently attached to the wheels, and the chains and hooks carried in the tool-box until needed. At a stretch of "bad going" the driver hooks on the chains with his bare hands. No tools—no jacking up the wheels. Two minutes and the truck is on its way.

For Solid or Pneumatic Tires

There is a size to fit any truck or type of wheel. Clamps are drop-forged and rust-proofed. Will outlast the truck. Chains are heat-treated to give the greatest strength and wear.

Write for our booklet, "Truck-Time Insurance."

DEALERS: **With the Giant Grip line you have fewer models to handle. One style fits over 400 makes of truck. Write to us at once for full particulars of our dealer proposition. Dept. 26.**

Established 1863 **CHALLONER COMPANY** **Oshkosh, Wis.**

LIFT *the* DOT TRADE MARK *Fasteners*

CURTAINS that open with the doors are held flat and secure with Lift-the-Dot Fasteners. The front door curtain is carried around in front of the windshield frame and fastened there also with Lift-the-Dots.

This is the month when your car should be fitted with new curtains and top, before Winter rains and snow come. Be sure to specify the use of Lift-the-Dot Fasteners throughout.

The Lift-the-Dot is a self-locking fastener. When closed—the socket snapped on the post—it is securely locked on three sides and cannot be unfastened by accident or force of wind, yet it is opened quickly and easily by lifting on the fourth side—the side with the dot.

Because of its beauty, compactness and sturdy construction, the Lift-the-Dot Fastener is more and more generally used on luggage, sporting goods, heavy clothing and many articles of canvas and leather.

Manufacturers of goods requiring fasteners should know the entire Dot Line of Fasteners, of which Lift-the-Dot is but one type.

A descriptive catalogue will be mailed on request.

glances without interest in man or beast toward the elevator at a fairly good-looking man dressed in those English tweeds who alights leisurely, followed by a young man in automobile outfit, and Rowena thinks idly that a chauffeur's uniform certainly does look good on a fellow with a figure—when she nearly falls through the glass. It was the prince of the night before! He was a chauffeur.

"Well, she stares at him with her mouth open as he trails along after Tweeds, as handsome as ever, and you can imagine the world went round! All his talk of the night before about driving her in his car and his estates was phony. His friends he was talking about must 'a' been the tweeds—his car was the boss'—his evening clothes he'd borrowed perhaps, just like she had. Of all the ——" And then a wave of joy floods over her as she realizes she's got her wish—he wasn't rich after all!

"The tweeds and him stop a little way across from her and Tweeds says: 'Better stock up the car with smokes,' and waves him over to the cigar counter; and with that he turns and starts straight for Rowena.

"He looks at her, and she begins to laugh, and then as he sees who it is he stands staring at her with his mouth open, and the funniest expression comes over his face.

"'Cinderella,' he says with a kind of gasp, as though he was talking to himself.

"'Prince,' she answers with a gurgle. 'Discovered! Ain't it the limit?' Somehow it was an awful relief not to have to put on, and be able to talk good old United States. She leans over the counter and puts her hand right over his and squeezes it and says, laughing: 'And I thought you was a millionaire!' He laughs, kinda sheepish. 'Honest, I think you look a lot nicer in those clothes than in the soup-and-fish last night,' she goes on chummily, to show him she don't care about him not being what he tried to pretend. 'Who you working for?'

"'A dub of a rich family stopping here,' he says slowly, still gazing at her.

"'You were fooling too,' she giggles. 'Wasn't it a scream?'

"'I thought you were a society girl,' he answers. Rowena laughs; then he begins to laugh too. 'You did talk rather flowery, but I—I've been looking all over the register for you.'

"'Gee, I'm glad you're not a society man,' says Rowena.

"'And I'm glad you're not too,' he says, terrible earnest. 'I'm—glad!'

"'What? A society man?' she answers, feeling heavenly. Then he smiles—and gee, ain't he handsome! All at once Rowena thinks how terrible it would have been if Charles Vaughn's proposal had been on the level.

"'But that gown you wore?' he asks, leaning over the counter. 'It was beautiful.'

"'I was one of the models, silly,' answers Rowena, who couldn't keep from giggling. 'It was loaned to me for fifteen minutes. Where did you cabbage on to that dress suit?'

"'It was loaned to me,' he grins. 'My boss.' Then they both stand, smiling.

"'The Bible says it's harder for a rich man to get into heaven than a camel to pass through a noodle,' says Rowena solemnly as a tall gray-haired man and his wife walked by, attended by bags and bowing attachés.

"He laughs, still keeping his eyes on Rowena.

"'They're blue,' he says forcibly.

"'What? Camels?' queries Rowena, knowing full well what he meant.

"'Your eyes. They're—wonderful!'

"'I don't like rich men,' continues Rowena.

"'Lots of them are regular fellow answers. 'My boss is.'

"'I was thinking of Charles Vaug lenton,' explains Rowena. 'He's V Armour's uncle.'

"'Yes. I've heard though that they get along very well. What about Alle he asks kinda stifflike, letting go her

"'Nothing,' she replies quickly, won't get jealous. 'Only I know whe going when he dies, and if his nephew thing like him, well ——'

"And then somehow she felt she go on and tell him all about her fo tempt and everything, though she exactly know why, unless love ma feel kind of ashamed about it.

"'I went to dinner with him,' s plains. 'You see things are pretty ba the folks—you've no idea how hard are on shoes—and I'm the only o enough to help,' she goes on, find easier when he was holding her ha sympathetic. 'So I thought I'd ha marry a rich man to save the family breaks out laughing. 'But I guess I bother,' she finishes. 'It's an awfu on the disposition.'

"'Princess,' he murmurs tenderly, are we going to have our dinner?'

"'When can you get off?' she r happily.

"'The boss is going out of town the evening to myself.'

"'All right. Five-thirty—out in f she whispers, and he hurries out Tweeds, who Rowena sees is sittin yellow racing car at the curb. He g and drives off.

"That evening sitting in one of th geous jazz palaces that line Broadwa have a grand meal, him in his eve clothes, that look like a million d Then they see a show from the balco then home via the street car and R is perfectly and deliriously happy.

"The next day he's round a lot, t he keeps away from the counter so's be conspicuous, and Rowena take home that night and introduces him family. And say—Rowena's mothe always stood up for George Jennings a liking to him right off and says h nicer manners than any rich man b he's sincere and he'll make a far bett band than any millionaire, and R gets red and he laughs. His own m and father being dead he takes right her ma, who is a swell woman or she wo 'a' been brought up the way she had right then he proposes and begs Row marry him right off 'cause his boss i ing for Palm Beach and he wants t Rowena along. Of course that tak family's breath away, but Rowen sents—you couldn't stop her—and th a quiet wedding at home, and he sur swell in a classy new suit his boss gi for the occasion.

"And off they started on their h moon."

Pansy Imogene paused and toyed a mindedly with the crumbs of th vanished éclairs. The restaurant cro thinning out. At her plate lay her punched at the figure 25. Her frie impatiently waiting.

"Is that all?" she asked as Pansy gene did not continue. Pansy In nodded. "Gee whiz!" exclaimed her scornfully. "Anybody can marry a feur! If she'd got a rich man and h her family, that would 'a' been som to it—but a chauffeur!"

"He wasn't," replied Pansy In with a smile. "Only she didn't know after the wedding and they'd starte private car for their honeymoon. married Vincent Armour!"

t rening the captain of the Fust Serv-
B talion came to his quarters. The
dct was teaching the goat Lily not to
stes.
B7, build me a fire and build it quick."
c otain was cold.
C'n, yessuh."
hWildcat began tying a complicated
t Lily's picket rope, which he hoped
ntndure until his return. The captain
anpening his mail. In the first enve-
v s a bill from a Cameraux tailor. In
s ond was a request from a brother
ein Paris for the loan of twelve hun-
l fincs. In the third was a notification
n 'ashington stating that the captain
b n overpaid seventy-three dollars on
a pay voucher, and that refund must
mae at once.
Il his finance bounced back and hit the
dc. "Are you going to build that fire
re kill you or afterward?" The cap-
r ved easily toward the Wildcat.
ilband the confining knot were sud-
y bandoned. "Cap'n, they ain't no
nkwood heah; nothing 'ceptin' kin-
s. Ise gwine fo' some right now."
hWildcat trotted out of the door, one
on for fire wood and the other looking
t dismal future that promised to be
unss the cap'n's mood changed mighty
le Under a carwheel over on the spur
k ading to the tank of liquid soap the
dc saw a nice piece of two by four.
D wood. Sho' burn noble."
le icked the two by four from where
as vedged under the car wheel. A car

length ahead he saw another similar block, which he retrieved. Three car lengths ahead he saw a third noble-looking block between a car wheel and its supporting rail.

"Th'ee is plenty fo' a start." He kicked the third block loose and started toward the office with it. He had gone only a little way when a noise behind him attracted his attention. He turned and discovered that the string of cars from under which he had removed the blocks was in motion.

"Sho' kin roll easy downhill."

He looked about him. "Mebbe dese heah blocks wuz all de brakes ol' cars had. Mebbe Ise instigated a ruckus. Hope nobody seed me an' tells cap'n."

The Wildcat's second mebbe suffered a rapid transition into reality. Folks had seen him. Hornet railroaders began pouring toward the racing train. Each man ran a little way and then stood fixed, gazing breathlessly at the rattling tornado headed for the soap tank a mile downhill.

The chill rain of evening began to fall as the Wildcat lighted the captain's fire. In the captain's fourth envelope was an invitation from the artillery gang at Sougé to sit the following night in a five-card enterprise wherein a gentleman bets that something he doesn't hold outranks the hand some other gentleman is inflicted with.

' Soon as you get that fire built head for Cameraux on the six-twenty and get my new uniform from Mesuret's tailor shop on Rue Augustine. Here's your pass."

"Cap'n, yessuh."

The Wildcat breathed heavy. Here delivered into his hands was a quick evasion of the heavy swinging club with which Lady Luck was about to caress him. From the distance there came a terrific crash. For five seconds there followed a heavy sustained roar. The captain suddenly abandoned his correspondence.

"What the hell broke loose?"

"'Spec' ol' sergeant's blowed up some stumps, mebbe, cap'n, suh. Mebbe ol' thundeh sto'm bust. Mebbe ——"

The captain had joined in the race toward the site of the soap tank, where twelve heavy freight cars had plowed through a shrieking fabric of splintering timber. When he arrived near the scene the sloping terrain from the tank site to the river was ten feet deep in a dancing foam created by the impact of myriad raindrops mingling with the liquid soap. On the choppy surface of the Rivende there presently rose enough soapsuds to last a million Mondays.

An hour later the Wildcat leading the goat Lily entered Cameraux via the stone bridge that spans the Rivende. The smothery soapsuds blanket was rolling up the river and spreading into the city streets.

An automobile ran into a great bank of foam and died. The driver and his passenger raced on foot from out of the menace of the translucent mass of bubbles.

The Wildcat observing the bubble phenomenon headed for the tailor shop, pausing only to absorb a few slugs of cognac. The goat Lily, which he led beside him, gave a plaintive bleat.

"Is you a mascot you'd betteh begin workin' at it heavy, Lily. Us needs to ketch up now wif Lady Luck—else wese gwine neveh to see 'at woman again."

The Wildcat noticed that the twinkling lights that lined the Intendence revealed a stream of humanity headed in one direction only—away from the river.

At the door of the tailor shop an M. P. hailed the Wildcat. "Boy, halt! What are you doing in town this time of night?"

The Wildcat's heart got up on a trapeze and tried a tail spin. Here then was the hand of the law, closely followed by the law's foot, clad in the new and heavy marching shoe.

"Me? Nuthin'. I never knowed dat ol' railroad train'd run away 'count of a li'l stick o' wood bein' ——"

The M. P. decided the Wildcat had missed his train. "Old bunk! Lemme see your pass."

The Wildcat explored his raiment and finally produced the slip of paper which spelled temporary freedom.

"Ise gwine back—me an' Lily—soon as I 'cumulates cap'n's unifohm f'm ol' tailor man in de sto' right heah."

"Beat it—and lay off the coonyak." The M. P. read the pass and gave the Wildcat a little parting advice.

The Wildcat entered the tailor shop five minutes before closing time. A harelipped

DON'T believe that Duracord is the best portable electric cord made until you prove it to yourself. Send for samples of Duracord and the ordinary braided cord. Test them any way you please. Show them to your electrician or superintendent. You will readily see the superiority of Duracord.

For any portable electric cord that is subjected to hard service and abuse, mechanical strength is absolutely essential. You get this strength in Duracord—because it has a special covering of fine quality cotton *woven* like fire hose—*not braided*. This weave gives the covering a wear resisting quality without which the best of copper and insulation are wasted.

Ask your electrical jobber about Duracord or write us.

50TH ANNIVERSARY—FIFTY YEARS OF PROGRESS

HEINZ Fig Pudding

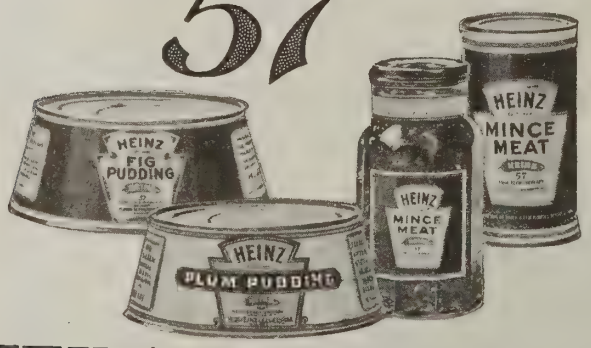
Heinz Fig Pudding, one of the newest members of the 57 family, became famous almost over night. The demand has grown so rapidly that it is difficult to keep apace with it.

Especially appropriate to this time of year, it is pudding that is seasonable always.

Light, wholesome and easy to digest, it has the delicious taste of figs which makes it a most delectable dessert.

Don't fail to use with it the special sauce—recipe for which comes on every can—as it was originated particularly for Heinz Fig Pudding.

Some of the 57



HEINZ Plum Pudding

It is real plum pudding made of the best ingredients and prepared in the Heinz kitchens. An older member of the 57—tried and true—its quality never varies.

HEINZ Mince Meat

The choicest materials are cooked and seasoned and blended in the most delicious manner for the Great American Dessert—Mince Pie. In glass jars and tins.

All Heinz goods sold in Canada are packed in Canada

young clerk struggling with a .22-caliber English vocabulary discovered the motive of the Wildcat's visit and returned presently with a bundle in which an officer's uniform was neatly folded.

"Ett is charged, M'sieur Nagur. *Voilà! 'Revoir.*"

The Wildcat plus the goat Lily entered the night.

"Tell us 'Wallah in de riveh'! Never seed white boys sassy like dese heah French guys is."

The Wildcat started toward the river on his journey home. And there quite suddenly he and Lily reversed the line of march and headed up the street. Approaching them in gentle jumps of a hundred feet was a wall of soap bubbles fifty feet high.

"Neveh seed such heavy drams o' coonyak. Us sho' is had plenty, an' then some! Lily, you mascot, see kin yo' laigs rattle a gallop. Git out o' town. Le's go!"

At the distant crescent avenue that lay about the city the Wildcat paused long enough to take on four more slugs of cognac. The paper covering the uniform, soggy in the rain, burst when it lay between the Wildcat's feet. He picked it up and started out with it. Through the opening in the package the brilliant scarlet of French cavalry breeches assaulted the Wildcat's eyes.

"Lily, us travels! Ise stahted seein' red! Sho' is a bad sign!"

In the obscurity of the great trees that lined the boulevard the Wildcat completed his investigation of the package.

"Eyes tol' me true. Ol' pants sho' is red. Dese is clo's like French cap'ns weahs."

From down the street there came the measured beat of the nine-o'clock guard relief.

"Cap'n kill me sho', does I go back. Ol' M. P. jail me does he ketch me in Cam'raux. Me—I fades out."

The Wildcat emerged from the total eclipse of a wide-spreading tree five minutes later wearing the French uniform, but instead of the bars of a captain's rank there shone the polished stars of a general of the line. On the Wildcat's head was a cap encircled by two wreaths of golden leaves.

"Lily, you follow me. I sho' aims not to lead you—me totin' all dis rank."

In the rays of a street lamp the Wildcat strutted past his first M. P. That young soldier focused his eyes carefully on the glittering insignia and then rendered a strenuous salute.

"First nigger general I ever saw. These Frenchies sure beat hell."

The next M. P. the Wildcat passed came from another part of the United States. He did the best he could to express his sentiments in profane language, neither appropriate nor available for present use, and then swung his club in the darkness at an imaginary adversary.

Meanwhile the Rivende River, the Wildcat's captain and the general were each and severally foaming at the mouth.

General Bore, a party to a session of refined military poker, played his game wisely during the early part of the evening, and then fully alcoholized played not too well. At midnight the members of the party one by one departed through the rain in their respective official conveyances. The general lingered for a final drink at the urgent invitation of his host.

Meanwhile the general's car was lying abandoned in a bank of soap bubbles beside a residence near the river in which the general's chaffeur had discovered a practically flawless feminine pearl.

"No carburetor on earth can mix soapsuds and gas so it'll explode, *mon chérie.* T'ell with th' old bird. Leave him walk home—or fly if his boots is too tight. Drag out another one of them vang blinks whilst I tells you about life in Niagara Falls."

An hour after midnight the general sailed grandly down the street through the rain. Over the shoal places in the sidewalk he backed and filled to steerage way, came about smartly, luffed from the menace of a tree and tacked to the smooth residential cliffs that lined his channel. Softly at times he sang: "Shine on, you dog-gone silv'ry—hic! G'wan, baby. Shine some f'r the love of—hic! Never saw a darker night. Rain on, gentle rainlets. How dry I yam—how driyam—likell I yam. I should—hic!—worry!"

A soldier of the A. E. F. approached. The general stiffened during the second of proximity and snapped a return to the M. P.'s salute.

"Not a globe busted and the dynamo goin' a million—lit up like a dimun' palace."

The M. P., who had laid off of v duration, did some heavy thinkin walked his post.

Pulsing through the night toward base for subs the wireless from Berli an order to the Herr Lieutenant vo "To the Rivende approaches from A a convoy of twelve food ships, six a tion cargoes, four with troops. Pr six sub chasers. Sink the food ship

Eight minutes after the radio had the commander's hands four unders were driving through a choppy sea the mouth of the Rivende. At five in the morning the four submari decks awash, off the mouth of the I Steaming toward their certain fate knot hulls of the great convoy through the phosphorescent sea.

Meanwhile the Wildcat in his general's uniform, closely convoyed the goat, prowled through the my darkness of Cameraux. Approach over a heavy rolling sea, carrying a cargo, sailed the general.

And the enlarging blanket of so bles fifty feet deep bulged from i haustible source in gentle but ir hundred-foot leaps.

Looming out of the night the gen the Wildcat. First the red breeches visible, then the coat with its heav nia. In the wake of the figure Gene saw a ghostly goat. The Wildca blended so perfectly with the shado he appeared to be headless.

General Bore fearing for an inst he was beginning to see things w sured by the gleaming whites of th cat's eyes.

The Wildcat saw the bedraggled and laughed. His mouth opening i crescent gave him the look of a ma throat had been cut considerably m the technic of throat-cutting d General Bore still doubting his ow saluted the French uniform.

"Bon sore, mon général."

"So is mine," the Wildcat replie antly. "Mah bones sho' is sore—likely. Mah feet is wuss though."

General Bore looked puzzled. parley English?" he asked. He kick ways at the goat Lily, to assure hi the mascot's reality. His booted foo heavily on Lily's ribs.

"Lay off dat goat, man! Lily ai nuthin' to you."

Lily, however, made a sudden res She backed off twenty feet and accu a few million slugs of momentu landed on General Bore south of h torial Sam Browne belt. Gener landed somewhere in France. The grabbed the rope which trailed f mascot's collar and together they into the gulf of night.

signated for immediate return to
ited States. An order issued reliev-
Wildcat's captain from field duty.
It directed him to report to the embarkation officer at Grubert for assignment to the first available steamer sailing for New York.

Deloused, if any, and delighted, the captain languished for long days in the embarkation camp.

"What the hell does 'available steamer' mean?" he demanded one day.

A disappointed and overworked field clerk in the transport office voiced an insubordinate but perfectly accurate reply: "It means that West Point has the right of way. You'll leave here about two months from now. You're a reserve officer, aren't you?"

It was then that the Wildcat's captain began to feel alone and to miss the faithful black hands of his Wildcat servant.

At two o'clock in the afternoon of a perfectly hot day six regiments of the A. E. F. stood at rigid attention while General Bore and a dozen other officers inspected them. Facing the troops and a hundred feet distant from their front ranks there stood massed on the parade ground at Cantatrice a disorganized mob of soldiers and spectators. Prominent in this mob was a group of brunet prisoners from the Casino de Cuivre detailed that morning for the duty of policing the parade ground previous to the inspection and the subsequent ceremony.

The Wildcat standing well in the center of the group of fellow offenders held tightly to the collar of Lily the mascot.

"Turn Lily loose, Wil'cat, and see kin he graze hisself some grass."

"You-all want some grass, Lily?"

The Wildcat released the mascot. For a little while Lily stood still, nibbling delicately at the turf, and then she essayed a short march to the right and left.

An order barked suddenly from the center of the troop formation across the parade ground. Marching importantly down the line followed by a group of perspiring officers came General Bore and three other officers of equal rank. The group halted in the center of the line of troops.

Another series of orders exploded in the heated air and the soldiers did various things with their rifles.

"Attention!"

Some general was speaking. General Bore protruded his chest to receive the medal that testified to his distinguished services.

Everybody stood still when General Bore began to speak.

"I am not unaware," he began—"I am not unaware of the fact that the great honor conferred upon me is but a compliment to every man in my command."

Everybody stood still. Everybody, that is, except Lily. In the mascot's brain there suddenly awakened memories of a midnight kick! Oh, hated voice!

"You have served well and nobly through the long days of this great struggle, and every man of you from the quartermaster corps to the engineers can be proud of the fact. May I not ——"

"Bla-a," Lily interrupted.

"May I not then, as one of the ——"

Lily shifting to the high covered the hundred feet in three seconds. She aimed at the speaker. She followed through and kept her head down, and she made a par.

General Bore absorbed the shock of the mascot's weight, but the point of impact was low—too low to add luster to an overpolished military dignity. The general in revolving touched lightly on the back of his neck. His spurs described concentric silver arcs in the sunlight. The somersault accomplished, he landed heavily on his feet like a Swiss Sweater in the second act. His pose was that of a giraffe gazing deeply into a desert spring.

Presently all except the younger soldiers regained enough self-control to come back to an approximate attention.

Lily escaping cleverly into the crowd became the center of a mob of admiring protectors.

"Rally roun' Lily! Screen dat goat! Save 'at mascot! Rally roun' 'at fo'-legged TNT!"

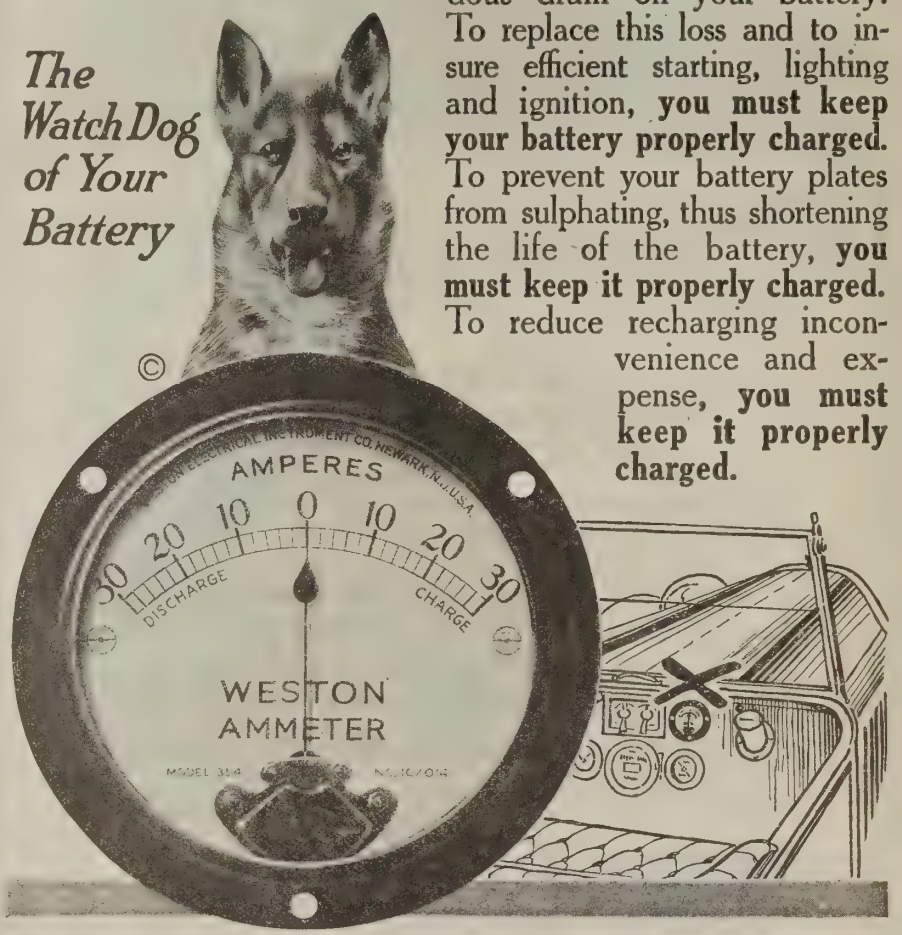
An elaborate investigation covering the origin of the bubble screen fixed the responsibility upon Vitus Marsden, colored, Fust Service Battalion, A. E. F.

Attached to the original report of the Department of Criminal Investigation was a memorandum from which General Bore discovered that the hero languished for the

The Heavy Toll Taken by Self-Starting

Self-starting usually requires electrical current at the rate of from 150 to 300 amperes for around 10 seconds—a tremendous drain on your battery. To replace this loss and to insure efficient starting, lighting and ignition, **you must keep your battery properly charged.** To prevent your battery plates from sulphating, thus shortening the life of the battery, **you must keep it properly charged.** To reduce recharging inconvenience and expense, **you must keep it properly charged.**

The Watch Dog of Your Battery



The Weston is the Ammeter **with a pedigree**—the dependable Ammeter—that always keeps you reliably posted as to the correct ampere-rate of charge or discharge. Its installation is a splendid investment at insignificant cost—its guidance a constant comfort.

Your guarantee of satisfactory service outlasting your car is in the reputation for dependability of all Weston Electrical Indicating Instruments. For over 30 years their accuracy and absolute supremacy have never been questioned by experts in any part of the World.

A Weston Ammeter may be obtained from any Accessory Dealer or will be installed at any Garage or Battery Service Station. Send for descriptive leaflet showing special types and finishes, giving model of your car.

moment in confinement, paying an indeterminate penalty of servitude for an undiscovered offense.

The general summoned his adjutant.

"Have this man brought in here—Vitus Marsden, private, colored, First Service Battalion. They've got him at the Casino."

The Wildcat left Lily in charge of his fellow prisoners and made his way under guard to the general's headquarters, via the automobile patrol driven by a speed king by the name of Roberts. "'At boy sho' kin ramble!"

"Delivering a prisoner under personal orders of the general," the guard explained to the orderly in the outer office. "Vitus Marsden, the Military Wildcat, they call him."

Presently, alone with the commanding general of the base, the Wildcat began his story:

"'Ceptin' foh galloping a couple o' risk cubes wheneveh Ah craves action Ah's neveh busted no reg'lations fah as Ah knows." The Wildcat could look honest, by straining himself.

"Crapshooter—that's it, is it?"

"Gin'ral, some calls it that."

"Do you ever lose?"

"Gin'ral, hahdly eveh! Boy in Memphis showed me once neveh to ace, dooce o' twelve; ginally Ah 'cumulates strong."

The general gazed out of his window over the roof of a vegetable market for a minute. Then suddenly he gave the Wildcat a match.

"I sentence you to a hundred years in jail," the general said. "Each one of these five cigarettes is ten years—and each one of these ten matches is five years. Your stake is one five-year match. Shoot out your sentence."

"Gin'ral, yessuh. Is you'all got de bones?"

The general, it appeared, had no dice in his personal equipment. That fact established the Wildcat felt free in the emergency to fish his pet gallopers out of his left shoe.

"They neveh talks 'less they's on a blanket. Neveh talks on wood."

The general moved back from the center of the rug spread on the floor of his office. "Go to it."

"Whuf! Shoots five yeahs! Fade me, white boy—lemme see, dast you!"

The general kneeling opposite the Wildcat threw a match upon the rug. "Shoot," he said.

"Cubeb babies, whang! Seven, saw de bars! Shoots ten yeahs!"

"Roll 'em." The general threw a cigarette beside the two matches on the rug.

"Jail breakers, speak to me. Ah, nines. Slow death! Five an' fo' Ah craves. Ramble, you rattlin' risks! Whuf! Dey reads six-tray—'at's nine. Ah lets it lay. Shoots twenty yeahs; Mil'tary Wil'cat neveh lost yit. Fade me, white boy, is you crazy?"

"I'm crazy," the general announced. "Let 'm ramble." He threw two cigarettes upon the rug.

"Bam! An' Ah th'ows a six-ace th'oo de ol' jail do'! Shoots it all."

"Forty years," the general said. He ered the bet. "Shoot 'em."

"Fo'ty yeahs!"

The Wildcat hesitated. He picke the dice and rolled them gently betwe perspiring palms.

"Gen'ral, whah at is dis yeah jail?"

"We'll pick a good jail—roll 'em."

"Lady Luck, at yo' feet. Lily—sta me! Li'l' jail bustehs, ramble! W An' Ah reads six-five; 'leven, fr' Lawd. Gin'ral, how much does Ah you yit?"

"Twenty years."

"Shoots twenty yeahs—whuf! Ar th'ows five. Ace an a fo' opens de Whah at, ace-fo', is you? Th'ee an' t Lady Luck. Wham! An' Ah fives!" Wildcat got to his feet. "Gin'ral, sul Ah go now?"

The general sat back in his chair ar garded the Wildcat without answering rang for his adjutant.

"Discharge and immediate transp tion to point of enlistment for this ma has it coming to him."

The general reached into the top d of his desk and brought out a thick pa of bank notes.

"This is a navy prize awarded yo saving a convoy with that soap-b screen. Good work—good-by—good l

Twenty minutes later en route to a barkation camp from the Casino de C the Wildcat, his arm about the ne Lily, the mascot, began to realize the few details of the good luck which had denly hit him.

"Lily, how come?"

Three days later the Wildcat le against the rail of a steamship about t for the U. S. A. Beside him chewing he on an expensive cigar stood Lily. Wildcat's vacant eyes ceased drea suddenly and focused upon a familiar f ascending the stage plank.

"Cap'n, suh," he called, "how com ketched dis boat?"

The Wildcat's former captain look him.

"Boy, what in hell are you doin' h

"Cap'n, Ah's headed home. Lemme yo' coat an' 'at valise. Ah's a casual.'

"So am I," the captain said. Mer of long weeks of waiting in the emb tion camp suddenly settled upon him turned to the Wildcat.

"Come down here and fix up my s room."

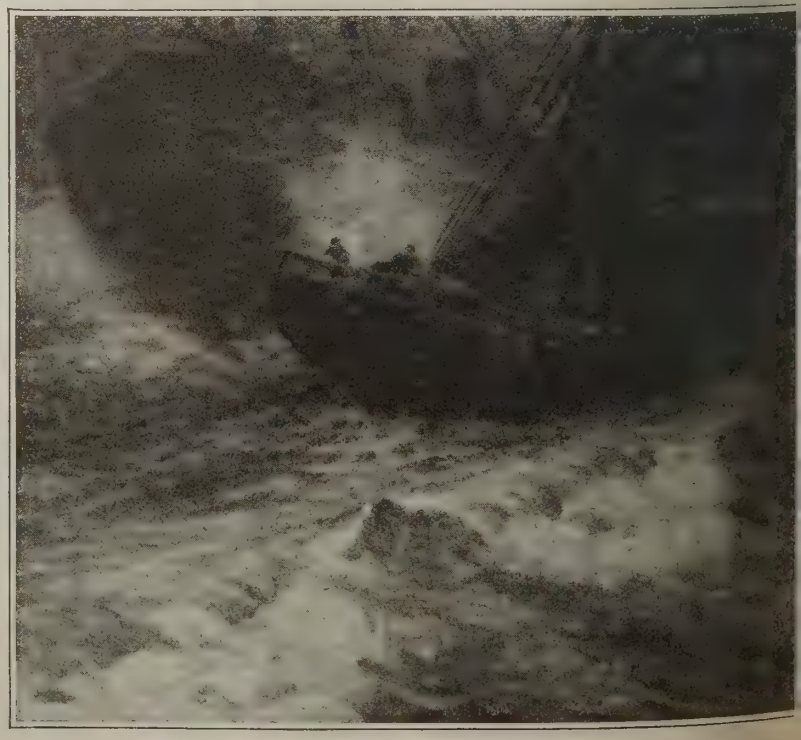
"Cap'n, suh—kin I take keer you home?"

"If you don't," the captain said you don't I aim to kill you whenever time."

"Cap'n, yessuh."

The Wildcat explained it all to Lily mascot:

"Me an' Lady Luck plays de same g 'At's how come us headed home."



THE HAPPY SPENDERS

(Continued from Page 17)

lcars a year, had on the highest-priced elthing. She wore:

Co	$150.00

Stckings	3.00
Gl es	2.50
	$217.50

ne made her own underwear.

stenographer at $1220 a year wore the ehipest outfit. She had on:

Su	$25.00
Shs	17.00
Hs	11.00
Stckings	3.25
Jrerwear	2.75
Gl es	2.25
Ttal	$61.25

teacher making the same salary—$120 a year—had on $180.75 worth of clothes. A stenographer at $1620 a year wore clothes costing her $133.50. The head stenographer at $1800 a year had on $192.55 worth of stuff. Another stenographer at $1400 a year had on clothes that cost $112.40. A clerk at $1120 a year paid $91.50 for what she wore. None of these girls had on stockings that cost less than $2.25 a pair. Most of them were $2.75 to $3.50 a pair. None of them wore a hat that cost less than ten dollars and only one had a hat that cheap. The others paid $15 to $21 for their hats.

What Women's Clothes Cost

When these figures were brought in to the man who had made the inquiry he sent his woman investigator out with these instructions: "Go out and buy yourself an outfit of clothes proper for your daily work. Come in and let me see how you look and tell me what you had to pay." The girl went out and bought these things:

Su	$55.00
Ht	7.50
Blse	3.50
Petcoat	3.00
Jrerwear	5.00
Stckings—lisle	.85
Shs	13.00
Gl es	1.75
Ttal	$89.60

To my friend fixed upon $89.60 as a fair average price for which a working woman in an office can get an outfit. But he was rather unsettled that night in his opinion when he had found a secure standard. He was taking his wife to a movie and telling her of the experiment he had been conducting. She began to mumble and count on her fingers.

"Why," she said, "all the clothes that I have got on only cost $45.50."

So the great question of what a woman's clothes ought to cost is as yet unsettled, but it is perfectly clear that an outfit for a woman working in an office ought not to cost $217.50. It may help you to work out the problem for yourself if I set down here in detail what I have just summarized:

Occupation	Approximate Salary	Amount Spent	
Teacher	$1100	Suit	$45.00
		Shoes	10.00
		Blouse	7.00
		Stockings	2.60
		Gloves	3.00
		Total	$67.60
		Wore last year's hat and petticoat. Made underwear.	
Teacher	$1220	Dress	$35.00
		Wrap	29.50
		Hat	10.00
		Shoes	8.00
		Stockings	2.25
		Gloves	3.00
		Petticoat	8.00
		Underwear (homemade)	13.00
		Total	$108.75
Stenographer	$1620	Suit	$86.00
		Hat	18.00
		Shoes	10.00
		Stockings	2.25
		Underwear	9.00
		Gloves	2.25
		Blouse	7.00
		Total	$134.50
Stenographer	$1220	Suit	$25.00
		Shoes	17.00
		Hat	11.00
		Stockings	3.25

		Shoes	12.00
		Hat	15.00
		Stockings	3.00
		Gloves	2.50
		Total	$217.50
		Made underwear.	

Now, suppose we compare what these girls were actually wearing at work with what working women have agreed is a necessary expenditure for clothes. The highest minimum wage thus far achieved for women through legislation has recently been granted women workers in the District of Columbia. Merchants must pay not less than $16.50 a week to any woman in their employ who has had seven months' experience. The saleswomen in making their fight for an increased wage drew up a budget of their actual necessary expenditures. This was verified and found to be true for the great body of them. This is what they found they must have:

Suit	$35.00
Coat	39.50
Waist	2.00
Hat	5.00
Shoes	10.00
Gloves	2.50
Stockings—lisle	.60
Petticoat	3.95
Underclothes	5.00
Total	$103.55

Who Are the Spenders

These working girls of Washington proposed to have one suit every two years at $35.00 and one coat every two years at $39.50. They allowed for two wash dresses in summer at $8 apiece; two summer skirts at $2.50 each, and a real dress-up dress at $29.50 every two years. This estimate of expenditure is not really an estimate at all but a summary of actual expenditures of girls employed in merchants' shops in Washington.

By the way, when these saleswomen were negotiating with their employers and the Minimum Wage Board one of the girls reminded one of their managers that a few years before she had worked at his store for $3.50 a week and when she asked for $4 was told she could go. She is now being paid more than $25 a week. The incident is indicative—if nothing else.

Now, who are these happy spenders? Where do they come from? Where do they get the money to spend so lightly and without asking prices at a time when most people are undoubtedly pinched? I think I have found out where a good many of them come from. When the war began there came with it a great demand from the European governments at war for all manner of manufactured materials. This demand steadily

Proud of His Eversharp

WHEREVER you see Eversharp, you know that back of it is a proud owner. And Eversharp not only means pride of possession; it means *pride in writing* because Eversharp writes right to the point, always.

Eversharp is really unique, combining as it does the skill of the jeweler artisan with the dexterity of the mechanical craftsman. You would scarcely believe that such superb writing comfort could be encompassed in so graceful a pencil.

Eversharp is always sharp—never sharpened. It carries enough lead for a quarter million words. And when the lead supply runs out a quarter renews it—enough for a quarter million words more—ten thousand words one cent!

Eversharp establishes a new writing standard—sure writing, smooth writing, easy-to-read writing. You're never without lead and never without a clean-cut writing point. That's why there's always such justifiable pride in Eversharp—not forgetting its matchless outer beauty.

There's an Eversharp style for all—for pocket, chain, or lady's handbag. Prices start as low as $1. Get one today for a lifetime of pencil pride and wondrous writing comfort.

increased. As we went into the war it became insatiate. Every sort of mill and manufactory was going at top speed. Prices for labor went up steadily from the very beginning. Men and women both began to shift from the lower-paid employments to the higher paid. They left clean-handed jobs to take dirty-handed jobs. It was widely remarked upon at the time how clerks in dry-goods stores and insurance offices and haberdashery shops and all sorts of retail stores were leaving their clean, soft-handed fifteen and eighteen dollar a week jobs to go into shipyards and munition factories and what not and do manual labor at from six to ten dollars a day and in some cases even higher.

There was the same shift among women workers. Women who had light, clean-handed jobs—stenographers, clerks in shops and offices, manicurists, hairdressers, beauty-parlor employees, and all that sort of thing—found they could get work in shops and mills where the work was dirty perhaps, but paid double and treble what their old jobs had paid them. They shifted naturally. Then there came to work at the same time literally hundreds of thousands of women who had never worked before, or who had perhaps worked a little bit at odd times to make pin money but who had never fully supported themselves. These women were the wives and sisters of officers and men who went into the Army, or they were women who lived at home and wanted to do something useful during the war, or they found the cost of living going up and did not wish to reduce their domestic standards and so went to work to earn a little money on the side to keep things up as they had been before the war.

The war not only made it respectable for women to work and washed away whatever social differences might have attached in some conservative communities to working women but it made working fashionable for women. They permeated the whole field of industry. I have been going over a rough sort of survey of an inquiry made among several thousand factories and I find that in virtually every one of them the number of female employees has greatly increased. There was a notable jump after the second draft. I believe it is true that hardly an appreciable number of women who went to work during the war have become idlers again since these restless days of so-called peace have come upon us. A dozen women have said to me—women with husbands and comfortable homes—"I will never be idle again. I was never so happy as since I have had a job. I like to have the money to spend and I like the sense of being occupied."

The Shortage of Teachers

So here we have a great number of people, men and women, who have changed the nature of their employment and gone into industry because of the larger wage being paid people who work with their hands. They are everywhere. They are making more money than they ever dreamed of making before, and they have got more money to spend than people who have not been affected so favorably by the changed conditions. In some cases this has tended to work harm to the general social fabric, and in others it has not. I do not apprehend that any great loss would come upon the world if there was a temporary shortage of beauty-parlor specialists and manicurists and haberdashery clerks and ushers in movie-picture houses and lace-and-ribbon sales men and women.

But in one employment at least there is a shortage of competent people which is a matter of concern to all of us—peculiarly so at this juncture.

In going through the records of women who have shifted their employment since the war began and who have gone into munition plants or war work in one of the government departments, I have been struck with the number of school-teachers. There must have been nearly 10,000 in Washington alone, women at work for the War Risk Insurance Bureau, the Housing Corporation, or the Food or Fuel Administration, who quit teaching at six or seven hundred dollars a year and came to Washington to work at from $1000 to $1440 a year. They are working in factories too. Many of them have not gone back to teaching. Some of those in Washington, I found, were taking courses at various colleges there while keeping on with their work for the Government. They were preparing themselves to do better work and get higher pay as teachers when the opportunity offered to go back to tea ing. Meantime they were holding onto higher-paid jobs.

Inquiry discloses that the condition become alarming from the viewpoint those charged with the management school systems all over the country. T National Educational Association dressed an inquiry to every county district superintendent of schools in United States. The information sou included the actual shortage of teachers the opening of schools in September, number of teachers below standard w had been accepted in order that vacan might be filled, the relation of salary creases to the increased cost of livi whether or not the number of teach under twenty-one years of age has creased and whether or not promising you men and women are being attracted teaching as in the past.

The replies already received to this quiry indicate that the total shortage teachers in the United States must about 38,000 and the number of teach below standard approximately 65,000. other words, something more than 100,0 teachers' jobs in the United States either without teachers or else suppli with teachers who are admittedly unqu ified to teach, measured by the standar of the localities in which the schools situated.

A Premium on Handwork

Of 1512 superintendents, 1430 repo that teachers' salaries have not been creased in proportion to the increased c of living and 1267 report that they ha found it necessary to lower the standard qualifications in order to supply teache Virtually all of the superintendents repo that the number of teachers below twent one years of age is increasing. Many repo that their rural schools are being taug largely by young girls without professior training. The average annual salary pa teachers in this country last year w $630.64. No class of workers for the ra ways, not even the section hands, but wh receives from 107 to 500 per cent of the ave age salary paid teachers. Hod carriers ea from one and a half to twice as much; he bakers, carpenters, glaziers and printi machine tenders earn twice as much; wi men, lathers, blacksmiths and machinis earn about two and a half times as muc and bricklayers, plumbers and structu iron workers earn about three times much.

In the present unsettled condition of imperfect world the person who can wo with his hands is for the moment at t top of the heap. The whole world wan material commodities, wants increas production. Money is plentiful—too ple tiful. The general stock of money in th country increased from August 1, 1914, January 1, 1919, from about three a three-quarter billion dollars to a little mo than seven and three-quarter billions, increase of more than 100 per cent. We a lush and dripping with money—at lea some of us are. And those who have want manufactured articles, though v haven't enough to go round.

But this condition, which is necessari only temporary, is no reason for forgetti there are people who earn a living wit their heads, for after all the human bein with minds, the brain workers, have just fied their existence. We cannot entirel eliminate the throbbing old bean, and ce tainly we can't drive all the teachers int making parts for cash registers or addin up columns of figures for the War Ris Insurance Bureau. The generation tha comes on after this war, which has s wrenched and racked the world, will hav its hands full. We who have been throug the war will not be able to complete the jo of reconstruction. The children who a now growing up and in school deserve better fate than to be taught by inexpe rienced, incompetent teachers or go partl unschooled for lack of teachers.

We are talking and working and spend ing money at this minute to Americaniz the United States. We discovered to ou chagrin and amazement when the test c war came how many passengers we wer carrying in the national boat, a great un digested lump and mass of people wh could not read or write or who did no know English and who had not the faintes glimmer of a notion of the spirit and ideal and qualities of our national institutions

(Concluded on Page 185)

(Concluded from Page 182)

yvere not a part of us. They did not
ɔr. They did not feel any responsibil-
fc national welfare. They did a day's
kor a day's pay and let it go at that.
ɪtɪmp is not to be broken up and that
aon is not to be changed save by
cion. With the cost of living what it
ɜve have already found it, we can't
nn and women to do educational work
r hey can't get a living wage out of it.
t ɪs been discovered that the two jobs
n dislike most are domestic service
ɔrking in laundries. When the de-
ɑcame for women workers to replace
ɪ ɪ industry and in all sorts of jobs
ɾɪe war began, among the very first to
n their occupations were the domestic
ɾɪts and the women employed in laun-
ɛs This was true both in England and
h United States; nor have the women
n illing to come back to these jobs since
vɾ ended. There is still a shortage and
ɾɪnd for them even at increased wages.
ɛy lon't like the hours and they don't
·e work and apparently they would
fɛ to do almost anything else. Many
ɛɪɛs and plans have been suggested to
ɛ· the domestic-service situation, but
ɛf them has as yet proved successful
aɪring enough to attract any great
nɪr.

The Berlin Agreement

ɟn the passive domestic servants in
ɾɪny have demanded new working
ɗions. What the German servant is
ɨi· to do and call it a day's work will
ɛɾt the American housewife and fill her
h hopeless longing. The new arrange-
nɪwas reached in a characteristic Ger-
n vay. In Berlin a board has been
ɑtshed, consisting of representatives
husewives' and domestic servants'
ɔɑtions. This board has drawn up a
d· form of domestic-service contract to
sɪɪed by both parties before an engage-
nɪs concluded. The following are the
ɛfɒoints in the model:

t ɪates exactly the kind of work to be
ɪɛthe number of persons in the house-
d he number of rooms, the number of
ɔr in the house, and provides that
ɪɪeration shall include lodging, ade-
ɪt board and a monthly wage of —
rɪ, to be paid on the last day of each
nɪ. For a beginner a minimum wage of
ɪɪrks—$3.57—a month plus 5 marks—
1!-high-cost-of-living bonus is pro-
ɛ These figures are based on the
-ur value of the mark. The domestic
vɪt must be registered with the proper
ɑlsick fund and the legal deductions
sɒe made from the pay for invalidity
ɪ ckness insurance.

T contract specifies in detail whether
sɦg, carpet beating, coal carrying,
ɪcw washing, floor polishing, and so on,
ɛ t be done. Information as to the serv-
ɛ household experience and education
ɪ aining is asked.

Tɦ door of the room assigned to the
vɪt must be provided with a lock and
y, nd the room must have a bed for his
hɛ exclusive use, a window opening into
ɛ uter air, a wardrobe, washing ap-
ɑɪes and a towel. There must also be
ɛɑ for heating the room. Where heat
ɪɪt be provided, another heated room
ɪs be available for the servant during
ɪ ɛ her spare time.

Were there is a bathroom in the house
ɛ ɾrvants must be permitted to use it,
ɛɛe they must be granted time and
ɒɪy to have one bath a week outside.

T daily period during which the servant
ɪs be at call shall be as a rule thirteen
uɪ, of which two hours shall be free for
ɛa and other purposes. After 7 P. M. the
ɾvɪt shall only be liable to perform cur-
ɪtwork, such as getting supper, prepar-
g bdrooms, opening the door, and so on.
ɑsing, ironing and scouring are not to
ɪdertaken after that time. Any work
nɪafter 8 P. M. on account of visitors or
rɪs must be paid for extra, the over-
mɛate to be 50 pfennigs—11.9 cents—an
ɒu for work done up to 10 P. M. and 75
ɛrigs—17.9 cents—an hour for work
ɒn after 10 P. M.

Ii cases of sudden illness of a non-
fɛious nature in the household the
rvɪt must be ready to perform work
ɪtɦe of the regular working hours. The
rvɪt may, however, decline to care for
ɒdttend a person afflicted with an infec-
ɒu disease and to clean the utensils
ɛɪɪred for his care.

The servant shall be given leave every other Sunday after 3 P. M., and each week one free afternoon of at least four hours after 4 P. M. shall be allowed.

The servant shall not leave the house without notifying the employer. Girls under eighteen years of age must return on week days not later than 10 P. M. and Sundays on which they have leave at a time to be agreed upon. For adults the hours of return on week days is left to agreement with the employer.

No deductions shall be made for household utensils accidentally broken.

After one year's service the servant shall be entitled to at least one week's leave with full pay and suitable allowance for board. This leave is to increase by one week for every two years' additional service up to a maximum of three weeks.

Two weeks' notice shall be given on leaving the service or on discharge.

Instead of the service pass book hitherto prescribed, testimonials are to be produced by the servant if required. These shall be returned when the servant begins to work.

If disputes arise while the contract is in force they are to be settled by an arbitration board consisting of an equal number of representatives of housewives and servants.

I ask you, Mrs. American Housewife, wouldn't you like to have a cook and a housemaid and a waitress on those terms?

Here is a curious thing that investigators of the high cost of living have discovered: The average percentage of expenditure for food decreases as the income increases. The percentage of expenditure for rent and for fuel and for light also decreases as the income increases. On the other hand, it has been found that the average percentage of expenditure for clothing and for miscellaneous items increases without exception with the increase of income. The happy spenders are responsible for that. They are going out into the shops and buying not only more clothing and higher-priced clothing but all the little gewgaws and nonessentials that they have always longed for and never been able to buy. They do not spend more money on the table than they have to. They spend a smaller proportion of their income for food than ever before.

The Only Way to Lower Prices

Notwithstanding this decreased proportion of the increased income spent for food, the unemotional Bureau of Labor Statistics notes in its dry-as-dust professional manner: "Much interest has always been displayed in this subject, and since prices have been rising so rapidly this interest has become almost passionate." This Federal agency has recently made and just published the result of an inquiry made in 91 cities throughout the United States to determine the annual average cost of food for families with incomes from $1200 to $1500. It was found to be $511. The largest sum, $624, was spent in Fall River, Mass., and the smallest sum, $427, in Savannah, Ga.

On June 15, 1919, the cost of 22 articles of food was 14 per cent higher than a year ago. The comparison was made on these foodstuffs: Sirloin steak, round steak, rib roast, chuck roast, plate beef, pork chops, bacon, ham, lard, hens, flour, corn meal, eggs, butter, milk, bread, potatoes, sugar, cheese, rice, coffee and tea. Onions and prunes, which were not included in this list, increased 133 per cent and 53 per cent respectively.

It is clear enough that this sort of thing can't go on forever. It must stop somewhere. It is absurd in a great country packed with richness and plenty that we should not have enough for all. We can, if we will only work and save. Normal conditions will return with normal production. Scarcity of commodities caused by underproduction is the opportunity of the profiteer.

Men and women who produce things—food or clothing or furniture or any other necessity—who deliberately restrict their output are punishing themselves and their kind. They make the opening and the opportunity for the profiteer who gouges them. Great prosperity is not a license for extravagance. Until production becomes normal, economy is more necessary now than it was during the war. Don't buy what you can't afford. That is the only way to bring prices down. Stopping work won't get us anywhere. High wages are no help if the cost of living is higher. Work and Save! Don't be a happy spender!

TEMCO

Trade Mark

Portable Electric Tools

Type "G" Bench Grinders

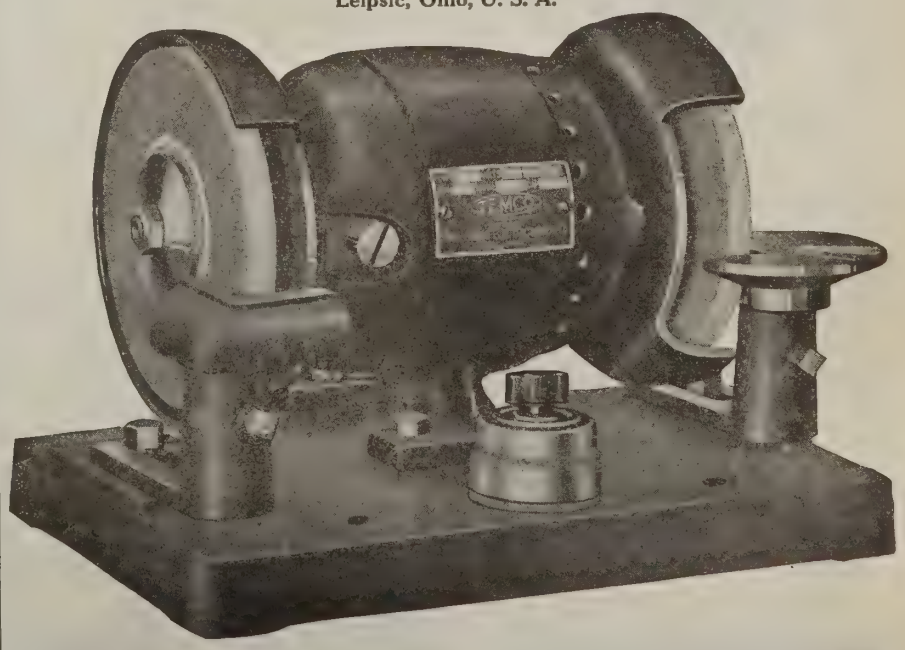
A general production tool for grinding castings, sharpening drills, cutters and other small tools. This type is portable, being mounted on base which can be easily carried to any part of the shop or factory. Also built in Wall type for mounting on side wall or pillar and in Pedestal type for mounting on floor. Motors fitted with high grade ball bearings.

Shops, factories, mills and tool rooms need these grinders as they increase the efficiency of workmen and the tools they use.

Write for the Temco Catalog and select a tool best suited to meet your requirements.

Drills, Grinders, Buffers and Garage Outfits. Write for Catalog.

The Temco Electric Motor Company
Leipsic, Ohio, U. S. A.



BALL BEARINGS IN BISSELL SWEEPERS

THESE "Cyco" bearings do even more than make sweeping easy. It is not simply the balls but the manner of their mounting that makes the Bissell Sweeper self-adjusting to all grades of carpet, that develops such positive brush-propelling power, that automatically takes up the wear of parts and makes the sweeper do good work years from now.

Bissell Sweepers are not to be compared with everything that is called a sweeper—Bissell's are more than a box, four wheels and a brush, and don't have to be replaced frequently. A Bissell is cheapest in the long run.

BISSELL'S
Vacuum Sweepers

are made as carefully as these world-known carpet sweepers. They combine powerful air suction and the brushing.

The name Bissell's is your safe guide in purchasing a sweeping device.

There are Bissell Carpet Sweepers at all prices—"Cyco" Ball Bearing grade from $4.50 to $7.75; Vacuum Sweepers, $9 to $17.50—depending upon style and locality. Your home needs both. At all good stores. Send for booklet, "The Care of Rugs and Carpets."

THE GIRL ON THE HILLTOP

(Continued from Page 5)

"See those thatchings," he went on; "all dinky and quaint and beautiful and full of mice and worse things, hot in summer, cold in winter, flaring like tinder if a spark drops. See those vines climbing all over, making those houses so smartly pretty and dark and dank and clammy. No slate roof, says squire. No vines cut down, says squire. The village must look pretty to him, and quaint, and old-fashioned, when he chooses to ride through it."

Young Lingard was greatly struck by this new view. He glanced down the street. "It looks too good to be true," he admitted.

"It's sham, humbug!" the young man cried. "That cottage, and that, and that," he pointed, "have been condemned by the sanitary authorities. They're falling to pieces. Their walls reek, but they can't turn the people out on the street and heap their bits of sticks on the roadside, for there's no place for 'em to go. So when the old uns get rheumaticks the squire sends liniment. When the kiddies get sore throat the squire sends a gargle. And these fools are grateful. The women curtsy, the men touch their hats when the squire chooses to ride through his village. Keep wages down. Keep 'em humble. He has 'em in his fist right enough. 'Take my wages or out you go!' And so when the squire rides through his village it is cheap as well as beautiful."

He stopped abruptly in front of a cottage. "No vines there," he said. "A slate roof all dry and tight inside and out. Water piped in from the well; no carrying a hundred yards from a standpipe by the roadside. Two pigs down at the end of the garden behind. Wooden floors; none of your ragged old stone floors in there. New door and window sills, keeping out the drafts."

He flung back his head.

"The man who lives there," he said, "owns his house. He's beholden to none. He can sell his labor where he will. He can buy his own liniment and his own gargles. And he don't touch his hat, and his sister don't drop any curtsies."

Hearing approaching horses they glanced up the street. He of the sledge hammer promptly presented his back to the roadway. "The squire rides through his village," he said.

Young Lingard watched with eager interest. The girl with the racket passed with a casual, unrecognizing glance. The squire, very erect, with a soldier's seat in the saddle, drew up, glancing from the sledge hammer to its holder.

"Turle," he said abruptly, "if you take the usual methods about the right of way you will meet an unusual defense."

The young man wheeled, twirling the hammer as though it was a light shillalah. "Colonel," he answered, "the monks from the abbey made that path in 1312."

But the squire had gone on.

"What is the usual method?" the boy cried, looking with eager eyes after the retreating figures.

"This." Young Turle laughed and patted the sledge hammer. He touched his cap. "That's in a friendly way to a Yankee," he said. Then he bolted into the house.

Young Lingard saw the old man Turle peering from the attic window, anxious-eyed, troubled.

He walked on fast, in hope of another glimpse of his Lingard relatives. The oak door was just opening to them as he came to the tree, and the girl chanced to drop her tennis racket. Roger went over and handed it to her.

"Thank you for not hitting me with it," he heard himself say. He was astonished at his own audacity.

She flushed crimson again, but her voice was cool, her words deliberate. "Would you mind handing it——" She pointed within and rode after her father.

Roger dropped the racket and turned angrily away. "Over home," he thought, "if we're mad we say so, and get it over. Over here they put themselves on ice and you bark your knuckles against the blocks."

Beneath the oak, smoking a brier, sat a graybeard whose kindly face and indolent, drooping shoulders were an invitation to gossip. This village schoolmaster, contented with one hundred and sixty pounds a year, and a garden and small orchard that supplied everything, including strawberries, asparagus and Cox's orange pippins, had but one complaint against life: he had not enough people to talk to. An ardent, inquisitive American boy, attractive of face and very pleasant in manner, had but to say good evening; the fountain spouted and the stream of talk flowed on evenly.

This village, it appeared, not being in the direct road between important centers and being some miles from a sleepy little market town, was almost untouched by the modern spirit.

The great house fathered the lot. A thirty-shilling gift at harvest; as much cider at hay and harvest time as they liked to drink—and some drank two gallons a day; a goose at Michaelmas; a brace of pheasants after a big shoot; rabbits almost all the year round; a hare now and then; coal and blankets at Christmas; a clothing club to which mothers contributed sixpence a week; the amount doubled at Christmas by the Lingards and children's clothes bought wholesale and distributed at cost; rare old port for pallid wives; stout from the grocery for nursing mothers; a midwife from Castlechepe when babies came; a doctor without charge to such as could not pay; wood at will for those who chose to gather; spectacles for astigmatic children and the old.

"Splendid!" the boy cried when the schoolmaster paused for breath. "It's like a fairy tale. They have everything!"

The graybeard nodded. "Everything," he corrected, "except a living wage, modern houses and freedom."

"Mighty important exceptions," said young Lingard, sobered; "but surely all this costs more than a living wage."

The philosophic schoolmaster admitted this, but explained the pleasure of being boss of your own countryside, of playing Lady Bountiful and of receiving gratitude. No Lingard, he said, knocked at a cottage door. They walked straight in. That was one of the traditions. No cottager could continue to live in the village if he did not work for the squire, or on one of the farms rented from the estate, or on the roads in the parish. No cottager or farmer could take in a summer lodger. The Lingards did not want people from the towns roaming about. No girl who had gone wrong could stay or come back; though, to be sure, that had not happened in fifteen years. No farmer could fence with barbed wire; that interfered of course with hunting. Economical as it would be, no farmer wanted to use it. They were a sporting lot and liked to see the hounds coming their way. Foxes got a lot of fowls of course, but housewives seldom sent in a bill to the hunt fund; it wasn't thought exactly sporting. When they did their accounts were promptly settled.

"All this," young Lingard said, "is mighty interesting. It's so different. You've summed everything up for me, all the things I've heard."

"You're going on soon?" the schoolmaster asked, a little perturbed.

"Oh, yes. To Stratford-on-Avon."

"All Americans go there. You mustn't quote anything I say, of course."

"Oh, no!"

The boy eyed the speaker; so free speech was denied too. He looked from artless eyes and asked casually if nobody in the village could be independent. The philosophic schoolmaster, happy in such a listener, fell immediately.

There was a most interesting illustration, he explained, of the effect of economic independence. There was one family that owned its house. The result was freedom in choice of occupation. A young man had been apprenticed and had only jus turned as a highly skilled machine f He was working in Castlechepe on m engines and had been a student of econ in the Oldport night schools, was trades-unionist, a firebrand, bringing ernism to the village and reviving a h tary feud with the great family.

The schoolmaster chuckled and kn out the ashes from his pipe.

"Yet his grandfather takes tips,' boy blurted out.

The schoolmaster stared. "Those of yours see a lot," he said, surprised

"He looks such a fine old man," th stammered.

"He was independent, self-respect said the schoolmaster. "When he go old to work he sunned himself here u this tree and let tourists photograph He never takes tips when villagers about. He never takes more than shillings a week. I've watched him five years. He's an old man with a b his bonnet. He doesn't need that m He doesn't spend it. His grandchil know nothing about it. He pouche Why? Just that sum; just about weekly rent of that house of his."

The schoolmaster meditatively re his pipe. "I've often wondered," he tinued, looking up the street with a spe tive air and smiling. "That family is it is because it has owned the house; what if that foundation is sand? It w be irony."

The schoolmaster chuckled. The began to comprehend.

"He ran away from me," Roger "but he's not afraid of all Americans.

The schoolmaster nodded and stru match, but it burned unnoted, for y Lingard added: "I spoke to him stra I only asked his name. I wonder if afraid of someone from the United S coming to look for him."

"You're a clever people, you Yank the schoolmaster cried, flinging a m from a singed finger.

The boy laughed. "You make it a clear," he said.

The schoolmaster, obviously troul pledged him again to silence, and ask he was staying at the Boar's Head.

Roger heard the name with pleas He fingered the ring he wore, the sole loom that had descended to him. I seal was cut a boar's head, the crest of Lingards.

"Yes, I'm staying there," he said.

"Not a word there," the schoolma cautioned. "Charity Turle is barmaid

"A barmaid?" echoed the astonis boy.

"Yes; and a very good one too, with quick hands and her superior educat She's as ambitious as her brother, and as much of a firebrand in her way—fragette and all that. Oh, they're a pa

A woman bartender—his cousin. W would his father say to that? In his c munity a man who distilled or brewe sold or dispensed alcoholic liquors shunned and despised.

"It's time I went," he said. "D mind if I've guessed too much. Not a w to anybody, I promise. I say, I've enjo your talk. Thank you. Good-by."

He hurried to the motor cycle which stood for hours against the park wall, he saw the racket lying where he flung it.

"A spoiled kid," he thought, and too into the turnpike house. He rushed aw eager to see a barmaid.

The Boar's Head he found was the le ing inn. He pushed his motor cycle bene an arch into a cobbled court in which st enough vehicles to prove that a good ma farmers were making a long day of it town. He entered the hotel through a b door and found a small window like a tic seller's looking into a bar. There was a b maid too. He saw the top of her he

en y, smiling, had acted as though she
s ally glad to see him. How different
as from room clerks at home. He called her a room clerk now, you perceive; and that is the word that would appear in his letter to his father.

He talked to the waitress, that he might ask about Charity Turle. His ardent interest met more than the usual response to curious American tourists, for youth, simple manners and good looks get results both in bar parlor and coffee room. Miss Turle was very popular. She never put on any airs. She was not likely to do as most of the young ladies behind the bar did—marry a farmer; though she had walked out three or four times with Mr. Ryker, and that was foolishness, for he was really a very jealous gentleman, and of course it was her living to be pleasant to everybody, and it was interfering with her bread and butter for a gentleman to stand there looking glum when she was laughing and talking with other gentlemen, and Miss Turle was not the kind to put up with that for long. Mr. Ryker?

A bell jangled in the hall and called the waitress away. Roger hurried, delayed, hurried again. The moment was approaching. He had a delightful sense of sin. He was about to enter a barroom and face a barmaid. In previous vacations he had no more than tramped over strange states and worked on strange farms. Of cities he knew little, of girls less. He had kissed one in final farewell under an apple tree in a Vermont orchard the summer before; that was the cherished limit of romance. He had hardly seen the inside of a barroom and had never tasted liquor, wine or beer.

At last he folded his table napkin, rose with a slow dignity, descended the stairway with stately deliberation and entered the bar with head held high. His cousin Charity was busy, but she flung a smile and a welcoming nod.

He sat down among farmers at a little table and watched her.

She was alive all over. When a farmer asked for a pint of mild and bitter she pulled one handle of a beer pump and then another, and handed over a shining tankard with creamy foam oozing over. When another asked for Scotch and a split she made a quick move of her hands, and soda-water bottles exploded with cheerful little pops.

"Say when," she would call out as she divided the soda between the two whiskies, and the farmer would lift a finger and she would stop pouring. She had a pleasant, cheerful word for everybody. She collected shillings from some, ninepences from some, tanners from others. When a customer asked for stout she poured the dark-brown liquid with such deft art that only about a third went to foam. Young Lingard had never seen stout and did not know how hard it is to pour on a hot day. Some of the older farmers called her "Missie"; the younger men said "Please, miss"; one said "A horse's neck, Charity"; and another ordered "A gin and peach, please, Miss Turle."

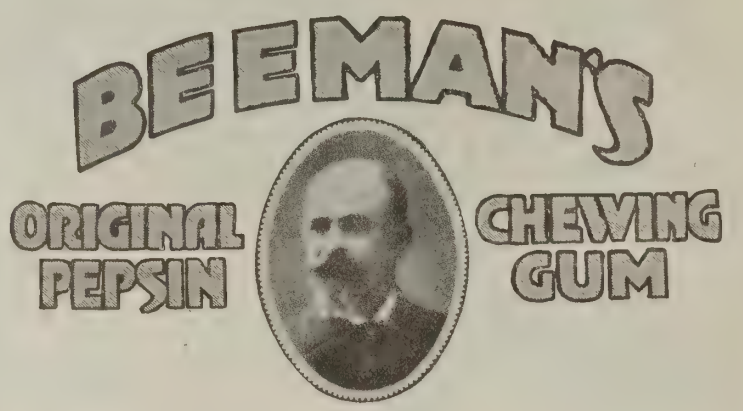
She was taxed to the limit of her unusual abilities, for more came than usual, and men drank more, for war between Austria and Serbia seemed possible. They talked much of this, and of holding on to their wheat, which one thought would surely go as high as a hundred shillings a quarter.

"Here's to a hundred a sack!" another cried, lifting his glass. "I shall sell mine before Christmas," he added. "It'll all be over by then."

Roger thought that Harun-al-Rashid had nothing on him. That Caliph of Bagdad had only looked on at life generally; he had never had a chance, unsuspected and unknown, to talk to his own relations. The boy felt so high an exhilaration that it was attractively expressed in face and manner. Farmers flung a second glance at him; Charity looked his way when the chance offered.

Roger was Number Twenty-one to her; he was determined that that should not last. His name was ready—Kellie Hill. He thus honored his native place in California, Mokelumne Hill; but he made it pronounceable. He thrilled with the sense of utter freedom. The last tie was cut. He vaguely regretted that the bar was so jolly comfortable and snugly respectable that even his father must enjoy it and approve. He was not even shocked when a farmer's wife, telling her husband that the trap was ready, stood at the little window outside and drank a glass of port.

At last Charity was free. He went over and asked for a cigar. She shook her golden head and leaned confidentially forward.



Eat Slowly

IF we would eat our food more slowly, we as a people would have much better digestion.

The way we hurry through our meals and keep our minds on business while we eat, when we should, as a matter of fact, relax, forget our business and pay attention to the proper mastication of our food, results necessarily in the improper mastication of the food with the results that usually follow.

The routine use of my Original Pepsin Chewing Gum ten minutes after each meal will supply the saliva which has not been provided during the meal, and do much toward aiding digestive troubles and increasing the efficiency of every business man and business woman.

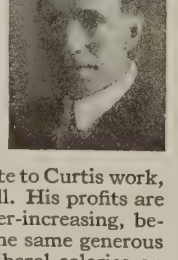
When buying new furniture your dealer will be glad to equip the furniture you buy with Domes of Silence—ask him—that's all.

DOMES *of* SILENCE

"Better Than Casters"

SPARE TIME PROFITS

Throughout the state of Washington Mr. Orville W. Street is known as "Street, the Curtis man." Yet he sells us only his spare hours and devotes to his work of caring for new and renewal subscriptions to *The Saturday Evening Post, The Ladies' Home Journal* and *The Country Gentleman* only the odd moments that come to him in the course of a busy day. In these extra hours he has built up a reputation and a thriving, profitable subscription business that easily nets him $100.00 A MONTH EXTRA.



Mr. George B. Hunter, across the continent from Mr. Street, is quite as successful. His reputation and his pleasant, profitable business have been built up in Maine. He has only an hour and a half a day to devote to Curtis work, but it pays him well. His profits are permanent and ever-increasing, because he receives the same generous commissions and liberal salaries on renewals that we pay him for new subscriptions. He finds new business easy to get. He, too, counts on his spare-time Curtis work to bring him $100.00 A MONTH EXTRA.

Cash For Your Extra Hours

These are but two of hundreds of our successful spare-time workers. You yourself can do as well. Only one subscription a day will pay you about $13.00 a month; 3 a day, $35.00; 5 a day, $85.00; 10 a day, $215.00; or 2 an hour—which our *most* successful agents can average because of the popularity of our publications—will pay you $100 a week! Clip the Coupon now!

The Curtis Publishing Company,
499 Independence Square, Philadelphia, Pa.

Gentlemen: I should like to sell you my spare hours. Extra money looks good to me. Please tell me how to get it.

*Name*_____ *Street*_____

*Town*_____ *State*_____

"They'd all be too dry for you," she said; "and, besides, we can't keep them in condition. Damp one day with the moist weather; dry the next; how can we? Is your room to your liking?"

"Yes, thank you. Of course if you can't recommend them——" He swept his hand largely, brushing inferior cigars into limbo. He had not smoked a dozen in his life.

"No American gentlemen like them," she confessed. "What will you have?" She showed white regular teeth in her cheerful smile.

He was stumped. He did not know what to order.

"We've no ice," Charity said, "and I don't know how to mix one, but if you'd like a dry Martini I'll give you the makings. Come round."

"I can't either," he admitted with honest candor. "I've never even tasted one." He flushed a little as she drew back, put her hands on her hips and stared at him from mocking gray eyes.

"Your name is George Washington!" she exclaimed. She leaned forward and murmured that he was the first of his race to admit that there was anything he could not do.

A man came striding in, turned an emphasized back on young Lingard and said: "Miss Turle, I haven't got but a minute. I'm sorry—beastly luck—it's off for to-morrow afternoon."

The girl stood up straight and looked at this newcomer with combat in her eyes.

"Why, Mr. Ryker?" she said.

Roger recognized the back of his antagonist of the morning, and understood that it was aggressively meant for him.

"The colonel's orders."

"But what orders?" she persisted.

Steady glances met, then the man answered slowly: "Some job; he didn't say."

The girl bent down. "Oh, very well," she said from the depths.

The bottle that she had sought flew open with an expressive bang and she poured its gurgling contents into a tall glass. One touch of her hand to a lever, and a tap spouted amber liquid into the tumbler.

"Lemonade and a dash," she said, smiling on Roger Lingard. "You asked for that, didn't you?"

The man turned sharply. The boy as he slowly drank the pleasant mixture looked over the rim. It was so deliberate a performance that a couple of farmers noted this long-drawn, challenging exchange of glances.

Bickley Ryker at length turned a frowning face to the girl, then stalked out of the room.

Young Lingard put down his almost empty glass. "I was thirsty," he said.

Charity Turle looked at him with a slight puzzled frown on her forehead. "You're a stranger here, aren't you?" she asked, a little troubled.

"One day in the place. I wanted to go through that big park. He stopped me."

"Oh!" Her exclamation was sharp.

The boy nodded, interested in her sudden flush, in the quick, angry flicker of her attractive eyes.

"Say," he asked, "isn't there any way I can see that park?"

Charity seemed to be considering this question. "I think I could help you," she said at length. "It's my afternoon off tomorrow. I'm going home that way."

"Fine!" young Lingard cried. "And you'll let me go with you?"

"I'll show you the way," she answered.

A little later he tore himself away to write to his father. In his letter he spoke of the pauper labor of Europe, of paternalism on estates, of the astounding gap between landlord and tenant—in short, he unconsciously quoted the schoolmaster. He incidentally mentioned a Lingard girl and a Turle girl. He had talked to both of them, but had not yet made up his mind to claim relationship; things were different over here.

In the morning at breakfast he found an envelope by his plate, addressed to Number Twenty-one. Two negatives and two prints dropped out. One was of a girl on horseback coming out of a gate and a boy standing just by her side gazing up at her with unbridled admiration. The second was of the girl crashing a tennis racket on the head of the boy.

"Two ladies left it," the waitress explained. "They seen you here last night and said as you would understand and they was much obliged. They've gone on."

"Fine!" Roger exclaimed.

He studied the photographs all t the meal. Serene or angry, Miss was a peach!

He went searching for the county office and ended in a place where from different signs on the outsi peared to be clerk to everything county: Clerk of the Peace, Clerk Board of Guardians, Clerk to the trates, Clerk to the St. Dyfrigs Es the Water Company, to the Bridg pany; he was staggered to learn young man—he could not see the pal—that there was no registra deeds, and that when you bought tate you got a brand-new parchme all the other parchments from su owners back to the time people lea write—a whole trunkful, he gathered times. How to know, then, if peo property to which they had no righ

"I know," he answered, laughing. extraordinary. It's with you."

She flushed a little. "The ri way——" she began.

"I'll be back here at four," he cut hurried away.

As he went up Castlechepe's str saw Miss Lingard in a governess ca side the door of a small store. H mounted from his motorcycle and his hat while she looked at him in ing, incredulous surprise and lift reins as though to drive away.

"Your tennis racket is in the o gate house, Miss Lingard," he said.

She jerked her head in silent, pret thanks. She was wearing a tam-o'-s and the end of it bobbed with her a indignant movement.

"I've got this for you," he con companionably. "It's very good o not so good of me."

She scowled, but he grinned che and handed her one negative and one

"Thank you," she choked, glaring picture, then at him.

He smiled. He thought he saw—he not be sure—a little twitching of that arrogant upper lip. If so it was th shadow of the ghost of a smile. She t picture and the negative into frag and dropped them into the street.

He lifted his hat again and passe thinking what she would look like saw that other picture snugly hidden pocket. He was not going to give th not he. He was going to label it "C Dorothy's welcome" and hang it on h at home. "Cousin Dorothy—Cousin ity." The words beat a rhythm in h It was this cousinship, and his imm departure, that gave him such unexp resource with the two of them. He shy boy masquerading on a wonderfu day; and shyness, too, wore a mask: one girl thought him impertinent, an other considered him a jolly good older than he looked.

At St. Dyfrigs he went straight t home of old William Turle and w right in through the hall into the sitting room. Charity's sweet peas there too, and a strange mixture of soli oak and thin, graceful Chippendale inlaid Sheraton. He was impressed, pl by the room, so cheerful, so richly nished in its jumbled medley. He sca the color prints on the wall, ign that they were now of great value, attracted by their charm. He saw, fra the marriage certificate of Roger Lir and Charity Turle. This was indeed covery. It forged the one link necessa complete the chain. His father had a

e tared vacantly at the coins by the
clock, then sprang to his feet, rushed over, and began to scoop them into one of his great list slippers.

"Good-by, uncle. I'll write to you as soon as I hear."

But old William Turle only shook his head and muttered and feverishly shoveled half crowns. Roger slipped away.

At the hotel Charity was waiting. Ought he to tell her? Was a promise to a cracked old man binding? Would those coins be hidden about again as squirrels hoard nuts? To-night perhaps, after the walk through the park, he would go home with her and see what had happened.

He was proud of Charity as they went up the street together. She was vigorous and vivid, and suppressed excitement made her eyes very bright and flushed her cheeks. She was bound on an adventure. He laughed in her face because she did not suspect that he knew it; and she laughed, too, just from exhilaration; and she bowed and nodded to everybody; yes, everybody: even to the rector, labeled by his clothes. Strange—a barmaid, and everybody smiled on her.

They passed under the ancient arch of the old town gate and soon were skirting the park wall, away from the road, toward the right.

"The main lodge gates are closed," Charity said. "No use trying there."

They were soon among scattered trees—wild cherries and white birches and white poplars, which Roger thought were cottonwoods; and then they came to a fantastic dead ash, murdered fifty years before by goat moths.

"You first," Charity ordered. "I must go slow or I'll tear my dress."

The dead ash limbs made an easy ladder. She was beside him in a moment on the top of the wall. The ground rose inside and the drop was not more than eight feet. "Before you jump," Charity said, "it's fair to tell you ——"

"Come on!" he cried, seizing her hand. They landed together and he would have stumbled to his knees but that Charity held him up.

"Now," she said, "we can go round by the river. The trees will hide us until we get almost to the St. Dyfrigs gate."

He laughed as he looked down over the park with its white road threading the green grass and passing in front of the house. He hummed a bar: "And ye'll take the high road, and I'll take the low road ——"

The girl's lips parted in a slow smile as her eager eyes questioned.

"Oh, if you're game!" she cried; and they went straight down toward the road.

"It's fair to tell you," he gibed, mimicking her, "that Mr. Bickley Ryker told me that next time it would be the horsepond. If it is ——"

"Did he say that?" she interrupted indignantly.

"More," he said; "he called me a cockney cooky. Now, what's that?"

She looked him up and down with appraising, mirthful eyes. "Shall I tell you?" she asked.

"Please do."

"It's a rotten slander of course—but the uniform did it."

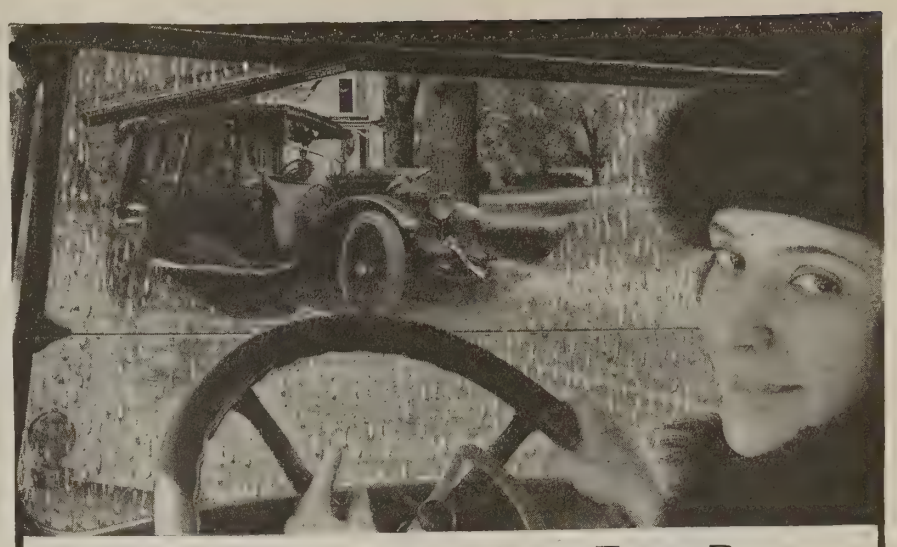
"The uniform?" He looked down at his belted Norfolk jacket, his long woolen stockings. "They told me this was the right rig; 'a proper country kit,' the man said." His manner was rueful. "I worked my way over," he went on, "so that I could buy an autocycle, and I got this suit in Bristol."

"It looks ripping," Charity consoled, "but it's the kind of thing London clerks buy ready made when they go in the country on tourist tickets."

"But why," the vexed Roger asked, "is it so disgraceful to be a London clerk on a vacation?"

"Everybody," Charity explained, "that is anybody in this country knows about the land. Clerks on holidays walk across meadows kept for mowing. They throw stones at pheasants. They mistake sheep paths and rabbit runs for rights of way, and sometimes carry away snares, peg and all, wrapped round their clumsy feet. They fling burning matches in the shade of the hayrick or on dry heather. They walk straight up to a bull and then don't know how to get away from his charge, and perhaps the farmer has to pay damages. They leave the path if it's a right of way and become trespassers."

"As we are now," he interrupted as they stepped onto the road that led to the house.



Saved From Such a Fate By
PRESTO-FELT
"The Windshield Cleaner That Fits Any Car"

Made to attach in any of three ways—clamps over top of windshield, bolts through the frame or through the glass. Built exclusively for those who want to drive their cars in safety and who like others to exercise similar precaution as a guaranty against accidents.

Showing Cleaner attached by drilling directly through Glass.

Once Cleaned—Stays Cleaned

Cleaner attached through rim of windshield.

The Presto-Felt Cleaner is made with chemically treated felt pads which wipe the surface entirely clean, causing the rain to "flatten" out as it hits the glass, leaving a clean, "flat" surface through which the driver gets a clear view of the road ahead. No "beads" of rain to obstruct the view. Presto-Felt entirely eliminates that blindfolded effect. One cleaning sufficient in any storm.

Fits Tight—Can't Rattle

Holders are made of high quality, oil-tempered spring steel insuring positive pressure which thoroughly cleans and a uniform tension which prevents cleaner from rattling or dropping down in line of vision. The double felt pads keep both sides of glass thoroughly cleaned.
Simple in construction; extremely efficient in operation.

PRICE $2.00 Complete With All Necessary Attachments

Remove Corns with Freezone

A few applications of Freezone loosen corns or calluses so they peel off

Apply a few drops of Freezone upon a tender, aching corn or a callus for a few nights. The soreness stops and shortly the entire corn or callus loosens and can be lifted off without a twinge of pain.

Freezone removes hard corns, soft corns, also corns between the toes and hardened calluses. Freezone does not irritate the surrounding skin. You feel no pain when applying it or afterward.

Women! Keep a tiny bottle of Freezone on your dresser and never let a corn ache twice.

Small bottles can be had at any drug store in the United States or Canada.

The Edward Wesley Co., Cincinnati, O.

Keeps Your Bed Warm

$2.25 All Night

20 Hours of Heat

It can't roll over — It won't leak

Filled with 3 qts. of Boiling Water

For Sleeping Porches, Baby Carriages, Sick Rooms, People with Poor Circulation; also Automobiles

Made by hand of specially prepared clay, and glazed. Doctors, hospitals and many families throughout the country using them; all recommend them to their friends. Easy to fill and handle. Pat. screw top—guaranteed not to leak. Will not burst nor corrode—is practical, sanitary and lasts a lifetime. Price $2.25 delivered. Canada $2.50.

For Hunting and Outdoor Sports

For comfort, convenience and smart looks there's nothing like a pair of Fox's Spiral Puttees for hunting, golf and other sports. They are easily adjusted and always lie flat and smooth, as they are woven in a curve. They will not fray at the edge like ordinary puttees.

FOX'S

"F.I.P." PUTTEES

(IMPROVED)

NEW NON-FRAY SPIRAL (Patented)

These quality puttees are made of the finest English wool and are exceptionally durable—far more so than leather or canvas puttees. Fox's are waterproofed and are known for their quality all over the world.

The genuine Fox's have a small brass tag with the name and the letter R or L, for right or left, on each puttee. If you cannot obtain them from your dealer write us and we'll send them at the regular retail prices, as follows:

Regulation Heavy Weight - - -	$4.00

CROCHETERS WANTED

Positively no canvassing. Stamped addressed envelope for particulars. MRS. MEIXEL, 517 Lycoming Street, Williamsport, Pa.

"Until this instant we were," Charity corrected. "Whether we are now we'll know later." She laughed defiantly and glanced about. No one was in sight.

"Town people," Charity said with an accent of contempt, "call hounds 'dogs,' hunters 'horses,' say 'three' partridges instead of 'one and a half brace,' and 'catch' salmon instead of 'killing' them."

"But I should make worse mistakes than that," Roger said.

"Oh, that's different," she answered him. "We make allowances for Americans."

"You are an aristocrat at heart," he charged, absurdly nettled by what seemed a touch of patronage.

"Now don't get huffy," she soothed. "You look very nice indeed, and Mr. Bick Ryker only wanted to be as beastly rude as he could. He was a soldier, the colonel's orderly in India, and when the colonel had to chuck the army and come home last year he brought Ryker. Like master, like man." She flung up her head. "I'm done with him," she added, two little red spots flaming on her cheeks. "You can't run with the hare and hunt with the hounds—not with me, anyhow."

"That means," Roger said calmly, eying her slantwise, "that Mr. Ryker breaks his engagement with you this afternoon to help the colonel take unusual means to stop usual means."

Charity checked and stared, her pretty lips wide, the tip of her tongue just visible between her teeth.

"And you invite me to see the fun," he went on, chuckling; "and it's mighty kind of you."

"Well!" Charity panted. "Well, I never!" She flushed pink. "It wasn't fair of me," she confessed. "I've tried to tell you—twice, and you wouldn't let me."

"Why tell me what I knew?" he asked. He laughed joyfully at her embarrassment. She had treated him as though he was just a boy. That couldn't get by.

"You caught me on the hop last night," she confessed, "and I was so upset about it all that I just let you walk right into it." She turned. "Let's go back," she pleaded. "I don't know what's going to happen, and I might be letting you into anything."

"The main lodge is closed," he reminded her.

"We'll go the way we came."

"That," he chirruped, "would be trespassing. And now we're on a right of way."

She glanced him over with perplexed admiration. "You are a cool one," she said. "Oh, all right; as long as you understand and don't mind."

And so they walked on side by side in silence for some distance.

"Gee, I don't know myself!" this quiet, studious boy was thinking; and indeed he was right. He stopped in front of the house a hundred yards away. Two vine-covered ells projected toward him, and the afternoon sun shone warmly on the mellowed Elizabethan bricks.

"If I had so wonderful a house I should want people to see it," he said after a long, still scrutiny.

"And what you are doing—standing still and looking," Charity answered—"is one reason why the path is being closed. I stood here last week. They were playing tennis. They laid down their rackets and went inside."

"No?" said the incredulous Roger.

"They did so, and sent a footman—he was a village boy before he went there as page, and very humorous; he said: 'Charity, will you please keep your eyes from trespassing?'"

It so annoyed this democratic American to hear that his cousin was called Charity by a footman that he missed the humor of the servant and the staggering egotism of the master.

"You knock things down when you are opening a right of way," he said as they walked on. "I guess that. And what does the other fellow do?"

"He takes names and addresses and you get a summons, and then if you prove that people have used the path for twenty years you get fined a shilling or so."

"Sounds tame."

"Colonel Lingard is not tame." Charity's eyes darted right and left now, and she scanned distant trees and shrubs. "His mother was French and she took him to France when he was a boy for his holidays. Then he went into Sandhurst, and ever since the army. Now he's had to chuck the army and settle down here. His father, the old squire, has been declared off his head by law, and the colonel is in charge. Now there's the trouble. He doesn't und us, nor we him, and he thinks he ca age his estate as if it was his regime

"I see," Roger said. "I heard him would use unusual methods."

"There's precious little you don't Charity said with frank admiration you don't seem to mind what happe course you won't be in the fight, but

"The fight?" Roger echoed.

"Well, what else can he mean?" battle glint shone in her eye. "He c possibly bring in the police. Even h know better than that. If he doesn' Lingard does, and she wouldn't l She knows."

"But why not the police?" Rog sisted, eager to get at the bottom novel code of etiquette.

"Can't you see?" she demanded. family affair, and no harm done. B has the police that's different. Tom get a month for resisting them. Th countryside would rise and bark colonel like wolves, for all he's g under his thumb. No, it's not sporti may be a tyrant, but he's a sportsm

The macadamized road had ceased house. They were in a beaten path t direct to the distant oaken door. C edged away and they walked close wall. Trees and shrubs protected fairly well from sight. Charity point saw half a dozen men behind some t

"They're on!" she said eagerly. fight right enough!"

Roger chuckled, partly at her pl "Why not outside the park," he "and save that old oak gate?"

"A fight on a public road's not qu thing," she answered as she glided from tree to tree; "and, besides, wouldn't hurt that oak door. He's ing a lot of men from his works. T skilled men, not bunglers. Look! L

He saw the end of a crane proj above the wall.

"They've pushed up a motor cra hand," she said, laughing. "The burning off the hinges with an ace flame and they will lift the door on a and carry it away through Castle streets."

"Come!" the excited Roger said darted forward.

She called, but he would not retur hid behind a tree almost beneath the merhouse on the wall. The great silently, mysteriously, slowly slipped ward from the top. There was a jar chains. The door rose in the air. An ished shout from the defenders within a rush forward; an answering shout without, and an assault en masse, dozen sledge hammers knocked post way and that; then hammers were aside and a dozen were at it, man to hammer and tongs, with bare fists.

Roger, breathing hard, unconsciou the open, was seen by Bickley Ryker charged with a cry: "It's the pond r

Ten seconds told Roger that his ass was no boxer. Ten more told him th reach was the longer by at least two i After that it was no more than stepping, dodging, waiting. The c came inside one minute.

"The pond, huh?" the boy cried delivered his blow. Bick Ryker crash the grass.

Roger was roughly jerked from be He shook himself free, turned and ered a straight punch with all the fo him. He stared. A policeman sat hu up nursing his stomach.

Young Lingard heard a sharp comm "Come up—quick!"

He ran up the steps to the summerl on the wall. The door was opened t and quickly closed behind him. He face to face, not with Charity but Dorothy Lingard.

"What are you doing in this?" sh manded imperiously. She looked int eyes just as she had that morning.

"I was walking through the park, panted.

She stamped her foot and turned to through the lattice. "You've assault constable!" she snapped over her shou

"He should not have been there."

"No more you," she answered ru "You ——" She stopped short. breath came quick. He went to her and looked down.

"Roger's done it!" she exclai "Good old Roger; Tom Turle's d No—yes." She clapped her hands laughed.

...Roger got to Castlechepe in advance of ...report of his dire offense. By midnight he was an innocent pilgrim at Shakspere's shrine at Stratford-upon-Avon. He had passed in the moonlight through part of the Forest of Arden, but as the forest no longer has trees he did not know that, and his thoughts were not of Rosalind but of Charity and Dorothy.

He was incredulous, astounded, indignant when, within a week, war came and caught him penniless; for all his money was in checks of the North German Lloyd Line, and these were waste paper. He rushed to London to find an army of fellow countrymen, placed like himself, storming the embassy. The cables were blocked; even if he could wire, his father had no spare money; and Roger was not one to elbow his way among frantic ladies to the government relief tables.

So, behold Kellie Hill, Canadian and dispatch rider, an enlisted man in the British Army, on his way to France. He called himself a Canadian because he could not be accepted as an American. He called himself Kellie Hill lest his father should trace him quickly and reclaim him as a minor.

For it was not alone an empty purse that drove him to the Front. That peaceful little village must be left in peace. His cousins lived there. Those green acres must be protected. His relatives owned them. The English were his kin. He was glad to fight for them, with them.

III

FOUR years later he came again to St. Dyfrigs. He sat on an unaltered bench beneath an unchanged oak, and drew long, contented sighs. The door into the park was wide open. Cattle grazed inside. The grass was as green as he had left it. Nothing was altered except that no automobiles passed. All was peace and rest. His lazy, pleasant thought ambled inconsequentially from gigs and randems to an oak door on an auto truck; from a fight for an heiress who turned out to be a cowman's daughter to a battle for a right of way; from an older Charity in crinoline to a younger Charity with red roses in her belt, and to a girl leaning out of a window, whispering "Thank you." How far away it all seemed, all equidistant in time—great-grandmother and cousins and tennis racket in air and all; a delightful, restful dream of an incredibly far-away time.

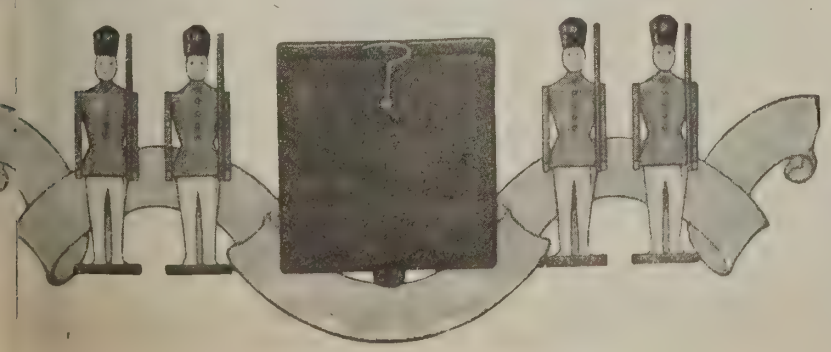
Home. He thought the word, all but felt it, for his father had been dead for some years, and St. Dyfrigs held his only living relatives.

He had come to beg a recognition of those ties of blood which had grappled him with ever-increasing strength through the struggle and the horror of war.

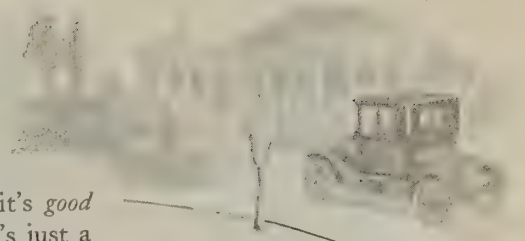
Aristocratic Dorothy might despise his Turle blood, but she would honor his British uniform. Democratic Charity might loathe his Lingard descent, but she would respect his khaki. He was passionately eager for a special individual welcome, for smiles that had a real meaning, for talk that was personal and kindly and cousinly. His craving for women's society was the thirst of a man in a desert.

Millions of young men craved, just as he did. Hundreds of thousands of Britons, lucky to be so near home, came to Blighty on leave and sat happily loafing, blissfully basking in the presence of a girl—even of a sister. Hundreds of thousands of soldiers were silently disappointed not because girls were so busy but because in their leisure time these girls were a little tired, had less coquetry than of old, and in their new economic independence and pride of achievement conveyed no subtle old-time pretended conviction of the superiority of man.

Hundreds of thousands of girls on the other hand were silently disappointed that the brothers and lovers and friends would not tell their experiences, would answer



It's Glorious— to Drive, under the Koupet Top



On bright, cheery days—when it's *good* to be outdoors, but the weather's just a little chill—The Koupet Top makes your Ford the snuggest and most comfortable thing on wheels.

See the Koupet Top Dealer In Your Town

The Koupet Top is **built to wear**—screwed, bolted and hinged together—sits firm, rides quietly. **Perfect ventilation.** A score of superior features. Price only **$55.00 for Roadster; $75.00 for Touring Ford.** F. O. B. Belleville, Ill.; with Chart Diagram for setting up and mounting on your car.

Your dealer will quote you **prices delivered and installed.** If you do not know his name—write us. Also ask for Koupet Top Illustrated Booklet.

Mr. Blankenbeker Has Twenty Extra Dollars Every Week

MR. PAUL BLANKENBEKER, of Colorado, is an energetic representative of *The Saturday Evening Post, The Ladies' Home Journal* and *The Country Gentleman*. There are many reasons why he likes his work—it is easy and pleasant, it brings him into contact with the best of people, it is out-of-doors and healthful. It is permanent—and it brings him **twenty extra dollars every week.**

OTHERS DO AS WELL

$87.50 His First 15 Days

Mr. E. D. Barensfield, in the first 15 days of his work as our representative, earned $87.50. Mr. R. M. Black earned $70.00 in spare time alone in his first month.

$1.50 An Hour

Mr. Henry Yockney sends in to us a steady stream of orders that represent only his spare-time work. His profits are just as steady; he easily earns $1.50 an hour.

$5000 A Year

Mr. Alexander Heath's record shows what can be expected with full-time Curtis work. He has bought a farm, a summer home and a car, and has built up a $5000 a year business.

YOU CAN TOO

You have the same opportunity that has brought twenty extra dollars every week to Mr. Blankenbeker, and enabled hundreds of other Curtis representatives to earn the extra money they want. Even if you have only a few hours a week to spare, this is the work that will bring you the largest return for your investment of time and effort.

PELTERS

Smart Utility

The "comfy" Coat that's smart!

Bitter winds, nasty rain and biting cold mean nothing to the man with a Pelter. Its soft, smooth leather baffles Jack Frost at his worst!

You'll see more men wearing Pelters this winter than ever before—motoring, at the football game, around town, ice-skating—*everywhere!* Pelters are at home on the open road and on the most exclusive avenue as well.

Men like their brisk, snappy style—their genial warmth—their genuine *goodness*. A Pelter is *the* all-around coat for every need, for every taste, for every man.

Pelters are reversible "gabardine and leather—a side for every weather." They're carefully tailored out of choice leathers to fit well, look well and wear well.

For men, women and children, $30.00 up
Look for the name on every "Pelter."

Go pick out your model at the store that sells Pelters. If you don't know one in your locality, write us.

eager queries in short sentences, and only wanted to forget horrors and filth and to be lazy or absolutely frivolous. The acute sex consciousness of the English was in fact much diminished, to the mystified regret of the men, to the unconscious satisfaction of the women. But things were all right, for all that, and the fourteen days' leave was dreamed over later in the trenches and in the homes of the girls.

But Roger had idled in no such oases in the desert march of war. His leaves had been spent in Paris. The place had been very well, and people had been very kind, but he had been one in a crowd, and everybody had been hurrying and scurrying. So it had come about that every thought of rest and peace and women's smiles had centered in St. Dyfrigs and in Charity and Dorothy. So he had come at last to the seat beneath the oak. Here he was content to sit and bask and wait; for he was a fatalist about the old tree. Everything that had mattered in his other far-away, almost accidental visit had happened beneath its shadow. Everything that had happened beneath its shadow had mattered. Everything that could matter would happen here. So here he sat and dreamed and cherished his pleasant harmless superstition about the friendly old tree.

Roger eyed an approaching boy, the first human being whom he had seen in his hour of waiting. The boy began to whistle a tune. Roger rose and saluted. The boy returned the salute.

"Where did you learn The Star-Spangled Banner?" the delighted Roger called out.

"Teacher learns us for the squire."

That was a fine omen, Roger thought; the finest that could come to him. It was international and national and personal. Americans were Allies now. His cousin was educating the village about it. There would be a welcome for him. He stood at attention as long as he could hear.

An old road mender passed, very old, carrying a besom of twigs bound together. None but the aged could be spared for this labor.

"Is Mr. William Turle alive?" Roger asked him.

"In the churchyard these three years."

"I was afraid so. He was very old. Is Miss Turle here?"

"Aye. She were wounded and come home. She be spry now and farming."

"Wounded? Where?"

"In France. 'Tis my dinner hour."

He would not be stayed.

A little girl came down the street, barefooted, happily strolling in the little runnel of water by the roadside. Roger had chocolates. She ran to the lure. She at his knee and he put an arm round he had round dozens of French child

"You're a home kid," he said.

He had heard dozens of British so talk of their home kids. It was a deli stroke her shock of hair as she sucke chocolate and told him that she ha none for months because soldiers lik took it all. He asked about Miss Lin

"Red Cross," she answered, pointi the park. "It's a 'orspital now." She open his fist and helped herself. He the pressure of her warm grubby har

"Our cross'll be there," she said, po to the center of the green.

"What cross?"

"For our roll of honor. I know it. I say it?"

She stood straight and ran off the r as though she were giving a recitatio

"Abraham Anderson. John A William Clegg. George Daniels—he cousin. William Gladstone Evans. I Lingard the elder—that's Colonel Lin he was drownded going to Egypt. I Lingard the younger. Roger Lingard

"Dead? All dead?"

She nodded as she eyed the closed intently.

"And the old squire too," she "him as was off his head." She pounc his hand, laughing, and secured an sweet.

A long silence, broken only by smacking of her lips; then: "Do you school?"

"Yes; fourth standard."

"And are you learning The Spangled Banner?"

"Yes."

"For the squire?"

"Yes."

"What squire?"

"The new squire. He's an American mother says he haven't any right to and take our land."

Another long silence. She helped h again, but he did not know it.

"Teacher says he was born in the where the oranges used to come from; we don't get no more. They can't find That's funny, ain't it? Daddy calls h low-bred Yankee, but Eunice Mills sa Turles is as good as Lingards."

"Winnie! Winnie!" The cry came the street.

"Mother's calling." She snatched last chocolate and ran.

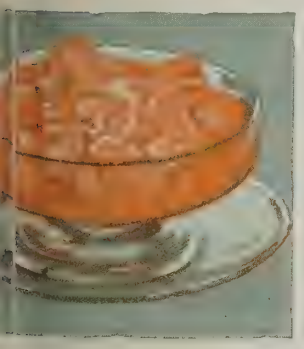
T Baked Orange Custard—a French-Style
d:acy—wholesome too—and easily prepared.

"French-Style" Desserts

Luscious—Economical—Dietetically Correct

Note the Welcome They Receive



ouquick dessert is chopped oranges.

Marie M. Reilly, food expert, says this about an American housewife who might visit France:

"She would note the absence of cake and pastry from the dinner menu and in its place she would find shredded fruit or fresh fruit in baskets.

"The exquisite French cuisine would not permit a heavy dessert of rich ingredients to end a substantial meal.

"Indeed no, for they know too well that the acid fruit is necessary to cut the fats and heavy courses of the menu."

For the same reasons, we in this country are coming more and more to delicious, healthful fruit desserts. We have found that orange desserts, particularly, are luscious, economical and dietetically correct.

No salad is needed with them, for oranges are salad and dessert in one convenient dish. The desserts are easily prepared.

You can help your family to form no better habit than the regular eating of these incomparable "French-Style" desserts.

Send for free book, "Sunkist Recipes," by Alice Bradley, principal of Miss Farmer's School of Cookery, Boston. Here are *accurate* recipes, including many salads, tested and proved by Miss Bradley. Every one makes a luscious food.

Send for the book now—try "French-Style" desserts. See how much better it is to end your meals with these dainty, efficient fruit desserts.

Always ask for Sunkist Oranges—sweet, juicy, uniformly good. They are exceptionally tender and practically seedless—ideal for desserts. Look for the name "Sunkist" on the wrapper. All first class dealers sell them by the box or dozen the year 'round.

e Ivarian Cream—combines the

BIG PEOPLE

By Henry Sydnor Harrison

ILLUSTRATED BY H. WESTON TAYLOR

R. WOLLASTON took some time to read the papers. The emissary from the Navy De- nt sat by the window looking nto the littered and lamp-lit t Her complete immobility sug- e a certain tension, proper g in an underling awaiting a of moment from supreme y. But the inference was it l; the emissary had forgot- papers, forgotten the great d Chief altogether; and her g s, which had been tinged all w n bitterness and with a curi- e itement, too, were a thou- l gues away.

his office she had first come as a messenger. Her instruc- at day did not even include n for an answer. But the rs of much experience, much u labor, had flowed under the e since then. On the bureau r a year ago this girl's name a peared—extremely near the r—as "F. E. Hardy, landsman e nan," a title whose strange i l mysteriousness had in the ng stirred and elated her. e blue sleeve of her smart r bore the rating marks, ob- l new, of a C. P. O. By faith v ks the greenest of the ama- s nographers had made her- r ally speaking, the personal a of the division head, though b ure reasons—possibly con- d with sex antagonism—Lieu- t Charles still let the title rest Esign Frothingham, who, as n Patrick once disrespectfully v l, "wouldn't know a North- e tral if one bit him on the . Such inhibitions meant n to George Wollaston of the d, however, who, prizing exact l ge above rubies, took and u d it where he found it, re- e of badges, ribbons, stars or he effect was the more agree- n hat Mr. Wollaston, in peace w r, was a personage, beyond s and lieutenants. A strik- s ccessful man of business— s rubber manufacturer from a l made money by the dray- M Charles said—here, in his t al year of service, he had t ken place as one of the most e ng and commanding figures ll -a-year Washington. But ng time now he had been n this girl, who came increas- o en to his office for respon- c sultations, quite like an d she was at home in the st resence.

"I Adore Missing the First Few Acts," Noted Ethel as They Rose

s five-thirty o'clock, after hours, and the immense government shack, with its o pasteboard walls and miles of flimsy corridors, was almost empty. Mr. Wollas- a to the end of the long exposition, shuffled the sheets together, said "Hm" u ed back to the beginning again. Chief Yeoman Hardy continued to stare a piles of building débris, sparsely dotted with red lanterns. The quiet had be- l e solitude, and she had had neither solitude nor quiet before, that busy day.

Her gloved fingers touched her breast, and beneath tunic and blouse, close to her heart, she could feel the square of folded paper round which her secret and essential thought had continually fluttered, while head and hands were occupied far otherwise. The paper was a message, from a long way off, a summons completely personal. She had looked at it but once—when she found it lying face-up in her "Incoming" basket at quarter to nine that morning—but the words, few and simple, were well remembered:

Sailing Bordeaux Transylvania twenty-third. Expect leave on arrival. Can you meet me New York?
RUSSELL.

And now, as she sat officially, with expressionless face, her mind was a jumble of acute hidden feeling, of rare nervous anxieties, of complicated, general but profound resentments, and above all of passionate pride in the sender of the summons, who by his exploits and his service stood so newly upon a pedestal, a nimbus about his brow.

"I suppose you wrote this?" said Mr. Wollaston suddenly.

The girl's head turned. Attentiveness and intelligence swam instantly into her eyes, but she did not jump or start.

"Yes. Of course, under Lieutenant Charles' direction."

"It goes pretty far."

"Our position is that American business is entitled to that much relief at least—and the sooner the better."

"That's the argument of course. By the way, my sister and her husband are here from St. Louis—Colonel and Mrs. Burley. I'm having a few people to lunch with them to-morrow at the Shoreham. Will you come?"

"I?"

"Why not?"

At another moment, beyond surprise, the girl must have been flattered at so unprecedented a mark of esteem. Renown apart, it happened that she personally admired Mr. Wollaston; she even feared him a little; by the knowledge of many meetings she liked him very much. But now, looking directly at him, in his prosperity and his ease, she seemed principally aware that the blight was upon him too; the blight that for days past had seemed to lie so heavily upon the contented young officers and yeomen with whom her days went.

Besides, she had a simple rule in regard to all men met in a business way, however distinguished or sedate.

"Thank you, I'm afraid I can't. But it's nice of you to think of it."

To mitigate the baldness of that she added, after a deliberate pause: "You see, I can allow myself only half an hour for lunch. We are frightfully busy just now—busier than ever since the armistice, it seems."

"Too bad. I'm really sorry," said Mr. Wollaston. "My sister's a very nice woman—not a bit like me."

His eyes, which had one day made her think of a granite wall round an institution—it was the occasion when she had learned to fear him a little—dropped to the papers. However, he raised them at once and said without any change of expression:

"You seem a little distrait to-day. Am I right?"

"Distrait? I wasn't conscious of seeming so. May I apologize?"

"In fact the thought crossed my mind the last time you were here—Monday, wasn't it? I hope ——"

"Really this is unpardonable of me. Is Mr. Charles to be told that I'm not proving satisfactory as his representative?"

Disregarding this feminism, the man said straightforwardly, "May I ask if there's anything wrong?"

She was struck with the evidence of an insight, a sympathy even, which in other directions had sometimes seemed to her wanting. But a light showed in her eyes.

"Yes—everything! I will confess. However, an analysis of my sentiments would bore you, I fear. You might even think it womanly!"

Her deceptive vivacity faded a little, despite herself, as she added: "A man just told me that he had had the happiest year of his life—here in Washington."

Mr. Wollaston leaned back a little, with a stare. He was thirteen years older than she and possibly considered that he knew five times as much.

"Am I to understand that you're against people's being happy?"

"Well, I wonder at it, under the circumstances. And that explains me in a way too—briefly. For the more people there are who feel perfectly happy these days the more it appears necessary for others to feel—though not necessarily to seem—what you call distrait. You agree?"

"How can I agree—when I don't understand a little bit? You are absolutely too subtle."

The girl smiled. She was dark, with a colorless skin, and her face in repose looked overserious. But Ensign Dawson, who wrote verse in secret, had likened the effect of her smile to "flinging ope a stained-glass window giving on a golden garden." He had tried over many versions of the concept in his fancy, but this may be accepted as on the whole his final text. The present smile, however, was a feat of character; it was transient and it was not pacific.

"I thought I was childlike in my simplicity. Of course I spoke of the obligation—in honor, if you like, for it's a common cause—from those who give nothing to those who give everything."

"The obligation? To do what?"

"Naturally, to share in their giving, in their suicidal generosity—in the only way we can. Through the understanding—through the feelings."

"But what good does that do?"

"Good?"

"Really, does it help anybody or anything to spend time and energies in lamenting—sentimentalizing perhaps—the unescapable sufferings of war? For that's what I understand you to say? Don't we who stay at home in fact help the sufferers more by plugging to keep the world going somehow—by trying to lay hold of some positive good in the mess—and being happy if we can?"

Her instant feeling was that in that rationalism, harder than a stone and with the fatal smoothness of convenience, the captain of industry had written his own epitaph. Even Lieutenant Charles had his moments when he brandished a slender fist and classically damned the Germans.

The pause was long enough for one to count ten. The petty officer said with quickening breath:

"I spoke of it as an obligation. That isn't right of course. It's an instinctive response. People either feel it or they don't feel it. But of course one gets in the habit of judging people by what they feel or fail to feel under acid tests like this." Having let fall another pause, she resumed in a measured way:

"If I seem abstracted to-day there's a coincidence to account for it perhaps. A few hours before this man told me how happy he was—he's a young man, with all his faculties, doing work as tame as a girl's—I heard that one of our best friends, a soldier, was sailing for home this week. He belongs with another class, with those who've given everything—suffered everything. I'm proud of him, I adore him for what he's done and I—shrink from seeing him."

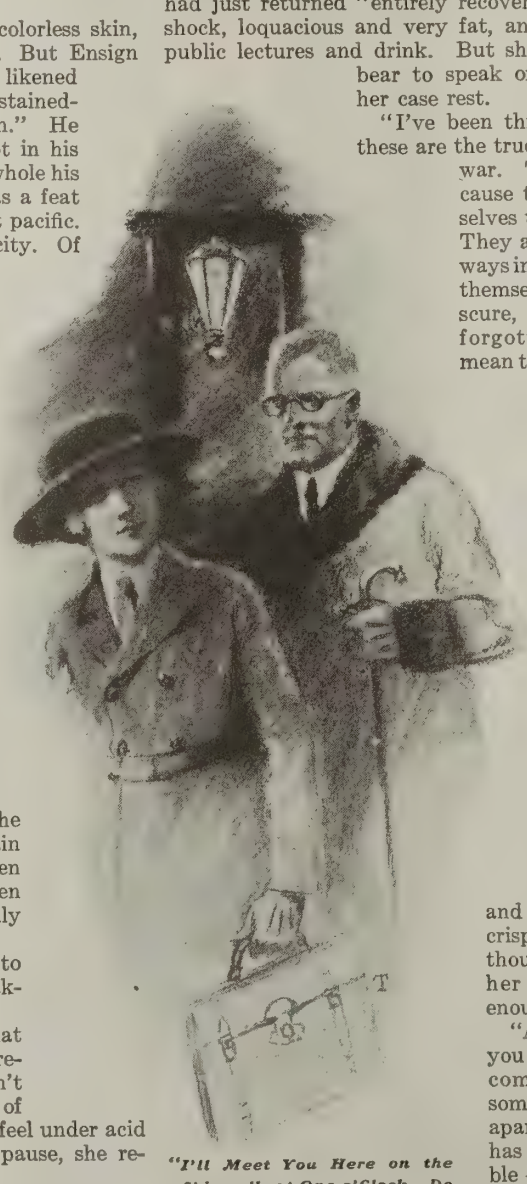
If the Board Chief's gaze now clearly questioned her she was not aware of it, needing no more prompting. Conceivably, since she was a woman, the simple desire to talk about what lay close to her heart was not wholly wanting. Beyond that she was driven by a conscious longing to shake this ease, to pierce this man with a hurting knowledge of those vicarious tragedies which seemed to her latterly to people the world.

"I'm not thinking of his wounds particularly—though as a matter of fact he was wounded twice. Once, the first time, at Soissons—with the bayonet. And then in the Argonne he got three machine-gun bullets in his knee, cleaning out some German nests. He got a citation for that—and was retired. That's why they're letting him come home so soon—they've lamed him. But wounds to the body don't matter so much, do you think? At least they speak for themselves, so the dullest understand. I've been thinking so much lately of those—those deeper hurts which people hardly notice and never praise, of the men who have given us, not their lives but in some way themselves—who have felt everything so intensely that they can never have much interest in anything again. I've known several—rather bad cases lately. But perhaps this does bore you, after all. Perhaps I'm keeping ——"

"You do not bore me—you're not keeping me. I assure you I'm very much interested. Please go on."

Pressing her hand against her breast, where her cablegram lay, the girl spoke movingly—to herself at least—of a friend of hers in Caledonia, Henry Risdale, the promising and once ambitious, who had come home in September with only a finger or two missing, very brown and husky looking, but whom no cajolery or ingenuity had shaken so far in his strange voiceless depression. And then she sketched Major Gunther, who had been meant for a poet and looked so eerily handsome with his suddenly white hair, and who after three months' rocking in a wicker chair on the back porch at home had blown out his brains while the bells were ringing on November eleventh.

She had meant to speak of her brother Frederick, who had just returned "entirely recovered" from a touch of shock, loquacious and very fat, and taken instantly to public lectures and drink. But she found she couldn't bear to speak of Frederick. She let her case rest.



"I'll Meet You Here on the Sidewalk at One o'Clock. Do You Know, I Think You're Doing a Very Nice Thing"

"I've been thinking that men like these are the true tragic heroes of the war. They are heroes because they've ruined themselves to save the rest of us. They are tragic because the ways in which they've ruined themselves are terrible—obscure, unhonored and soon forgotten. Well, I don't mean to forget them. That's the sum of what I am trying to say. I refuse to regard such suffering as—a philosophic abstract. And I'd despise myself if I pretended that it meant or could mean any kind of positive good."

She continued to look down at her interlocked slim hands, disclaiming any excitement, denying by her pose that she had said anything special, or pointed, or personal. Mr. Wollaston's face, strongly and saliently cut under crisp dark hair, wore a thoughtful look. He took her up sympathetically enough:

"And this other friend you mentioned, who's just coming home—you've some reason to think that apart from his wounds he has suffered in less reparable ——"

"Letters show very little of course. I'll know when I see him. But I'll tell you one reason I'm afraid of that: It would be such perfect poetic justice."

"For ——"

"For me. Oh, I don't mean that I ever held the purely heroic view of war—the fife and drum view. I wasn't so silly even then, and that was just at the beginning. He was the first man in our town to go. But I did think," said the girl resolutely, over a mounting inner disturbance—"I did feel that the experience might be—be good for Think! And that's hardly eighteen months ago. known him ever since I was born, you see. We family—are all devoted to him. And still I've criticized him—nagged at him—in one foolish w thought he took life too lightly. I thought he w pleasure-loving—too easy-going. I wanted him to b ous and settled—and old. I was lecturing him up minute he went away."

She stopped short, and as clearly as in a moving p she saw her shaded porch in Caledonia that sultry tember afternoon last year when Lieutenant Mar he then was—had come to say good-by. There in the old canvas swing, brave and handsome in h trappings, telling with endearing boyishness of th friends he had made at the O. T. C., of the farewell and ball at the hotel in Indianapolis. He had been with her since she was sixteen, had twenty times her to marry him. And now he was going away, l ing upon the heroic service which, as it gradually u itself, was to raise him so high in her imaginatio knew she was not to see him again. And still, eve her mind pursued him, running like a common scold smiling ways, his young expressions. A thousand she had remembered, with humiliation, saying t under the shadow of that parting: "Why must you trip the light fantastic, Russell? Can't you ev dance?"

Ah, what wouldn't she give to hear him say th with the old jolly laugh!

"I can understand your feelings, I think," Mr. W ton's calm voice was heard to say. "But after all just a feeling as yet, isn't it—rather than anythi crete? Mayn't we hope that these—quite na anxieties will prove unfounded in this case? I ——

That recalled her quickly enough. From him up present mood the speech resounded like the willful d ation of a hero. Now it was as if she were dete that her warrior should have suffered to the neth for the shame and confusion of all safe stay-at-hor

"That part is mere feeling, if you wish. But another reason, more logical perhaps. It is this: I of common risk the best give the most. It takes a fi to feel things enough to disintegrate—and our frie proved himself that sort. And since I judge everybo by what the war has meant to them, I place at the ot of the scale—the bottom end—those who hav through it without being affected at all and, in fac kept happy. I am angry when I think of them."

Mr. Wollaston's rejoinder to this broad summa partly circumvented. The door of his office had al opened and a Board messenger stood revealed u threshold, a freckled and youthful courier on roller a friendly lad and a stranger to self-doubt.

"Well, boy?"

"Is that Miss Hardy there? Well, Lieutenant says to come back to the office as soon as you get t here. Says he's got work must be got off to-night he's sorry. I think he said that."

"How did you get the message?"

"Didn't you hear your phone ringin' and rin here? Well, I did. So I stops in as I passes an swers it."

Miss Hardy's heart sank a little. It had been a l and she was supposedly bound for "home" and re yond that, the turn that this official interview ha left her deeply unsettled. But she seemed ready it now. She had risen at once, and as the lad rolle down the thin echoing corridor she spoke impersor the recovered voice of the emissary:

"About the memorandum? What may I t Charles?"

The Board Chief, standing, picked up her pap them down again and frowned briefly at the green his desk light.

"It's a first-rate statement. Tell him I app approve. I'll handle it at the board meeting on F

"He will be glad. I know this matter has worr a good deal."

But Mr. Wollaston had his say, his last word, a Courteously walking with her, he opened his door and having opened it, he halted large and firm u sill, the knob retained by a strong hand. So con his girlish colleague, he looked down at her with turbed friendliness and said in quite a soothing wa

"Won't you allow me to say that at least it nev to cross bridges before we come to them? May it that your friend has—after all—got out of his exp exactly those benefits you wished for him? Who kr you say? And in that case, if you will pardon me, I might still claim a positive good—for everybo cerned."

"Your optimism is beautiful," said the petty off

She went away frustrated and angry.

Her resolve was that this subject should be d again with the evidence in; and she anticipated pr then facts concrete enough to shatter this comp forever.

He Had Been in Love With Her Since She Was Sixteen, Had Twenty Times Asked Her to Marry Him

a these hours must stand as the happiest time of
e.
r, which overthrew empires and set off gigantic
ys s, had silently reached out in remoter ways,
n n obscure details the lives and customs of people
in ortance. This girl from the provinces, typically
or entionally bred, had struck work and taken a
s urney in an upper berth to meet a young man at
n ience in a strange hotel. Two years ago—even a
g this would have seemed to her an inconceivable enterprise. Now the supreme naturalness of the proceeding and the ease of its accomplishment had left her wishing only that she had had a harder thing to do for Russell.

Even the practical arrangements, which had promised to be complicated, had worked out with the smoothest simplicity. The shipping man at the office supplied the most reliable information; she had learned to a minute when the Transylvania was to dock; her telegram from Washington had reached Captain March with marvelous promptness. Before eleven o'clock she had heard his voice on the telephone; before twelve he was with her.

At once her mind, so joyfully released from its hidden burden, could begin the eager exploration of the reacquaintance; and the first all-important observation was followed by hosts of others, supplementary and divers, as an author will jot down footnotes to qualify his finished text.

They had met in the library of the great hotel in which she had rented a cubicle upon the twenty-second floor. Here again fortune smiled upon them. For company in the dim odd trysting place they had only the librarian, who was old and fond of knitting, with a brown mole beside her nose and a small Christian smile, and one yet older lady, sole patron of the books, who slept heavily upon a distant sofa, her fingers clasping a large green volume called How to Develop the Memory. Behind the shelter of a projecting book stack the young people had found seclusion like the privacy of home. And the minutes flew in talk of those little things, personal and impersonal, which seem always to come first into people's minds in times like that, leaving them to marvel afterward what possessed them to waste opportunity so riotously.

Russell was changed of course. He was marked with the symbols of his gallant sacrifice. Most conspicuous was his lameness, which was worse than she had anticipated and which—he mentioned in the most casual debonair way conceivable—was likely to be permanent. But the whole look of the soldier, his changed aspect and bearing, carried the unmistakable souvenirs of service. The handsome face, still bronzed despite the weeks in hospital and thinner than she had last seen it, had noticeably aged. There were new lines about the once boyish mouth. In repose his expression looked to her, in the first sight of it, decidedly sobered; at least it was visibly *settled*. And in his movements and his manner, too, in hardly definable ways, she seemed to be aware of corresponding changes—less sprightliness perhaps, but more maturity, increased poise, the new authority of the ruler of men.

But—she was positive from the beginning—there was no sign here of those profounder changes, subtle and sinister, such as had so moved and shocked her in William Gunther and her poor brother Frederick.

Captain March had twelve hours' leave. He was in luck at that, he said. It developed that he had planned to the last detail how the brief holiday should be spent. No sooner had they met and greeted—or so it seemed to her—than it was time to rush on for luncheon. Actually the forehanded young man had a table engaged, through the offices of his friend Captain Jasper.

Their talk had been so happily normal, her relief so powerful and uplifting, that the soldier's purely physical disability had literally passed from memory. They had sprung up from the cushioned settle between the stacks chattering like two excited children. Once again he—the twice promoted, with the ribbon on his breast—had cried out proudly at the becomingness of her uniform.

"And to be a chief too, Fanny! I simply can't get over it!"

All was merry. And then as he turned to clutch up cap and stick she was struck suddenly and heavily with what she had forgotten; and the simple thought shot her through that Russell—her Russell, the light-footed—might never dance again. The stroke was swift, like a needle in her heart. Her pride in him melted in a rush of tenderness, new in her experience. Half behind his unconscious figure as she was, she slipped her arm through his, brought her other arm to meet it and, folding the khaki sleeve against her breast, had briefly touched it with a cheek as soft as swan's-down.

"Russell—I'm so happy to be with you."

The rare tribute had unsteadied the tall captain. She thought he meant to take her in his arms. And probably that had been his novel aspiration—up to the instant when both became aware of the eye of the librarian, intensely regarding them. But the memory of that moment lingered.

By now, in her reassurance, she was almost ready to draw Russell out a little, to hear from his own lips something of his experience and his exploits. But the fashionable restaurant manifestly was not the background for serious talk. If the girl could have wished for a quieter nook she was more than compensated by her soldier's candid satisfaction in his choice; it was clear that he basked in this smart atmosphere, this agreeable and expensive scene. Having ordered an excellent lunch, which he selected with unexpected skill, he thrust a bill into the palm of his fellow captain of the serving staff and demanded speed, as required by his program.

"We've got exactly one hour, mind! I want everything hurried."

He had his way; sections of the repast began to arrive almost instantly. He attacked them with devastating earnestness. She praised his discrimination as a chooser of delicious things from a bewildering assortment, and the look in his remembered eyes said speakingly that her approbation was the reward he coveted most upon earth.

"I hope I have learned something since—the Palace Hotel, Caledonia! For one thing—well, I spent three days in Paris last year as the guest of Johnson Fielding, 2d. If there's anything Johnson doesn't know about what a chef can do I never found him out—that's all! By the way, he's a wonderful fellow, Fanny. I'm going to visit him at Newport this summer if I can. And when it comes to spending money like a prince—gad, he's as good as a college education!"

"I shouldn't liken your method to a pauper's exactly. I've a notion, Russell, amounting to an icy conviction, that this lovely place is fantastically extravagant."

He laughed winningly and quoted a saying from their childhood days:

"Brush, the best is none too good for you!"

"But what is the best, my dear? I'll tell you: To see you, to talk to you, to listen to you, to have you tell me a thousand things and tell you a thousand back. And we could have that as well at a lunch counter."

"Not on your life! I don't say you wouldn't adorn that setting, but I prefer to see you where you absolutely belong. And then, too, I'll say something is due to an officer in the world's best Army, back after fifteen months!"

"Agreed!"

"But to set your mind at rest, Fanny—I'm just bursting with it! Got three months' pay I haven't had a chance to slice into yet, and then what did Aunt Gertrude do, dear old thing, but come through with a thumping fat check the day I got on the boat!"

The girl laughed delightedly.

"But you'll need it, Russell—you'll need it! Why, you don't even know yet whether you can get your old place back or not! At least—do you?"

He gave her an animated look in which something like exultation warred with something else like surprise.

"My old place! Listen at her! Why, I wouldn't touch it with a ten-foot pole! Teller in the Caledonia National Bank! Great heavens, Fanny! You seem to think I've been standing still all this time."

"But—Russell, what *do* you mean?"

(Continued on Page 60)

GERMANY IN TRANSITIO

By ISAAC F. MARCOSSON

BERLIN was bathed in autumn sunlight. As I walked down Unter den Linden, the main thoroughfare, I felt those mingled emotions that novelists delight to write about. Behind me bulked the Brandenburg Gate, its central arch no longer reserved for the exclusive passage of royalty. At the other end of the long avenue rose the dome of the ugly sprawly palace—once the home of William Hohenzollern—the walls still pock-marked by the machine-gun bullets of the spring revolution.

Watching the crowd that surged back and forth I could not help thinking that these men about me who wore the black-and-white ribbon of the Iron Cross—no male person in Germany seems to have escaped a decoration—and who smoked and talked so amiably were perhaps the same steel-helmeted soldiers in field gray whose shells I dodged a year ago. Furthermore, I mused, the badly dressed women who drank their coffee and chatted volubly in the many pavement cafés were possibly the identical ones who strafed America with every grace before meals. Yet, so far as externals were concerned, normal life had apparently been resumed amid the serenity of this September afternoon.

Suddenly I heard overhead the purr and whir of a Zeppelin motor. Twelve months before this same noise in London or Paris was the prelude to swift destruction, for it invariably announced that the air raider was abroad. Instinctively I turned to cover. Then I realized that the war was over. I looked up and saw a giant airship sailing gracefully over Berlin. It was the Hamburg-American Line Zeppelin starting on its triweekly four-hundred-mile trip to Friedrichshafen, with passengers and freight. After circling a few times it moved off toward the south and was soon lost to sight in the gathering twilight.

That Zeppelin did more than give me a surprise. It showed that Germany, stripped of her shipping at sea, had turned, with peace, to the air to retrieve her lost near-mastery of transportation. More than this, it demonstrated that the defeated and discredited Fatherland will capitalize every last word in science and invention in the effort to achieve a rehabilitation fraught with supreme significance for the whole world. What is true of aviation will be true of many other activities, once the nation has struck its stride. For the moment this seems a remote consummation. The present German hour is dark with a despair that is developing into a menace to international recovery.

Why is Germany's plight of such universal importance? In the answer lies a revelation of conditions as tangled and troubled as ever the war itself disclosed. It would be difficult to find the parallel in all history.

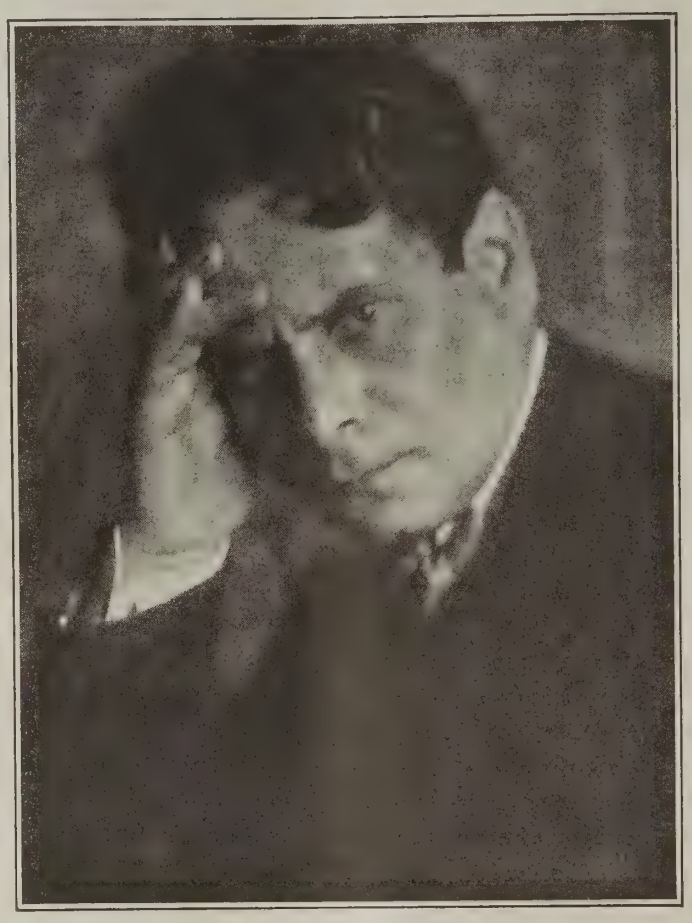
A Menacing Balance of Power

TO VISUALIZE this unprecedented situation and to understand fully the wholly unexpected influence that Germany wields even in her travail we must go back a bit. For at least fifteen years before that fateful August of 1914 she stood up erect and strong, an arrogant empire of blood and iron. Her trade, her science, her resource, her vast and compelling desires—conjured up fear. She beat the big drum in the concert of Powers, and though the note was often discordant it rang out above all the rest. Through her commercial penetration she became the spinal cord of the economic body of Europe, and contributed in addition much sustenance to the world business structure. "What will Germany do next?" was the invariable query.

As we all know, she did aplenty. She plunged a civilization, hypnotized with a mistaken sense of security, into war and for nearly four years dominated its stupendous drama of death. Again she held the calcium.

But war, however long-drawn and hideous, is at worst a temporary thing. Thus in time the greatest of all wars ended, whereupon the optimists said: "At last Germany is eliminated as a factor."

It was dangerous optimism, for the curious reason that Germany, beaten and severed, remains a force to be reckoned with in the eternal struggle to live and labor, which knows neither race, prejudice nor war hang-over. Like the battle of business it is a permanent thing. Men are not compelled to fight every day, but they must be fed three times a day. The irony of fate now dictates that the one-time bulwark reared by Bismarck out of the humiliation of France emerges from the dust of conflict to confute and embarrass its foes and impede the general rehabilitation.



Maximilian Harden

Automatically, and largely because of her former economic prestige, Germany still holds an uncanny balance of power, which if unconserved may yet bring widespread disaster and nullify the costly fruits of Allied victory. In other words, Germany, nemesis of peace before the war, remains a death's-head to economic security now that the war is over. How is this possible?

If you dispassionately analyze Europe as it is to-day you soon find out. Here are the facts: It is exactly a year since the armistice was signed, and peace remains as much a will-o'-the-wisp as in the dark days of 1917. The only difference, in a larger sense, is that the Allies and the Central Powers no longer hurl shot and shell at each other. The poison gas of the battlefield has been succeeded by a deadly distrust and a more destructive inaction that are stifling initiative and sterilizing real recovery.

Following the colossal energy that swept the war to its titanic proportions is a supineness that has become epidemic. No nation is immune from this plague of idleness, and Germany, once the stronghold of thrift and industry, has joined the slackers. Belgium is the only country in Europe that has really settled down to business.

But Germany has gone her enemies one better. She has tasted of the crimson fruits of revolt, and the virus of discontent has entered her system. Nor is this surprising. Kept in practical ignorance of the hopelessness of her national struggle until defeat actually stared her armies in the face she has developed an indifference that borders on abandon to any emergency. A years of overwork and underfeed unrest is as much pathological a wise. But whatever its origin it is there and It is one definite phase of Germany in tran

If the Actionists, alias the Spartacides, just another name for Bolshevists, plu country into another revolution—and it i the possibilities—it will not only mean an Germany but the kindling of a flame t sweep England and the Continent.

This sounds like strong speech, and it no man can study Europe, and for that r need not leave America, without discove this strike-mad world of ours to-day has not, for at least, been made a better place to live in, de welter of blood and sacrifice that began in 1914.

Germany's political collapse under a reign would upset a large part of the European scheme struction. First, because it would prevent the of the indemnities exacted by her outraged co which are essential to French and Belgian deve second, because she is still technically the spinal I have described. With or without her depar authority she is unfortunately indispensable to prosperity. She is so intimately bound up in mercial fortunes of her neighbors that bankru worse for her mean dislocation of the Entente machine, now in such sad need of renewal and lu

I found convincing evidence of this in the British, French and Belgian commercial travel met throughout Germany and more especially in pied area, who were in hot competition to resume relations with the Germans.

If the Germany that murdered the Lusitania, Britannic, shot Edith Cavell, ravaged Belgium the whole conduct of war a rebuke to humanit isolated entity we should have not the slightest tion about her eclipse. One would even be glad vultures come home to roost. But the lustful that made Europe a shambles happens to be so i related to the universal process of demand ar that she cannot be eliminated. To put it cor Germany to-day is like a rotten apple. I converting the sword into a plowshare E turned from a war of force to a battle of

The Collapse of the Mark is Eloquent Evidence of Germany's Decline

be and dangerous. It all operates to enhance the tragic importance of the beaten Germany.

In short, Germany must be salvaged if we are going to save Europe, and our stake abroad is now so great that we cannot afford to be an inert bystander in this new crisis. The salvation is possible only through work. A busy man has no time to think of mischief. Keep a people fed and busy and you likewise keep them out of trouble, provided, of course, they have no military masters itching for war. Fundamentally the German is a worker, but at the present writ he is without the tools with which to labor. The principal tool that Germany lacks to-day is raw material. If I were asked to state the most pressing need of the Continent to-day I should without hesitation say that it is the necessity of starting the flywheel of industry. Production, the unfailing instrument of regeneration, is as essential to Germany as it is to the rest of the world. Reproduction, once stimulated in Germany, will act as a speeder-up for the nations now involved in industrial turmoil, because it will rob the Bolshevist agitator of his job. Repose in Germany confutes a red alliance with Russia, and this in turn is the primary cause for the unrest that is undermining all constructive endeavor.

At this point the average man will exclaim: "How about the needs of the other European nations, and more especially our Allies and those small but gallant peoples who have passed through darkness to self-determination?"

The more you find the beaten Germany potent even in her downfall. These little nations and their brothers as well can have no prosperity without a real peace, and there can be no real peace until Germany is at work. This peace cannot be accomplished by politics, legislation or revenge. The time has come for frank talk and this talk resolves itself into the statement that American credits for Europe must start with credits for Germany if we are really going to make a start in real rebuilding. This implies neither sentiment nor sympathy. It is plain economic self-preservation.

With this statement of the most outstanding feature in present-day Germany we can proceed with our survey. What is happening behind the frontiers that were so long an impenetrable curtain? What is the German people thinking and doing? Who are the new leaders? What is the American interest in the revolution that has followed revolution?

I went to Germany to find out. I visited the occupied, neutral and free countries. I talked with cabinet ministers, soldiers, captains of industry and plain people. What follows in this and in the succeeding articles is outlined at first hand at a time when the long shadow of war had been lengthened with peace.

Fourteen Points

A NATION in trouble usually faces either a political or an economic crisis. Germany has both, and at the same time. Appraise the situation as a whole and these facts stand out:

FIRST: Germany is not only beaten but knows and admits it.

SECOND: Things are likely to be worse before they get better.

THIRD: Her morals are at lowest ebb. Theft and even murder are as common as the discontent throughout the land.

FOURTH: Despite the depreciation of the mark, food and other prices in Germany are low, and the stocks fairly abundant. On luxury articles are expensive.

FIFTH: The Kaiser illusion is shattered and there is not the slightest chance that a Hohenzollern will ever return to power. A constitutional monarchy, however, is among the possibilities.

SIXTH: Though a large body of intelligent Germans realize less philosophically accept the peace terms a great many people seem to be indifferent to their fate. "Why work for the French?" is their refrain.

SEVENTH: Conscious of the misdeeds of his soldiers and sailors on land and sea the German, with a psychology peculiarly his own, expects the world with which he fought to forget them with the dawn of peace.

EIGHTH: German production is partially paralyzed by reason of insufficient fuel and lack of raw materials. Even the democratization of industry now in process has so far failed to bring the discontented workers back to work, even where work is available.

NINTH: Contrary to widespread belief before the war and since Germany has no large accumulated stores of finished or unfinished materials. Thus she is unable to enter upon any extensive dumping campaign. The Germans are shamming about some of their shortages, notably with iron and steel.

TENTH: The institution of German propaganda is still at work. Its chief object now is to convince visitors to Germany that the country is unable to pay the drastic indemnities and must obtain some modification of the peace terms.

ELEVENTH: Though the utmost friendliness is expressed and displayed toward Americans the man most unpopular in Germany to-day is President Wilson, who is held personally responsible for what the Germans consider national confiscation.

TWELFTH: Germany has had all the war she wants for a long time to come. The great mass of the people feel so beaten, there is such bitter resentment toward militarism, the children are so impoverished from underfeeding, that a long time must elapse before the nation is physically and temperamentally fit again.

THIRTEENTH: Unless Germany gets credits with which to purchase raw materials her recovery at the moment seems impossible. In this event she will be unable to pay her indemnities and she will come dangerously near bankruptcy, more especially if the mark continues to fall. Just as she is shamming with her shortages, so is she exaggerating her financial needs. Every money demand of hers must be halved.

FOURTEENTH: Given credits, the miasma into which industry is plunged will vanish. Work—the unfailing antidote for all unrest—will succeed discontent, and Germany will surprise the world with her recovery. She has lost none of her skill and efficiency. I doubt if a prosperous Germany will ever again be a war-mad Germany, not merely because the myth of her invincibility is shattered but because the overhead of defeat is too great to risk again. The nation is sapped.

These fourteen points are not based on what Germans told me. The penalty that Germany pays for the crimes of the war is the world's lack of confidence in her utterances. What I have just written is the record of what I have seen.

Before we go into the detailed analysis of the present-day German balance sheet let us first have a look at the country and the people. I thought that my thrills and surprises had ended with the signing of the Armistice, but I was mistaken. The Germany that I peacefully invaded presented a series of dramatic situations almost as impressive as any I had faced through the years of the war.

To begin with, I was no stranger to Germany. I had known her back in those prewar days when the world felt the lure of her opera and cures. Far less pleasant was my vicarious wartime contact. I had looked down into her from Switzerland, gazed at her from across the Dutch frontier, beheld her troops across many a shell-swept No Man's Land. Through all these hazardous years of travel and tumult Germany to me was as a sealed book. Now at last the time had come when the curtain was pulled aside, the iron ring broken, and I stepped into her confines.

Mr. Marcosson's German Passport

Apathy and Depression

OFTEN during the war I wondered just what my first experience in Germany would be. I had ridden on British troop trains marked "On to Berlin," had watched our own soldier-laden cars labeled "The Rhine Limited," and speculated whether I should cross the great German divide with an army of conquest or otherwise. As a matter of fact I rode into Germany late at night in an unromantic first-class coach from Metz, and it was only with the breaking of dawn that I realized my long dream.

An American bugle woke me out of my sleep in a hotel at Coblenz. I stepped out of my window to a balcony and saw the Rhine flowing at my feet. On the footbridge directly opposite marched a company of doughboys, while from the heights of the old fortress of Ehrenbreitstein across the river the Stars and Stripes flashed in the sunlight. It was the new Wacht am Rhein!

The Germany that I found on the eve of the final ratification of the Peace Treaty late in September is in human respects not much different from the Germany of a year ago, stunned by the Armistice. No man can visualize the completeness of the jolt to Germany, however, until he is well within the German confines. This is one reason why the world has been fed up with so much misinformation, written in the main by long-distance observers, about Germany's so-called "victory in defeat." To be sure, she wields the uncanny influence due to her social unrest and her interrelation with the rest of the economic world which I have already described. The great mass of her people, however, are dull with apathy.

The smug cocksureness and self-complacency which in the old days irritated every visitor in Germany are gone. Once inside the country you get a sense of depression that almost amounts to listlessness. This impressed me deeply the moment I began to talk to Germans, whether in Coblenz, Cologne, Wiesbaden, Frankfort, Düsseldorf or Berlin.

TUTT AND MR. TUTT

By Arthur Tra

ILLUSTRATED BY HENRY RAL

"Hold Up Your Hands, You! You Do Solemnly Swear That in the Case of The People Against Mock Hen You Will Tell the Truth, the Whole Truth and Nothing But the Truth

Case Number Nine: Ways That are Dark

"Oh, East is East and West is West, and never the twain shall meet."
Ballad of East and West.

"But the law of the jungle is jungle law only, and the law of the pack is only for the pack."
Other Sayings of Shere Khan.

A HALF turn from the clattering hubbub of Chatham Square and you are in Chinatown, slipping, within ten feet, through an invisible wall, from the glitter of the gin palace and the pawnshop to the sinister shadows of irregular streets and blind alleys, where yellow men pad swiftly along greasy asphalt beneath windows glinting with ivory, bronze and lacquer; through which float the scents of aloes and of incense and all the subtle suggestion of the East.

No one better than the Chink himself realizes the commercial value of the taboo, the bizarre and the unclean. Nightly the rubber-neck car swinging gayly with lanterns stops before the imitation joss house, the spurious opium joint and tortuous passage to the fake fan-tan and faro game, with a farewell call at Hong Joy Fah's Oriental restaurant and the well-stocked novelty store of Wing, Hen & Co. The visitors see what they expect to see, for the Chinaman always gives his public exactly what it wants. But a dollar does not show you Chinatown. To some the ivories will always be but crudely carved bone, the jades the potter's sham, the musk and aloes the product of a soap factory, the joss but a cigar-store Indian, and the Oriental dainties of Hong Fah the scrappings of a Yankee grocery store. Yet behind the shoddy tinsel of Doyers and Pell Streets, as behind Alice's looking-glass, there is another Chinatown—a strange, inhuman, Oriental world, not necessarily of trapdoors and stifled screams, but one moved by influences undreamed of in our banal philosophies. Hearken then to the story of the avenging of Wah Sing.

'Tis a tale was undoubtedly true
In the reign of the Emperor Hwang.

In the murky cellar of a Pell Street tenement seventeen Chinamen sat cross-legged in a circle round an octagonal teakwood table. To an Occidental they would have appeared to differ in no detail except that of a varying degree of fatness. An oil lamp flickered before a joss near by, and the place reeked with the odor of starch, sweat, tobacco, rice whisky and the incense that rose ceilingward in thin, shaking columns from two bowls of Tibetan soapstone. An obese Chinaman with a walnutlike countenance in which cunning and melancholy were equally commingled was speaking monotonously through long, rat-tailed mustaches, while the others listened with impassive decorum. It was a special meeting of the Hip Leong Tong, held in their private clubrooms at the Great Shanghai Tea Company, and conducted according to rule.

"Therefore," said Wong Get, "as a matter of honor it is necessary that our brother be avenged and that no chances be taken. A much too long time has already elapsed. I have written the letter and will read it."

He fumbled in his sleeve and drew forth a roll of brown paper covered with heavy Chinese characters, unwinding it from a strip of bamboo.

To the Honorable Members of the On Gee Tong: Whereas it has pleased you to take the life of our beloved friend and relative Wah Sing, it is with greatest courtesy and the utmost regret that we inform you that it is necessary for us likewise to remove one of your esteemed society, and that we shall proceed thereto without delay.

Due warning being thus honorably given I subscribe myself with profound appreciation,

For the Hip Leong Tong,
WONG GET.

He ceased reading and there was a perfunctory grunt of approval from round the circle. Then he turned to the official soothsayer and directed him to ascertain whether the time were propitious. The latter tossed into the air a handful of painted ivory sticks, carefully studied their arrangement when fallen, and nodded gravely.

"The omens are favorable, O honorable one!"

"Then there is nothing left but the choice of our representatives," continued Wong Get. "Pass the fateful box, O Fong Hen."

Fong Hen, a slender young Chinaman, the official slipper, or messenger, of the society, rose and, lifting a lacquered gold box from the table, passed it solemnly to each member.

"This time there will be four," said Wong Get.

Each in turn averted his eyes and removed from the box a small sliver of ivory. At the conclusion of the ceremony the four who had drawn red tokens rose. Wong Get addressed them.

"Mock Ding, Mock Hen, Get, Sui Si you it is conf avenge the murder of our brother Wah Sing. F in your purpose!"

And the four answered unemotionally: "Those to it is confided will not fail."

Then pivoting silently upon their heels they pas of the cellar.

Wong Get glanced round the table.

"If there is no further business the society will d after the customary refreshment."

Fong Hen placed thirteen tiny glasses upon th and filled them with rice whisky scented with anise a dash of powdered ginger. At a signal from Wong thirteen Chinamen lifted the glasses and drank.

"The meeting is adjourned," said he.

Eighty years before, in a Cantonese rabbit warr yellow men had fought over a white woman, and killed the other. They had belonged to different so or tongs. The associates of the murdered man had a his death by slitting the throat of one of the mem the other organization, and these in turn had ret thus establishing a vendetta which became part and of the lives of certain families, as naturally and u ably as birth, love and death. As regularly as the they alternated in picking each other off. Branche Hip Leong and On Gee tongs sprang up in San Fr and New York—and the feud was transferred wit to Chatham Square, a feud imposing a sacred obl rooted in blood, honor and religion upon every m who rather than fail to carry it out would have kn yellow silken cord under his left ear and swung gently off a table into eternal sleep.

Young Mock Hen, one of the four avengers, had a distinct place for himself in Chinatown by making ful study of New York psychology. He was a good-l Chink, smooth-faced, tall and supple; and he kne well how to capitalize his attractiveness. By attended Columbia University as a special student plied electricity, keeping a convenient eye meanw three coolies whom he employed to run The College dry on Morningside Heights. By night he vica operated a chop-suey palace on Seventh Avenue, congregated the worst elements of the Forty-second

oadway district. But his heart was in the gambling ich he maintained in Doyers Street, and where anyo knew the knock could have a shell of hop for the ir, once Mock had given him the once-over through le sliding panel.

k was a Christian Chinaman. That is to say, purely siness reasons—for what he got out of it and the g that it gave him—he attended the Rising Star and also frequented Hudson House, the social ent where Miss Fanny Duryea taught him to ng-pong and other exciting parlor games, and read from books adapted to an American child of ten. a great favorite at both places, for he was sweetd and wore an expression of heaven-born inno- He had even been to church with Miss Duryea, arily absenting himself for that purpose of a Sunday g from the steam-heated flat where—unknown to course—he lived with his white wife, Emma Pratt, of highly miscellaneous antecedents.

ed back in the of Chatham Square, while Quong resumed his tortoiselike perambulation toward Ah Fong's. Pell and Doyers Streets were deserted save for an Italian woman carrying a baby, and were pervaded by an unnatural and suspicious silence. Most of the shutters on the lower windows were down. Ah Fong's subsequent story of what happened was simple, and briefly to the effect that Quong, having entered his shop and priced various litchi nuts and pickled starfruit, had purchased some powdered lizard and, with the package in his left hand, had opened the door to go out. As he stood there with his right hand upon the knob and facing the afternoon sun four shadows fell aslant the window and a man whom he positively identified as Sui Sing emptied a bag of powder—afterward proved to be red pepper—upon Quong's face; then another, Long Get, made a thrust at him with a knife, the effect of which he did not observe, as almost at the same instant Mock Hen felled him with a blow upon the head with an iron bar, while a fourth, Mock Ding, fired four shots at his crumpling body with a revolver, one of which glanced off and fractured a very costly Chien Lung vase and ruined four boxes of mandarin-blossom tea. In his excitement he ducked behind the counter, and when sufficiently revived he crawled forth to find what had once been Quong lying across the threshold, the murderers gone, and the Italian woman prostrate and shrieking with a hip splintered by a stray bullet. On the sidewalk outside the window lay the remnants of the bag of pepper, a knife broken short off at the handle, a heavy bar of soft iron slightly bent, and a partially emptied forty-four-caliber revolver. Quong's suit of mail had effectually protected him from the knife thrust and the revolver shots, but his skull was crushed beyond repair. Thus was the murder of Wah Sing avenged in due and proper form.

Detective Mooney, distant not more than two hundred feet, rushed back to the corner at the sound of the first shot—just in time to catch a side glimpse of Mock Hen as he raced across Pell Street and disappeared into the cellar of the Great Shanghai Tea Company. The Italian woman was filling the air with her outcries, but the detective did not pause in his hurtling pursuit. He was too late, however. The cellar door withstood all his efforts to break it open.

Bull Neck Burke, the wrestler, who tied Zabisko once on the stage of the old Grand Opera House in 1913, had been promenading with Mollie Malone, of the Champagne Girls and Gay Burlesquers Company. Both heard the fusillade and saw Mock—a streak of flying blue—pass within a few feet of them.

"God!" ejaculated Mollie. "Sure as shootin', that's Mock Hen—and he's murdered somebody!"

"It's Mock all right!" agreed Bull Neck. "That puts us in as witnesses or strike me!" And he looked at his watch—four-one.

"Here, Burke, put your shoulder to this!" shouted Mooney from the cellar steps. "Now then!"

The two of them threw their combined weight against it, the lock flew open and they fell forward into the darkness. Three doors leading in different directions met the glare of Mooney's match. But the fugitive had a start of at least four minutes, which was three and a half more than he required.

Mock Hen took the left-hand of the three doors and crept along a passage opening into an empty opium parlor back of the Hip Leong clubroom.

Diving beneath one of the bunks he inserted his body between the lower planking at the back and the cellar wall, wormed his way some twelve feet, raised a trap and emerged into a tunnel by means of which and others he eventually reached the end of the block and the rooms of his friend Hong Sue.

Here he changed from the Oriental costume according to Chinese etiquette necessary to the homicide, into a nobby suit of American clothes, put on a false mustache, and walked boldly down Park Row, while just behind him Doyers and Pell Streets swarmed with bluecoats and excited citizenry.

Hudson House, the social settlement presided over by Miss Fanny and affected for business reasons by Mock Hen, was a mile and a half away. But Mock took his time. Twenty-five full minutes elapsed before he leisurely climbed the steps and slipped into the big reading room. There was no one there and Mock deftly turned back the hand of the automatic clock over the platform to three-fifty-five. Then he began to whistle. Presently Miss Fanny entered from the rear room, her face lighting with pleasure at the sight of her pet convert.

Mr. Tutt Pondered Upon the Matter for About an Inch of Stogy and Then Informed the Committee That the Terms Were Eminently Satisfactory

LET THE SELLER BEWARE

By WILBUR HALL

The President's Answer Always Was That the Profit Sheets Showed Increasing Returns on the Right Side of the Ledger

THERE had been a good deal of talk in the executive offices about appointing a purchasing agent, but the president was lukewarm on the subject. He seemed to be pretty well satisfied with the existing system—which was no system at all, since it comprised a young clerk who filed catalogues and price lists and could sometimes find them when they were wanted—and every department head bought for himself. Some of the younger officials of the concern chafed under this condition, but the president's answer always was that the annual profit sheets showed increasing returns on the right side of the ledger. It was a hard argument to get round.

Then one day the superintendent of operations dropped a bomb in the president's lap and it exploded.

"I came in to tell you," the superintendent said bluntly, "that we're due to shut down the plant about the first of the month."

"We're what?"

"We will have to close up on the first."

"What are you doing—being funny?"

"No, I wish I were. I'm in dead earnest. I've only known it ten minutes myself—but there's no mistake about it now."

The president groaned.

"Another strike, eh? I thought our boys were all satisfied since ——"

"Oh, it isn't a strike, Mr. Baker! It isn't labor trouble or transportation or a shortage of raw materials or a change in our market. When I tell you what it is you'll laugh."

"Laugh about a shutdown? Don't worry! What's the difficulty?"

"Box nails."

"Box—nails?"

"We have just enough on hand to run us ten days."

"But what's that got to do with it? Get out into the market and order some nails!"

"There aren't any in the market. There won't be for two or three weeks."

"Then use some other kind of nails."

"Can't! Our box shooks are cut to take a certain nail—what the trade calls a five-penny cement-coated cooler. Nothing else will do."

"That's easy—get some new box shooks to tide us over."

"That might be done—though it would mean changing all our shipping weights and raise Cain in the transportation department—only there happens to be the stevedores' strike to consider."

"Oh, couldn't get shooks from up the river, eh?"

"That's the answer."

"But good Lord Harry, man! I still don't see why you can't figure out a scheme for beating this emergency!"

The superintendent grinned uncomfortably.

"I've been trying to, chief. The only solution seems to be to buy an entirely new box for our gross-lot cases. If we do that it means changing the size and shape of our containers and cartons. If we do that we've got to abandon our filling machines and fill by hand—which puts the whole factory system on the blink. I know it sounds funny, but without those particular box nails we've got to close down for a while or rebuild the factory."

The president sat digesting this.

"It looks absurd," he agreed finally, "but I can't suggest anything. What I'd like to know is who fell down on the nail orders."

"That," the superintendent of operations replied, "is not my territory. The best I can make out of the mess is that the supply department hesitated a few weeks back about buying nails because the market was high then and there were indications that it might break. When the supply clerks realized that we were getting low the boys tried to cover and found they were too late. There wasn't a nail to be had. If we had had a purchasing department now ——"

"Oh, don't rub it in!" the president interrupted. "I'll have to fight our way through this somehow. As you go ask the treasurer to drop in, will you?"

Frantic telephoning in the next few minutes convinced the two officials that they were blocked in the matter of box nails—and no mistake about it. They brought others into conference—the only brilliant suggestions were an ironical one on the part of the secretary that they ship their product in gunny sacks and an earnest one on the part of the sales manager that they appeal to a man he knew to buy for them.

"Who's this man?" the president demanded sharply.

"Wiley of Sharp Steel."

"A purchasing agent?"

"Assistant to John Greer, the purchasing agent. He's a live young fellow, and Greer is the best purchasing chief in the city—as I have many reasons for knowing."

"See if Wiley will go to lunch with me," the president ordered finally.

And the conference broke up on that.

Wiley proved to be an alert, neat, keen-eyed young citizen with an agreeable smile above a very firm chin and with a quick and accurate way of summing up that made a few words go a long distance.

"I'll admit that it's a hard nut to crack, Mr. Baker," he told the president. "Why haven't you had a purchasing agent long ago?"

"Didn't see the need of one," Baker admitted. "Now I'm beginning to. And if you can pull us out on this nail business I'll want to make you a proposition."

"I'll see what I can do," young Wiley said cautiously.

And at four o'clock that afternoon a heavy truck backed up to the supply department warehouse platform and began unloading five-penny cement-coated box nails. The president was notified, and called Wiley.

"Can you come over at five o'clock?" he asked.

"Yes."

"And by the way, you'd better tell your people that you're going to leave them on the first."

Young Wiley's laugh sounded.

"We'll see that later," h and hung up.

Shortly aft he appeared a shown into th dent's offic latter made generous offer did not hesita

"I'll take one provision you give m authority in partment."

armistice ought to have what I wanted. One o did—the Nevers Brass Foundry. You might have the town and missed them. As far as that goes, have too. But the association saved us."

The president chuckled.

"You've sold the purchasing-agent idea to me keeps," he said. "I feel better already. Go to it!"

That was the beginning of a new era in the his the company.

At the end of eight months the auditing dep got out a special report on the activities of the pur agent's department that showed that Wiley ha or saved an amount equal to fifteen per cent of t profits of the firm for the preceding year. An were no more awkward hitches due to lack of sup raw materials or needed machinery. The young cials had a chance to say "I told you so," a president had excellent reason for admitting that been wrong. But he had more to learn.

The time came when it was necessary for the c to add four five-ton trucks to its fleet. The preside little about trucks, but he owned and drove a touring car and was an enthusiastic booster for called the purchasing agent in and said so.

"All right," the P. A. said. "What about it?"

"I think," said the president, "that it would p have Mileage trucks. If they are as good as the p cars we couldn't ask for more."

The purchasing agent frowned.

"I'm just beginning to look into the truck q Mr. Baker," he said. "From what I've alread I am inclined toward the Grand. But I'll inv further."

A week later he came back.

"I've decided on the Grand truck," he said.

The president looked up sharply.

"What's the matter with the Mileage?" he den

"Nothing that I know of. But let me tell you came to eliminate it in reaching a decision."

"Go ahead."

"As soon as the truck dealers found we were market they came down on me in swarms. I dis that there were about eighty different motor trucks market. From the catalogues and the selling tal agents they all looked good. But in thinking the over I decided that what we wanted to buy wasn or names or even low first cost—what we want mileage. Service, you understand."

"Go on."

SYNDICALISM STRIKES

By L. E. McKenzie

DECORATION BY EDGAR F. WITTMACK

IEN the few other Americans in the block are
nad clear through and helplessly afraid, what are
ou going to do? You'll probably do what one
ie did—snap out the lights, bolt the doors, and
ti state police will arrive before the riot breaks
Tith Street, where it began in fifteen languages,
o block and the only business avenue in the town.
e as mad as the other Americans, and just as
l,nless you are one of those foolhardy persons who
bieve anything un-American and Bolshevistic can
ll happen in Donessen, because Donessen is in
ic and oversubscribed all five Liberty Loans.
t"be mad because you're an American and helpless,
nl be afraid because you are sandwiched in between
it uanian Club on one side and the Greco-Italian
the other, with the headquarters of the Croatian
st across the street.
n elplessness comes from knowing that you are only
teen hundred scattered Americans, whereas, hur-
nbilized, imbued with a new kind of class hatred,
rof the law, and so much plastic mud in the hands
hce group of red radicals, are thirteen thousand
ndred foreign-born steel workers, believing that
n your puny fifteen hundred compatriots, assisted
den state police, are all that stands between them
wership—actual ownership!—of the Pennsylvania
setching for three miles along the Monongahela
uind you.
' fairly certain the steel strike can't win. Corpora-
ic ertisements have been hurling that at you in
y ifferent languages until you believe it. But that
go g to make you forget that you watched free-born,
ent sons of the Stars and Stripes cower in cold
nhe safety of their wives and families while past
fnt door flowed a steady stream of Magyar, and
k,and Austrian, and Croatian, and Serbian, and
rn, and Italian, and Greek, and Polish, and Lithu-
:d Russian, and Rumanian and a dozen other in-
icalisms.

Advance Agents of Syndicalism

the advance agents of syndicalism speaking to gullible masses of foreigners in their own language, without even the check of an official interpreter.

Further, you saw a parade mob wind its way through the peaceful streets of Donessen, bent on the invasion of another steel community across the river. Over there the burgess had called for volunteers and had prepared fifteen hundred American citizens to resist the breach of state and municipal law prohibiting assemblies of this character in times of disorder.

Yes, the sun shone on a peaceful American community. Nothing could happen in Donessen.

They repeated it over and over again, did American citizens, seeking to reassure themselves against this arrogant demonstration of syndicalist agitators. The parade tramped soundingly past your door and down onto the bridge three blocks away. At the borough limits of the neighboring town you were told that citizens—lawyers, doctors, ministers, editors, business men and workingmen—had armed themselves and were stationed on the heights overlooking the river.

Still, it couldn't be. You laughed, and if the laugh trembled a little it was no reflection on your Americanism. Then a shot rang out. Another and another, until the firing had grown into a fusillade. You rushed to the door and you wondered if it would be possible to get your own family to safety somewhere outside this seemingly Russianized zone. The fusillade swelled in volume. There were some who had said this was to be merely a peaceful parade of striking workers, peacefully conducted.

Then the tramp, tramp of five thousand feet on the shaking bridge sounded ominously nearer again. They were returning. What had happened? This: Without apparent reason, other than to demonstrate their power and the intent that might underlie it, members of the parade mob had been amusing themselves by firing on one of the plants of the steel mills where they were employed. Windows were smashed by the volley, that was all. No one was at work in the mills.

At the far side of the bridge a small troop of Pennsylvania state police turned the head of the parade, galloping among the leaders and firing as they came, but pointing their riot guns heavenward. The parade mob turned on itself because it lacked leadership to go ahead. Radical agitators were not there to assume command; they rarely are in evidence when law and order perforce unholsters its weapons. Back came the thwarted strikers through the streets of Donessen, and a muttering, mumbling, guttural mob it was, as it again swung past your door. Riding closely behind were the state police.

One thing that day stood between the American homes of Donessen and the fanning of the spark of disorder into a flame of violence. This was the wholesome respect of the alien for the Pennsylvania state constabulary. "The Cossacks are coming!" was passed along the line of the parade. They call the police that, the term emanating from the group of Russian and Finnish reds with whom the whole effort to disrupt labor organization and law and order in the valley of steel is permeated.

The "Cossacks" were enough to break up the assembly—merely a good handful of them. Representing the best type of Americanism they rode through the polyglot gathering, advising the workers in their own tongues to return to their homes. No person in all that mob—which had within the hour sought a demonstration of force as opposed to American law and order—was molested by any state trooper.

Yet it was of this day's incidents that the senate committee was told "many citizens were shot down in cold blood by brutal thugs and gunmen." It was of these same incidents that the senate committee was told "the men were herded in groups in a building and told if they did not go back to work they would be hanged."

Americanize or Deport

HAD you lived in the midst of the handwriting of class antagonism on the walls of your own supposedly American town, and discovered you stood on the edge of a melting pot that had boiled over with quickly stirred alien prejudice, and had you watched the plant of syndicalism grow and grow until it assumed the proportions of mob spirit, held in check only by the sheer reputation of a trained state constabulary, you to-day would be saying to the senatorial committee: Yes, they must be Americanized—and if you are for the safety of America and American ideals do your Americanizing now—or your deporting, or whatever it is that must be done. And then, not only lop off these limbs of revolution but lay the ax to the root of the tree of syndicalism. Do that now also. And have done with any method that merely checks and does not crush this communistic spirit.

No more peaceful town existed on that ominous morning of the parade. We flung our small-town jests with small-town frankness born of daily contact. Yankee jests with a Yankee zest, the kind that tell we haven't been taking things very seriously since the Armistice was signed and the influenza took its grim toll and passed on.

The most cheerful optimism was abroad, for we thought of these peoples of a score of tongues as our neighbors—more, our friends.

This, mark, was the town that had sent five hundred of its sons—they, too, of the many tongues—across the River Marne and into the Argonne to un-Prussianize Prussianism. If you could know this town and a score of other steel towns like it in this Pittsburgh district where great mills had been booming along at capacity

Rip Van Winkle Lands an Orde

By Robert R. Updegraff

ILLUSTRATED BY WILSON C. DEXTER

From Then on it Was a Joke Round the Office That Victor Havelock, Jr., Could Sail and Dine With the President of the C. M. & B., But He Couldn't Sell Him a Pint of Varnish

WHEN Rip Van Winkle rose stiffly, rubbing his eyes after his twenty-year sleep in the Catskill Mountains, and picked up his rusty musket he little thought that he would ever be drafted to help Victor Havelock, Jr., of the Chicago sales office of the Havelock Varnish Company to sell a bill of varnish to a procrastinating prospect. In view of the fact that railroads were not at that time in existence we need feel no surprise that Rip experienced no symptoms of the coming sale as he stumbled agedly toward the village, rubbing his forehead in perplexity as he raised his cracked voice to call his dog. And inasmuch as it is not the present writer's intention to attempt to collaborate with Washington Irving in telling the story of Rip's return to civilization, we may safely leave the old man to make his trembly way back to his old haunts under convoy of Mr. Irving and ourselves take the elevator to the sixth floor of the Monarch Building, Chicago, on the morning of April 16, 1917, the day being Monday.

In the elevator we discover Edward R. Carrington, manager of the Chicago sales department of the Havelock Varnish Company of Boston. As the elevator gate clangs as the car leaves the fifth floor Mr. Carrington—being one of those I-carry-the-office-key-myself managers—reaches into his right-hand front pants pocket for his bunch of keys and deftly selects one of them by feel as he steps out into the marble-walled corridor of the sixth floor. He turns to the left, strides down the corridor with an aggressive swing past five doors bearing the name "Havelock Varnish Company," and stops at the door of Room 614, which bears down in the lower right-hand corner the word "Entrance." Nodding in high good humor to the office boy and the two stenographers who are hovering at the door, he inserts the key, turns it and the door swings open, disclosing the usual Monday-morning scatter of mail on the floor, pushed through the door slot by the letter carrier on his Saturday-afternoon rounds.

Ordinarily Carrington pays no attention to the Monday-morning mail on the floor, leaving it for the office boy to pick up. But this morning his attention is attracted by a certain white envelope, long and narrow, lying over by the water cooler. This he knows at a glance to be the personal stationery of the president of the company and he stoops and picks it up almost involuntarily, for a personal letter from the president is something to sit up about.

He enters his private office. Ripping open the long white envelope before removing his hat, he reads the letter which brings us to the opening of our story:

Boston, April 14, 1917.

Mr. Edward R. Carrington,
Manager Chicago Sales Office,
Havelock Varnish Company,
614 Monarch Building,
Chicago, Ill.

My dear Mr. Carrington: My son, Victor, Jr., has just completed his four years at Harvard and I now want him to enter our business. During part of each of his vacations he has been working in our laboratories to get an understanding of the chemical end of the business and he is now anxious to learn the selling end, selling being his natural inclination.

It has seemed to be desirable, owing to his relationship to me, not to have him start on either the Boston or the New York sales force, but to send him out to Chicago where he will start among strangers. I suggest that you start him in the railroad department.

Needless to say, Victor will be expected to enter your office on just the same basis as any other new man, and under no circumstances is the fact that he is my son to influence you to show him any special consideration.

He will arrive on the Twentieth Century Tuesday morning.

Yours very truly,

VICTOR HAVELOCK,
President.

As Carrington finished reading the letter his assistant, Gordon Williams, entered the outer office carrying a suitcase and tennis racket and wearing a week-end coat of tan.

"Oh, say, Gord, look at this," called Carrington as Williams hung up his hat and coat.

"Huh!" grunted Williams when he had finished reading the letter.

"Just our luck, isn't it?" Carrington demanded sourly. "When Boston has anything they don't want they wish it onto us."

"Huh!" grunted Williams again, staring at the letter.

"I've never met this young Harvardite, have you?" asked Carrington.

"Yes," said Williams; "I met him once in the elevator when I was at the home office."

"Well, then you are elected to be a committee of welcome to go over to La Salle Station to meet the Century tomorrow morning with the keys to the city for His Nibs. Take him over to my club. We'll have to put him up there until he gets his bearings. I'll arrange about a room for him when I go to the club for lunch to-day."

Williams stood smoothing back his cherished pompadour, still looking at the letter hard.

"Ye gods!" he blurted finally. "I wonder what the old man's thinking about to suggest putting a new cub into the railroad department."

"I know it!" exclaimed Carrington hotly. "Of all jobs to pick, selling to the railroads is the prize pick. Why, I've been on this territory for eleven years and I don't feel any too comfortable going after railroad business myself! Only an old seasoned technical man like Longstreet ought to be allowed to handle the railroads."

"Well, the old man only suggests that you put this budding graduate into the railroad department."

"Humph!" said Carrington shortly. "If you'd ever worked in the Boston office with the chief you'd as soon think of ignoring one of his suggestions as you would of ignoring the suggestion of a mad bull that you get on the far side of the fence or get gored. That's the worst of it," he continued, throwing open the roll top of his desk with a bang. "The chief sends the kid out here fresh from Harvard, and no matter what happens, as long as we don't kick, the chief will think he's doing fine. And being the boss' son, we don't dare kick on him. So he can just stay on, fattening up on experience on our pay roll and getting us in a mess with the railroad purchasing departments. I tell you, it's just like Boston to wish their lemons onto us."

"Well," said Williams dryly, his face suddenly lighting up with a significant smile, "if he's a lemon we might squeeze him."

"How?"

"Well, there's the C. M for instance. Longstreet else in this office has eve varnish order out of them. regular bears over ther might be a good for some young start on."

In spite of him rington grinned.

"I get you! Af ing on a prospect C. M. & B. fo months the railro the business might so attractive. Th didn't decide tha or some other East would go better complexion, why, a might decide tha on the retail trad be a nice change. added, warming to "we have some lo ritory out throu and the Dakotas long rides betwee that might be developed young college man."

"Exactly!" agreed Williams.

"Well, fix up a desk f Longstreet's office. G won't Longstreet be delighted to ha sales colt running round in his pas

By noon everybody round the of that the chief's son was coming o Chicago office. There was conside citement. More than one ster gum quid was neglected that mor cepting in the case of Martha Scri seemed to be able to chew better when talking Martha who sounded the keynote of the office opin she said: "Well, George Longstreet will give litt Harvard Havelock a nice little post-graduate co will make Harvard seem like a kindergarten."

The main fireworks of the morning were set privacy of Carrington's office with Longstreet as rocket. He'd be blankety blanked if any blanke young cub from Harvard could come out and c prospects, even if he was the president's son. Why why, blankety blank blank!

It was thirty-five minutes before Longstreet near enough to earth even to see any humor in of this new cub calling on the C. M. & B. B when Carrington drew a word picture of young interviewing Maganch, the purchasing agent of t a faint flicker of a smile flitted across Longstre and Carrington knew that the pyrotechnics wer over for the present. In the end Longstreet ha in, of course, for the newcomer was the preside and, father's letter to the contrary notwithstandi dents' sons are presidents' sons.

"Well," asked Carrington as Gordon Williams his office the next morning, where he and Longst having it out for the second time, "did you get h up at the club all nice and cozy? And did he n Harvard banner I got the steward to put up on of his room?"

"Yes—he did not."

"What do you mean? Didn't he arrive?"

"Yes, and he said to tell you that he though mighty fine of you to offer to put him up at your he really believed it would be better for him to for himself from the beginning. He went over small hotel that he knew about and said he'd be in about an hour."

"Humph!" grunted Carrington, glancing ou corner of his eye at Longstreet, who sat sullenly t his loose-leaf price-list book. "He's commendab pendent anyway."

"Snippy, I should say," snapped Longstreet, the fact that Carrington's remark had not been a to him. "Now, looka here, Mr. Carrington; you'v me for nine years and you know I'll stand for a when ——"

"Yes, yes, I know," soothed Carrington. "You me that a dozen times in the last half hour. Bu old boy, he's the president's son and we've got him a chance. Now just lie low and watch a certai Harvard graduate go up against the C. M. & B

aced significantly, "if some young fellow should
cide that the railroad end was a little too stiff a
otion for a greenhorn, why, there's some half-a-day-
ven-towns retail trade that needs developing out
ut Iowa and the Dakotas that might make Boston
ore like home to a Bostonian. Get me?"
orstreet grinned in spite of himself.
even o'clock sharp the elevator gate clanged, steps
dl down the corridor and the door of 614 opened
:ousinesslike swing.
M Carrington, please. Say it is Victor Havelock, Jr.,
oston."
ie outer office there was much covert craning of
o get a squint at the president's son through the
artition that fenced off the reception office. And
and Whitmarsh and Roy Farrell, three stars of the
a) sales force, who had been hanging round the office
oning to give the newcomer the once-over, all sud-
y'ad business that took them out through the recep-
o ce, where they winked at Marjorie Bent as she made
h name slip for the boy to take in to Carrington—a
f unnecessary formality, since the latter had been
in suspense for fifteen minutes trying to think up
cd C. M. & B. type of prospect for the new man to
o against to keep him away from conflict with Long-
t
Hs got nice hair anyway," was the mental comment
Marjorie Bent, who was always more impressed with
t as on top of a man's head than with what was inside.
Sl w him right in," directed Carrington when the boy
ed the slip a minute later.
ie junior Havelock was ushered into the manager's
e ich a buzz of comment ran through the outer office
Carrington hastily closed the door.
t velve the door opened again and both men came
wh their hats on.
Will go over to my club for luncheon," Carrington
sing. "It's quiet there and we can talk without any
rotions. When we come back I'll introduce you to
gs eet and the rest of our family. Now, as I was
y I think perhaps the best prospect for you to
rch first would be the C. M. & B. They ——"
tat was all Marjorie Bent's sharp ears could catch
rche outer office door shut.
vs not until after lunch that the office force and such
ealesmen as happened to be in got a real good look
Victor Havelock, Jr. What they saw was a tall young
th rather wavy brown hair and grayish eyes and
rius face that lit up occasionally with a smile that
e to be about a fifty-fifty mixture of deviltry and
it.
t he luncheon table Carrington had suggested that
as Havelock would prefer to spend a week going the
id with Longstreet and learning the ropes. But to
rington's great relief Havelock had declared that if it
lose all the same he'd rather jump right overboard
g wet all over. In fact he even announced that if
esle to Carrington he would call on the C. M. & B.
ve next morning and try to interest them in Havelock
is
A right, go to it," Carrington had said. Havelock
n'seen the quizzical smile that played round his lips, a
ehat suggested that he was enjoying some very pri-
thoughts that were as amusing as they were private.
n the reason he hadn't seen Carrington's
zal smile was that he had not dared look
ir for fear Carrington would see the smile
t felt must certainly be showing through
ov normally rather owl-like face,
it ad taken him about three sec-
s) see through the C. M. & B.
hen Carrington had first sug-
eth that road as a prospect.
h fact was he knew something
ut he C. M. & B. that Carrington
n'know, or Longstreet either. He
w at the next morning the C. M.
B. would have a new purchasing
nt quietly taken on as assistant to
esent purchasing agent, who
suddenly found it necessary to be
o the city for a spell. What was
re, he new purchasing agent was a friend of
—d in fact been a senior at Harvard during
o n freshman year and had been one of his
i spite of their difference in classes. Further,
w purchasing agent, Arbuckle by name,
d been for the past two years assistant to
p chasing agent of a large Eastern road, had
n is traveling companion on the Twentieth Century
n oston and they had talked over the railroad-varnish
bln at great length and Arbuckle had halfway prom-
t swing some of the C. M. & B. varnish business to
ve ck just as soon as he could arrange it, because he
w rom experience that it was as good as any, if not
te
on more fact young Havelock knew that Carrington
n' though he had always suspected it: The reason that Longstreet had never been able to sell the C. M. & B. was that Maganch, the old purchasing agent, was getting a bit of graft on much of the business he placed. That was why he was to be fired—dropped as quietly as possible—just as soon as they could break Arbuckle in.

II

SHORTLY after ten the next morning Victor Havelock, Jr., stepped into the rickety little elevator, one of the few surviving gas-lighted elevators in Chicago, and was jerked slowly to the fourth floor of the antiquated building housing the C. M. & B. general offices.

Making his way along the gloomy corridor past offices labeled "Supt. of Dining Car Service," "Supt. of Telegraph," "Trainmaster" and "Engineer of Bridges and Trestles," he finally arrived at a door marked "Purchasing Agent." A crudely painted fist pointed to a little window beside the door and under it was a brusque request to "Present your card at the window."

Havelock's visit with his old Harvard friend was pleasant socially, but—as might have been expected—was not productive of an order. At noon Havelock explained to Carrington in a perfectly naïve way and with a sober face that while he hadn't landed an order from the C. M. & B. he did think he was on the right track to get one. And Carrington repeated his words to Longstreet after lunch, causing the latter to laugh outright for the first time in two days.

Meanwhile Carrington turned Havelock loose on another hard nut of a prospect that Longstreet had given up as hopeless long since—the Chicago purchasing agent of a group of small Western interurban trolley companies which pooled their buying.

But if Victor Havelock, Jr., had expected to make rapid headway with the C. M. & B. through his friend Arbuckle he was doomed to rather dismayed disappointment, for after two months, in spite of the fact that the old purchasing agent was still "on a little business trip," Arbuckle found it very difficult to swing the promised varnish business to young Havelock.

For you must know that varnishes and varnishers are fussy things to work with. Arbuckle knew varnish pretty well from the laboratory standpoint, for Havelock had shown him a series of laboratory tests that were startling, but he did not know it from the human-nature standpoint. He had not realized that a harmless order for a new varnish—even though it be a better varnish—might stir up such a commotion in the paint shop that—figuratively speaking—it could be heard in the president's office. And not so figuratively either, for paint-shop strikes have occurred on lesser pretexts.

But he had learned much in his first few weeks on the job and he had sensed even more than he had learned. And so it was that he was afraid to change varnishes too suddenly.

He had therefore hopes but no orders to hand out to his college friend whenever he came round, which was quite often, as he had to report his calls to Carrington and the latter had told him to concentrate pretty much on the C. M. & B. until he had landed their business. It made it rather stupid having but four or five prospects to work on—for that is all Carrington would give him—but he made no comment.

At the end of the first three months two things had happened: Havelock had landed one railroad order, a small one for finishing varnish, and he had been able to show Longstreet a laboratory demonstration that had enabled that clever salesman to bring through several big orders for varnish from hard-nut prospects. The demonstration was one that young Havelock had worked out the previous summer in the factory laboratory, and after Longstreet had sold his first order on the strength of it everybody in the office noticed that he no longer spoke of his understudy as "that Harvard cub." In fact he was known to have referred to him quite respectfully by his name on one or two occasions, which had given the office a distinct shock.

And finally the day came at the end of nearly five months when Longstreet actually asked Havelock to go to Milwaukee with him to a convention of railroad master painters before which he was scheduled to make a talk. He had discovered that young Havelock really knew the chemistry of varnish from C to Y and he wanted him to conduct some experiments for the painters—tests Havelock had worked out himself which demonstrated the qualities of Havelock varnishes as no one else had ever demonstrated them before.

That convention was the beginning of a real friendship between Longstreet and the president's son. For two days they lived and worked together in Milwaukee and when they came back Longstreet insisted that Havelock call with him on some of his big customers and perform some of the same tests. In fact he even suggested to Carrington that he give Havelock two or three other railroad prospects to work on by himself.

To the surprise of the entire office a week later Havelock brought in a good-sized order from one of these roads whose purchasing agent had been only lukewarm on the Havelock line.

Things were in fact beginning to look up a little with "the Harvard cub" and everybody was getting used to the situation when one morning the mail brought a certain white envelope, long and narrow, addressed to Mr. Victor Havelock, Jr. The letter inside was on the president's personal stationery and it read as follows:

Mr. Victor Havelock, Jr.,
Chicago Sales Office,
Havelock Varnish Co.,
614 Monarch Building,
Chicago, Ill.

Dear Sir: According to advices received some months ago our Chicago manager, Mr. Carrington, assigned to you the solicitation of the varnish business of the C. M. & B. Railroad.

Up to date we have received no record of your having procured any business.

The Havelock Company has been built up on aggressive and persistent salesmanship, backed up by good varnishes. The factory is still turning out good varnishes.

Very truly yours,
VICTOR HAVELOCK,
President.

A pink-sheet carbon copy of this letter went to Carrington as manager of the Chicago office, as was customary with all letters pertaining to sales matters in the territory. Carrington was reading it as Gordon Williams burst into his office full of news.

"Gord, what do you think of this?" Carrington demanded, handing him the pink tissue and not noticing the excitement in his assistant's face. Williams read it and arched his eyebrows when he came to the last sentence.

"Gosh, but the old man hits hard! 'The factory is still turning out good varnishes'!"

"Who Do You Suppose Was Dining With Him? None Other Than the President of the C. M. & B. and Our Young Friend, Victor Havelock, Jr.!"

(Continued on Page 130)

RIDE 'IM, COWBOY

By Courtney Ryley Cooper

When the Horse Doesn't Buck Sufficiently, the Wranglers "Speed Him Up"

IT HAS been rumored persistently that the old West is dead. Out where Bill Cody once rode pony express the automobile average is one car to every thirteen persons. The dance halls of Cripple Creek have become garages and restaurants. On the Sioux reservation most of the braves know the difference between a transmission and a crank-shaft, while Boise, Idaho, is about thirty per cent safer than Broadway. A padlock has been placed on the doors of the Stockade in Butte, leaving only shadows and faded finery to linger in the place where once the days were one wild succession leading up to nights even wilder. The road that long ago brought down the miners from the diggin's at Creede, Silver Plume, Georgetown and Barrow's Point now is an automobile highway broad enough for three machines to pass at once. Up in Wyoming the last of the stage lines has been abandoned; auto busses whirl you through the Yellowstone, stopping now and then to allow you to feed the bears. The only Indian seen on the streets of Denver in the last three months wore his civvies when off duty and his headdress while working. He was advertising a motion-picture show. Atop Mount Lookout tourists from Albuquerque, New Mexico, and El Paso, Texas, to say nothing of Phoenix, Arizona, and Provo, Utah, have nicked and cut the tree which shelters the grave of Buffalo Bill until hardly enough of it is left to sustain life. Yes, the old West is ——

Dead? Perhaps. Dead as far as the outer manifestations are concerned—the lack of transportation, the isolation from the more civilized world, the absence of culture and education and comfort and convenience and all those things which are as easily procurable in Salt Lake as within the sight of Subway kiosks. But certainly not dead as to spirit or dead as concerns the memory of other days—not even approaching death. It is merely in its second childhood. As evidence:

Fifteen thousand persons are packed into an inclosure capable of giving comfort to ten. Before them is a tangled mass of color, of leaping, sprawling horses, of swirling ropes, of dust, horse wranglers surreptitiously biting the ears of their charges when the humane agents aren't watching; men in chaps and clanking spurs and silk shirts that blaze with raucous hues; of high beaver hats creased down the center; of belts carved and monogrammed and plated with silver; of high filigreed boots and leather gauntlets and high-pommeled ridin' saddles; of women in buckskin and cowhide with the hair left on; of excitement and danger and the voice of the roaring announcer:

"Maggie Martin from Poudre River, on Fidgety Ann!"

A rumble from the fifteen thousand. A high-pitched "y-e-e-u-p" of a cowpuncher who arrived at the arena in a sixty-horse-power speedster. A scurrying of figures as the gunny-sack blind is removed from the eyes of Fidgety Ann and the fidgets begin. Five minutes later the ambulance jogs back to

Prairie Rose Henderson Riding a Bucking Horse, Just Following an Accident in a Relay Race

PHOTOS. BY JOSEPH LANGER

War Dancers. Above—Nearing the Finish of a Bulldogging Contest. The Bulldogger Failed to Throw the Steer With His First Leap and Now Must "Wrassle" Him Until He Falls

fences and does its best to commit murder; of Sioux war dances; relay contests where the accident rate runs fifty per cent; of squaw races on barebacked ponies, which always result in fat lobby lady Injuns flopping off their horses all the way round the track, while squawking bucks lasso the recreant mounts and later absent-mindedly rescue their respective wives; of blood and ambulances and broken bones and sprains and wrenched, torn muscles and—the happiest grins that ever came to a human being, even while the doctor hesitates between the bandages and the call for an amputation. That part of it is hard to understand—how on earth men and women can get any pleasure out of being cut and torn and generally hashed up. But they do—more, they thrive on it!

Back in 1912 I stepped from a train in Cheyenne expecting to find the staid capital of Wyoming capitalizing in its ordinary way, and found instead a madhouse of men in red and green chaps, loud shirts, broad hats and shooting irons. A week later I went hazily away with the dazed memory of rocking ambulances and much gore—but with little knowledge of what it was all about. As far as I could see, it was about as near concerted suicide as anything else.

But other rodeos came—here, there and the other place. They were all the same. More cuts, more bruises, more smashed collar bones, more squawking, grunting Indians, more ambulance runs and more grins! Always the same, always the happiness. And then it began to dawn on me that perhaps these people were self-appointed apostles of a day that is gone, striving to the limit of their bone and sinew to keep alive the traditions and the romance of the land where irrigation is running the prairie dog out of business and the motor horn calls more often to its mate than does the coyote. But naturally one couldn't expect the apostle himself to look upon things in that light. He—or she—is only having a good time. To wit: Cal McMillan.

I met Cal in Cheyenne five years ago bending over the water barrel near the judges' stand at Frontier Park. In spite of his spraddled chaps, his sunset shirt, his high-crotched beaver and his stilt-heeled boots with their rusty spurs, there was a memory of having seen the man before in the ordinary clothes of an ordinary citizen. And if I'm not mistaken, I'd seen him at the soda counter of a drug store meekly devouring a pineapple sundae. But now Cal, with the cup poised before his lips, was all that a movie director could wish for.

Far across the inclosure, its edges fringed with thousands of horses and riders, a dozen bechapped wranglers were striving to jam a gunny sack over the eyes of a murderous-looking outlaw which had been pushed, pulled and jerked with

CABELL DRIVES THE NAI

By Alice L. Tildesley

ILLUSTRATED BY CLARENCE F. UNDERWOOD

AS SHE stepped out of the low red car Cabell flashed an apprehensive glance at the big apartment house. Fully one-third of its windows glowed cheerfully in the October dusk. It must be later than she had imagined.

"I had a gorgeous time, Mr. Christie," she effused, sparkling up at the driver with what she privately thought a fascinating smile.

"Prove it by coming again."

The idea made Cabell gasp. She dared a "I'll think about it" airily, and ducked the French tam—like those all the girls were wearing—so that she had to look at him sidewise.

"How about to-morrow—same time?"

"Oh—to-morrow?" She began unfastening her gloves. "Why—I don't know. I'll see. Mamma might have something on."

"I'll call you up, then." His strange almond-shaped eyes gave her one of their odd long looks—the kind that made her feel as if she were the heroine of a screen drama.

"We-ell, after nine in the morning. Mamma's gone by that time. She'd die if she knew." Cabell laughed nervously. "Maybe she's home now. I'd better fly." She took a step toward the curving drive, then dashed back to the car. "Wait a minute! My books!" He lifted them by their strap and tossed them to her. His perfect teeth shone whitely in the purpling dark.

"After nine!" he agreed; and added "Good night, little pal!" as she sped up the gravel. She darted into the east entrance and paused before one of the hall mirrors to see how she had looked when they had said good night.

Oh, dear, had that straight piece of hair really straggled like that? The tam should have been pulled farther over the right eye. She rectified these things with a frown and pinned the collar of her fluffy blouse higher in preparation for her mother's critical glance. Then she proceeded to mince to the nearest elevator. Her heels were not so high as she would have liked, but all the girls said she had an elegant walk.

"Good evening, Walker!"

She minced into the elevator with a gay nod. Cabell was always gracious to the employees of the Stratford. She hoped they regarded her as a lovely young princess and dreamed of what they said about her to each other. She would have been genuinely surprised if she had heard what they actually said.

"Doug home yet?"—with a repetition of her fascinating smile.

"Ain't seen him. Your ma's in." Walker stopped the cage and slid back the door with on e movement. "She's waitin' on you-all."

The girl nodded and minced along the corridor. Her mind was working too rapidly to answer. Where should she say she'd been? If she just knew what time it was! All the other girls had wrist watches.

She saw the light above the door and paused with one hand on the knob, her eyes mechanically reading the name plate, "Mrs. Shirley C. Smith," while her brain went on with a plausible story.

When she finally opened the door and stole in, the crowded little living room was empty. She made her way among the big mission chairs to her own tiny room and snapped on the pink-shaded lights. She could hear her mother moving about the next cubicle, but she pretended not to. Why shouldn't mamma say something herself? Cabell put away the tam and hung up the coat of her suit. Mamma hadn't approved of that suit; said it was too old for a schoolgirl. Too old! But Cabell had worn it home, so there could be no question of its going back.

"That you, Cabell?" at last, when the girl was fluffing up her fair hair for the third time.

"Yes, mamma. You home?" with bright surprise.

"Where's Douglas?"

Mother and daughter met in the overfurnished living room, Cabell still wearing the sweet, pleased smile she had put on when she replied to the first query. She did not let it fade, even while she observed that she didn't know a thing about Doug. Hadn't seen him since lit. You know, Doug's class passed out of Miss Malley's room when she went in for lit.

"Nearly seven," commented Mrs. Smith with a glance at her watch. She moved restlessly from the table to the stand where the mail lay, and ran over the letters as she talked. She was used to doing more than one thing at a time. "I have something to say to you. I'll wait for Douglas. No use going over it twice."

"You Let Go of Me This Minute. I'll Get Daddy. I Guess He'd Settle You!"

Cabell sitting on one foot in the farther armchair, thus exhibiting a length of black-silk stocking above the other neat pump, was not interested. It would be some dull business or other, very likely.

"By the way, weren't you rather late yourself?" The mother's brown eyes flashed alertly from the bill before her to her daughter.

"A—little. I was—— Stelle and I ran downtown to the library for a book Miss Malley wanted us to read in lit."

"What book?"

"Oh—something by Balzac. I've got it written down. It wasn't in. And—we went to a picture show." She caught a flyaway lock and began pushing short hairs upward busily. It had come to her as an inspiration, as she would giggle to Stelle to-morrow. "It's Friday, mamma, and we've got all day Saturday to study."

Her mother didn't appear to be listening. She was biting her upper lip and a frown was drawing her brows together. She did not inquire what picture they had seen, though Cabell was quite ready with "Mary Pickford." You could always say she was so cute, and nobody objected to the plot—except herself and Stelle. They preferred films entitled Her Immortal Soul or something about wives or, better still, outcasts. Those advertising "Children under sixteen not admitted" especially attracted them.

Mrs. Smith glanced at her watch agai
said Skelton's bill was outrageous. Bad as d
a débutante to clothe a schoolgirl.

Cabell decided it was no time to tease for

ng for governor," said Douglas.

"The one that comes here sometimes?" from Cabell.

"Yes. Well, I'm going—he—that is, we're going to be married." She brought it out with some irritation. She prided herself on always speaking to the point.

Such a thing had never remotely occurred to either. They couldn't quite believe it. Mr. Brewster had called not more than twice—or was it three times?

"Well—when?" gasped Cabell.

"Married! What for?" from Douglas.

"Soon." Their mother had the faintest color in her brown cheeks. "As soon as election's over. About two weeks now."

"But—isn't it sudden?"

"Not so especially sudden. Mr. Brewster and I are old friends. Since before either of you was born. He's been urging this for three years."

"When did he get a chance? He doesn't come here very often."

"He is general counsel for the firm."

That conveyed nothing illuminating. They probably didn't know she had charge of collections for Overbeck & Collins, and went to Brewster's office every Monday.

A storm of questions broke upon her. If Mr. Brewster was elected governor, would they all live in the gubernatorial mansion? Oh, baby! They could come out to school in one of his cars, couldn't they?

"You'd hardly expect the daughter of a governor to hang to a strap! Oh, won't the girls be furious! My, I can't wait to tell them. I wonder if he'll give us each our own car."

"He'll not necessarily give you anything. You mustn't ask for anything. Cabell, put your feet down! In that tight skirt ——"

"Isn't he rich?"

"He has some money. He's been under a great expense in this election and he may not win."

"What'll we do if he doesn't win?" Douglas wanted to know.

"He will go back to the law. He has a house on Pearl Street. We may decide to live there."

"Wouldn't it be maddening if he didn't get in? Oh, mamma, shall we all take his name? Cabell Brewster! That's so much classier than Smith."

"Gee, Cab, course we won't get his name. Don't you know anything?"

Mrs. Smith agreed dispassionately. "You—like him, don't you?" She was self-conscious. She had never discussed emotion with the children.

Oh, sure. He was all right. They didn't know anything about him.

"He's coming to-night. I want you to be nice to him."

Which Cabell considered most unnecessary advice. She intended to be the sweetest little daughter in the world. Mr. Brewster would be utterly captivated and would insist on her presence everywhere, stating he found he made better speeches when he could look down at his golden-haired inspiration. Cabell's idea of a governor was a man who devoted all his time to making speeches. Her mother might come to be a little jealous perhaps. The thought touched the edges of her lips with a smile.

"Won't we need more money if we belong to the governor?" asked Douglas.

"My dear child! What for?"

"Well, it looks funny for a fellow to keep asking the time ——"

"You shall each have a watch for the wedding," promised their mother. "But you're not to mention money to Mr. Brewster. Here's that five, Douglas."

Cabell rushed into eager questions about the wedding. Could she be bridesmaid? Could she have an orchid-colored satin and carry laurel and wear a wreath of galax leaves? Doug would have to give mamma away.

"The wedding will be very informal. It's not necessary for me to be given away at my age. You may have a new frock of course, if you're willing to dress like a schoolgirl and not a grass widow. . . . Wasn't that our bell?"

It was. A moment later Wallace Brewster came in.

Cabell and Douglas surveyed him with new interest. Tall, erect, soldierly, with very thick, very white hair over

(Continued on Page 76)

A Moment Later Wallace Brewster Came In. Cabell and Douglas Surveyed Him With New Interest

The First Lady of Cranberry Is

By Richard Matthews Hallet

TALES, like philosophies, have much to do with causes and effects. Therefore, as a moving cause of this our tale, let it be set down and known for truth that Captain Hat Tyler had been, in tyrannous and unjust wise, relieved of command of her ship, the Minnie Williams. Yet this, the moving cause, was in itself an effect, if I may be believed. Nay, the philosophers asseverate that in a sense truly profound every cause is in some measure the effect of its effect, and every effect the cause of its cause. If there is no effect how could there have been a cause?

Let us look then first at the effect of the effect, and next at the cause of the cause. Certain it is that at the instance of Mr. James Rackby, owner of the Minnie Williams, Mrs. Tyler came ashore one summer's evening, bag and baggage, as those who saw her come affirmed. Outrage was manifest in all her giant frame.

"The gall of the man! The unparalleled gall of him!" she said, sitting in Lena Kidder's bakeshop in her shoregoing hat, and with her skirt of broadcloth rumpled round those massive, slightly bowed, seagoing legs. She was doing justice to a good meal of victuals, which had been placed for her at the table in the front window, where all men might see that no act of Mr. Rackby's, however low, however degraded, could make her lose her appetite by so much as one new potato or one dish of spinach heaped mountain high and drowned in vinegar. As she was free to say, and did say freely, if she had a dollar for every time she had wished that man at the bottom of the sea in the last three or four months she would never have to lift her hand again in the way of work. Mrs. Kidder inquired in her sympathetic tones: "How did he approach the subject, Hat?"

"I guess there wasn't much in the nature of an approach," Mrs. Tyler answered bitterly. "My heavens, if I had run his ship aground, or alienated his affections, or scandalized him in any way, shape or manner, I don't say but what he might have had reason on his side; but nothing of that kind took place. What does he do but just walks himself aboard and says in that nasty voice of his that he guesses he can dispense with my services henceforth."

"He hadn't been drinking, had he, Hat?"

"No, he's too cussed mean to drink," retorted Hat. "Oh, the more I think of it the worse my blood boils! Just you think, for one thing, of his waiting until I had seen my husband off on that coaster going to South America, and then watching his chance and taking it out on an unprotected woman."

"I will bet you can give as good as they send, when it comes to that," spoke up another, a lumpy-jawed man at one of the less well-lighted tables. This was Mr. Patrick Whalen, a pugilist, a one-time state champion in fact, known to fame under the style of the Megunticook Assassin. He was known to Hat of old. Indeed, he still owed her a bill for furniture bought of her when she and Tyler broke up housekeeping to go to sea. This furniture was now, with the rest of his effects, stored on board his scow, or house boat, which was anchored off Cranberry Isle.

"When I want an opinion I'll ask for it, Mr. Whalen," Mrs. Tyler said with cool insolence. Addressing herself exclusively to Mrs. Kidder she continued: "Don't that show what part of a man he is?

"I was combing out my head at the time, and I know I was just dancing, hopping mad enough to have hung him by the neck until dead, with my own hair for a rope, and I told him so too."

"Trust you," muttered the Assassin, falling off a little in politeness.

"You look out, will you, that you don't get a dose of the same medicine," Mrs. Tyler said heavily without looking round. "I said to him: 'Think twice, Mister Man, that's my best advice to you, because if once I set my foot on shore it'll take all the king's horses and all the king's men to get me back again. It's easier to set something going than it is to stop it in this world,' I says."

"I guess you are proof enough of that proposition without looking any farther," said the Assassin, scrouging his neck down into the turtle neck of his red sweater.

Captain Hat Tyler Had Been, in Tyrannous and Unjust Wise, Relieved of Command of Her Ship, the Minnie Williams

"I guess you'll find it so if you go on as you are going," said the sea captain in organ tones. "I have set better men than you are by the ears, in times past. If the time ever comes that I have to stand and deliver every time a string of a man like you opens his head I'll sell out for little or nothing."

"There, there, deary," Mrs. Kidder uttered soothingly. "Well, it'll do you good to stop on terra firma for a little and make up some of the beauty sleep you lost getting up so often in the middle of the winter nights. I don't believe a woman ought to make a practice of going to sea myself. She doesn't get enough electricity into her from the ship's deck."

Hat raised her big fist.

"There's enough electricity left in me to settle that man's hash if I hear he's been talking about me behind my back. And another thing—I'd like to see the man that I would allow to talk twice to me in that strain either. Show him to me, that's all I ask of you."

Her eyes rested on the Assassin, who said satirically: "Ain't that a pretty good imitation of a dog barking twenty miles off?" and went out and slammed the door.

"I'll have him down off his high horse if he isn't careful," said Hat. "What is he trying to get off anyway? He needn't think because he can punch a bagful of wind a little while three times a day that he can lord it over me, because he can't."

"He'll be all right to-morrow," said Lena Kidder. "He got out on the wrong side of the bed this morning, that's all."

"You let him cross me once more in my present mood," said Mrs. Tyler, "and I'll put him where there won't be any call for him to get out of bed at all for some time to come. Champion! I'll champion him!"

"I shouldn't wonder if he was at the bottom of the whole business," said Mrs. Kidder thoughtfully. "I happen to know through Kidder that they were talking the woman question down at the Tall Stove Club the other night, the way the men do eternally when we're not round. It seems they were discussing that case of husband beating they had up in the criminal calendar, and Pat Whalen said we didn't have to look that far away from home for a case of where a woman ha right under her thumb, and looked at Rackby and laugh

"They did, did they?"

"Well, you know how Jim is, weak as water —

"Aha," said Hat with a wicked accent, "so th sum and substance of it, is it? Whalen is one of th that think they wouldn't be ruled by a woman, cause he can handle that spineless creature he's g his own roof, that thinks the sun rises and sets in guess it's about time he was taken in hand."

"He's leaving town, I hear," said Mrs. Kidde wife has already gone on ahead to Roger's Inlet up a sparring partner for him. You know he ha his bouts coming on in a few weeks, if only they over the political hitch. I heard him talking it o Elmer Higgins in here the other day. You know El been mingling with the politicians lately."

Mrs. Tyler fixed her eye on Cranberry Isle, whi kind of mirage usual with it at this time of day, wa a foot or two above the horizon line, and seemed more like a radiant cloud than a substantial island

"I guess that's the first thing that wants ten Lena," she uttered grimly. "A stitch in time save

Let us now notice briefly how it is that an effect a cause in its turn, for in our capacity we are pr to see the world and all its mirages and illusions u form of eternity, to use the words of the illustriou Amsterdam.

Elmer Higgins was keeping bachelor's hous this time, his wife and daughter having gone the city to get together clothes for that youn nuptials. For the most part he got his meals Furlong's. A few nights after the coming as Mrs. Tyler he Neeze, who was a clam chowde his nose:

"There ain't anybody that I know of charged duty of keeping watch but the fish warden," said "and he is asleep most of the time in his wheel ain't he?"

"Still," said Neeze, "where a house is above s it is just as well to steer clear. I did get myself int it appeared like, about three nights back, when t Whalen come in here drunk; and what possessed try to sell me a bag of short lobsters I don't k mistrusted I would get one of these Fail-not-on-yo notes from the county seat if I dickered with an liable to blart as he was in that condition, so down to where he was and I said to him: 'Mr. Whalen, y in no condition to sell lobsters, and you know it as I do—well, almost as well,' I says.

"So he stood thinking on it, and pretty soon 'I'll just dodge in on my way back along, then,' he went, convinced, as I supposed; and thinks I to 'Good riddance, if ever there was one.' I couldn't for a spell on account of that quirk they is in th but my soul, in two shakes of a lamb's tail back h tearing with a crocus bag bulging with them, and i shop with them, and propped them up right wh are sitting, like so much sawdust. I over the c and out through that screen door in less time than to tell, and who should I see but that long fish wheeling his wheelbarrow along, sad. Thinks I: 'Isn now I am in a quandary.' So I hauled that prize into the back shop by the slack of his pants, as n anything, and I out with those shorts onto a pile bish I had in the alley, and slung boards over ther then I back out into the front shop with him, and said to him was aplenty. There he was standin holding onto the door just as a matter of precau same as you have got your arm out to the wall- hooked my foot into that door like a good one, an he went, and the dog on top of him. As a genera if they don't finish me at one slop I can calculate dog coming in.

I see if you'll offer to sell me short lobsters again,' y:o him; but he see who was top dog for once, and ai't in any condition to resent it, and then again the e:ouraged him to go away, too, and that was the saw of him for that time.

I dn't go near those lobsters till night howsomever. I Furlong had known they were in the house she d't have slept no more than if there had been a sowilting under the cellar stairs. 'Murder will out,' ss. But as soon as she was tucked into her downy ht 'em in and cracked 'em and shredded the meats t:t stone jar I got marked 'Leeches' that the apothe- trew away, and I put the shells in the fire, and says rself: 'Now, Mr. Pat Whalen, you ain't done such d ay's business for me after all, as it turns out, and u come round here in a sober frame of mind you'll r pay.'

I didn't think no more of it until next night about n, when I was out here filling the sugar bowls, and r out a splinter here and there, and I looked out er and who should I see but Whalen paddling along e iddle of the street with his eye on my place. Well, wen that he catched my eye he braced up, and come t nd puffed all out, the way that fish they call the sh will puff out and get squintish when you touch ot to it. So when I see he meant business I begun ea little cold, and I dropped the dishrag and sung t he girl: 'You better dust out of here as quick as L d will let you. There's going to be terrible trouble s about a minute.'

S she dusted, and in he boomed. Well, say, the n he set foot inside the door he struck an attitude h says to me: 'My name's Pat Whalen, and I'm r ree years old come August next, and I weigh 195 e ltogether, and I haven't been licked before by any my weight in this state except one or two,' he . Now then,' he says, 'you give me a good licking n ht, mister.'

J derstand, I was looking out at him through that d ole I had cut me in the door, and I was a-quaking a log after a bath, and my heart a-pounding, but n at I could pluck up courage I whisked open the d out I basted like fluging, and up I come inside a s, and my two fists shaking with fear, much as h g, and I hollers out: 'Yes, and I can do it again!' Vait a minute,' he says, hauling off. 'I want to tell t t you done just right, Neeze.'

W l, say, after being screwed up that way in expecta- o a battle royal it was just as if he had throwed so h old water in my face. I went as limp as that d l of dough you see there stretched across the head e sh barrel. Well, to show you how he took the tuck o ne, I had to squat down a minute in a chair and let myself go before I could get recruited up again. S hen I went in and got out his old sooth hat that I b ted his skull with and gave it to him, and when he s squaring accounts he reached in and brought s t shaker out of his pocket, and I begun to see r ell my salt shakers had disappeared to in the

'r a big man, ain't you awful kind of reason- ' says.

I in't the man I was,' he says to me.

A n't you enjoying your religion, or what?' I says.

N eze,' he says, 'I ain't my own man any more, 's he God's truth.'

S hen he begun to draw back one foot to a time, l kind of bashful for him, and when he come a of the door he whispers: 'Any lobsters I bring in the future, drunk or sober, Neeze, it's policy to 'n in if I got any judgment left at all,' he says.

'hat kind of a rigmarole is that for a starter?"

It jest the gospel truth, Neeze," said Elmer, tweak- a air out of his nostril. "It's policy, the way he says. ,.on't you know who the party is that he is acting "

N from Adam," said Neeze promptly.

It Hat Tyler, Neeze."

h fresh color ebbed from Mr. Furlong's face. "You t ay!" he murmured, perfectly appalled. "Just n was beginning to get where I could see daylight a n a few strokes more, and then to fetch up calamity t s. What—what is the arrangement she has made l m, Elmer?"

S 's turned the man bodily out of his scow, in the l ce," answered Elmer, chuckling.

N !" ejaculated Neeze. "Not the champion!"

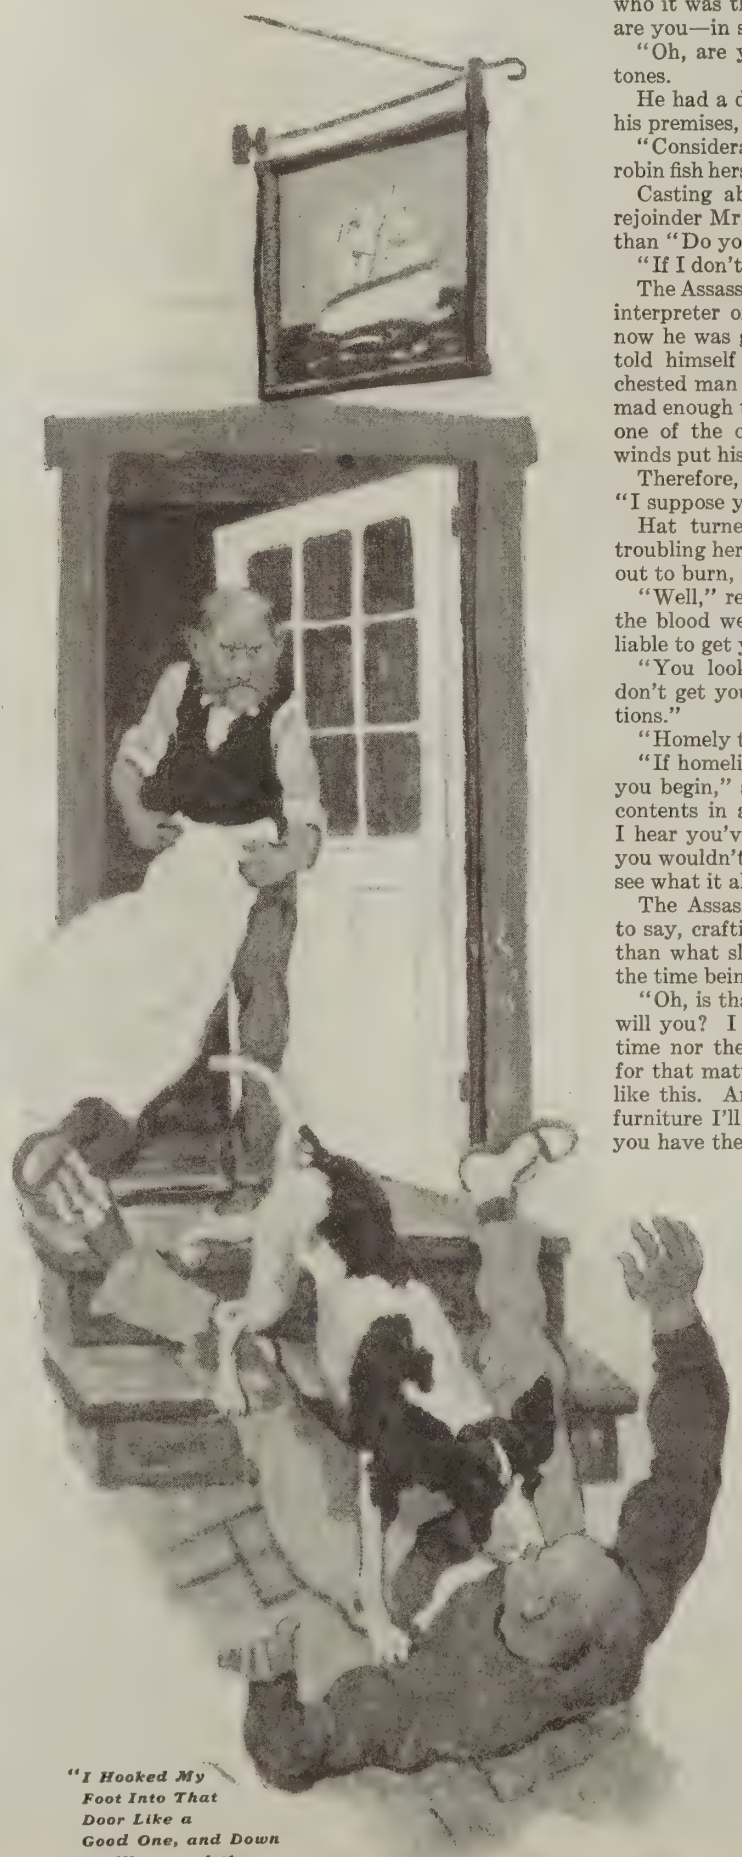
h derstruck, he covered his emotion by cutting his o er a piece of marble cake, first running his chicken- g ather duster lightly over the variegated frosting.

G pel," nodded Elmer. "She told me herself that h all but pitched him off neck and crop, champion o hampion."

A thing never loses in the telling with her," Neeze t d, but it was easy to see that he had no heart to o the likelihood of such news.

n ber truth Elmer's report was very near the truth. A sassin's scow was tied up to the wharf end in the north cove at Cranberry Isle, loaded to the rails with his effects. On the night following Hat's discharge he found himself rowing back from town in a small skiff at about the hour of the sun's setting. On rounding the point it seemed to him that he smelt this smell of mackerel frying at the head of the cove, but he kept on plying his oars. The smell of mackerel increased in his nostrils to such an extent that at length he was moved to slue himself round on the thwart; and to his amazement he saw smoke pouring out of the crooked stack which came up through the roof of the scow's galley. Otherwise his property seemed quite abandoned. It was a fine solid structure, iron bound and ring hung at the four corners, with a rudder as big as a barn door, and lace curtains, somewhat frayed, at the windows of the cabin.

His first thought was that some of the pull-and-be-damned tribe were in there helping themselves in his absence, and he came on, rattling the oars briskly and growing hotter under the collar with each stroke. Siding with the scow he was up onto her deck in jig time, and, indeed, he was halfway down the companionway, which consisted of three worn steps, before he saw anything to give him pause.



"I Hooked My Foot Into That Door Like a Good One, and Down He Went, and the Dog on Top of Him"

Then indeed he paused. At the foot of the companionway he had leaned temporarily one of these long mirrors used by wives, sisters and sweethearts for looking precariously backward down their spines to see if petticoats peep out anywhere, and how skirts are hanging. This was one of the furnishings that Hat had sold him when she broke up, and now what was his amaze to see Hat herself reflected there, standing on that red linoleum of his in her stocking feet, very much down at heel, and with her big toe sticking out. She was frying a fresh mackerel on his stove, as cool as cool.

As soon as she saw, by looking in the mirror herself, who it was that was darkening the door she said: "What are you—in stays, mister?"

"Oh, are you here?" the Assassin said in his politest tones.

He had a dreadful sense of having a difficult woman on his premises, and even on his hands, it might appear.

"Considerably so," said Mrs. Tyler, with a hint of the robin fish herself. "As big as life and two times as natural."

Casting about for something crushing in the way of rejoinder Mr. Whalen could think of nothing better to say than "Do you find everything you want, I wonder?"

"If I don't, I'll ask for it. I've got a tongue in my head."

The Assassin was still satisfied to use the mirror as visual interpreter of these threatening fair proportions, but by now he was getting his second wind in the affair, and he told himself that there was nothing here for a barrel-chested man to be afraid of. All he had to do was to get mad enough to forget that he was dealing with a woman—one of the opposite sex—and throwing chivalry to the winds put his trust in his natural powers.

Therefore, with a retraction of his upper lip he said: "I suppose you think you're here to stay, missis."

Hat turned the mackerel over in the spider before troubling herself to say in answer: "While the lamp holds out to burn, yes."

"Well," rejoined the Assassin, gritting his teeth, while the blood went swarming in his cauliflower ear, "you're liable to get your expectations dashed, young woman."

"You look out, will you," retorted Hat, "that you don't get your brains in the same box with my expectations."

"Homely thing, do a quick job," yelled Whalen.

"If homeliness is any sign of speed you are done before you begin," shrieked Hat, picking up the spider with its contents in a gingery hand. "Well, now you try it on. I hear you've been going round making your brags that you wouldn't be ruled by a woman, and I'm just going to see what it all amounts to."

The Assassin looked out on deck before coming back to say, craftily: "Look here, Hat, that wasn't any more than what slipped out in the course of conversation, for the time being."

"Oh, is that so? Well, you take it out in conversation, will you? I feel quite at home here. This isn't the first time nor the only way I've seen myself in that mirror, for that matter. I haven't always had to tog myself out like this. Any time you see fit to pay me that bill for furniture I'll vacate, but until you do, Mister Man, just you have the goodness to seek other quarters."

"Now just suppose for the sake of argument," said the Assassin in a white fury, "that I don't choose to do anything of the kind."

He let his midriff sink in, and forced up the floating ribs in the general direction of his massive pectorals.

"Just you step your foot round that corner and I'll give you the answer or I'll perish in the attempt—one or the other of the two things," said Mrs. Tyler.

"Well, say, did he round the corner?" inquired Mr. Furlong when Elmer, after enlightening him thus far, addressed himself to his cooling chowder.

"It seems he was afraid of making a move toward having it out with her for fear of breaking that mirror and bringing down seven lean years onto him. He set out to, though, and if it hadn't been that that pesky glass was situated jest where it was he would have pitched into her good. So he jest said: 'You wait till I catch you ashore once,' and off he went and liquored up."

"Ain't it possible, Elmer, he might come off second best ashore?"

"I don't doubt it a mite. I've been shipmates with that woman, and I know

ANYONE CAN WRITE

By Edith Hulbert Hamilton

ILLUSTRATED BY H. WESTON TAYLOR

A BROAD smile illuminated the somewhat heavy features of the president of the Merriweather Music Company, Incorporated, as he pushed a basket of mail across the table to the president of the Verdi Publishing Company, Incorporated.

"Things are coming our way, Basil, old boy," he chuckled; "jumping at us, in fact. Ninety-eight nibbles so far this week, and it's only Wednesday. Forty-four immortal lyrics awaiting your expert editorial criticism, and eleven ——".

"Oh, can the humor, Bill—especially the Basil part of it," interrupted the tall broad-shouldered blond young man who had just entered the private office of the president of the Merriweather Music Company on the eighth floor of one of the older buildings on lower Broadway.

"Don't mind me, old man," he added as he began a hasty examination of the mail before him, which had already been opened. "I'm in a rotten mood this morning, and that fool moniker gets on my nerves. Make it Dick when we're alone, can't you? It's bad enough to figure in a piker's game like this, without posing as the hero of a penny dreadful. Or is it the villain to whom the distressed damsel shrieks 'Oh, Basil! Basil! If you are false to me my life is over'? At any rate his name is Basil—has been for centuries. If I hadn't been asleep when you doped out those form letters you never would have stuck that label on me."

"Sorry it worries you," retorted the other with a grin. "Too late to change it now. Besides, it's there with the atmosphere all right. I call it one of my happiest thoughts. What better bait could there be for the sentimental New England spinster than this paragraph from Form Letter Number Two: 'Your verses appeal to us so strongly that should you decide to enter into an agreement with us we will have them set to music by Mr. Basil Beveridge, the most popular and talented young song writer on our staff. Mr. Beveridge is already well known in musical circles, and the gifted young composer is rapidly making a name for himself in this particular branch of the noble art to which he is devoting his life'?"

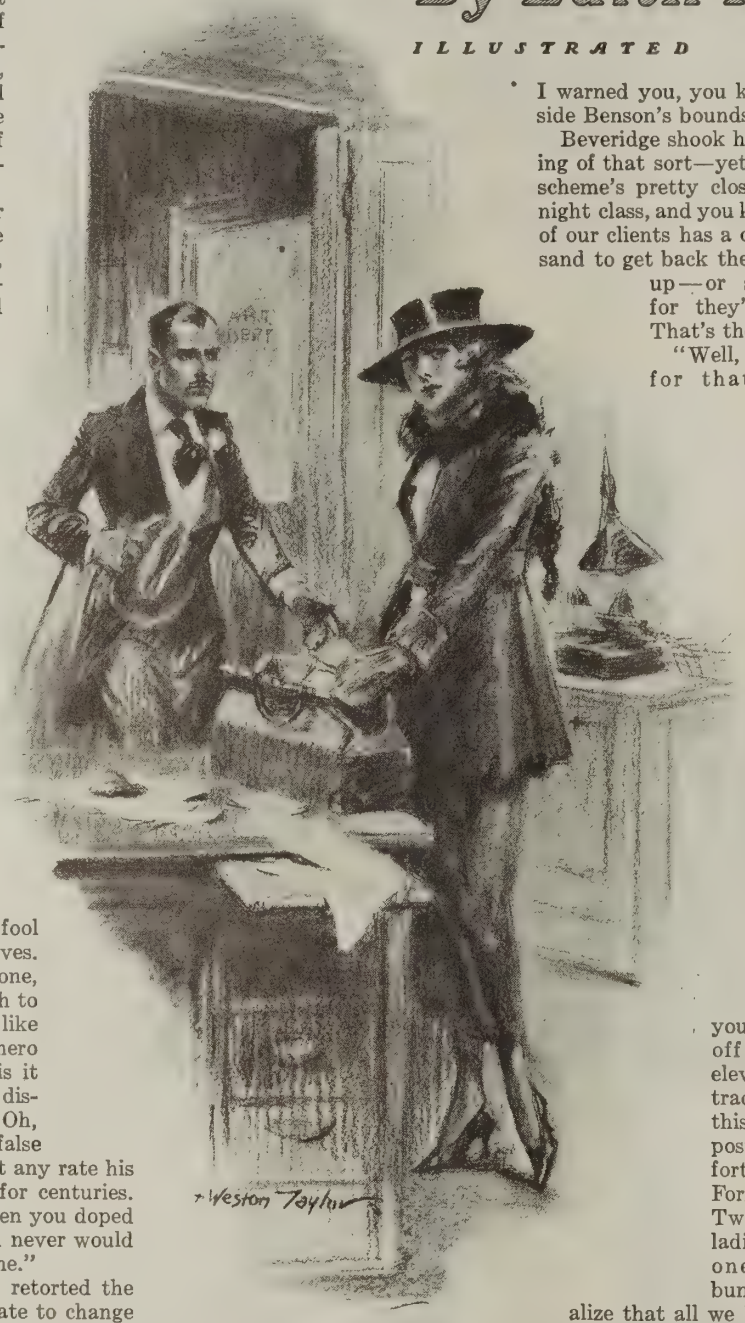
"When it comes to atmosphere," growled Beveridge, glancing up from his task of sorting manuscripts, "if some of these New England spinsters begin to dabble with lawyers and the thing gets into court William Graftleigh won't be such a bad touch of local color for the reporters, will it?"

The president of the Merriweather Music Company laughed a trifle uneasily.

"The blue devils have sure got you this morning, Bassy. New England spinsters with poetic proclivities don't dabble with lawyers. It's most unmaidenly. And let me tell you it would take some little lawyer to get the Merriweather Music Company, if that's what you mean by 'thing,' into any court in this town. Benson, who fixed up our articles of incorporation and contracts, is a regular shark, and we've never sent out a form letter that he hasn't O. K'd. There isn't a legal flaw in the whole outfit. I'd stake my last dollar on that. And we can prove we have kept, to the letter, every promise made to a client."

"'Letter' is good. How about the spirit?"

"That's a matter of personal equation and cuts no ice in business deals. What's eating you anyway, Bassy? Made some slip with the Verdi? Anybody after you?



"Minnie," Stammered Beveridge, "I Know I'm a Cad and a Brute, But There's Something I Must Say to You. I Will Wait for You Downstairs"

I warned you, you know, to keep inside Benson's bounds."

Beveridge shook his head. "Nothing of that sort—yet. But the whole scheme's pretty close to the fly-by-night class, and you know it. Not one of our clients has a chance in a thousand to get back the money he's put up—or she's put up—for they're mostly shes. That's the worst of it."

"Well, who's to blame for that?" demanded Graftleigh. "If the song doesn't go because the verses are bum it's the client's fault, and if the music's punk it's your fault. No use kicking to me. I haven't reneged on my end.

"Gad, Bassy," he went on in a more conciliatory tone, "your grouch has nearly knocked the good news out of my head! This isn't so much of a piker's game as you think. As I started to tell you when you went off at a tangent, eleven signed contracts have come in this week with eleven post-office orders for forty dollars each. Form Letter Number Two surely gets the ladies. There's only one man in the bunch. Do you realize that all we have to do is to keep going at this rate, and in a few months we'll be on Easy Street, with a couple of cars, bigger offices, a hired man to help patch up the lyrics over in Philadelphia in the Verdi place and an office manager for this joint? You can take your temperament out of moth balls then, Bassy, and write the great American opera, and I can be a gentleman once more."

"Sounds good. How do you dope it out?"

"Easy as A B C. It's a little over four months since we opened the offices and started our active campaign. We're on the second week of the fifth month, to be exact, and have managed to cover expenses, including our drawing accounts of twenty-five dollars a week. In fact, we've made out a lot better than ventures of this sort usually do in the beginning. Figuring rent at two hundred dollars; stenographers and office boys two hundred and sixty dollars; lights, telephones and general supplies another hundred dollars; and installments on furniture forty dollars— it takes about six hundred dollars a month to run the two offices. Allowing each of us a salary of two hundred brings the total to a thousand.

"Now then, according to your arrangements with the printer, the total cost of getting out a song is not more than ten dollars, which leaves a margin of thirty dollars on each contract. Ergo, thirty-five contracts a month will keep us solvent, and provide simple food, lodging and car fare. Fifty contracts a month furnish four hundred and fifty dollars in the way of velvet, and seventy-five a month, or about eighteen a week, will give a clean profit of about twelve hundred dollars a month, or fourteen thousand four hundred annually, which, being halved, Bassy old top, is seventy-two hundred. Oh, I know you've heard some of this before. The point in summing it up at this particular moment l the fact mention that eleve tracts dropped in upon us in three days. Seven more i next three will keep us up to our schedule of sevent a month."

Beveridge was silent.

"What's the matter now? Isn't seventy-two hu dollars a year plus a salary of twenty-five hundred e to run a duplex studio; or are these simple calculatio much for the artistic brain?"

"Oh, I suppose I'm making an ass of myself, Bill. in the thing too deep now to pull out, and there's n to do but go ahead and make the best of it."

"Pull out!" echoed Graftleigh. "Who wants t out? Your remarks might have been timely two ago, but just now they're an anachronism. Come he look over the contracts. Miss Middleton has attach proper poem to each one, and you might as well get on the melodies. It won't do to let them stack u they're coming in so fast. Remember we guarantee t mit the manuscript of the music within three weeks the receipt of the contract, and the duplicates have a been signed and sent out."

Beveridge took the papers which Graftleigh held him, dropped into the swivel chair opposite his pa glanced hastily over several sets of verses, only which was typed, selected one for a second readin proceeded to make a series of curves and dashes on a yellow pad. Suddenly he flung his fountain pen o floor and buried his face in his hands.

"It's no use," he groaned; "I can't forget them.

"Forget what?" asked Graftleigh in a tone of surprise.

"These cursed verses. Listen:

"I dreamed last night that you clasped me
Close, close to your throbbing heart.
The love light shone in your eyes,
You vowed that we never shoula part.

"I woke with a sob at the dawning
Of another desolate day.
No voice responds to my call,
My lover is too far away.

"If only once you had kissed me ——"

"Hold!" cried Graftleigh. "That's great stuff, but run it off so fast. Read the first stanza again. R twice.

"Just as I thought!" he exclaimed triumphantly Beveridge had complied with his request. "Fits it to

"Fits what?"

"Why, Annie Laurie, you big stiff. Just change 'r in the fourth line to 'ne'er', and any schoolgirl could off to the old tune. Try it yourself."

"I don't believe any normal human being coul that drivel off to any tune. But I don't get you. Y not suggesting that we should offer Annie Laurie original melody, are you?"

"Not exactly. But there's no harm in borrowin swing of it, and perhaps a phrase or two. It's done time. Why should the theme of every piece of mu absolutely original, any more than the plot of every or every play? Doesn't Kipling explain somewher old Homer got his reputation by dressing up a lot situations? You're not trying to tell me, Bassy, you've been beating our brand-new stuff for each all these weeks? I haven't asked questions, beca thought you didn't want me to butt in on the a end, but you sure need a guardian. What are those glyphics on your pad?"

Beveridge looked a trifle sheepish. "Just sca marks. You see, Bill, when I have this slush in front the only thing I could possibly invent is a new cuss So I block them out and build up the tunes fro skeleton. It's not a very inspiring method, but it best I can do with the sort of rot you've been p over on me."

"I've been putting over on you! Sakes alive m didn't write them. I can't inoculate the entire co with the divine spark. But I've made things as eas can for you by sticking that clause in the contract g our lyric editor authority to 'make any change nece to adapt the song to the requirements of vocalization.' can rewrite every line if you want to. Make them as brow as you please. Only for your own sake I advis not to tamper with them except where the meter repairs. I have a hunch that digging up melodies wil about all your spare time from now on. The lyric yo read doesn't need a thing done to it—has a very d

ho cares about the words anyway? The tune is
hg. What's next?"
Ts gem," said Beveridge.

"*The village band will meet you, Bob,*
When you come home from France.
The prettiest girls will crowd around
To beg you for a dance.

"*But one face will be missing, Bob,*
From those that greet you then.
'Tis vain to seek, you'll never see
Your old sweetheart again."

, I remember that one. I spent about half an hour
er this bunch before you came in."
what classic does this fit?"
an to say you don't know?"
en't thought."
uld auld acquaintance be forgot, and never brought
ir?" sang Graftleigh in a small but not unpleasing
'Try it yourself."
, you're right, it does; but I'm not sure that makes
rk any easier."
Dcourse it does—just like following a pattern or
m from a model, or—or—anything like that. Pity I
n a musical education. With my sense of rhythm I'd
it a tune every ten minutes. But I tell you what,
If the Verdi's going to keep step with the Merri-
h you'll have to get wise to the fact that Home,

M Beveridge?"
se nd female voice
mlified by a note
igl bewilderment.

"Yes; the Mr. Beveridge whose name is mentioned in your contracts."

"Oh, you mean the composer. Mr. Beveridge has no office here."

"Where is his office?"

"Mr. Beveridge has a studio in Philadelphia. It is against our rules to give the addresses of members of our editorial staff, but any letters sent here will be forwarded to him."

"Do you mean to say that I shall have to go to Philadelphia in order to see Mr. Beveridge?"

"I have no knowledge of Mr. Beveridge's engagements, madam, and no authority to arrange any interview for him. As I have already told you, however, any communication ——"

"That will do," interrupted the first female voice disdainfully.

"I didn't come two hundred miles to listen to that sort of twaddle. I have several important appointments myself before my train leaves, and I have wasted all the time I intend to. Young woman, you tell Mr. Graftleigh that Miss Abby Goodell, of Housatonic, wants to see him, and let him know that I'm in a hurry."

"Ye gods, Bassy!" groaned Graftleigh. "That type of woman stops at nothing. She'll be in here in another minute. Middy can't hold her. How about the fire escape?"

"Will you please state your business, madam?" The second female voice retained its professional calm.

There was a moment's silence, followed by a rustling of papers. Graftleigh and Beveridge listened breathlessly.

"Perhaps," said the first female voice dryly, "these documents which I have received from your company will explain it better than I could. . . . No, young woman, I don't propose to let them leave my hands."

"It is not necessary, madam," replied the second female voice stiffly. "I merely wish to see the file number. Thank you. Miss Reynolds."

"Yes, Miss Middleton." The third female voice registered profound respect.

"Bring me the correspondence of File 278 F."

"What's 278 F?" echoed Beveridge in a faint whisper.

"We began with 274 F," explained Graftleigh.

"If you have quite finished," resumed the first female voice after another silence, "perhaps you will ask Mr. Graftleigh to come out and explain why he hasn't complied with the terms of his contract."

"I have charge of the inquiry department, madam," replied Miss Middleton, "and I see nothing in this correspondence to justify your last remark. If you will be a little more explicit, however, I will endeavor to clear up any misunderstanding which may have arisen. Miss Reynolds, will you please get the correspondence of 689 F, 1241 S and 984 B, and take it to Mr. Graftleigh? Ask him if he will please discuss with the directors the matter of special arrangements with those three clients about the introduction of their songs into new Broadway shows. I wish to know whether it will necessitate any change in the royalty rate.

"Now, madam, I am at your service."

Several minutes elapsed, during which the first and second female voices maintained a spirited dialogue. Then Miss Reynolds—tall, slim, pallid, gray-eyed and auburn-haired—entered the private office, closed the door softly behind her, laid some papers on the table before Graftleigh and bestowed an admiring glance on Beveridge.

"Miss Middleton wishes to know ——" she began.

"You do it well, Betty," said Graftleigh, "but can the rest. What's the old bird's kick, anyhow? I don't quite get it."

"The lady claims," replied Miss Reynolds primly, "that she sent you a song early in November, and that she had a letter from you saying it was one of the finest things you ever read, and promising that if she would send you forty dollars you would have appropriate music written for it and have it published for her, and that it would sell all over the country. And she says that she has a signed contract from you which you haven't kept, and she wants her money back."

"Now can you beat that?" ejaculated Graftleigh. "How old is she, Betty? Does she mean mischief?"

"Over fifty, Mr. Graftleigh; and—and—she said something about going for the police."

"Look here, Bassy, that kind always falls for the melancholy, artistic type. You go out and gaze soulfully into her eyes and explain ——"

"Not on your life!" said Beveridge. "Unravel your own tangled web. I don't know a thing about the business end of this proposition."

"Nice helpful partner you are. Perhaps Middleton can get rid of her.

(Continued on Page 102)

It is, of Course, Ridiculous to Suppose That All the Details in Regard to the Melody and Accompaniment Could be Settled at One Conference—or Two—or Three

ONE THOUSAND DIAMETERS

By Stanley M. Rinehart, M.D.

If Johnny's Mother Should Read This She Will be Thankful That She Lives in the Present and Not in the Past Era of Medicine

WHEN Johnny Smith came home the other day with his foot cut—he had been running barefoot—Mrs. Smith knew exactly what to do. She washed it thoroughly with soap and water, carefully cleansed the wound of dirt, applied tincture of iodine to it and bound it up with a first-aid dressing. Nothing remarkable about that. Any other sensible woman, especially anyone who has taken Red Cross work, would have done the same thing. But when Mrs. Smith was a child her mother would not have treated an injury in that manner.

Though Mrs. Smith is less than forty, in her childhood they applied flaxseed and bacon rind and other kinds of vegetable or animal poultices to open wounds. And then when pus appeared, as it almost inevitably did, it was called laudable or praiseworthy.

This difference in the treatment of so slight an injury as Johnny's cut is indicative of all the wonderful changes that have occurred in forty years in both medicine and surgery. Forty years ago operation wounds were almost never entirely closed. There was always a drain left in to allow the exit of the inevitable pus. And just as pus was once inevitable but is now considered unnecessary, so it is with many of the diseases that for centuries afflicted mankind. Many of these diseases have become only reminiscences—episodes of history. They no longer appear and fatten and flourish at our expense.

And all these changes have been brought about by one thousand diameters. In other words, it was the perfection of the compound microscope that enabled men to see the minute structure of the body, and by magnifying at least one thousand times, or diameters, to bring within their vision the germ enemies of mankind.

The advances in medical knowledge, though less spectacular, have been as great as those in surgery. Perhaps the most obvious instance of our progress in medicine is the change in our attitude toward malaria. Anyone who has lived in a flat marshy district can recall the sallowness of the older inhabitants. In their early days malaria—chills and fever—was so common an affliction that it was looked upon as a necessity. The drug stores could hardly keep stocked with quinine and calomel. Quinine and whisky went together in people's minds—and into their stomachs also, just like hot cakes and molasses. In fact, many a man met an untimely end because he tried to omit the quinine from the combination.

The Winged Allies of Napoleon

BUT how many of the later generation have that yellow look? No one before the year 1899 knew that the parasites of malaria attacked people from airships—that is, a certain kind of mosquito. Nor did anyone think of carbon oil as a means of prevention. And yet oil, spread upon the breeding places of mosquitoes, has made malaria a thing of the past.

Malaria has been a great scourge of humanity. It has numbered millions among its victims. It has destroyed nations and submerged civilizations. History tells us that the downfall of Greece was due to the attacks of invading barbarians upon a decadent people. But their decadence resulted from an earlier invasion. There had always been marshes and mosquitoes in Greece. In the fifth century B. C. malaria was introduced into the country, and the mosquitoes did the rest. When the barbarian hordes appeared they found the Greeks ripe for the harvest.

The same thing occurred in Rome, but there another disease aided malaria in bringing down the mightiest empire the world had ever seen. It was called the plague, but history is vague as to whether it was smallpox or an epidemic dysentery. Whatever it was, together they wrought the destruction of Rome.

Hannibal brought over from Africa his Carthagenian mercenaries to conquer Rome. He did not accomplish his purpose, but the malaria that his soldiers brought with them finally destroyed the health of the people and made conquest easy for the Goths and Vandals.

Physical deterioration of a people is always followed by mental and moral decay. Wherever in history one comes upon a healthy people, there one finds a people of high intellectual and moral standards. During the centuries that the Moors were in Spain they bore the flag of civilization. When they were compelled to go back to the debilitating climate of Africa their moral and intellectual recession began.

Once malaria won a great victory for Napoleon. In 1809 an expedition set out from Great Britain to capture Antwerp and the French fleet. There was quite a formidable array of ships and soldiers, four hundred and seventy vessels and forty-four thousand men, and there was great anxiety in France. Napoleon, however, knew more about the country than the British, and he counted upon the aid of an ally of which the British were entirely ignorant. He ordered his generals to hold the enemy in check, but not to engage them in a decisive battle. And so the British were held for many days in the swampy region of the River Scheldt. There an ally of the French attacked them from the air. Mosquitoes inoculated them with malaria and the British casualties from this cause alone, in dead and sick, were twenty-seven thousand.

The British expedition was defeated before it could engage the forces of Napoleon. The anopheles mosquito had caused more destruction to the British than Napoleon's army could have done. But no one at that time, or for many years after, knew the part the mosquito played in the campaign. In fact, until 1880 no one had known the cause of malaria, and the mosquito's nefarious business was not discovered until nine years later.

For that matter, it is the same with other diseases. Typhus fever, the bubonic plague, smallpox, tuberculosis—one could go through a whole list—all were known to the ancients; that is, their effects were known and the fact that they are transmissible, but there all knowledge stopped.

Nearly all important discoveries of the causes, modes of transmission and means of prevention have been made within the past forty years. All those previous cent men were helpless against these foes because they not see them. They were fighting in the dark. A concerning the things of which they were ignorant built up superstitions, and doctors cloaked their igno with mystery and mysticism. About all there is le that is our prescription Latin. But the mystery h some, because it inspired Faith and her handmaiden, H which are more potent than all the horrible concoc of the ancients.

With the exception of anatomy and physiology medicine of a little more than one hundred years ag about the same as that of five hundred years B. C. medical knowledge for centuries was at a standstill. I were to compare the prescriptions in the Papyrus E which was written 3500 years ago, with those in me books of the eighteenth century, he would discover str similarities. This is because there was no knowledge causes of disease until the invention of the microscope medicine was lost in the fog of ignorance and s stition.

Suppose Johnny Smith, whose mother treated his sensibly, had lived in the Middle Ages or at any perio to, say, fifty or a hundred years ago. His mother w have sent off posthaste for the nearest surgeon, or l as he was once called. In the meantime she would given Johnny three, five or perhaps ten grains of ca and a dose of oil and would have applied hot vegeta animal poultices. And then the leech would have appe armed with a lancet and another kind of leeches. He w have bled him generously, perhaps more than once the leeches would have drained him still more.

From a book published in 1745 here i cold-blooded narrative of a licensed ass as quoted by Mark Twain. The subje patient, had a headache, that is all:

I, being c Order'd Ven tion in the A the Applicati Leeches to the sels of his No Forehead and Temples, as also to those Behind his and likewise Prescrib'd the Application of Cupping-G with Scarification, to his Back; But Notwithsta these Precautions, he dy'd. If any Surgeon, Skill Arteriotomy had been Present, I should have Order'd Operation.

Leeches, venesection, arteriotomy—all for the pu of separating the victim from his blood! If Joh mother should read this she will be thankful that she in the present and not in the past era of medicir "notwithstanding," Johnny might have "dy'd."

The Awful Prescriptions of Long Ago

FOR centuries roots and herbs were prescribed be of their symbolic forms, and diseases were banish incantations. If Johnny had lived in the seventeenth tury and had chanced to have the whooping coug mother could have found in a standard medical wor following information—archaic spelling omitted:

For whooping cough, pass the child nine times ove under a donkey, from left to right.

Mrs. Smith might have wondered what would hap she got in reverse and passed Johnny from right t But she would not have chanced it—not in those days

While waiting for someone to produce a docile d that would consent to cure Johnny, perhaps Mrs. S idly turned the pages of the medical work. If she di would have been interested in this:

It is said that many have been cured of the fallin by drinking of the powder of dead men's skulles, burn

The author did not say how one can drink a powde he was very particular to mention the kind of a "sk that should be used.

But the skulle must be the skulle of one that hath hanged or slain, and not of one that hath died o sickness.

One can imagine the medical student of those days, with a burning enthusiasm, yet shivering from fear, ing out on a dark, stormy night to obtain the "skull the latest victim of the crossroads gibbet. They considerate enough to hang men—and women, too—a crossroads, which made it easier for the doctors.

ATHLETICS FOR COLD CASH

By Bertram Lebhar

(EN the athletic committee of the University of Pennsylvania broke the news o me that I was ineligible for a place on ity football team I felt that I had been dealt rom which I could never recover. I had been ootball for four years. During my senior year at t ecclesiastic college from which I had just been d I was captain and coach of the eleven. I was t ll and tipped the scales at two hundred and three s I held a state championship in weight throwing, n wrestling championship and had broken the s cord in the discus throw. With these recommens felt justified in nursing the ambition to win new e er athletic honors at the big Philadelphia seat of o which I had come to study medicine. The ver- e authorities that I was irrevocably barred from ion in intercollegiate contests under the four- t rule was without exaggeration the cruelest dis- ent I had ever suffered in all my existence.

however, was more than a score of years ago. The I walked up to the cashier's window of one of the ew York banks and made inquiry as to my bal- e amount the smiling cashier mentioned was in s and the first figure was not the youngest member dit family. If I had not already long since forgiven ge athletic committee I should have done so then. ically every dollar I possess and all that I have I owe to their ban of excommunication, which into the field of professional athletics.

s when I say that I was driven into professional- not stating the case quite fairly. Because I had ve in college sports for four years before I came ylvania I was denied an opportunity to compete g games and meets, but of course that did not e to become a professional. I could have con- yself with playing football on the class elevens. I ve looked on while men whom I knew I could nt to the mat for our university in the intercol- restling bouts. I could have paid my way through cal school by doing the hard menial work of a the college basement or by getting a job as a stead of capitalizing my physical strength and oining a professional football team. Thereby I e maintained unsullied my reputation as a gentle- te. My disappointment and bitterness, however, g my athletic ambitions crushed prompted me to fatal plunge. To that extent, at least, the four- t rule—which had just about come into existence ntered the university and of which I was in total —was responsible for the inception of my career I was born on a farm of rich black Illinois mud and was the youngest and least husky of a family of six children—all boys. At the age of fifteen I permanently stopped growing. As at that time, however, I had reached the height of six feet and weighed nearly two hundred pounds, it will be admitted that in my case Nature had done a hurried rather than a niggardly job.

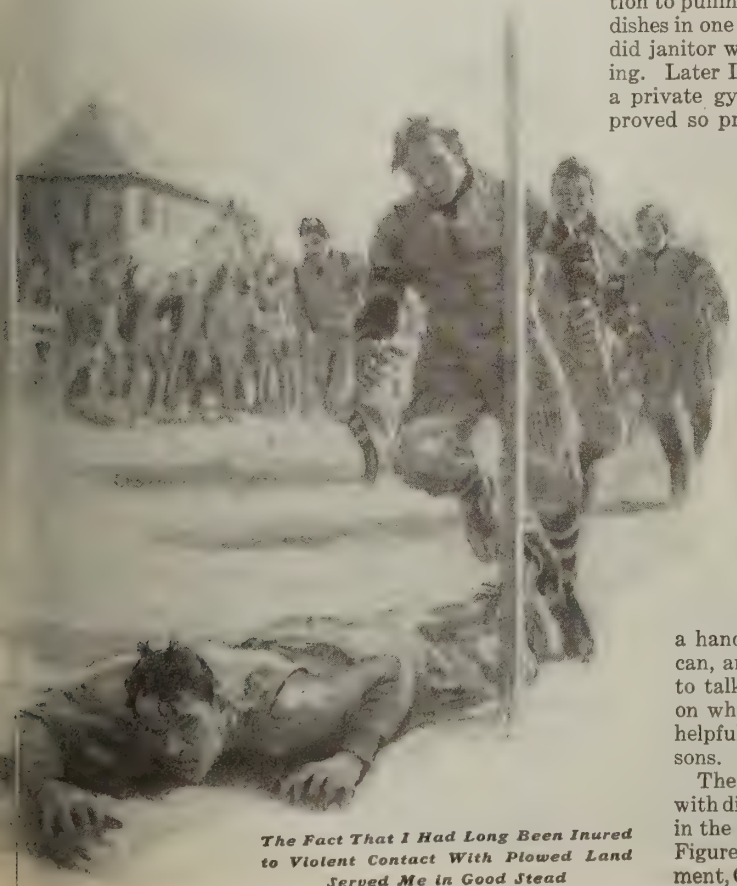
I Went Out With the Scrub Team and Helped Beat the Varsity Eleven

Our father, who was an old-fashioned son of the soil, was fairly prosperous, but he did not believe in a college education. In fact he was not very enthusiastic about any education at all and counted that time lost whose low descending sun did not find us out on the fields keeping up our end of the work with the grown-up men. From the age of nine up to my seventeenth year I went through an endless grind of hard labor. At the end of that period I kicked over the traces and announced that I wanted to be a doctor of medicine and intended to start out immediately for college.

That precipitated a long and violent argument. But a week later I left home—without the paternal blessing—and tramped barefooted eighty-five miles to the town of Greencastle, Indiana, where I applied for admission to the academy of DePauw University.

My total resources consisted of eleven cents in cash, a pair of cotton overalls—which I was wearing—and my Sunday pants, which I carried rolled up in a paper package. However, I succeeded in convincing the school authorities of my ability to work my way through and when the next day I landed a job in the basement of a local department store pulling nails out of packing cases for fifteen cents an hour I was permitted to enroll as a student at the preparatory school.

During my first year at the academy, in addition to pulling nails for my tuition fees, I washed dishes in one of the dormitories for my board and did janitor work at Theologue Hall for my lodging. Later I ran a boarding club and conducted a private gymnasium, and both these ventures proved so profitable that I had no difficulty in financing the remainder of my college course. Moreover, in spite of the demand these outside activities made on my spare time I managed to take a prominent part in the athletic life of the institution without falling behind in my class work. That I did not neglect my studies is evidenced by the fact that though the combined academic and college course was supposed to take seven years I succeeded in getting my bachelor-of-science degree in five years.



The Fact That I Had Long Been Inured to Violent Contact With Plowed Land Served Me in Good Stead

Until my arrival at DePauw I had never seen a football, but I knew a thing or two about boxing and wrestling, particularly the latter. Early in his youth my brother George, who was five years my senior, had come into possession of a handbook on the art of catch-as-catch-can, and almost from the time I was able to talk he had been using me as a model on which to test the practicability of the helpful hints contained in the printed lessons.

The volume was generously illustrated with diagrams in which Figure A was shown in the act of accomplishing the downfall of Figure B. Being of an impulsive temperament, George would pounce on me whenever the spirit moved him and without giving me a word of warning as to his intentions would proceed to put me in the position of Figure B. As these impulses frequently came to him while we were following the horses across a partially plowed field, it was not long before I grew dissatisfied with the rôle of the second letter of the alphabet and in desperation was driven to an intensive study of the counter-holds and defensive tactics described in the book. Eventually there came a day when George ceased to be Figure A. Not only was I able to throw him and our four older brothers in succession, but at the end of my fifteenth year I went on the mat with the champion wrestler of our county and got two falls out of him in seven minutes.

My wrestling experience and the fact that I had long been inured to violent contact with plowed land served me in good stead when I began my football career. During the four years that I played on the college team the newspaper sporting editors paid me the compliment of voting me the best guard in the Central States.

In addition to representing DePauw on the gridiron I held a leading position on the track-and-field teams. In fact, I made such a good record as an all-round athlete that when I was graduated, Fred Stone, physical director of the Chicago Athletic Club, who had refereed the last intercollegiate meet in which I appeared, urged me to come to Chicago and join his club, which was about to meet a picked team of the New York Athletic Club.

When I learned that I was to have a chance to compete with some of the greatest amateurs in America—national champions whose names we had always mentioned with awe and veneration at college—I eagerly accepted the invitation. And such was my scrupulous regard for athletic standards in those days and my horror of the taint of professionalism that I insisted on paying my own fare and other expenses to Chicago, though I should have had no great difficulty in "borrowing" the money.

It was at that dual meet at the Parkside Cricket Grounds that I broke a world's record in the weights. I threw the discus 130 feet, defeating Flanagan, McCracken, Sheldon and other noted weight tossers. I also won second place in the hammer throw, making a toss of 148½ feet; and I put the shot at 43 feet. No less an authority than Mike Murphy, who witnessed my performance with the hammer, predicted that with a year's proper training I should be able to make a throw of 180 feet with ease.

When, therefore, at the end of the following summer I went to the University of Pennsylvania I had rosy dreams of becoming one of the great heroes of intercollegiate sports. To be quite frank, it was not merely a matter of glory with me. I had shrewdly assessed the material value of a national reputation as a college athlete. A young physician with his way to make in the world, I told myself, couldn't have a better asset than a distinguished record as a football player on one of the big varsity elevens or as a star in the track-and-field contests. In building up a practice such fame would count for far more than all the honors

THE GIRL ON THE HILLTO

He Looked in Vain for a Relenting Gleam in the Cold, Blue-Gray Eyes. There Was No Smile in Them

By Kenyon Gambier

ILLUSTRATED BY HENRY RALEIGH

IV

THE Lord of the Manor of St. Dyfrigs, otherwise Roger Lingard of Chillicothe, Ohio, otherwise Sergeant Kellie Hill, of the British Army, owner of St. Dyfrigs Park, proprietor of St. Dyfrigs village, and possessor of Tydd's farm in Ohio, worked on sharing terms by his friend, Gil Hart, after an hour's melancholy brooding in the gazebo on the wall, rose and stared through the shuttered opening at the chimneys of the great mansion, his mansion. To go there now was to go as a sheriff's deputy with a writ of ejectment against an orphan girl who had lost a father, two brothers and a grandfather within four years.

He turned and looked over the village, his village, and at Turle's cottage, his cottage. Just the same there; and that little home meant as much to Tom Turle and to Charity as the manor house meant to Dorothy. Perhaps it meant more. Their lives had been built on the foundations of that cottage. It would be sacrilege to them that their home should fall back into the great estate and once again be owned by the squire.

The squire! He said the words aloud and broke into a flood of hysterical laughter. He was the squire. He, himself. He looked down at his dusty army boots; at his worn putties; at the old tunic, the sleeves of which did not even bear the chevrons of a sergeant. The squire! He laughed again. If he went back to Chillicothe and told them that, would they touch their hats? Si Hankin and Lem Burgess and Gil Hart would organize a vigilance committee and ride him on a rail, just to teach him manners and wish him luck in his new job.

The laugh did him good. Of course this absurdity could be corrected. He could guess how it had happened. The Lingards had made no wills. Primogeniture would carry the property down to the male heir just as they would have it descend. It would be easy to deed the estate to Dorothy, and the cottage to Tom and Charity. They could not help liking a fellow who promptly did the fair thing like that. He felt that the welcome he craved was doubly assured. His spirits bounded. He smiled when he saw the schoolmaster sitting on the bench beneath the tree.

The old chap was a little grayer, he thought, and a little more hunched, but smoked as comfortably as though all the world was at peace. Roger ran down to tap once more, after four years, the fount of wisdom.

Within three minutes the unrecognized soldier led the talk to the Lingard estate.

"A fine thing," the schoolmaster said. "That is, if the American heir is a true American. In the coming changes we want new democratic ideas. Probably the system of entail will go."

"Entail?" Roger exclaimed. He had not thought of that.

"Yes; the property is entailed. The system has done its work perhaps, but it has had noble results. It has kept estates together, has insured a male as owner, has made him a trustee for future generations, and for his tenants and dependents. Farmers rent their farms cheaper than anywhere in the world. The peasantry of England are the best fed and the best housed of any peasantry in the world. They are kings compared to the small holders of France, who starve on small patches of land, subdivided by equal inheritance."

"The heir should give up his rights," Roger protested.

"He cannot. He cannot break the entail until he has a son who is of age. It takes owner and heir jointly to do that."

The astonished Roger was struck dumb. The schoolmaster refilled his continuous pipe.

"The new owner," the schoolmaster resumed, "is English in blood, and probably has the Anglo-Saxon idea. He will understand that he is but a link in the chain of a system. He will not shirk his responsibilities in the anxious time coming. He will not surrender the birthright of his children."

"But if he does?"

"He cannot, I say. He can't get rid of it."

"But suppose he refuses to turn up or that they don't find him?"

"Chancery, I suppose."

"Miss Lingard wouldn't get it, then?"

"Oh, no. The court might make her an allowance perhaps, but the revenues would pile up and ultimately go to the crown."

"It is very hard on her," Roger protested hotly.

"The right of the male is part of the religion of the upper classes," the schoolmaster explained. "Their women are what they are, sheltered, cultivated, because entail has kept families well-to-do through generations, and provided the money to produce the fine lady—beautiful, exquisite."

"Miss Lingard has done her part with the rest," Roger cried. "I'm sure of that."

"She has done her best," was the reply. "The whole family was a generation behind the time, reactionary, semifeudal, paternal. I am sorry for her of course. I wish her griefs had been lighter. She has borne them well."

The schoolmaster rose. "An American trying to be an Englishman," he said, "is the saddest spectacle on earth. Let us hope this lord of the manor from the United States will remain a true American. He'll have some of the sound blood of the English yeoman, for he is a des on the maternal side of the Turles of this vil is said that he is young. I hope that he is p democratic and unmarried. Then we shall h happy solution. He will marry Miss Lin course." He nodded and ambled away, trailing sm a small tramp steamer burning bad coal.

Roger sat pondering, too dazed for consecutiv too deeply shaken to plan. "A link in a chain trustee for future generations . . . the birthrig children . . . marry Miss Lingard." These recurred in his confused reflections. The chain in was a link was fastened about his neck, he thought felt that it was drawing tighter. What claim had his children on him? That idea was un-American; i make everybody play for safety. If children were course you did your best for them, and educate and placed them as well as you could. What mo they ask? He emphatically refused to consult these children. In the States a man hustled for himself.

If he should say to Gil Hart: "You are a trustee terity," he could just hear Gil Hart's answer: "Ah getting you?" And yet there was something fine a after all. Ancestors had been something to talk ab his father when there was nothing much to do; p had never worried either his father or him; but it to him that in this strange England they were vita This estate, he thought, was not his; rather, he b to it. He was a cipher, an accident, an incident, th not the master. He bent under the weight of an in rial past and an ancient tradition.

It came clearly to him at length that there w things he could not do: He could not slip secretl and leave chaos; he could not, as Roger Linga Dorothy; not yet at any rate. It followed that I continue to be Kellie Hill. Kellie Hill could find o Roger Lingard ought to do and could do.

His course decided, he found himself hungry and The sign still hung over the door of the turnpike Teas—Mineral Waters. As he crossed he recal great horizontal cameo brooch which moved stra and down as the fat, placid lady breathed. He fo there, outwardly just the same, a little stouter p but she was no longer placid.

"Milk?" she snapped at him. Grown-ups ough ashamed to ask for it when there wasn't enough babies.

"I didn't know," he said meekly. "Some bottl onade, please."

She had had none this twelvemonth, she said. Th no sugar for the manufacturer, and all his men h called up anyway. Roger pleaded for tea with h

ng smile. Rationed, she explained; and she could g enough for herself. Bread and cheese? She got wi indignation as she said that she had got just half ul of cheese from the shop in seven weeks. She ecinto a tirade against officers' wives in the village gt all the tea and cheese they wanted from the r canteen in Castlechepe while honest villagers re.

Bad and butter?"

e tared at him. Did he not know that dairymaids fcotten how to churn? She was allowed two ounces eek—tub stuff, salt—and the same of margarine; b h were so bad that she could eat neither, nor fry her. "But them officers' wives, they rolls in fresh er' she added bitterly. "You needn't think as you in tr ches has had all the worries to bear. Where did ne from as you didn't know there is nothing fit for a man to eat as is a bit tasty about her meals?"

e oked at her in wonder. How had she kept her ?

" been stuffed with milk and cream and butter and n a convalescent hospital," he answered humbly. ic't know."

ne here—you!" she commanded abruptly.

e stone-flagged kitchen she put before him a loaf r war bread, a half-pound pat of fresh country but-

a hunk of rich dr cheese and gf cider. "I'm o business this the," she said; f course you g esh from hos- —"

n't eat your e, he protested. ecut a thick bread, put tl butter on his e, and sliced a sous wedge of s

Gon," she com- dl. "I've two ers married to ns and they 't ee their poor h wanting, not n government fd controller. re more where me from."

e tched in. Ah, gd it was! He d questions, but min interest in hrs was that y should not w of her secret ples. She had t more to say t fficers' wives. gthered that e ere great mu- onworks at Cas- hoe, that the e wn had burst ponds, that vil- e ottages and oms had been pd up, and that e as bitter jeal- ecause these rbers could get hich villagers d not get. He n that he could ect to find a e o sleep in the ghorhood, and ed in the end eting about the gals.

e ained a strik- nv fact which rsed on him e eeply the in- ic to Dorothy, ad dental nature h inheritance t impossibility ev ling it. The on, it seemed, s vived his two s nd had seen at was coming, w powerless to a the entail.

The old squire, the stout lady said, was declared silly by the courts. He could not sign any papers.

"Does the village take to the idea of a Yankee squire?" Roger asked.

"Just like I would open my eyes and see a burglar in my room," was the prompt answer.

"But Americans are Allies now. They are fighting with us."

"Do you like that?" she demanded.

"Yes."

"Well, you are the first soldier as haven't said as he'd rather finish the job himself. We've got to take the new squire same as we have a new vicar, and they do say as he's a young man and so there'll be a wedding of course."

"Does the village want that?"

"A Yankee with Turle blood!" she cried with bitter contempt. "And you ask if the village wants it! But it's only fair to Miss Lingard if so be as she will put up with him."

"I ——"

A pig squealed. The stout lady burst into bitter reproaches against a government which had fooled her—intentionally, she believed—about pigs. Back in the spring they had made everybody buy pigs. She had bought one for fifty-six shillings—fifty-six shillings, mind!—and him only a weaner, eight weeks old. And now there was no sharps, nor no grain offal, nor no maize, and she had just bought a sack of what they called pig food which turned out to be just mill sweepings and nothing more, and it worked out at threepence a pound, and there wasn't a pound of fattening in the lot. They would not let her sell the pig, and if they did pigs was half the price.

"Well, there! Hear him—starving. He's got to be fed to the tick or I get notice from him."

The end was that the lord of the manor mixed the meal—and indeed it was pretty poor stuff—and fed the pig, which certainly was not putting on flesh. That was the first service the squire rendered to his tenants.

He walked up through the village, unconsciously pleased by the absence of change, soothed by its restfulness and charmed by its summer beauty. He mechanically recalled one or two faces, but no one remembered him. He had altered in more than stature and breadth. His features were as changed as his speech. He had not definitely planned to stop at the Turle cottage, but its wide-open front door and window beckoned irresistibly.

As he lifted the solid-brass knocker he scented the mass of sweet peas that rested on the window sill, and he thought with a smile of Charity in the bar parlor. What had France and war and wound made of Charity? He thrilled to her cheerful voice as she called "Come in." She no more than glanced when he entered the parlor.

"One minute, please," she said.

Dorothy was there, too, with a vivid red cross across her breast. Roger, startled, embarrassed, fingered his cap and eagerly looked at his two cousins, found so unexpectedly together.

"Now this one, Miss Lingard." Charity put down a paper for signature, and then others—a dozen perhaps.

The red cross on the white apron was so vivid that there flitted across Roger's memory a picture in Ivanhoe of a Knight Templar in chain armor with a brilliant cross on his breast. It seemed to him that Dorothy was in armor too. She was immaculate, detached. She was disdainful, he thought, in her pride. He felt it in her manner toward Charity. He could see it in her profile, outlined against the window, especially in her short, curved upper lip. She signed papers with a dashing flourish. He had seen generals at the Front in dugout headquarters sign like that while adjutants sorted and blotted. She was general, Charity adjutant.

His eyes turned to Charity. She wore a shapeless white garment reaching to the tops of heavy muddied boots—a splashed and stained cowman's smock resurrected from the carved old oak chest. Her hand hovered over the papers and pounced swiftly, and sometimes she explained a document or a letter in a curt, precise sentence.

Joyriding and Jaywalking

A GENTLEMAN who is trying to have his classification under the revenue law changed, with the pious purpose of saving some thousands of the taxes levied on his earnings, observed during the course of a recent discussion: "If the object of government is to make men, then I am in favor of government ownership."

This quotation should be orchestrated for the tuba, with the cymbals crashing in on the last word, where the orator pounds the table. It is typical of this era of Big Talk and small sense, in which everyone is demanding shorter hours except the Big Talkers. They are still asking for "Just one moment more."

The simple and amply proven fact is that government ownership does not make men, and rarely makes money. It makes weaklings, dependents, grafters, bureaucrats, autocrats and deficits. It is the first lesson in Socialism, and Socialism is the first lesson in Bolshevism, and Bolshevism is the last lesson in government. The class graduates from that into Anarchy.

Men are not made by government, but government is made by men. For this reason it is imperfect, inefficient, wasteful and often dishonest. It reflects, and always will, the human weaknesses of those who compose and administer it. If office and the power that goes with it change men, it is rarely for the better. A good man is good in office, but he is at his best in private life. It is harder to prove an alibi there.

Laws are seldom as just as they are intended to be; for they are only as strong as the men who enforce them. The difference between words and deeds finds its clearest example in them. The conduct of the great departments of government, no matter how efficient the theoretical plan under which they are organized, is only as businesslike as the standards of their heads and personnel. There is nothing about a Washington job, beginning with the Presidency and working on down, that changes the character and the competency of the man who fills it, though it may and often does shackle him to outgrown tradition and outworn precedent. A bungling, boneheaded private citizen is not transmuted by election or appointment into a competent public servant, though he is often press-agented as one.

All this, of course, is the obvious; but this is a time to state and restate the obvious, because almost every scheme of world-saving that is receiving consideration ignores the simple and proven facts of life and character. The obvious is too plain, too unexciting, too much like the well-settled middle years of matrimony for a world that wants jazz, hokum and soulmate economics. Oftener than not, the obvious course is the right one. But once that is admitted, a lot of lawyers and deep thinkers will be out of a job.

Government ownership is the college widow with whom they all take up when they begin to yearn for a sympathetic, an understanding companion. The gossip of the campus, the scandals of her past, the flat failure of her attempts to land one of the long line of freshmen with honorable intentions who have fallen for her—are brushed aside as capitalistic lies by the pure young soul who sits beside her in the hammock while she plays the dear old songs on the ukulele. Lots of people are simply holding hands with the past when they think they are looking ahead at the future.

Government ownership cannot make good beside private business because it cannot develop the ablest type of executives, nor attract them from private business. Its final form—Communism—is predicated on supermen in office, and on a superstate that derives its administrators from some Jovian source of supply apart from and above the run of men. It must depend on altruism instead of intelligent selfishness as a motive to attract capable managers, and the supply of altruists who are willing to work twelve hours a day in order that the mass of men may lazy round in the sunshine is strictly limited; in fact, it has been found nonexistent in Russia. There seems to be a high degree both of selfishness and of intelligence on this subject.

The average voter, without stopping to take government apart to see what makes the wheels go round, why it loses time and sometimes stops altogether, ascribes godlike attributes and powers to it. Bill Smith in private life round the corner must prove his claims to superiority by concrete and old-fashioned tests of his honesty and ability, but Bill Jones in Washington and Bill Joneski in Russia can tell him that they have been anointed with a new oil of wisdom, and he believes blindly. It is a great world delusion that the state, composed of fallible men, selected by and imposed on fallible men, possesses attributes of infallibility, virtues that are not inherent in the individual, abilities that in some occult way are brought out and perfected by office holding. Rapidly developing corollaries to these propositions are:

That the labor radical is more disinterested and less greedy for place and power than the politician.

That theorists are less avaricious and more competent to govern than men of practical affairs.

That in some unexplained way revolution changes natural law and human nature, and that Communists can bring commodities out of the air like rabbits from a conjurer's hat.

That altruism should move business and professional men and farmers to work for their own ruin in order to serve the purely selfish ends of labor.

That radicals, agitators and demagogues care less for power and money than the men they are trying to take it away from.

Government ownership, Socialism and Communism are based on a belief that these self-evident falsities are truths. It is not intelligent for the radical labor class to think that all other classes will ruin themselves and then pitch in and work to make life soft for the reds. Men believe many things because someone states them from a soap box or a rostrum, or puts them over in a pamphlet or a book. It never occurs to them to step round the corner and get the facts for themselves. Yet there is full information, fact not theory, on almost every subject under discussion, just round the corner. Take the one that for fifty years has been the most argued over, most written about of all—the liquor question. The mass of views, reviews and counter-views has befuddled everyone who has followed them in an attempt to form an opinion. But any man of average intelligence could have seen the system in operation and have discovered all the good and the bad of it by spending an evening in his club, another at the neighborhood saloon, a third visiting Casey's place near the factory and the barrel house in the slums; by asking a few questions in the office, in the factory, of merchants, and of his friends.

Beneath all the books and befuddling argument few questions are more abstruse than that. Most o will yield to the same simple personal treatment. G ment ownership is an open book to anyone who ha riding on the cars, doing business with the railroa paying taxes—and it has been a failure, though it h the services of practical men whom it could not h retain under permanent government ownership. W are headed for under a neat little plan like Plumb' gers the imagination of those who will have to make deficits. We see no evidence that Plumb and his br hoods are superaltruists or that their standards of theirs and what's the public's are higher—except tha want to be farther above regulation—than those present owners.

We are all more or less government owned, and b we do not like the dose of it that we have already part of the public is clamoring for more, on the theor if one drink turns your stomach a dozen will rest tone. Some want it in one kind of bottle and so another; one group believes in it homeopathicall another demands it in its allopathic and logical form genuine Russian vodka, with Lenine's name blown glass.

Government ownership is not only ownership of m ery, but it is also ownership of men. In its final for not only ownership of the machinery of productio it is ownership of the individual, body and soul. folly to talk of ownership of production, in the se mastery, by all the people. Actual ownership will be in the men who are selected or who, as in Russia, themselves to hold and to manage capital and ind From the very nature of the case this will be a sma autocratic group. Government will own all the cap and they will be government. There will be no except to God or the counter-revolution, and these day altruists do not believe in God and are excee careful about leaving firearms lying round loose which the happy comrades might hurt themselves.

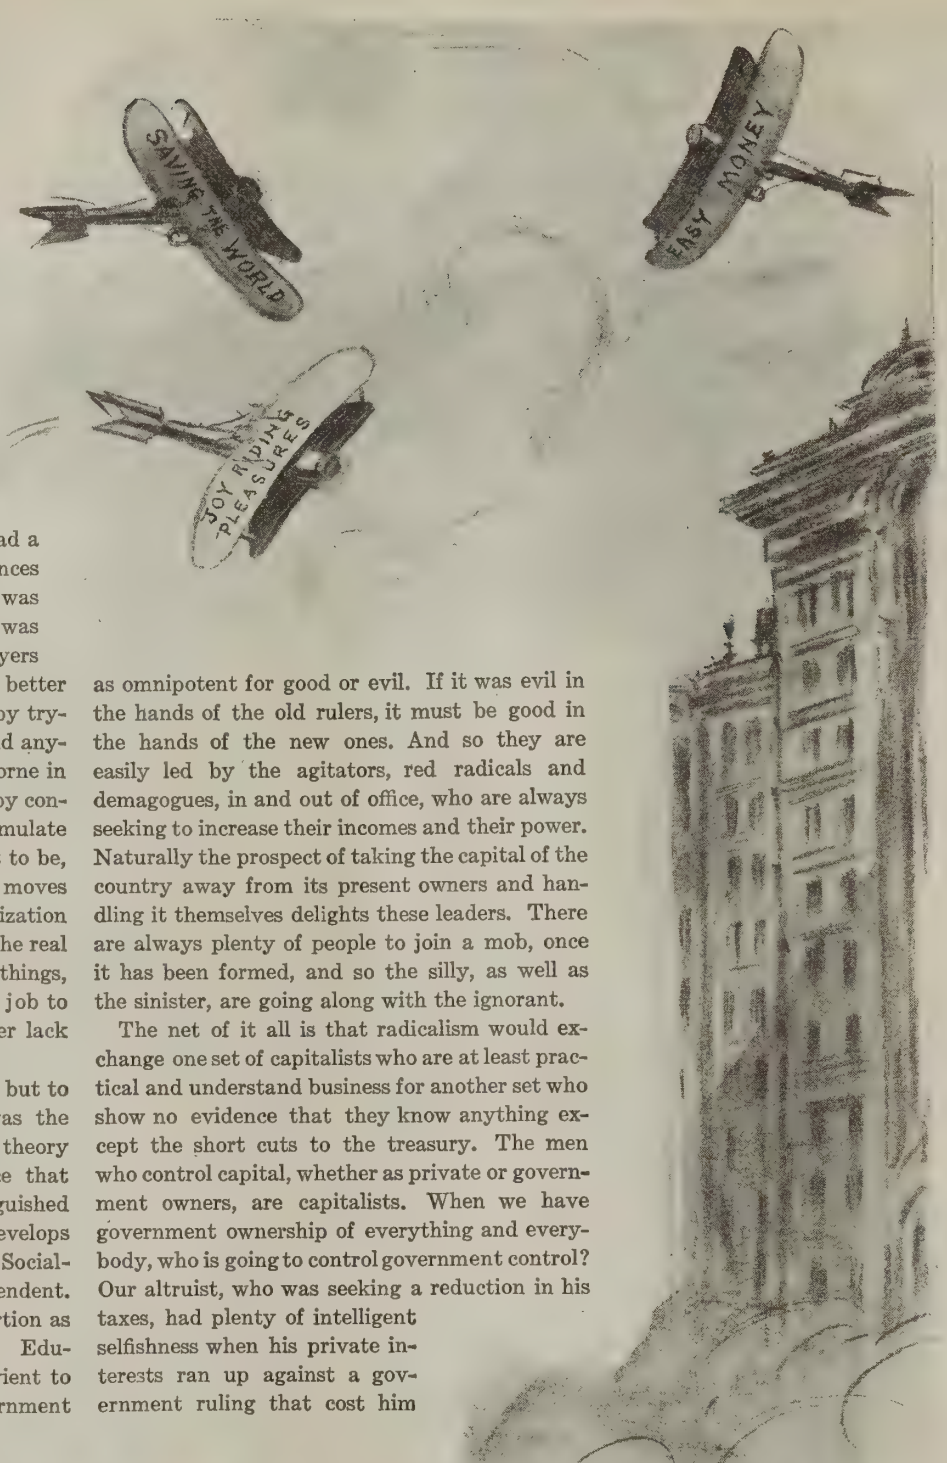
In any form of government we must delegate c powers over our life, liberty and property to some human men at Washington and elsewhere. The few smaller those powers, consistent with equality of tunity, the happier, freer and more prosperous the n Under government ownership we gradually increase powers, but every increase of them means a correspo decrease of the individual's rights and liberty, until ideal state of the reds we are slaves of the machine, wi individuality or opportunity. The choice is betwe dividuals who are outside the government but who government can control, and individuals that ar government and beyond any control.

A government may be ideal in theory, but it is no better than the men who dominate it. The we spots in all administrations have been some of the who have been selected as advisers and execu The weakest of the weak in the present Administ have been the theorists, uplifters and world-savers wh disciples of the new thought in politics. But it wou these men, who have made such a sorry showing, and who profess their delusions without believing in them would be our rulers in the new dawn, as they call thi twilight of civilization.

Until a party goes before the country on a radical form and returns an administration on it, there warrant for thinking that the American people wa expect men to hold office whose views are not in ful mony with their traditional principles of governm Socialists will naturally lend the weight of their influ to forwarding socialistic doctrines even in an indivi istic administration. The country emphatically repud Socialism at the last election.

Government is not what a party stands for historic not what it promised in its platform, but what its m office are doing. It will be radical and socialistic to jus extent that the men in office are radical and socialist compromising with socialistic doctrines.

One hesitates to discourage anything that may to bring factions together and to compromise differe but we doubt whether Big Talks by Big Names wit



nd authority to settle anything will get vire. The things that need doing must be t the Government, not by conferences, and e hopeful signs of an awakening by the inistration and Congress to the need for fi action. The first conference, as was a go conclusion, blew up. Consideration of ctive bargaining should have been preceded ecision as to whether labor considers a ai binding on anyone except the employer. cn before that question was taken up ould have been a clear-cut condemna- o those radical labor leaders who, when e refused the unreasonable, the intol- le and the impossible, threaten strikes e in effect—and, we are afraid, in in- o revolutionary.

he preliminaries settled and red leader- al principles disavowed, labor would have had a netic public behind it when its just grievances lms came up for consideration. There never was n the history of the world when so much was one by progressive and sympathetic employers ri the country to meet every fair demand for better s nd hours, and even to go labor one better by try- o nprove living and working conditions beyond any- at has been asked. It must, however, be borne in at many of these strikes cannot be settled by con- o ; in fact, that concessions will simply stimulate tkes, because they are not what they purport to be, t o obtain fair wages and just conditions, but moves n by red leaders, seeking first the disorganization tln the confiscation of industry. In short, the real t e of these leaders is Communism. These things, v , are squarely up to Congress, and it is its job to h no department of the Government can offer lack giation as an excuse for inaction.

he usiness of government is not to make men, but to r n a chance to make themselves. That was the t which this Government was conceived, the theory vh h it was founded. That was the practice that lced the American pioneer and that distinguished frm the European peasant. Individualism develops e of strong, self-reliant, progressive freemen. Social- s mply a crutch for the half-free, the half-dependent. dnand for it in America has grown in proportion as nmber of unassimilated aliens has increased. Edu- d a belief in the superstate, always subservient to a ays dependent on one, they conceive government as omnipotent for good or evil. If it was evil in the hands of the old rulers, it must be good in the hands of the new ones. And so they are easily led by the agitators, red radicals and demagogues, in and out of office, who are always seeking to increase their incomes and their power. Naturally the prospect of taking the capital of the country away from its present owners and handling it themselves delights these leaders. There are always plenty of people to join a mob, once it has been formed, and so the silly, as well as the sinister, are going along with the ignorant.

The net of it all is that radicalism would exchange one set of capitalists who are at least practical and understand business for another set who show no evidence that they know anything except the short cuts to the treasury. The men who control capital, whether as private or government owners, are capitalists. When we have government ownership of everything and everybody, who is going to control government control? Our altruist, who was seeking a reduction in his taxes, had plenty of intelligent selfishness when his private interests ran up against a government ruling that cost him money. Highbrows as well as lowbrows have a keen sense of their own property rights. Division is only desirable when it is in fact addition. Old John D. Rockefeller, their horrible example—who in truth is not above the suspicion of having more than his share—has done more for humanity with his Rockefeller Institute than all the theories of all the reds, professional and parlor. Incidentally, he gives to society more freely than any of these altruists that it has been our fortune to meet. They all put off the day of division and resent any attempt at direct action on their check books.

From what, then, do they argue to their Utopias? Not from their human nature nor from all human experience, but from some surface in their brains that is too soft to retain the impressions of common sense, but is always receptive to the counsels of vanity and cupidity.

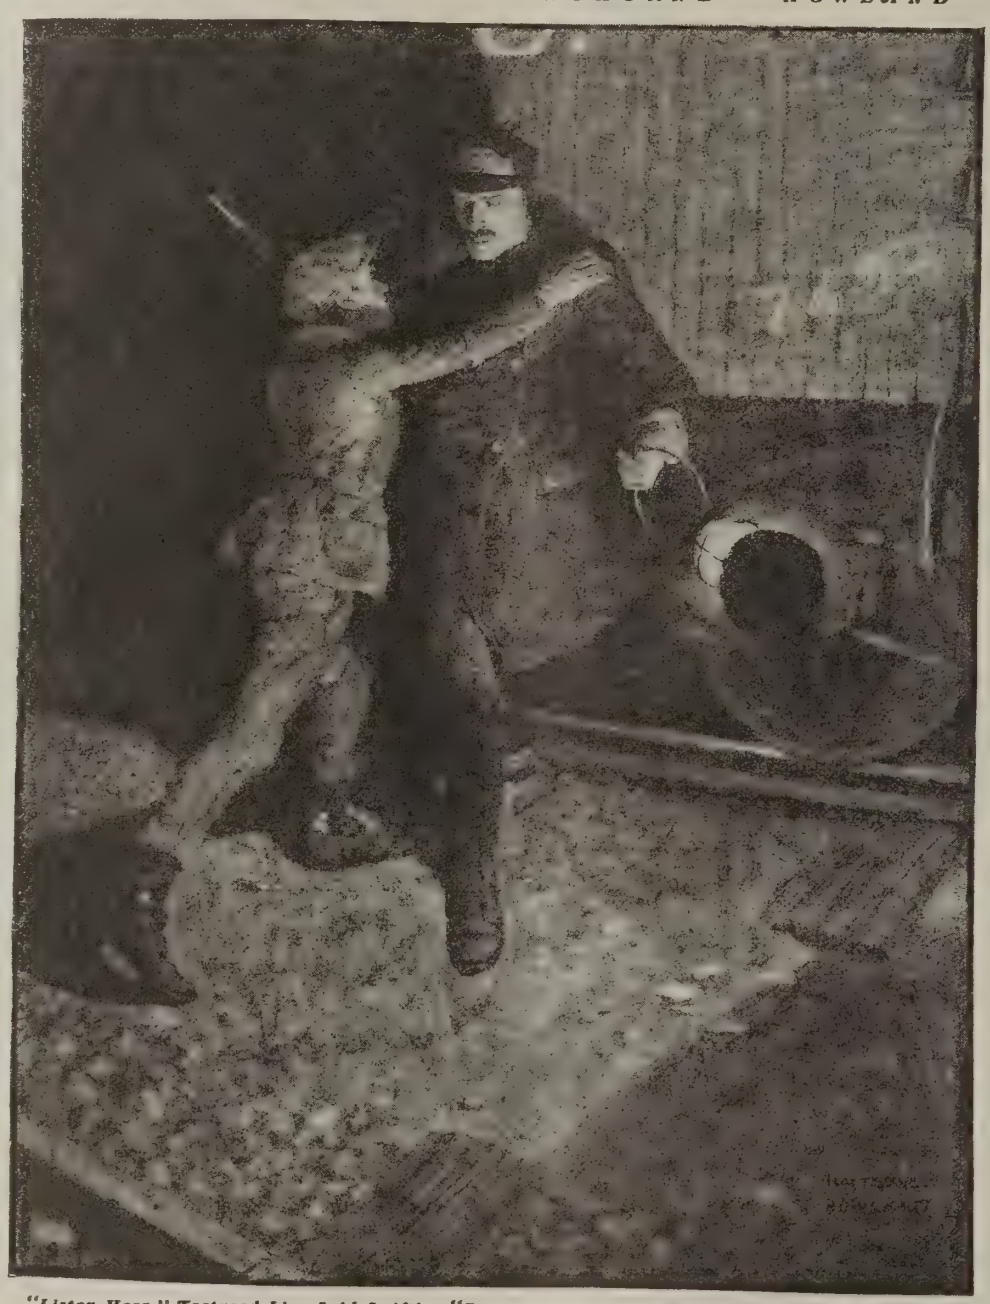
Every hard-headed man—mechanic, farmer, clerk or merchant—who has studied the literature of the red movement knows that it is based on fallacious theories and deliberate, though often clever, misrepresentation of facts and figures. Thousands are at work, tirelessly spreading these lies, but even in the industries where the reds have been most active there has been little organized man-to-man effort to combat them with the truth in terms of cold facts and actual figures. You can deport liars, but you cannot deport their lies. They can only be killed by the truth.

JAYWALKING

THE GAMESTER

By Will Levington Comfort

ILLUSTRATED BY HAWTHORNE HOWLAND



"Listen Here," Tortured Lips Said Swiftly. "Forget Your House for a Minute and Stay With Me. You Can Finish Off the Night by a Real Piece of Work for Once in Your Life"

IT WAS raining and coming winter when Bernie Cave let himself painfully down a dingy stairway to North Schwartz Street, Chicago—a narrow bleak building with a drug store on the lower floor, a doctor's office above. Bernie had lain up for fourteen hours in one of the back rooms of the doctor's establishment. The night's lodging had cost him five dollars, but a dream book went with the room. The doctor had supplied it with a hypodermic at five the preceding afternoon. Locking Bernie in he had moved about various other affairs.

The little chap pulled up his coat collar with a crippled movement and stared about vaguely. The only thing he could think of that would help the bitter look of the world just now was a cup of coffee. There was silver enough in his pockets for that. Across in the restaurant he sat hunched over the counter waiting for the coffee to cool. His hand wasn't steady enough to raise it in the saucer. Chuck Cadwell, who had known Bernie over in Michigan, came in and sat down beside him, waiting for the man behind the counter to pass a length away. Chuck was a bartender from Monahan's blind pig across the street. He took in Bernie from the side. What he saw required no words. He expressed it back to the other by the look of his face.

"I followed you in," he said in a low tone. "I saw you sneakin' past, not even looking across the street. I let Monahan take the bar because I wanted to speak to you."

"I'll pay Monahan what I owe him," Bernie remarked.

"That ain't what I'm talking about. Monahan isn't worrying, because he'll take what you owe him out of my wages if you don't pay. I told him I'd stand you a few drinks. I'm not chasing you for that. I'll stand you a few more drinks. What I'm talking about now is Phœbe."

Bernie Cave shrank lower; then colored in a sickly fashion and drank his coffee all at once.

"What do you know—what do you know about her?"

"She's sick," Chuck answered.

"Who told you?"

"Her brother Dave was in Monahan's yesterday."

The truth was Bernie had seen Phœbe's brother enter and had ducked out of the back door.

"He came in just before you went over to the doc's," Chuck added.

"What did he say?"

"Dave's just about as queer as Phœbe is," Cadwell mused. "They're off the same piece. He wasn't sore at you. Wanted to see you, but wasn't sore. Looked kind of tired of it all. Tired about Phœbe, tired of himself. Tired's the word. He's still looking for you—coming back to-day. He said Phœbe was sick—damned sick—only she wants you to know that everything is all right with her, and she knows you'll come back."

"Come back," Bernie repeated. "Does she mean come back to her or come back in the game?"

"I dunno. That's what Dave said, and that Phœbe knowed you'd come back. You don't look this mornin', Bernie, as if you'd ever come back—in the game. The doc's got you going and he can drive faster than you ever did."

Chuck was regarding the small but straight-grained face. It was pale, sickly; it was sharp and wasted, even stunted a little, but with a curious concentration of power somewhere in the nostrils or round the mouth or back of the jaw. The eyes were shadowed and tortured just now, vague with morphine, vague from the hopelessness of the depression that followed the dream book, vague from the hopelessness of resisting the need of morphine when its grip tightened again. That would begin later in the day.

"Still you're looking a little better than when I came in," Chuck added drearily.

Bernie sniffed. A smile of scorn curled his thin mouth. It wasn't for Chuck Cadwell; certainly not for Brother Dave. Bernie was facing the failure in himself. Back of all that was a kind of dead-cool and crawling nausea that had to do with the message from Phœbe.

"Living God," he muttered aloud. "They never do get mad!"

"Who?"

"Phœbe or her brother."

Then Bernie saw how interested Chuck was and became sore at himself for the words.

"I guess you're right about me not coming back," he added quickly; "and yet ——"

The scornful smile flickered again. Cadwell's whole look had changed. Something of awe came into his kindly hardened face. He was remembering what Bernie Cave had been—the best jockey the Middle West ever turned out; for one season, three years ago, the most talked about jockey in the world. Chuck Cadwell couldn't have told what brought the awe back, but it was something that had come just now into Bernie Cave's face between those two looks of scorn—the mounting again, after many days, of an old unwhippable something he had known as a boy; the old look that had made them all back in Leeds think of Bernie Cave as The Gamester.

He had felt himself going back to Phœbe—but that meant going back clean and a winner. He had said that. It would be so. Anything else might happen; he might die in the gutter or in Doc Halsey's back room, but if he went back to Phœbe it was to be clean and a winner. And she had said he would come back. For just a second again the old surge took his heart an died down.

"Thanks, Chuck," he said. coming over pretty soon. I I need another one of these touched the coffee cup—"ar quiet and warm in here."

Chuck was gone. Bernie th over those two moments when power had come back. It was thing that Chuck said about Ph brother that had done it—how Dave was and about his not sore. It seemed to him th would almost die to see her b this minute. They used to be friends as boys, back in the old but never inseparables. Ther been other hotter palships, b agony of longing for Dave no because he was Phœbe's br Chuck Cadwell had made it wo saying they were off the same

The old power that had to him twice while Chuck sat nea not risen often of late. Mos had to use front nowadays. The seemed to work, but it didn't work. Bernie knew that from he stood now. The people point him out as Bernie Cav great and only Bernie, but he as they stared that they were s ing the present from the past, to restore for their own curio hero out of a has-been.

Yet he was only twenty-si right now lighter than most st chasers. Three years ago Blue had fallen upon him on the F course. It had felt as if the field of jumpers had taken a k him as they went over. About e thing that can be broken in a got it. Bernie had lain pract still, in various casts and scaffol ten months—"never to ride ag the papers had said; and the s ing writers hadn't known the w that one young doctor had take on his pain and got him start the dream book.

He wished he had asked C what had happened to Phœb seemed to choke him to say her aloud to anyone else; even to Chuck speak of her was all he stand. It started fresh fogs of s rising up within, and hatre himself, which was bad enoug the time. The truth was, of late Bernie could only with him when the drug worked. That set him f a better world than this, a world managed better. were high lights there, no frost or ache or distance. I like moments of races, moments of ball games and bill and gambling—when he couldn't lose, when the e the game or the end of the race was ordained and sta before his inner eyes as a thing finished in his f though he might be far behind at the time.

This was his own real world, and the drug set him in it in spite of the crippled body. He had known world sometimes when walking and talking with Ph He had known it all the way up as a boy, always in g and fights—the coming of a cool patient invincible c ness and calm that couldn't lose.

They never forgot and never stopped talking abo certain ball game when Leeds, his home town, pl Bostock and was losing. Bernie went in to pitch ir seventh, four runs behind. The light and power st with him for the full three innings—in and out of bat. had held Bostock tight, but that wouldn't have cop Bernie had to win his own game with a hit in the half of the ninth.

Always like that in a field of runners. He could mak mount rise with his own power when the thing was wor just right. He would come up from behind.

In the moment of winning he would hear the crow not before. In the pressure of approach to the climax crowd went out of his consciousness—far back like banks of a lake, and silent. But when he won the cro

MADE BY THE MAKERS OF CAMPBELL'S SOUPS

Campbell's tomato sauce is famous

Campbell's Beans are flavored through and through with rich tomato sauce—justly famous. We use red, ripe tomatoes. The sauce has the real, full delicious tomato flavor, touched with spices and delightfully appetizing. The beans are of selected quality, slow-cooked until they are tender and thoroughly digestible. A wholesome, hearty, satisfying dish.

roar always took him—like a shock of falling through air and a breathless joy in his chest and throat.

This was his secret. He couldn't live long without this secret joy. The morphine brought back something like. Everything was perfectly managed in the dream book, but the world was hideously slow when he came back—slow as now, deadly dreary as now, with Chuck staking him to drinks, Dave looking for him, Phœbe sick, gray in the sky, frost in the air, hell loose in the city—strikes and starvation and seething class hatred in the city—Phœbe calling for him to come home, and his old will and pride that never broke yet saying he couldn't go home until he was clean and a winner.

Now something more subtle than a straight thought yanked him erect. It called him to the street to begin over again, begin somewhere at the bottom. It was still only eight in the morning. He wrenched himself past Monahan's, where there was a drink or two, had he cared to begin that way. He passed through several empty squares to Finney Street, where there was a car barn. The company was trying to keep a few cars going against the will of the strikers. Bernie hadn't really thought it out, except that jobs were open for those who cared and dared.

They asked him if he could drive a car. He said he could drive anything. It appears that actual experience was needed for the front end. They took him on for conductor and started his car across the city. What he was really up against broke upon him less than three blocks away from the barn, when passengers were crowding in, and one square-faced, deep-eyed person, dressed as a laborer, passed by his glass coin slot, whispering three words: "You . . . runt!"

The missing word belonged in the center. Also the square-face left a wad of half-chewed tobacco on Bernie's shoulder. Right after that a fight began—bricks and a small riot, shattered windows and a scream or two. The car was derailed. Bernie wasn't hurt, but he was seeing more clearly. The pain of old hurts drummed on. That was always with him, but now shame was ugly in his heart. He knew nothing about the squabble between the men and the company; only knew now that he had butted in, that he was in bad, hurting somebody's chances, going against men.

He dumped his change into the coin slot and slipped out of the crowd when the police got there. The company would think him a coward; the men had already called him a scab. This was no game for him, and he cleared.

"The old town's gone crazy," he muttered as he walked hastily back toward Monahan's.

He would take a drink or two and think out what to do next—just a drink or two and a sandwich, and then go out and try again. Four men were in Monahan's with an hour to spare. Interest pricked up when Chuck Cadwell leaned over to one, whispering that the little man behind the stove was Bernie Cave—the great and only Bernie. Chuck didn't say "What is left of Bernie Cave," but that's what the strangers saw.

A few fast rounds of drinks, before Bernie warmed to show in words a trace of his old color and class. It was past noon and the world had a flow and a grace to it by that time. The little town of Leeds seemed just across the lake, and the steep grade to becoming clean and a winner a mere afternoon's climb. Just as Bernie was telling of a certain trick pulled off one afternoon at Ascot, Phœbe's brother entered the front door.

Bernie heard his own voice going on, a sort of barren light in the place. His own eyes felt dirty as he looked into the clear shining smile that Dave brought. The face was brown and pock-marked, rugged and manful enough, but the eyes had the shine of a child in them. It had always taken Bernie by the throat. It seemed to mean that it was easy to die—something of the look that you remember about children who die young. Phœbe had it. Yet she had a strength that matched his own in most ways, and Dave had never known a sick day in his life, except for the smallpox. Dave's hand was on his arm. They were walking together to the back room.

"I've been looking for you, Bernie. Hoped to get you started yesterday. I want you to hurry back to Phœbe."

"I can't. I can't, Dave."

"Why?"

"You know what I said—that I'd go back right."

"You're right to Phœbe now. You two always needed each other. You didn't mean any more to Phœbe three years ago when they were all talking about you than you do right now. She knows you'll come back, and I know it, but she's sick from waiting."

"I can't, Dave. I can't show up in the old town like this. Phœbe knows I can't."

"Chauvin is back in Bostock for the winter."

"Huh?" came from Bernie.

Dave repeated, adding: "He's wintering a small string in his old stables and he said he'd like to have your eye on some of them; that nobody had an eye like yours for what a yard of fillies might turn into."

"Did Chauvin say that?"

"Yes," Dave answered.

Bernie had done his first riding for Chauvin, an old race-track man with stables formerly at Leeds, as well as Bostock.

"What's the matter with Phœbe?"

Dave turned his slow shining eyes upon him.

"They don't know," he said. "They call it—oh, they call it different things."

"But what do you know it is?"

"It's you, Bernie."

The little man sat back, turning his face from the window.

"You know Phœbe's like that," Dave went on. "I think she needs to take care of you. It would mean as much to Phœbe to take care of you now as all that big year meant to you—before Blue Sage tripped."

Dave's hand rested softly upon Bernie's elbow.

"Why, you've got something—not in one man in a million. Phœbe knows it. I know it. You're different from all of us. You won over all of us, but her—all the way up from a kid. Chauvin knows it. Never mind Leeds, that's only a town. It is only pride that makes you care about a town. But what Phœbe has for you—why, Bernie, she never saw anybody else but you."

Bernie half raised his arm, like one who could hear no more.

"Oh, I'm not going to take you back. I know you want to be alone. I'm going to stay in Chicago for a few days. Pick up a good coat and some things. This you ca me later."

Dave thrust a small roll into Bernie's hand, t away out.

"Besides, you've got most of it coming," he "You staked me once when you were flush."

Dave had made it easy, looking away like that and with strange haste. Bernie hadn't promised anythi was all up to him. There had been times three yea when he had a pocketful of money and had done with it for people, not even remembering the a himself, but Dave wasn't a fellow you could stak forget. There was a twenty, some tens, a five or t the roll—sixty or seventy, by the feel. Bernie pinn ten away in a secret place and left the back room. was gone from the front.

"Just waved and blew out," Chuck whispered.

Bernie passed him a bill. Chuck took it with s rather than satisfaction, shoving the remains back the remark: "Go and get yourself something to eat. a steak into you—then come back before you home."

Bernie resented the word "home" from alien lips made a false move right then, buying a drink for the that had been exploiting him when Dave came in. meant several others before he could escape. No city looked more human in the early dusk. He was warm blur of a barber shop—talk and laughter of about him—holding himself still and steady, an old of Bernie's. Very few had ever seen him rock with

The dark was thick and lights were on when he w the street again. The morning and his hour of stre experience were away back in the past, like some that had happened before the big year. The city cr seemed to be tuned to sanity now, seemed to have s thing to live for—green and red everywhere in t windows, Christmas coming, as if sent for.

He resisted the curious inner call to get the overcoat and continued to look for just the right place for a In some places the benches were all filled, in other man behind the counter didn't look appetizing. It h be just right for Bernie this night. But it didn't worl so—a rank failure, that steak at last. He could have better back in Schwartz Street, across from Monal blind pig.

He was looking for a coat now down among the sec hand stores—a street of low flares and groups of men g ered to centers of restrained harangue. Bernie skirte knots of men. The wind from the lake was keen and nowing, filled with stinging dust. A big man stepped from one of the crowds and caught his shoulder, yan the face up to his own and laughing into it.

"I thought I couldn't mistake you, runt," he said a frosty chuckle.

It was the square-face who had climbed onto his in the morning and left the stain on his shoulder.

Bernie trie break away, the big one him with hand, turnin speak to fri in the crowd.

"Here's on them, fello Give him the over."

Bernie w struck from hind, while square-face his eye. He still as death the manhandli absolutely no sistant. Th hands went o him. Then he carried throug shop to an al and dumped th enjoined to hu back to work.

Bernie craw to his knees, st up, one nur hand gropi frantically un his belt to t place where t one ten had be pinned. Th hadn't fou that. It was s in place. Mo over, they had

Right After That a Fight Began—Bricks and a Small Riot, Shattered Windows and a Scream or Two

Have you discovered LITTLE BOBBIE?

If not, it's high time you did!

THERE are lots of cigars taller than *Little Bobbie,* and fatter around the waistline. But there are mighty few that offer more in quality.

The reason why *Little Bobbie* tastes so good when compared with larger cigars at the same price, is simply this: *The General Cigar Company, Inc.,* maintain an immense year-round reserve stock of fine leaf. By limiting *Little Bobbie's* size to 4¼ inches, it is possible to "endow" him with long filler of special selection and real Sumatra wrapper—and still sell him for 8c or 2 for 15c.

But *Little Bobbie* is not to be judged by his size or his price. Smoke a few and judge *Little Bobbie* purely on his merits. No cigar we know of gives a man more for his money. Isn't that a discovery worth making? Try 2 *Little Bobbies* to-day.

General Cigar Co.

(Continued from Page 30)

really laid him out, because he had gone limp in their hands from the first blow—taking the beating as he had learned to take a fall as a boy.

He might get the train back to Bostock with this ten. He wouldn't go home; no, he wouldn't go to Leeds like this, but he might go as far as Bostock and report up with Chauvin. The old man would keep his coming a secret until he was ready. He would be near Phœbe then—next town to Phœbe. It sounded like the next room—he had been so long and so far away. Now the picture came to his mind with a kind of crying pang—of going to her from Bostock, if she were in grave danger—hooking up one of Chauvin's fillies and doing that eight miles into Leeds. But Phœbe was in danger now, Dave had said. Something deep inside of Bernie fought that. Dave had said so merely to start him home. Phœbe was only lonesome.

And now as he stumbled his way out of the alley he thought of Doc Halsey and this black day he had just lived—the riot, the beating, the drink dying out, the rotten luck of it all, Phœbe waiting for him, Phœbe just lonesome—over all his vow not to return to her until he could go back in style.

The drug thing that had long been frowning from a distance like a slow storm now broke upon him. He knew just where Doc Halsey would be at this hour. All else slipped away. Half the ten would do! One more night's rest—no pain for hours. His step quickened. He shut out every sound from his ears lest someone call his name; every thought from his mind lest something prevent him from reaching Doc Halsey's upper room.

Men on the street at a distance looked like Dave—looked like Chuck Cadwell. Bernie would duck lest he meet them. They would put him on the train home—to sit in the horror of a chair car for hours—all hell broken loose in his mind. And now the need was riding him right—his steps almost to a run—his dreams forming, focalizing. Doc Halsey never failed. There was always a cot to spare. The smell of drugs in Halsey's back room was the smell of heaven's approach.

"Put me to sleep," Bernie muttered with a sigh. "Give me a good one, doc."

Bernie loved the pierce of the needle and the itching ache of the lump among the scars. He waited for Doc Halsey to go. When the door was shut the long sigh took him. All the weariness of life went out. The cot and the room grew sweet to him as the home of childhood. Pain and failure loosed like temporal things, fell away in the outpouring of that long tired sigh. The unhurt boy lived again in an expansion of warmth and light discord, and division in his body swung into rhythm again.

Then he missed his way for a period and poked and glided like a vagrant dirigible through musty memory grounds and into cross currents of old trials and reckonings. That passed into clear still sailing again. Early summer morning at the end of Main Street in Leeds. He had gone for his mother to Phœbe's house for milk. He had looked in from their kitchen to the breakfast table. There was the warm smell of muffins and coffee. Phœbe was sitting by her father, a mysterious man, always kind. The soft blue shine from her eyes to him had needed no words. Then he was walking back to his own house with the filled pail in the beginnings of the vast warm still summer day—blue gleam from the morning-glories on the fence, and one great cobweb perfect as the dream of creation, every marvel thread ashine with dew.

And now he was the real Bernie Cave, gamester, which is all that trickster is not. All the high moments of games and races he had known massed now into one and were sustained. Each at the time had been merely a flash in which he sat tight in a pinch or made the one exact needed move before one could think, but this was a steady easy holding to his power—the power back of every man if one could only reach it. The badly broken and badly mended body which held him in vices and pains and limitations when awake was only the trailing, dragging ground part now. He was out in the open with Phœbe, and she understood everything now and always—understood beyond the need of words, like the child with softly shining eyes at the breakfast table. And this was a vast warm still and radiant day—a day that was more than day; and horse racing wasn't a yellow-cruel, man-made thing, but horses and men playing together, a wide-open sport of the gods.

The drug was working differently than ever before. It recurred vaguely at first, but again and again that this peace and power and light also concerned the dragging broken thing that bumped the ground—that he must make all this come true down on the ground.

He put the thought away, but it recurred persistently and with cumulative drive—that dreams were all right, but they must belong to the days too. Winning was in the plan, and joy was the proper state of beings, but one must not run away from a sick and hurting body, because running away was running away, no less or more! Phœbe didn't run away, but stayed down and waited. Dave stayed down; Chuck Cadwell stayed down. But he, Bernie Cave, seized every chance to run away. To limp was not to fail, to go slow wasn't to fail—only running away was failure.

And now Bernie's pride world cracked round his ears. He saw for once and all what a mean whelp of a thing it was—holding him off from the very work that would bring him home clean and a winner. All this would look differently to-morrow, but it stayed and lived with him now, forcing him to see it from every angle and making him know that he must carry it with him to the morning and begin at the bottom with it in the new day.

It was cutting in on his night. It was taking the light and ease away. The day thing was rising into the dream book, darkening all the pages. He burned with revolt. Dreams had never failed him before. Hell was loose, indeed, if this kept up—no rest in the day, no rest in the night, no place to turn.

"Go to Phœbe," the voice said quietly within. "Make the dreams come true with her. Come up from behind, Bernie. You can pass the field, one by one. The Gamester isn't dead. He's only handicapped because he was made to come through with full weight! That's you—made to carry full weight and come up from behind!"

A steady rousing challenge. Now Bernie actually felt the heaviness of his body again. It lay like a frozen thing. His mind hardly touched it, but raced away like a steamer's screw out of water. His body was made of ache and inertia, yet he was free of it no longer. The damnable thing that had hurt him so must butt in now and come along, spoiling everything.

He tried to sit up. It was minutes before he could get the thought working in his limbs, yet always back of everything was the cool quiet voice—the old winning voice: "Now's your chance, your last chance. Make it all work out neatly below. That's what dreams are for. Listen well now, because you'll have to work to-morrow, when you can't hear these words. Remember you'll have to put it through alone to-morrow—right down in the beaten track. That's what it means to be a winner, kid."

It was like a conspiracy against him, tightening, tightening, until he could not get away. The Gamester in him was challenged, urged and whipped and lured awake. The pages of the dream book were flying leaves; the force of the drug kicked back to rouse him out of the old easy pastures—to drive him down into the dark and cold.

He sat up at last and got his legs out. He tried to put on his shoes, against waves that broke over upon his mind, putting out every light. He couldn't feel his fingers among the laces. He lurched forward on the floor with a crash. Halsey came. Halsey wanted him to go back to bed, even promised him another shot.

"I want to get out of here!" Bernie mumbled.

"It's only eleven, you fool!"

"I want my shoes."

"Remember, if you get out of here it will cost you another five to get back."

"I've got another five."

Halsey coughed.

"Put on my shoes."

"I can't stay up all night waiting for you to come back."

"I'm not coming back, doc."

His lungs felt all wet inside from the rush of cold air in the streets. Bernie had started home—not to Chauvin—no further waiting or wabble like that—but straight to Leeds, straight to Phœbe's door, to her arms, to learn all there. He was walking to her now, and one way or the other he would never stop until he got there. He had five, but that would not do the whole journey. He would save that for the last end, and trust to steal the first half. He wondered now how he could have thought of staying in secret for a time with Chauvin—with Phœbe ill, Phœbe calling! It was almost as if he had not understood Dave's message until that last moment in Halsey's, when the big change came to his mind.

The first leg of the drive was to the freight yards on the lake. Long stretches of street, he knew nothing, felt nothing except that he was on his way. Then he would see lights and pass corners and feel cold. He was standing still, on pavement, in a blinding light. An auto cut round, the fender grazing his thigh, the driver's curse in his ears.

"Never touched me," Bernie muttered.

It hadn't quickened his pulse. No machine could get him. He was coming up from behind. At intervals the drug still worked with him—reiterating, beating the thing he must do deep upon his mind, working not with dreams but with all the real stuff left in him, against the time presently when he could not hear and feel its admonition.

He was far from Doc Halsey's when he recalled that he had passed Monahan's, where he might have had a drink and borrow a few dollars—enough with the five for a ticket straight to Leeds. Monahan's was open to familiar customers until midnight. Halsey had said it was only eleven. It didn't tempt him now! He would never go back. He was nearer the lake. The cold was keener. His feet were like trucks, and he was feeling the hateful bind of thoughts that belong to the day, never to the dream book. Still deeper within, he knew he must remember the drive—must hold to that down here on the floor of things and st surely give the lie to every objection, every obstr Winning meant that. To remember, when he cou hear and see.

He was down among the cars in the sag of the lak Vast brooding quiet in the place preyed upon him he actually recalled that strike conditions were als the freight yards. He had heard them say in Mon that the big Christmas shipping was hung up; that few passenger trains were running. His mind fa keened under this shock.

Presently the voices of men reached him softly fr right. He moved toward them. One seemed an ol man who had not walked out, the other two appa strike breakers. The old man was talking about livestock farther down the yards, which had to be f watered.

The voices of the three were queer and frightene conspirators in the stillness of a churchyard. An bell sounded far beyond them. It was like a tolling deadly lull. Now a headlight moved slowly round out of the Twelfth Street Station. The old man glan his watch and at the big white approaching lamp.

"That's the Boomerang," he muttered. "She's out on time."

Bernie slipped in between two coal cars and c under the coupling. He knew the Boomerang—the line train between Chicago and Detroit. When the was right they could hear her whistle in Leeds at f the morning, flying by ten miles south of the town couldn't ask what track she was passing out on, b Boomerang belonged. Nothing could stop him now reached a broad open current between the masses of f The passenger was nearer, sliding leisurely out on on of threads of this maze. Bernie stood in the midst open like one in a wide road, standing with arms stop a runaway horse. He heard the big passenger crash over the switches and saw her weave from on to the other, until the straight gleam held along on broken rail. She was near and speeding up. His f hooked the dull brass bar of the blind; the arm s yanked out by the roots, his body flung against the

"Four hours," he gasped.

Slowly the pressures tightened on him now—pre of cold and pain, hail of cinders, some still red, the of smoke. Yet queerly at first because he was on hi his mind trailed back to other times when he had c this train, once or twice in the big year, when he had decently berthed in one of the Pullmans behind; cha at Corson before four in the morning and hanging the little station until six, when the local that to Bostock and Leeds started up country from the mai and often before the big year, with some of the f coming back from Chicago, sitting up in the cha playing cards, saving a flask or two for the long w Corson—days of laugh and violence, of lose and w making ready for this night.

He remembered a story told about Bert Goodr Leeds barber, riding the Boomerang's blind from Ch to Corson. Bert had gone broke in Chicago and c the flyer's front platform somewhere in the yards. he had needed two weeks in bed. Still, the Boom crashed through South Chicago. The city seem stretch round the whole foot of the lake, round the before the throttle opened wide and the big locom raced forward into open country.

They might find him somewhere—shaken off where—but it would be after his lights were out. never let go. The fine red coal cut through and und collar, up his sleeves, into his shoe tops. Cinders fa white against his flesh. Fifty or sixty miles an hour out a windshield, without an overcoat, a steady pepp of fire fragments, in the crush of the icy air. It was icy rush that hurt most. He had to keep his hands the brass not to be shaken off.

If he could have hunched back against the door, c ing his face and hands and ankles, but he had to han Bert Goodrich laid up for two weeks. Bernie rememl laughing at that with the fellows, and somebody's sa that it was more than four hours on the Boomerang laid Bert up, but that was clearer now. He welcome numbness, but it only crept into ankles and wrists.

There was no getting away from a single minute. tried to draw back something of the power that had to him in Halsey's room. He had seen it all clearly there—how to fight it out step by step, how to make work out, down on the floor of things, down on the tr

The laugh and the power were gone now, the reason reality, the whole thing a dope dream, sanity gone from the message Dave had brought, leaving only s ments gone soft. He was looking into Chauvin's hard-l eyes. He had seen Chauvin's thin leathery lip curl a time. The old horseman would sneer at the idea of ta him back. Phœbe wanted him back? He could hol going home, against any force that did not kill or put out—that was done, that was inevitable, but he could hold now to the thought of Phœbe wanting him.

Printed LIBERTY TAPE— *and the Modern Coats of Arms*

Your goods are like knights entering battle. Like their coats of arms, the trade-mark identifies. It is the badge of quality—the buy-mark that directs the intelligent spending of billions annually.

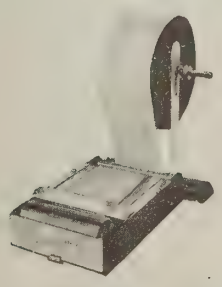
Your packages and cases can be made as easily and instantly recognizable as the knights of old—by binding your cases with *printed* Liberty Tape.

Then every package becomes a travelling advertisement—quickly located at terminals—easily found when lost in transit—safe-guarded against petty thievery. Thieves hesitate to tamper with these unreplaceable private seals. The cost of printing is not great.

Gummed Sealing Tape for Every Packing Purpose

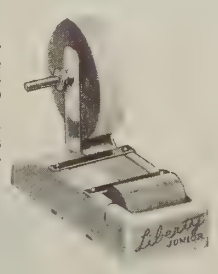
For fibre and corrugated cases we make the heavier Liberty Tape—for use in place of string. In addition to the lighter weight Liberty Tape we manufacture a special sized roll known as Tiedy Tape, containing 250 feet, to be used in the Liberty Junior Moistener.

Write for free tape samples, full information and estimate. Design for your tape in one or two colors furnished without charge or obligation.



The *Liberty Tape Moistener* in your packing department will speed shipments. Compact, simple, easily operated, all-metal. Handles all widths of tapes to 4 inches. Shipped on approval. Price $5.

The *New Liberty Sealer* is a semi-automatic machine for moistening and delivering plain or printed sealing tape. Designed especially for use in retail stores. Price $15.



The *Liberty Junior Moistener*—white porcelain and nickeled brass handles 250 ft. rolls of sealing tape. Makes the advantages and economies of sealing tape available for every store, office and home. $1.50 at stationers' or mailed with 2 rolls of Tiedy Tape for $1.74.

THE CROSS PUL

By Hal G. Evarts

ILLUSTRATED BY FRANK B. HOFFMAN

VII

FLASH stood on a divide that overlooked the valley of the Little Big Horn. The Bar T and his past life were a week behind and several hundred miles to the south. The ragged tear across his shoulder had healed and troubled him not at all. He was outlawed by men, but did not care. The one thing that most concerned him now was the insistent desire to hear that missing note for which he had always listened among the sounds of the night.

This was the mating moon of the wolves, but he did not know. He did not realize his craving for that long-sought note.

Then the note came! From far down in the valley there sounded the call. He knew now what it was. The far-off cry was that of a she-wolf questing for a mate.

His whole body thrilled and tingled to the call. He had never used his voice, yet he knew he must reply. He stood erect, his great head stretched forth, but no sound came. The note drifted to him again and he threw all the force of his lungs into one convulsive effort to answer it. For miles and miles across the white hills every living creature held its breath and lonely ranchers far down the valley felt the chill tingle of the wolf shiver as the lobo cry reached their ears.

It started with a deep bass note carrying a full smooth volume, then swept abruptly up into a clear siren peal that rolled on and on until it was tossed and echoed among the rim rocks of the valley.

The dog lobo and the she-wolf from the north circled the edge of the basin until at last they met and stood facing one another across fifty feet of moonlit snow. They approached cautiously.

The she-wolf was suspicious of his scent; it was wolf scent, no doubt of that, but there was a faint trace of the conglomerate odor that marks the domestic dog. She sniffed at him, then snapped and fled.

Her speed was no match for his and he ran easily at her side. When she whirled and slashed at him he eluded her teeth, but did not offer to return the snap. She soon found that he meant no harm to her. He was a massive, splendid figure of the true lobo; a mate to win the savage heart of any lovelorn she-wolf.

At last she stopped and they walked stiffly round until satisfied that all was well. She whined softly and he tried to answer. She seemed to understand the deep rumble which issued from his throat and he leaped about in a frenzy of delight.

She was a slim Northern wolf with a dark strip along her back blending into a soft silver gray on sides and flanks. Half an hour of courtship and the big lobo and the silver she-wolf started for the valley in quest of meat.

Close under the rims they found where a lone steer had left his bed at the lobo call above and started out across the flats.

Always before Flash had felt a furtive sense of wrong when on his raids, but now, with Silver running with him, there was no thought save to kill—kill food for her. She whimpered eagerly, and as he ran swiftly on the warm trail he was all wolf; the yellow eyes were streaked red with the lust to tear down his prey.

They closed in on the steer and pulled him down. Silver raised her voice and gave the summons to the feast, the victorious cry of the wolf who has killed. Once more Flash tried out his voice and the lobo note rang out with hers. From far up the slope of the mountains to the north, as if an echo of their own call cast back to them, there came an answering cry. Then another. Several blended into one—the cry of the pack. They sounded closer and soon were answering from the hills, assuring Flash and Silver that they were coming to the kill.

All up and down the valley ranchers listened to this devils' chorus and planned for ruthless, bloody war as soon as the sun should shine. This was no new thing to them. Each winter when the snow fell heavy in the North there was at least one scattering band of wolves that were lured across the mountains, coming down to the easier killing of the open range.

Two gray shadows came sliding through the night and fell ravenously upon the steer; then two more. Presently there were fourteen wolves tearing at the warm meat. They were gaunt with the pinch of famine and not until the last bone was picked did they quit the feast. As they ate they snarled. Flash had come into his own at last. He imitated these sounds of his kinsfolk and added his snarl to theirs.

There were frequent slashes and snaps, but no resulting fights. They had come in pairs and each one with true wolf constancy was contented with his own. The season of selection had passed its height. Among them were grizzled veterans who bore the marks of recent conflict gained during the savage courting period that had raged all through the North. A little earlier and Flash would have been compelled to defend his right to mate with the silver she-wolf.

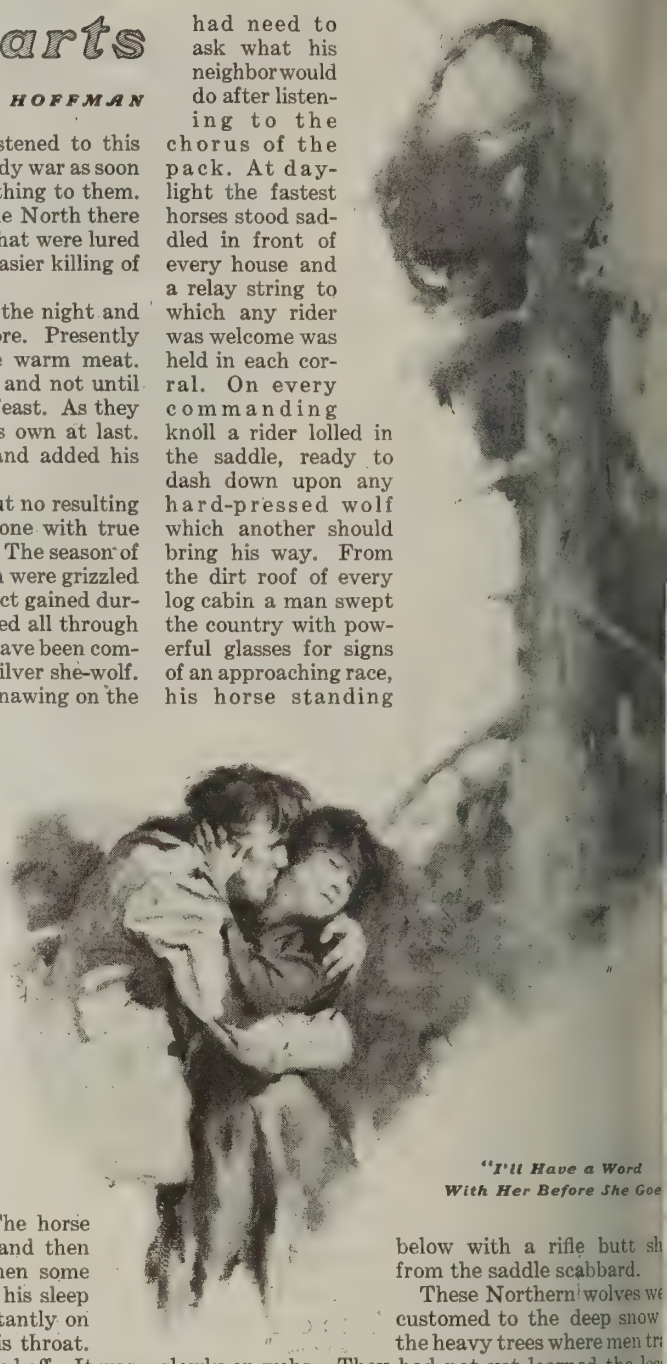
Two hours before dawn the pack left off gnawing on the bones of the steer and trotted slowly away. As he traveled with them the big lobo was four inches taller at the shoulder than the next, looming up by comparison as a giant of his kind. A wolf loses or picks up weight more rapidly than any other animal, and as they moved across the snow they were no longer gaunt. Paunches sagged heavily, low to the ground. After famine they had gorged to repletion. Some of them had not touched food for three days when they came to the kill, yet they had appeared springy and tireless. Now, after feeding, instead of feeling new strength, they were sluggish and lethargic. Ten miles from the steer they sought a knoll and bedded down, each pair choosing quarters of their own a few yards from the rest.

As Flash slept, his dreams dwelt upon a far-off speck on his back track which developed into a horseman on his trail. The horse changed color continuously—first a sorrel and then a tireless buckskin was pressing him. When some near-by wolf clashed his teeth together in his sleep it was a pistol shot to Flash and he was instantly on his feet, the new-found snarl rumbling in his throat.

He nosed Silver into wakefulness and started off. It was agony for her to travel, but she would not be left behind by this magnificent new mate of hers. She followed, and daylight found them resting far up the slope of the hills on a ledge that overlooked the valley.

Flash made out little specks which he knew to be horsemen riding at two-mile intervals along the base of the slope. Out across the valley as far as his telescopic eyes could reach, the tiny specks were moving swiftly across the white snow. The reports of irregular rapid-fire shooting drifted up to him through the clear air.

No ranchman on the Little Big Horn had need to ask what his neighbor would do after listening to the chorus of the pack. At daylight the fastest horses stood saddled in front of every house and a relay string to which any rider was welcome was held in each corral. On every commanding knoll a rider lolled in the saddle, ready to dash down upon any hard-pressed wolf which another should bring his way. From the dirt roof of every log cabin a man swept the country with powerful glasses for signs of an approaching race, his horse standing below with a rifle butt sh from the saddle scabbard.



"I'll Have a Word With Her Before She Goe

These Northern wolves we customed to the deep snow the heavy trees where men tr slowly on webs. They had not yet learned the les the hard-running horses and hard-riding men of the range—and most of them died as they learned.

That night when Flash and Silver made anoth there were but five of the pack who answered the feast.

Flash and Silver left them early and started on. coyote brain warned the lobo of the danger of killi often in one place. For almost two months they war on across several states, seldom killing in the same twice. They followed down the narrow valley of the La Poudre, bedding down each day far back in the

Silver felt great confidence in the judgment of this of hers, yet there were certain habits of his which she never learn to view complacently. Often at night he close to the dwellings of men, even sniffing round corrals and barns. Flash knew that men were powerless in darkness and their eyes very weak at but Silver only knew that the man scent death for wolves and she scrupulously av it. Then, too, meat was meat to Silver Flash killed only beef. His pride had bee charge of handling Moran's horses and nc never would turn his teeth against a horse

The cross currents were still at work in In the old days he had longed for the wild; that he was wild he felt the call to be near man. with Moran his dreams had been of the phantom sha the wolf pack. Now his dreams were all of men. often he was back in the Land of Many Rivers Moran and always in his dreams his former maste associated with the girl. His soft whimpering r Silver. Her irritable nip always brought him back t grim present and he was awake, the cold yellow sweeping the country for sign of his most bitter ene man.

His Mistress Seemed to Prefer Meat That Came From the Smaller Species

WE believe the Hupmobile to be the best car of its class in the world.

Eight years ago we first expressed this conviction.

We were strong and sincere in our belief then. Now, it is shared so widely by others that it has virtually become the general consensus of opinion.

Best in its class is a strong phrase, but—isn't it a fact that you constantly hear it applied to *The Comfort Car?*

(Continued from Page 34)

The last week in February they came to the rough country at the head of Powder River. Silver grew less and less inclined to travel far and panted heavily when she ran. A chinook swept across the hills and this warm wind softened the frozen ground in spots that had blown free of snow. Silver chose a place where the earth was deep and started to excavate. Flash watched her and when she tired and backed from the hole he took her place, tearing at the dirt with his great forepaws and pushing it out behind. He withdrew, shaking the dirt from his coat, and viewed this start of their home with pride.

Silver was very irritable these days, snapping at his approach. He turned his shoulder to her shrewish slashes and stalked stiffly out of reach. One night he came home to find a new scent in the den. Soft snifflings and squeaks issued from the depths of the hole. As he prepared to enter a savage snarl warned him off.

His curiosity was great and he wished to know more of this miracle, but not until the pups were three weeks old did Silver let them come out for a romp on the sunny slope and Flash then saw them for the first time. Every night he had brought meat to the den, and this was the result. He was very much excited as he nosed them over and Silver growled a warning not to be too rough when he rolled them round with his huge forepaws.

He was never allowed to occupy the den, which was just as well, for in any event he could not have been induced to spend a day inside of it. He had seen Moran dig out the swift-fox den on Peace Creek. Once Harmon, the ranger, had found a hole and dropped into it a stick of something with a spluttering fuse attached. Shortly after they ran away, there had sounded a roar as of several guns and Flash had watched Harmon dig out the crushed bodies of a coyote and her pups. So he spent the days alone in the hills and carried food at night.

The snow had melted from the foothills, leaving only the heavy drifts. As soon as the pups could follow they were led forth at night and taught the arts of hunting and the dangers they must avoid. By the middle of April they could cover thirty miles in one night.

VIII

AN HOUR before daylight Flash slipped up to the den. It was cold and silent. At sunrise of the previous day a rider had passed close to the den. Silver had run true to she-wolf form and departed with the pups as soon as he was out of sight. The day had been hot and had diffused and evaporated the scent of her trail. The night frost had finished blotting it out.

Flash had circled for miles in the effort to pick up the scent, but could find no trace of it, and there was no answer to his calls.

Far to the north Silver and the sturdy pups were traveling steadily, headed for the she-wolf's old hunting grounds, from which the winter's famine had driven her. Just at daybreak she turned on the crest of a divide and gazed back along her trail, then loosed one last wail for the mate that never came, and journeyed on to the north.

Flash too was starting for his old home—the Bar T range. The third day he spent on the rim of the Wind River hills, awaiting nightfall before venturing down among the familiar scenes of the Grey Bull. At the upper end of the valley, where it was narrowest, he crossed to the foothills that flanked the other side and started down to the Bar T ranch.

When thirty miles from his destination a point of light in a shallow foothill basin caught his eye. He drew near and partly circled the cabin, undecided whether to go on or not. He did not know this place. Moran had never taken him to Brent's. The lighted window attracted him and he trotted close. Several horses stood saddled in the yard.

Flash slipped to the door and sniffed along the crack. The tobacco smoke drowned the individual scent of each man within, but the general air of the place and the murmur of voices were not to his liking. There was something vaguely and unpleasantly familiar about it all; and suddenly the hair rose along his spine as he recalled the night at Two Ocean Pass when he had searched among the bald ridges and heavy spruce for the phantom camp which he never found—the voices and smells that had reminded him of Brent.

He reared to his great height, rested his forepaws on the window ledge and looked inside.

Three men sat there with Brent. A ragged scar lined the face of one from ear to chin and his stubbly red beard sprouted at eccentric angles along the line of it, lending a sinister twist to his face. Another was a dark, slender-faced man with a hint of the Oriental in look and manner. The head of the third was wide and flat on top, slanting down abruptly to his pointed chin, which gave a foxlike cast to his triangular countenance.

At a sudden move from the man with the scar Flash dropped from the window and as his feet touched the ground the glass crashed above him and there was a jarring report from within. He ran—and behind him the muffled roar sounded twice again.

The man had leaped suddenly to his feet and at the look in his eyes the others dropped flat to the floor as he shot twice across them at the window. Brent swept the from the table, and another from his prone positi through the door, then followed his shot and sprang They scattered through the night and threw themsel upon the ground.

Twenty minutes later Brent's voice broke the sil "What the hell started you off that way, Hanli demanded. "I've made a circle round and there's near."

"He was at the window," Hanlin said. "Ask Didn't Harte open on the door at the same time?"

"Mere presence of mind," a cool voice answer the night. "I didn't see a soul. When you starte ing I took it for granted they had jumped us and the door for a break outside. You're getting spooky

"I saw him, I tell you!" Hanlin snapped. " looking in at us."

"We can easily tell," said Harte. He strode window and sheltered a match with his hand w studied the ground beneath it. The others peere over his shoulder at the big prints in the dust.

"A stray dog," Harte said indifferently. "But dently looked like a marshal to Red."

"He makes a track as big as that beast Clark had," said Brent. He traced a finger along a ridg scalp and swore. "I'd like to have got a chance at t gray brute before the Bar T outfit killed him off."

"It's proof of a low order of mentality to let ha up the system until the fumes go to the head—esp anything so simple as hate for a dog. You had o over him with a man you couldn't afford to have trail; but then you always were more or less of Brent," Harte remarked dispassionately. "Let's

The fourth man had not spoken a word. Once Red Hanlin laughed hoarsely.

"Look at Fox," he said.

Fox Jarrat's triangular face still twitched from the strain and his little wide-set eyes glittered dangero

"Nerves!" said Harte. "Without brains." He a coin in the air, caught it deftly on the muzzle of and balanced it with a steady hand.

"You're a cold-blooded fiend for a fact," Brent g with grudging admiration.

"Warm-blooded," Harte corrected, "but cool-b Let's start. We can ride to the snow line and you br horses back."

They left the cabin, riding single file up a gulch t away into the hills. Ten miles farther down the Gre Flash, too, was heading for the hills.

They Had Not Yet Learned the Lesson of the Hard-Running Horses and Hard-Riding Men of the Open Range—and Most of Them Died as They Learned

...ain't It a Grand and Glorious Feelin'? . . . By BRIGGS

The Franchise of Romance

IT is not their power of entertaining which is the most astonishing thing about Paramount Artcraft Pictures. It is the thousands of audiences that see them at *the same time*—think of it, the Paramount Artcraft audiences of any one evening would populate half-a-dozen good-sized cities!

Every man, woman and child with eyes to see and mind to wonder, finds endless diversion at all those lucky theatres which have the franchise of romance from Famous Players-Lasky Corporation.

We, in our turn, are sensible of our obligations to the occupants of every seat, every day, in every one of these myriad theatres,

—and the way *you* personally feel at the end of any Paramount Artcraft showing at your favorite theatre is the thing that counts.

EVERYBODY'S BUSINES

The Noncoms of Industry

By Floyd W. Parsons

DECORATION BY WILMER S. RICHTER

ONE widely accepted plan for improving working conditions between management and men is based on the idea that industrial stability is best assured by educating foremen in human relations and also in business economics. The champions of this plan point out that the foreman is the real noncommissioned officer of industry; he is the one person who is in direct contact with the workman and it is from him that the laboring masses obtain their impression of their employer. This being true, the argument is advanced that there can be no labor solution unless the minor executives are first trained by intensive methods. The contention is that every company proposing to adopt some form of industrial democracy should first see that all of its foremen are thoroughly instructed in the primary economics of industrial management. Success is thereby doubly assured.

John Calder is a leader among those one-time managers who have embraced this idea. He contends that there is great peril in permitting vital questions to be fought out between ignorant change on one hand and ignorant opposition to change on the other. As we become better informed we are demanding more and more that all programs of reconstruction be submitted to the test of economic soundness. We can no longer live industrially in isolation. Employers and workmen in one plant and in one industry must fuse their efforts with owners and employees in other industries. There must be a plan that permits of self-expression and self-determination on the part of the workman in everything that touches his industrial interests.

Success can come only through the economies of specialized large-scale production. But to get this very essential result we must first establish a practical and satisfactory form of democracy in industry. We need never expect to get along without a certain amount of economic friction; that is the inevitable price we must pay for a democratic basis of existence, and the cost is not too high. However, the present time is a day of varied and bewildering theories—so numerous and so complex that many executives are uncertain as to just what the average workman does want.

It is a mistake to attribute present unrest in labor circles to the great war. The recent conflict did intensify our problems, but most of the demands now being put forward by employees are based on old claims which heretofore had not been generally recognized and almost never conceded. Workmen now want to be treated as intelligent participators in industry and not merely as the sellers of a commodity. They want to be consulted, to have some things explained to them in the first instance, not merely thrown at them or arbitrarily imposed on them by bulletins or orders to which they were not a party.

Though many employers have comprehended this new attitude of workmen, there are still a host of owners who cling to the ideas of the last century and say: "Can't we do anything we like and adopt whatever methods we choose in handling the things that belong to us?"

The answer is that there is no law forbidding an owner to follow such an independent plan, but if he is wise he will see the folly of playing a lone hand with the interests of others, for no important business to-day is a one-man affair—the public and the state must be considered as well as the management and the men.

Basing his conclusions on studies in hundreds of plants in America and in Europe, Mr. Calder says: "It is absolutely necessary that foremen should bring economic education into their work of governing men. Many concerns have failed to sell company policies to their own foremen. Some of these minor bosses actually know less about industrial relations than many of their own workmen. How can such foremen reconcile labor differences at their inception?

"This is not wholly the fault of the foremen. They are usually selected largely for their technical proficiency in their own particular branch and then are forgotten by the management so far as the engineering of men is concerned. The generous treatment of foremen and the steady drawing out of their capacities for leadership and for interpreting to workmen the policies and ideals of liberal-minded owners is the open secret of some of our most happy and successful businesses.

"Conferences have shown that the workman often entertains fallacies and misconceptions about industry, to which he clings tenaciously and to which many of our foremen, who are frequently the sole source of enlightenment, are not qualified to make an adequate response. Too often during periods of industrial friction foremen are mere onlookers when they might be efficient leaders and molders of thought among the small groups which they supervise.

"Here are a few ideas which guide the average workman in judging his employer:

"He is all for the direct, the concrete and the personal.

"He frequently believes that all his aspirations could easily be satisfied here and now out of present profits and with no more production.

"He often claims that raising the sales price will settle all of his employer's difficulties, reward them both more liberally and possibly reduce the effort demanded of them.

"When the obvious objection to this in its effect on all other trades and commodities is pointed out he says, 'Well, let them pass the raise on also.'

"Not a few workmen act on the convicti

useless in our day for employers to aim at and plan for a quite docile organization of human units as some have done.

"American and alien alike should be encouraged in self-expression and given sufficient education about the nature of industry to use their self-determination intelligently."

Experiments in Industrial Democracy

WISE business men are no longer devoting their attention to industrial expedients, but are spending thought on the value of certain industrial principles. The causes of business inefficiencies and unrest are deep-seated. Expedients may be popular, but they afford only temporary relief. Every plan worthy of notice must be founded on a sound principle. It is not a question as to whether a method will work for a month or a year, but whether it is permanently valid. The fundamental laws governing humanity are as old as the primary laws in physics or astronomy. The law of gravity is still on the job notwithstanding the fact that the airplane enables man to climb a few miles up into the air. So it is in business: the old natural laws continue to endure, notwithstanding the occasional adoption of freak methods or policies by numerous misguided individuals.

More than thirty years ago there was quite a movement in the leading countries toward the establishment of profit-sharing schemes.

The plan then lost headway and only in recent years has again come up for close attention. It is appropriate therefore at this time to state briefly a few facts relating to employees' profit-sharing plans that are taken from the experience of many industrial concerns. First and foremost is the truth that no profit-sharing scheme can be substituted successfully for a proper and adequate wage-payment system.

A great automobile corporation recently adopted a fifty-fifty profit-sharing plan. The company specified that its permanent capital should get a fixed return of seven and a half per cent. An additional three per cent was charged off for depreciation and one per cent was ordered set aside for a rainy day. Here we had one of the most carefully worked out profit-sharing plans ever devised, yet only one week before the first profits were distributed the company barely averted a serious strike and the workers demanded a twenty-five per cent advance in wages. Only a few weeks later a real strike did occur and conditions generally are not yet settled.

More profit-sharing plans have failed than have succeeded. In most cases where the scheme was discontinued the management claimed that employees were suspicious of the motive behind the plan. They frequently charged the company with falsifying the books, and nearly always in lean years, when no bonuses were distributed, charged the corporation with holding back earnings. In several instances the workers themselves requested higher wages instead of a possible share in the company's profits. Practically always there was a spirit of "gimme mine now."

The Federal Department of Labor in Washington investigated twenty-six cases where profit-sharing policies were abandoned. The reasons given were as follows: In eight cases the plan did not satisfy employees. In five the men went out on strike. In five more the men preferred an increase in pay. In four the plan failed to increase efficiency. In two the scheme benefited undeserving employees. In one case the plan did not tend to increase the stability of the labor force, and in another instance the scheme was discontinued because of the general upward trend of wages and competition. All of which presents the general plan of profit sharing in a rather unfavorable light.

But most of the plans for rewarding employees depend for their success upon investment or thrift features that raise them out of the class of strictly profit-sharing schemes. However, most of such plans have shown a tendency to reduce all workers to a common degree of efficiency based on the productive ability of the weakest. Wise managers now realize that every method of reward for employees to be successful must provide for a proper recognition of individual accomplishment. If adequate wages are paid there is little necessity for profit sharing. Should a company enjoy unusual prosperity there is much to be gained and little to be lost by distributing an unexpected bonus among workers who are already receiving a wage that is just and satisfying.

In recent years we are hearing much about industrial democracy. There are a dozen different ideas concerning the real meaning of the term. One such scheme that is interesting is a plan developed by John Leitch. Various companies have adopted his ideas and report satisfactory results. Here is what the president of one large corporation says of the plan: "We inaugurated industrial democracy in our plant nearly three years ago and it appears to be a solution for most of our labor problems. The scheme we use is modeled after the Federal Constitution of the United States. We have a cabinet composed of the executives of the company, a senate composed of the foremen and heads of departments and a house of representatives elected by the whole body of workers.

"Meetings are held once a week and such questions as wages, hours of work, holidays, quality and quantity of production, sanitation, labor turnover and similar problems are thoroughly discussed by the senate and the house, which meet separately on the company's time. The cabinet has the power of veto, but during the two years or more that industrial democracy has been in operation at our plant it has never exercised this power, there having been no occasion for such action.

"The success of our plan is based upon the confidence and coöperation of the whole body of workers. Our scheme provides for a dividend system by which the company and the employees share fifty-fifty any saving in the cost of production, whether gained through increased output or through a saving in overhead expenses. The dividend is paid every two weeks in a separate envelope marked 'Employee's Dividend.' In two years this biweekly dividend has never been less than six and a half per cent and it has been as high as seventeen and a half per cent. In addition to establishing a happy relationship between management and workers the plan has enabled us to turn out more and better goods. We have been in business for more than half a century and this is the best move we ever made."

The company in question is the largest manufacturing concern of its kind in the world and employs about one thousand men.

The president's story, however, does not complete the picture. Let us get the employees' point of view. One of the company's workers, who is a member of the house of representatives, says: "I have seen this plan of industrial democracy in operation for more than two years and I'm for the scheme, because through it I can always get a square deal. Under the old system a man with cause for dissatisfaction would often keep his grievance to himself, or tell other employees about it. Frequently he would nurse his trouble until it became so large he would finally throw up his job in disgust. But now this does not occur. The worker knows he can carry his grievance up to the big bosses in the cabinet if it should be necessary to go that far to get justice. However, we find that industrial democracy does not permit little troubles to grow up to be big ones. Nowadays at our plant you never hear the foreman urging the men to get on the job. There is no need for it. We all know that by doing our best all the time we are increasing our own dividends. At present when a man knocks off early, comes in late or takes a holiday it is not the boss who wants to know the reason why but the other workers whose dividends he is lowering. In the old days it was every man for himself; now it is all for one and one for all. I have worked here twenty years and never has there been such a general desire to coöperate."

Said another employee: "Our new plan of industrial democracy has proved that many of our men had valuable ideas locked up in their minds. Some of these plans included practical suggestions for bettering the efficiency of machines, but the owners of the ideas in the old days would not divulge their thoughts because they were not sure what reception the management would accord their schemes. To-day we all know that a good idea will not only be welcomed but will be rewarded. As a result we are adding more and more labor-saving machinery which has been invented by the men at the plant. This is lowering costs, increasing production and earning greater dividends for all of us.

"Industrial democracy has given us our say in the management of the plant; it has given us insurance and a lunch room where we can get good meals for twenty cents; it has reduced our working hours per week from fifty-three to forty-eight and is teaching English to our foreigners; last, but not least, it has taught us that the management has worries just the same as we have and that by working and coöperating together we all benefit."

In most profit-sharing plans the workers never seem to understand the inevitable variation in the company's percentage of profit. It is also true that employees see an injustice in their being made to suffer for losses resulting from bad sales, poor financing and unprofitable merchandise investments, all of which are beyond the workers' control. Men who labor want their share of the earnings now; not some day in an indefinite future. When dividends come along with the pay envelope it soon happens that the employee grasps the connection between what he gets and idle machines caused by shirkers or inveterate holiday seekers.

Only the future will tell to what extent industrial democracy can be applied in the nation's business. Certain authorities say that the basic principles can be made to fit any organization. The disturbing question in the minds of many employers is: "Will not such a plan undermine my authority?" In answer to this one manager replies: "In our case industrial democracy has not in the slightest impaired the authority of the employer. On the contrary our authority has been strengthened by reason of the fact that no important action is taken with approval of the employees through their represen As a result of democracy we find that any one of ou ers who is inclined to be troublesome has to reckon w full force of the opinion of his fellow workers, and, me, this is a factor that possesses quite some pers power."

Prices and Prospects

"ENTHUSIASM is the sparkle in the sapphire," famous automobile manufacturer talking to ber of salesmen. "Better methods come when t warms to his men—for then and only then will t warm to the boss. The secret of advertising and goods is a thorough understanding of the action of w call the five senses: Sight, feeling, smell, taste and h To these we really should add a sixth sense, kn equilibrium, or balance. This latter sense depend certain little canals in the ear. Alcohol paralyzes t

"In every advertisement there is a chance to two or more of the six senses. In selling the finishe a prospective customer there is again opportunity as necessity to satisfy requirements.

"When the car is sold the sale is not complete means. In fact the chief transaction has just beg the manufacturer has not supplied quality goods; advertising has deceived; if the salesman has exagg if the car offends—then look out for a little advert your product by the dissatisfied customer. Thou ads he prepares for you will be free of charge, they the most expensive and damaging announcemen ever got out.

"In every business a certain article or product su in so far as it is successfully adapted to the needs o tain class of people. A man who gets a little money tired of walking aspires to own a car and generall the cheapest one made. When he reaches a degree perity which enables him to advance a step higher social scale he chooses a slightly better car. Then h to pass his neighbor on the hills and he gets a machi more power. Now the wife puts a hedge round th yard and buys a phonograph and the family has t car of style and individuality. If he goes on up th again he changes and buys the best motor made.

"Now what has price to do with the advertisi sale of anything? In every city there are three s and distinct merchandising streets: One where pric sole governing factor; the second where both pri quality influence the sale; and a third where styl predominates. Each manufacturer must first of al a class of people to whom he is going to sell an remember that no one concern can sell them all.

"It's a good idea also to know just how large various classes of prospective customers. We hav than one hundred million people in the United Stat last year only 437,036 paid an income tax. A great ity of our six million farmers didn't show up at all. A census informs us that there are 27,304,177 family in the country. Of these, 7,288,000 report an income of $850 or less. There are 15,542,000 with i between $850 and $1500. Only 2,798,000 get from $ $2000 and 1,247,000 have incomes between $20 $3000. Of the remaining families, 157,000 average $5000, while 150,500 get between $5000 and $10,000 121,699 family groups receive an annual income o than $10,000. Such figures indicate the size of fie exists for the sale of articles of different prices.

"Many salesmen complain because they cann every prospect. The real truth is that generally sp six out of ten possible customers are not the right to own the particular car in question. Too many underestimate the importance of concentrating our upon that class to which our merchandise is inten appeal.

"Again let me repeat that price has nothing to d it above a specified class. Here is a cake of a famous soap. How much have I paid for it? A few might be able to answer, but if they had to spend cents more to get this same soap they would gladly The fact is the article does not sell on price alone real salesman to-day talks price last, not first."

Men and Machines

WHILE I was sitting in a corner of the Engineers writing several letters two men occupied the just behind me. Both of them were noted in affa management. Pathé
Feature Photoplays

reveal the Progress in Motion Picture Art, an Art which had its Origin with Pathé.

THE first motion picture feature, a scant two hundred feet in length, but truly picturizing a written story and enacted by experienced actors, was made by Charles Pathé over twenty years ago. Never before had a story been put into a motion picture!

The *first* comedy, the *first* drama and the *first* of the longer pictures were all made by Pathé.

More than fifteen years ago Pathé was reproducing in picture form the works of famous novelists and playwrights,—the very *first* company to see the necessity for giving to the public for its entertainment the best work of the best minds.

Thus each step in the evolution of the well written, well directed and well acted feature of today was first taken by this great pioneer. And today, as yesterday, Pathé Photoplays present the best in authorship, direction, acting and production.

Among the producers are Frank Keenan, Hobart Henley, Edgar Lewis, J. Stuart Blackton, Albert Capellani, Leonce Perret, Edwin Carewe and Jesse D. Hampton. Man for man, measured by achievement, these producers have no superiors in the business.

Ask the manager of your favorite theatre when he will show Hobart Henley's "The Gay Old Dog", adapted from Edna Ferber's story; Blanche Sweet in "A Woman of Pleasure", produced by Jesse D. Hampton and adapted from James Willard's famous play; Albert Capellani's "The Right to Lie", with Dolores Cassinelli; and J. Stuart Blackton's "Dawn". They are first presented this month.

THE TOTEM—By Thomas Bee

HIS father and stepmother came to meet Jim in Tacoma and bore him homeward in the power boat. This enabled them to land directly at the house on the point outside Seattle without a passage through the city, where three wound stripes and the family's eminence would make things tedious. But all the way up the chilly reach of Puget Sound Mrs. Crossley talked about the new English governess, of his small half sisters, and Jim wondered, shuddering a trifle, if one of her matchmaking fits had seized his father's wife. She was most voluble. Miss Robinson played splendid golf; she was pretty; people who came out to the house for dinner liked her. Jim finally grinned.

"Where did you catch this paragon?"

"Why," said Mrs. Crossley, "we had to advertise. Just by accident she saw the advertisement in the paper. She was staying in Victoria with her uncle, so she came over. She's such a relief after the last one, Jimmy. I'm sure you'll like her. Won't he, dad?"

"He'd ought to," Crossley drawled. "Better put on your coat, brother. This fog's pretty cold for an invalid."

There was a soft mist hanging low on the grim water, hiding the coves of the familiar shore. Jim sighed happily. The mist and the gray swells were as usual. His father seemed little aged in two years, though he had slipped past sixty.

"You haven't done anything to the house while I've been making a fool of myself, have you, dad?"

"Painted your bathroom olive drab, brother. Thought you'd like it. Painted it all myself. Sort of streaky, but it's dry, anyhow. Have a cigar?"

By this offer Jim knew that his father was inwardly jubilant. He expressed joy by offering infamous cigars of a brand sacred to retired sea captains and lumberjacks. Jim blinked into the mist ahead. It was much easier to endure battle and decoration to music than his father's pride.

"I hope I've got some clothes left," he remarked.

The lean boat lunged on through the swells and presently the great mountain showed itself for a moment, distinct as if painted on the colorless sky. Then the launch veered in toward the point of pines and dull turf. Jim saw the totem pole on the rocky beach below the red house and waved his cap to it.

"There's Miss Robinson with the girls on the pier," said his stepmother. "No, don't freeze up, Jimmy. You're always so icy to girls."

Jim resented Miss Robinson. A stranger had no business at the house when he wanted to be alone with his father, but she receded skillfully after introduction and reminded Cora that it might be injudicious to hug a person with such a long hospital record, so he felt grateful.

"Oh, she's all right," Crossley said later in the afternoon, tramping up and down Jim's room with a poisonous cigar. "Pretty nice girl. Had two brothers killed off, she says. She won't gush over you neither. I expect she's from nice people. About this hole in your arm now?"

Seattle sent out emissaries and reporters to question Jim, and his friends bothered him for three days. The lateness of his return gave him a flavor of novelty, he imagined, and Crossley agreed, nodding his cropped white head.

"All the other heroes have gone back to work or they're borrowing money or they've got married and the weather ain't awful good, neither, so people have got to talk. I don't want you working for a long time, though. Mighty restful having you in the house. I'm kind of sick of female society and the gardener's a bullshevik. I expect he'll burn us out some night."

"Oh, about that, dad—have you made or lost? Some of the men in town talk as though they'd been cleaned out."

"Made some and I don't expect Liberty Bonds count for a loss neither. This girl says that lots of the rich English are busted flat these days. By the way, got enough education left to tell what it means when you write 'honorable' front of an Englishman's name?"

"It might mean a lot of things—member of parliament, perhaps, or—let's see—oh, the sons of some of the peers are called the Honorable So-and-So. I think it's the younger sons of an earl or the sons of a viscount—I'm not sure. Why?"

"Been a heap of Englishmen in town lately," said Crossley. "Come on down and caddy for me."

The small colony played golf on the rocky, grass-covered beach below the steep bluff. This was Sunday and people called down from the verandas to them as his father ambled along the makeshift course, playing with a monotonous badness enjoyable to watch and swearing gently. Crossley preferred this retirement to the house in Seattle and Jim thought of the red cottage as home rather than the white limestone modern dwelling used in winter. The point hid the city and the huge pines gave the bungalows an air of absolute shelter. Jim hoped that his father's rheumatism would not return with autumn—he must begin to be careful. After sixty arteries harden. Crossley doubled his bulk over a putt and missed the hole by six inches.

"This is the damfoolest game the Lord ever let folks waste their time over, brother. Miss Robinson says it's Scotch. I thought better of the Scotch. It gets in your system, though. Good for old men, I expect."

Miss Robinson came down the wooden steps that ran obliquely through the brush of the bluff and announced luncheon. The hidden sun touched her hair into color and her tweed skirt blew a little. Jim admired her suddenly. She fitted the rough scene well and she laughed respectfully at his father's last shot.

"Oh, you'd better play with brother here when his arm's limbered up, young woman, then you won't be able to get sniffy about me any more. Got any history knocked into Cora and Grace this morning?"

"I think I've convinced Grace that Queen Elizabeth really existed. But somehow the Tudors seem awfully dead in Seattle."

Jim wondered whether his father knew the difference in English dynasties. He read profusely and sometimes astonished the family with strange bits of knowledge. He did so now. "Used to be a drunken Britisher in Leadville when I was a boy that said he was descended from old Charles First's butler. Acted like it, anyhow. Well, there's another good ball knocked to smithereens. Come along, brother."

"Leadville? The great mining town? What w
doing there?" asked Miss Robinson, and laughed.
never were a miner too?"

"Oh, everyone that was footloose and free
mining back then. I picked up enough to get
Francisco on. I was sixteen. Chopping trees wa
than swinging a pick. Miners are born, not
guess." He looked at his big shapely hands an
his head. "Awful stiff work, mining. I'd a hea
play golf."

Plainly Miss Robinson enjoyed Crossley's
drifting talk about the lumber camps of the Coast
holidays in the old San Francisco.

"My grandfather went there about 1860. He
it very shocking and rowdy, but I fancy he had
good time."

"Well," said Crossley, "it was rowdy all right.

St. Louis, U. S. A.

Largest exclusive builders of 4,000-lb. capacity trucks in the world

(Continued from Page 42)

His stepmother, always sympathetic, took pains to tell him how well Miss Robinson dressed and how good an influence she was proving to the little girls.

"And I'm sure she belongs to a very nice family, Jimmy. She told me that they'd be horrified if they knew she was a governess. She sends all her letters to this uncle in Victoria and they're mailed from there. When she came out to stay with him she found that he really couldn't support her. She's very proud. Dad wants to pay her more, but she says her salary's six times as much as a governess would get in England."

"Oh, that's why she gets those enormous envelopes from Victoria? Her uncle sends her her letters that way. I see. What's her first name?"

"Jane," said Mrs. Crossley. "Isn't that quaint?"

Jim failed to see that it was quaint. He knew that any name would have been equally adorable. His symptoms were rushing on with fearful speed. He could have borne Arabella if that had been her name.

"I think it would be all right to take her to town, don't you? I've known her six weeks and there's a play at the theater to-night—or couldn't we get a box?"

Mr. Crossley formed a white-and-black background for the girl in the box and Seattle bowed civilly. Several young men came to talk to her over his father's shoulder and Jim felt that he might reasonably grow to hate some of his best friends, who came along to supper at the Washington.

"Brother," said his father over a last dreadful cigar, "you won't get very far with that girl if you sit round and just goggle at her. Brace up! She's a human being, isn't she?"

"I didn't think I was showing it as badly as all that, dad?"

"You're as plain as a circus poster. What are you stalling for?"

"Oh," said Jim, "it's the money of course. She hasn't any. I suppose her people are stone broke or she wouldn't be out here. If she gets to like me enough she won't care."

"Hell," yawned his father, "she likes you! What about the money? You kids always worry about little things too much. It ain't such an awful thing to have an income, is it? I expect her folks won't mind at all. She don't talk about them so darned much that it sounds as if she bothered a whole lot what they think. Her mother's dead, she says, and it's always the old women that do the worrying about money. You brace up, brother, or you'll have young Sandon or some of these other pups climbing the fence on you. You're twenty-seven—time you tried matrimony. It's the safest excitement there is, anyway. I hope she won't want to trail off to England to get married. I'm getting too old to like traveling in cold weather."

But Jim was too awed for immediate attack, and if she was friendly it was an ingenious, fenced friendliness with a heart of reserve. She seldom spoke of England, save in some comment on the war. Seattle seemed to interest her.

"I suppose it's insular provincialism and all that, but these cities in Canada and the States, which simply weren't fifty years ago, rather frighten me. It's hard to realize that Seattle's younger than your father. Anything at home is a hundred times as old as any living man. You were born here?"

"No, in California. Dad had a lot of lumber there and I happened in one of the camps—try a brassy on that."

Miss Robinson used a cleek abstractedly. The ball bounded off into Puget Sound and bobbed away on the water, bright this morning under a clear sky. The mountain showed superbly—vast and white. The girl stared at it, flicking the grass with her stick.

"It's quite lovely here and everything's so new. At home one feels that it's all been thought about a million times before. Everything's ticketed with the proper emotion. You can look up a lake in Wordsworth and a ruin in Scott and be quite sure you're feeling the correct thing. I think that's enough golf for this morning, though. There's your father coming down the steps."

Crossley met them at the totem and leaned against it, talking about the radical gardener. He had just found the man burning waste paper in the rose garden.

"I guess he reads all the torn-up letters in the baskets to see if he can find whether I'm oppressing the laboring classes more'n usual. But it ain't good for the roses to have a bonfire in the middle of them. Brother, d'you guess we ought to have the family tree painted up some more?"

He patted the carved eagle's beak and smiled at Jim. Miss Robinson laughed.

"The family tree?"

"Well," said Crossley, "it's all the family tree I've got. Once when brother's mamma was alive we were in New York and she made me have my portrait painted and the fellow that did the work wanted to stick my coat of arms down in the corner—that is, the Crossley coat of arms. I had to laugh!"

Jim knew what was coming and grinned. His father lit a cigarette and went on in the most tranquil drawl:

"You see, my fond parents didn't have any use for me. I guess I was uncomfortable property or something, so they did me up in a red flannel shirt and left me on the doorstep of an orphan asylum back in Crossley, Pennsylvania. Didn't leave any name, neither. Well, the asylum folks called me Walter Johnson until I ran away and took to reading novels when I wasn't milking cows on a farm. So I got to thinking that Walter Johnson was a dumb kind of name and I changed off for Oliver Wilton; but that was too aristocratic for a lumberjack and one time I was down in San Francisco—I was eighteen then—and I saw a packing case marked 'Crossley, Pennsylvania,' so I thought that'd do and I changed to John Crossley. It's a pretty fair name and I've got a kind of claim on it, you see, and anybody can call himself John without breaking the law. There's nothing much in names, is there?"

"Oh, so very little," the girl said softly. "So you don't know anything about your people? That must give you such a—a restful feeling!"

She gazed at Crossley throughout breakfast, and for some days seemed to admire him mutely. Jim wondered if her own home was troubled with intrusive relatives and perhaps too much advice. He fancied a flock of aunts and podgy uncles—possibly clergymen.

"Your father's so perfectly honest," she observed. "I admired him the other morning so much. Most men—most Englishmen—wouldn't tell such a tale. I mean, successful men."

"I don't think many Americans would, either," said Jim. "Dad was trying to see if you'd be shocked, I think. He hates snobs. He likes you awfully, you see? He's very anxious to—to have you for a daughter-in-law—and I am too. I mean—I'm anxious to have him have you for—oh, that's all balled up! Won't you marry me?"

"You did mix things rather," she murmured, looking off at the water. The putter in her brown fingers shook faintly and her gray eyes moistened. "Thank you very much, though. I'm awfully sorry."

A flight of sea gulls dipped down out of the mist and shrieked. Jim's throat stiffened.

"If—if you're bothered about the money end of it, that doesn't matter at all really. I mean, you're frightfully proud, of course. Everyone likes you so much and no one will think about that."

"I'm afraid I have to think about that, Jim. Let's not talk about it. I literally haven't a penny, beyond what your father pays me. And I am—rather proud. Thanks ever so much, though—your shot."

She was unchanged for the rest of the week, but Jim felt that his emotions were advertised whenever she spoke to him or looked his way. Mrs. Crossley gave two dinners and men roamed out to talk business with his father at strange hours. They appeared in droves when it was time for tea in the garden. Clouds of as many as four settled about the table near the high broom hedge and Crossley scowled warnings at his son. Mrs. Crossley let the girl play hostess and Miss Robinson filled the part charmingly without any sign of boredom. She was gay and friendly to all comers and did not flinch when young Sandon, attempting to employ English slang, used the fearful word "bloody."

"The poor child knew no better," she chuckled. "I fancy he's been reading raucous novels. I thought you were about to assault him, Jim."

"I wanted to," said Jim, chewing his lip.

"Oh, come! I helped run a canteen for a bit at Euston Station and I heard some much worse profanity. You never swear before women, do you? That's so very decent of you."

"I'm glad I've some redeeming features."

"You've ever so many. Your nose is delightful, for instance." She pulled a tuft of the morbid-smelling metallic broom toward her and sniffed it. "Almost makes one homesick—for Devon. Broom and—there's your father coming back. He wants to talk to you, and I should write some letters."

Crossley stopped her as they met near the steps of the sprawling cottage. Jim could hear them laughing, then she vanished in the veranda and his father ambled over the turf to take her chair.

"You look as if you'd lost your last friend, brother. That girl ain't gone and refused you, has she?"

"Last Monday," Jim said.

"Oh, well, try her again about Wednesday," Crossley advised. "That'll be ten days—genteel wait."

"I don't see much use," Jim muttered. "It's the money, of course."

"Oh, get out!" Crossley grunted. "She's got too much sense for that truck. There's no use in wanting things you can't get. Maybe she'd like you better poor. She's awful young and I guess she's romantical in the head. Some girls think there's something awful funny and cute about being poor. I should think a dose of governessing'd knock that out of her." But he moved uncomfortably and in a moment asked: "She said it was the money?"

"Yes," Jim said, and burst out: "Oh, I can see how she looks at it! She's poor and she's proud, of course. I dare say her people—her friends rather—would say she'd married for money. I don't blame her for being proud."

"I wouldn't like you to marry a woman that wasn't proud," Crossley remarked. "Women that ain't proud are likely to stop wearing corsets when they lose their and that's awful. But ——"

He sat silent, erect and still in the gay, chintz-chairs. Suddenly Jim saw that he was angry. His eyes glazed and the lines about his mouth deepened.

"Proud, is she? All right! You ask her Wed She'll take you."

"Oh, look here, dad," Jim laughed, "I—I'm not damned good bargain as all that!"

"You shut up!" said his father, flushing. "T woman going ain't worth any more'n a good man. tell Neilsen I'm going in town after dinner and I' the boat ready at eight. Proud? Well, hell!"

Jim was afraid that the old man would show his but Crossley beamed on Miss Robinson at din talked of Victoria, where he owned some property

"We'll all go over some day and call on your What's he doing there? Government?"

"Real estate, poor dear—Gifford Robinson and pany. I think the 'company' is Aunt Eileen. She typist and I'm quite sure she knows more about b than he does. You'd like him, though."

She talked of her uncle during golf Monday and day mornings and it seemed that she must be very him. He had been a great oarsman at Oxford and tain of yeomanry in the South African War.

"He's a dear, big, quiet thing and not at all cleve sure you'd like him."

"He wouldn't resent my being dad's heir, then' smiled.

"Ah, that's not fair, do you think?" She drove ball into the Sound and shrugged. "You're not fair Suppose yourself in my shoes? You took it so nice week and now you're being gloomy about it."

"I thought I was being ironic," said Jim wret "But it isn't fair to tease you."

"It isn't unfair to tease me," she retorted, red swiftly, and before he could make a meaning out of t strolled off toward the steps. Either she was something or it meant nothing, he decided. After had taken the first repulse most tamely. He had not Jim ran after her, but the breakfast gong rattled stepmother was on the veranda watching the girl The little girls were chattering over their grapefru Crossley was already talking to Miss Robinson w entered the dining room.

"I've got a Britisher coming out to dinner to-nigh name's Tellford. He's a banker. Ever hear of him?

"My dealings with bankers are very few a between. No, I don't know of him."

"He's a pretty nice fellow," said Crossley. "(though. He'll talk all night if he gets started."

Jim sat considering her through the flowers. It hardly right to wait until to-morrow morning. He try again after breakfast. He choked in his coff when she looked at him. Mrs. Crossley was reading York paper and chose the dullest sections to repeat Her cheerful, stupid voice filled the meal's pauses.

"What pretty names some of the English families she said. "Maurevarne! How nice that is!"

"Only they probably say it Jones," Crossley "How d'you pronounce that, Miss Robinson?"

"Mavven," she said, and bent her face over her Jim saw that she was pink and wondered if he ha staring too hard, as her shoulders were nervous.

"Such a pity," Mrs. Crossley sighed. "Listen sale of Maurevarne House in North Devonshire ha announced by the Earl of Corways—or do you pro that some other way, Jane?"

"No, Corways is right," Miss Robinson nodded.

"I suppose some profiteer bought it," said C amiably. "You English have the blamedest han for real estate! What's it say about it?"

"One of the most celebrated English country ho Mrs. Crossley read. "Been in the possession of the since 1585. Famous for its gardens and the wor carvings in the great hall. Such a pity! A man Wood's bought it."

"I wish him luck with it," Miss Robinson sni "It's a perfectly poisonous hole! It takes about ment of servants to keep it up. The gardens are deathly, they're so run down, and there's only on in the whole ghastly place. How much did this idi for it?"

"Thirty thousand pounds," said Mrs. Crossley.

"Oh, my word!" gasped the governess. "I wo give sixpence for the thing! Cora, dear, don't, slouch that way!"

"Ever seen the place, Jane?" Crossley asked.

"Oh, yes, once or twice. It's quite handsome if yo fossils and coat armour and bad drains. Personal as soon live in Westminster Abbey. Cora, dear, getting in your brother's coffee."

Decidedly he could not wait for to-morrow mo Jim thought, seeing her color rise and wane. Her eye brilliant as if she might be a little angry for his tam He followed her out of the room presently and up th to the stairs.

Note the Recipes

Meatless Menu No. 4 This lima bean dish is an excellent meat substitute. Spinach is rich in mineral salts, especially iron. The fruit salad and wafers supply starch, balance the meal and take the place of a dessert.

Lima Bean Croquettes Spinach
Fruit Salad—Wafers

Recipe for Lima Bean Croquettes

1 cup lima beans
Cold water to cover
½ cup rolled, dried bread crumbs
3 tablespoonfuls milk
1 egg
½ teaspoonful salt
Pepper
1 teaspoonful sage
Onion juice

Soak beans over night in cold water. Drain and cook in boiling water until soft, then force through a purée strainer. Add crumbs, milk, seasonings, and egg, beaten slightly. Shape in the form of croquettes; dip in egg and crumbs, and fry in deep fat. Serves about five.

Meatless Menu No. 5 The California lima bean salad is the main dish of this luncheon; rich in protein with mineral salts supplied by the fresh vegetables used in combination. The rice in the soup furnishes the additional starch required and the necessary fat is supplied by the dessert.

Rice Soup
California Lima Bean Salad
Chocolate Blanc Mange

Recipe for Lima Bean Salad

2 cups cooked baby lima beans
1 cup diced celery
2 green peppers
2 or 3 large ripe tomatoes
Onions or chives
Seasonings
French dressing

Mix baby lima beans and celery; add seasonings and onions or chives and marinate with French dressing. Arrange slices of tomato on bed of lettuce, place a ring of pepper on each slice and fill ring with baby lima bean mixture. Serves about four persons.

Meatless Menu No. 3 The cream of lima bean soup makes a complete meal as all food principles are represented. The celery is a relish and supplies mineral salts. Apple tapioca is a simple, easily prepared nutritious dessert.

Cream of Lima Bean Soup—Croutons
Celery
Apple Tapioca Pudding

Recipe for Lima Bean Soup

1 cup dried lima beans
6 cups cold water
1 onion
1 slice carrot
1 cup milk
2 tablespoonfuls fat
2 tablespoonfuls flour
Salt
Pepper

Soak beans over night, Drain, add water, cook until soft and rub through a sieve. Cook onion and carrot in fat, remove vegetables, add flour, seasoning, and bean purée. Add milk, strain and reheat. Serves about five.

(Concluded from Page 44)

"Look here," he began, "let's have an argument."

"Not just now, Jimmy," she said without turning.

He hurried and caught her on the landing, then saw that her face was wet and her whole body shaking.

"Oh, what's the matter? Please ——"

"Let me alone!" said Miss Robinson, twisting away. "Please, dear, let me alone! I—I'm quite miserable. Please go away!"

His father went to town before noon and Jim tramped up and down the beach, slashing at the turf. He had hurt her somehow. It was sure to be his fault. He had stared all through breakfast. He had not been fair. She did not come to lunch and his sisters played ragtime records on the phonograph all afternoon unrebuked. They were exiled from the dinner table, but Jim did not miss them as she came down in black and her color warmed the living room, made the English banker stare. Jim cornered her in a window niche.

"What did I do? I'm frightfully sorry, whatever it was."

"You didn't do anything. Can't I have nerves and things if I like? What's this man's name?"

"Tellford. He means well. He comes here every fall for some English estate or other. Will you come out in the garden after a while?"

Miss Robinson drew her arm free.

"I might."

Dinner was enlivened by Mr. Tellford's opinion of prohibition and the Russian situation. It seemed that half the Russian princes owed his clients money, and collection was difficult.

"The aristocracy's in hot water, huh?" said Crossley.

"Oh, dear, yes!" Mr. Tellford delved in his stuffed trout and smiled. "Everywhere. The war's quite finished some very old families. Take the Mavvens—you'd pronounce it Maurevarne. They've had to sell Mavven House, you know. It went to a bounder called Wood for thirty thousand pounds. Of course that'll help the earl on a bit, but it's mostly owed. They've nothing left now but the entailed estates in Huntingdonshire."

"The earl ought to go to work," Crossley suggested.

"Too idle," said Mr. Tellford, "and I dare say he's as big a gambler as the rest of them. The Mavvens have always gambled, of course. The late earl didn't. His wife wouldn't let him. Very decent sort of woman. The Mavvens usually marry wasters. That's the way the family started."

"How?" Crossley threw in.

"Oh, there was some wretched girl at Elizabeth's court. I forget the sad details, but the good queen married her off to a Mavven and made him an earl. They all marry money, then get rid of it at once. The late earl married a clergyman's daughter who hadn't a penny, but he was an exception. This chap's his brother—an unutterable ass," Mr. Tellford announced, sipping claret. "Both the last earl's sons were killed—very decent lads, I believe. But it's an endless family and frightfully stiff-necked. There's a perfect army of Mavvens—cousins and second cousins and old women and all utterly useless. They sit about, you know, and the girls all hunt husbands hopefully. One of them married last week. The Honorable Gertrude Mavven, I think it was. She married some lad from Australia, with no end of money, of course."

"Jane, dear," said Mrs. Crossley, "you are not eating anything. Isn't your head better?"

"It's quite all right, thanks. But—you're not quite fair to them, are you?" Miss Robinson fingered her water glass. "After all, it's only been very lately that—that Englishwomen of the—of the Mavven variety have been allowed to do anything but marry money if they could. Of course in these days they could find things to do. It's inexcusable that the men shouldn't do something, I admit."

Tellford considered her for a moment over his claret and shook his head.

"Hereditary conceit and pride. They're good-looking people and they've enough brains to show themselves well. I know some of them by sight, but it's unhealthy to know them better than that, they say—great drain on their friends' resources. They're altogether too proud to pay their notes."

"Let's go back to Russia," said Crossley hastily. "What d'you think did happen to the czar and his folks?"

He talked steadily in his best vein through the rest of dinner and told some astonishing yarns, but Miss Robinson said little and never laughed. She excused herself after dessert and Jim could not find her in the garden—saw the light in her bedroom and hoped that she was not ill. Dinner had been tedious since he sat beside her and it was hard to see her well from an angle. The motor boat carried Mr. Tellford off across the bright water at ten and Jim wished that the mountain had chosen another night to show itself fully, all its snow glistening under the moon. It would be more admirable in her company.

"I'm afraid Jane's feverish," said Mrs. Crossley through a yawn.

"Let her alone," Crossley ordered. "She's got the blues. Better go to bed, brother. You look down in the mouth too."

"What about your going to bed, too, dad? You don't have to sit up all night, either."

"You mind your own concerns, brother, and pike off to bed! You have to get up at six and I don't. To-morrow's Wednesday too," he added coolly, and took his cigar into the veranda.

Jim sat in bed watching the mountain and hoping she would be kind in the morning. The lights from the living-room windows made a blur of glow on the damp lawn until they were put out, and he waited for his father's feet to creak upstairs. But as no sound came he assumed that Crossley had shed his shoes below for the sake of silence and pondered on the old man's pride in him—not quite justified, he thought, though there was not much to be ashamed of up to date. The mountain began to fade upon his eyes and he lay devising speech for to-morrow morning when something clicked against the lock of his door and he heard the handle turn. But nothing followed except a vague noise of garments rustling and after an instant a board of the landing creaked.

Jim jumped out of bed and went swiftly into the hall where the stairs were visible. Whoever it was going down must cross the wide living room, and the safe let into the wall by the fireplace held his stepmother's best pearls. He slipped on the cold treads, and the shadow moving ahead was lost in the black hallway. It might be a servant hunting something left downstairs. He did not wish to shout, and the living-room lights shot up as he came to the heavy tapestry shutting the room in.

"I thought you would," said his father genially. "Sit down and let's talk a bit, Jane. Drop your bag and sit down."

"I've nothing to say," Miss Robinson panted. "Please let me go!"

Jim drew back from the curtain. There was a long crack of light, but the figures did not show.

"Go where? How in time are you going to get to Seattle this hour of night, child? Walk? It's near twelve miles round the bay! Don't be a chucklehead and don't get hysterics, neither! I don't want brother waked up. He's losing sleep enough on your account. Sit down!"

"Oh, why did you do that? I didn't think you could be cruel! Is it my fault? I can't help it, can I? It's unfair!" Her voice swayed into sobs and came clear again. "And poor father was splendid, even if he wasn't clever. He spent years trying to make money. Everyone can't, you know. And Jack and Ronny were the best lads in the world."

"I'm sorry Tellford spoke of your brothers, Jane. I'm damned sorry for that, child. And I hear your dad was all right. But you needed a lesson. I'm not going to have any girl go and get sniffy about marrying brother just because she's a Mavven. You ain't played fair with brother, neither. If you'd come here and said you were the Honorable Jane Mavven—hell of a name!—and turned him down I wouldn't have any kick coming, but you said you were Jane Robinson. You ain't honest! If you're ashamed to be Jane Mavven and work for a living you'd ought to quit being Jane Mavven and be Jane Robinson and stick to it—that's all! Now you go back to bed and don't get sniffy any more or I'll coach some other damned Englishman up on your family tree and you'll have it all over again! I'll be hanged if I see what you've got to be proud of except being a nice kind of girl—and brother's mother was a Trescott from Boston, anyhow."

There was a sound of water spilling and glass smashed on the rug. Crossley grunted.

"There goes that vase he fetched back from Paris for Mrs. Crossley. Mind what you're ——"

"Do you mean to tell me," she stammered, "that you dare—dare think I'm—I'm idiot enough to be proud of—of being a Mavven? Oh, how dare you?"

In the pause Jim rallied. He should interfere. He put a hand on the curtain, then took it back. His father was fighting for him under a mistake, but his father must not know. Crossley chuckled.

"Well, don't look at me like I w tiger, Jane. If that's not what's the m what is?"

"Oh men are horrible!" she cried.

"Sure, we're fierce!" Crossley ag "But you ain't telling me anything. didn't turn brother down on account being a foundling, will you come out bushes and tell me what you did it fo

"How on earth can I marry four m pounds?" she wailed.

"You can't," said Crossley—"at not yet. Jim's only got about five hu thousand of his own and I mean to week or so. Don't you be silly! I'm only person entitled to kick, ain't started looking you up the day we brother'd landed. If I wasn't satisfied, you'd have been hunting another job. You think for a minute I'd have ha round where he could see you if I h thought it was all right? You go to b never heard anything so damfool i life. Can't marry brother because he money! Get out! That's right, sit and let's have some sense."

"How did you find out who I w she demanded.

"Damned gardener throwin' to letters all over the garden. Hono Jane Mavven, care of Gifford Robi Victoria, B. C. That's easy. If you want your folks to know what y doing ——"

"If you knew my people," she "you'd quite understand. The earthly reason they let me come o Uncle Giff was that they thought son would marry me—for the name. He mother's brother and he's just an ord gentleman, you know, and not a walk a walking totem pole like Uncle Rod Oh, wouldn't you be ashamed to r Jim if all you'd had told you since you old enough to understand anything that you must—must make a good m Proud of my people? I loathe the gang! And the minute they knew married well you'd have Ursula and trice and all Uncle Roderick's sons co out on the first liner! The wasters!"

"I'm luckier than you, ain't I?" ley meditated. "I'm safe. I guess h a lot of folks is kind of dangerous. H you better write home that brother's a bank clerk? I don't want a lot of hi Mavvens all over the place—not prices come down."

She giggled and there was an an pause inside the curtains.

"You really are a dear old thing! didn't Jim understand at dinner? I'm at all sure he'll ask me again."

"Oh, shut up!" said Crossley. " ask you about the fifth hole to-m morning. He wouldn't care if you concentrated essence of Mavven. He good to mind junk like that. You go to sister. You won't be fit for anything i morning, and brother hates poor golf. he didn't catch on. And don't yo him about this, either. I couldn't having brother sore at me. You ain' too good for him, neither."

"I know I'm not," she sighed.

Jim blushed and stole off upstai wind his alarm clock.

GERMANY IN TRANSITION

(Continued from Page 7)

asurprised me most, however, was aness with which the average Ger- mitted defeat. There is a wide- npression that the German does he is licked. Having talked with e of Germans it is almost incon- that any such impression should e forth. I ran the German range berger and Noske, the two strong- most powerful individuals in the nt, down to cabmen and labor- A every stage of this interviewing rnce I got the same reply, which up was: "We are not only beaten y beaten, and all we want is a ce more to lift our heads."

ature stands out: In some re- emocracy—and Germany to-day out as democratic as France was 871 and 1878—is not altogether a ou can, for example, discover an ed chair and not find it marked '—engaged. You can also, and st time, undertake to walk across in a park and not see a signboard e word "*Verboten*"—forbidden— our passage. If you knew Ger- fore the war this state of affairs that a miracle has been wrought. ny's more or less half-baked de- asserts itself in various illuminat- sometimes startling ways. Some go a conference was held at Co- ween an American Intelligence of- representatives of the German military authorities to establish regulations for aliens who pro- visit the unoccupied areas. The e finally resolved itself into the as to whether Americans should hotographs for the *ersatz*—sub- passports, as they are known. The ivil official argued in favor of the hs but the American objected urse, prevailed.

he meeting broke up the German k the American aside and said: d you didn't let that civilian im- hat red tape on you." This, from n officer, shows that in at least ion Germany has seen some light.

Watch Your Baggage

he most astonishing human, or hould say unhuman, revelation in rary Germany is expressed per- e general moral let-down. In the r of German conditions elsewhere icle I said that her morals were at b. This manifests itself in count- y.

illustrate: If you are so foolish as ur shoes outside the door of your hotel in Germany—and it is just the hotels in Berlin as it is of the st*Gasthaus* in Essen—you will be twear in the morning. Likewise, ould leave your bag unlocked in chamber the chances are that you over your socks or underwear n you return. On the wall of el room in Germany is posted the hat the management will not be le for shoes left in the hall or for olen from unlocked bags, closets robes.

here you can see evidence of the rman moral break-up. Putting war lust, superego, and all those ls that tainted Germany before she was in other respects more in- le than many other European . Life and property had certain ich were always respected. Such ; the theft of boots in a hotel was f. In addition to this the average fficial, with the invariable pride lt in his post, especially when he iform, was far from venal.

nearly every person in Germany es you in any way has his price. bribe a hotel clerk to give you a a customs official to pass your pened, subsidize the cabby to the vehicle that was engaged r. So it goes. Money as never he key to all things.

vered this to my cost at Frank- ad a choice in making the trip to ne was a day train that left at nty-five in the morning and ar- the capital at eight-thirty at night—a long, hot, tiresome trip. To take a chance of getting a first-class seat required my presence at the station at six o'clock. This was not inviting. The alternative was the sleeping car—there is only one on the train—which left at nine and arrived in Berlin for breakfast.

When I asked the hotel porter if he could get me a sleeping-car compartment he said that it was not only impossible but that all berths were booked for the next five weeks. I thereupon tried the porter at another large hotel, with the same result. At the sleeping-car offices nothing was to be had. I then began to bargain with the porter at the hotel where I lived. I bid in units of ten marks. At every stage I only got a negative nod of the head.

Travel Demoralized

Finally, when I reached the hundred-mark stage, which I had decided was my limit—and which in American money on that day represented only about four dollars and fifty cents—I realized that I had scored, for the autocrat said: "I may be able to get you a second-class berth."

Needless to say, I spent that night in the sleeper. There were no towels on the train and I had to wipe my face in the morning on the pillow slip. When I remembered the good service and equipment on the German *Schlafwagen*—sleeping car—before the war I realized that here as elsewhere Germany has gone back a great many years.

This episode of the hundred-mark fee for the privilege of buying a second-class berth is typical of what is happening throughout Germany. In Frankfort, for example, the hotel porters have a sort of unwritten agreement by which this natural scarcity of berths and compartments is intensified. There are so many profiteers bulging with wealth in Germany that there is no lack of victims.

The whole railroad situation reflects the moral looseness of the country. A waiter at the Hotel Bristol in Berlin, who had served me in former years at the Carlton Hotel in London, told me this astonishing story:

He was caught in England at the outbreak of the war and interned. A few months after the signing of the armistice he was sent back to Germany with about fifty of his colleagues. All went well with him until he got beyond the German frontier. The baggage of the whole party was checked and placed in the baggage car attached to his train. After they had traveled about fifty miles into Germany the train was stopped by a company of soldiers, who cut off the baggage car. That was the last the waiter or anyone else saw of his luggage. Such brigandage is no uncommon occurrence on the German trains. If you want your baggage carry it along with you where you can see it.

This brings me to still another evidence of the collapse of German order and system. Before the war the German railway service was a model of efficiency. A late train was such an unusual event that it was written up in the newspapers and formed the subject of conversation for a week. A German crowd, whether on the street or in line at a theater box office or a railway ticket window, kept its place with almost military precision. There was never any jostling.

Take a railway journey in Germany to-day, even under the most favorable conditions, and you think that you are full back in a rough-house game of American football or in a starving mob that has just heard the dinner bell. If you want to get a seat on a train that leaves at eight o'clock you are compelled to be in the station at least an hour and a half before the time of departure, and even then you take a long chance with the crowd that has already preceded you by several hours. No seats are reserved. The favorite device of rich Germans to insure a corner in a railway carriage is to hire a man to remain in the station all night. He grabs a place the moment the gates are opened. Clothes, hats, skins are all bruised in the frantic rush to travel.

There are definite reasons for this confusion. So far as traffic is concerned, there is, of course, a shortage of trains. In the second place, internal travel was much restricted during the war and now that the German, who is one of the world's prize travelers, has the opportunity to move about he is doing it with a vengeance, regardless of trouble and inconvenience.

But even this would not explain the absolute disorganization and almost utter disregard of all decency in present-day German crowds. The fundamental cause is that Germany has no tradition of voluntary public service. All the old much-vaunted order, which was nothing more than amiable docility, that you saw in Germany before the war was entirely due to the fact that it was literally pounded into the people. Once there, it was maintained by what was practically armed force, as expressed by imperialism. No matter what any German can say to the contrary, he delighted to be bossed about and kept in his proper place. It was as much a part of his daily life as were his meat and drink.

The whole German idea in this respect was expressed in those three magic words: "*Es ist befohlen*"—it is ordered. And the German's middle name was obedience.

Only the common people have joined the general scramble, however. Your regular army officer or reactionary—and they are synonymous—still sticks to the old habits, as this story will show. At the Adlon Hotel in Berlin, as in many first-class American hotels, there is a separate office for each floor, where the guests leave their keys. One day when I stopped to get my key I found the attendant absent, so I walked behind the counter and took it off the hook. An erect military-looking German whom I saw there then emulated my example.

I asked him in German how long he had been waiting and he replied: "I have been here fifteen minutes."

He did not have the initiative to go round and get his own key, but the moment he saw me do it it gave him an idea. This incident explains the whole German reactionary mind.

Almost overnight the mailed stewardship of public morals and actions ceased. With the overthrow of the Hohenzollerns and the advent of a republican form of government the German suddenly found himself without a master. He was like a trained animal, taught to perform to the lash of a whip, which suddenly lost his trainer and was left to his own resources. Quite naturally he fumbled. The lack of restraint now finds expression in what practically amounts to demoralization. The people themselves must discipline themselves, and it cannot be accomplished in one month or one year.

Putting this demoralization in another way—formerly the German bully was machine-made and was turned out by the government in quantity output. If Germany remains a republic the bullies henceforth will be self-made. In a subsequent article in this series you will see an example of this development as personified by Gustav Noske, the German Minister of Defense.

Germany Changing

Do not get the idea, however, that Germany in transition is a disorganized mass of disillusioned and despondent people. They know that they must live, and in order to live they must carry on with their daily tasks. The German workman—and you will hear much more about him in the next article, which will deal with German industry—does not express the entire mood of the country when he says: "The more I work the more we will have to pay the Allies; therefore, why work at all?" It is the instinct of human nature to want to prosper, and Germany knows deep down in her heart that though prosperity means the payment of indemnities it also spells her own economic salvation.

Hence you find, as one significant illustration of changing Germany, that the small shopkeeper, who was once a business piker and who was more concerned about his midday nap than about opening up a branch office, is waking up. This was first manifested in the occupied area, where the needs of the Allied troops led various enterprising little merchants to expand. In Coblenz I saw many German shoe-shining parlors, an almost unheard-of institution in Germany. Outside these shops you see these signs in English: "Have your shoes shined here" and "This is the best place in Coblenz to have your shoes shined."

This expansion in small business is duplicated in the speech and attitude of the people. The first unoccupied city of importance that I visited was Frankfort, which is just beyond the French lines of occupation. I created something of a sensation as I swept up the main thoroughfare in an American army car driven by a stalwart doughboy. The whole population paused in its labors and travels to gaze at this almost unprecedented spectacle. Except for a few scowls I was regarded with stolid indifference. Soon after the car deposited me at my hotel it started back to Coblenz. Up to this time I had been under the friendly protection of Allied troops up and down the Rhine. Now I was isolated in Frankfort and I believe that at that moment I was the only American in the place. "Alone in Frankfort" summed up my situation.

I knew one man there. He was the brother of a well-known Wall Street broker. I had wired him from Coblenz to obtain a room for me. He did so and it was a real act of mercy because in Frankfort, as in every other German city that I visited, hotels are literally jammed to the roof and the struggle to find a bed is almost as acute as the contest to get a seat on the trains. I often wondered as I watched the long lines waiting for accommodations in German hotels where the mob came from.

The moment I met this Frankfort manufacturer I got a glimpse into the state of mind toward America. It is impossible to get this in the occupied section because the Allied troops are the censors of both speech and action and the tactful thing among the Germans there is to be friendly and speak English if they know how. I marveled therefore just how spoken English would go in free Germany.

English Often Spoken

I said to this Frankfort citizen in German: "Which language shall we speak?"

He at once replied in English: "Let us speak English by all means. This is a free country now and we can do as we please."

The result was that with him and with many of his friends I spoke English, not only in the privacy of their offices but in the public restaurants, where everybody stared at us. Being stared at in Germany is no new sensation. The people there "rubber" more than in any other country, with the possible exception of Holland.

Wherever I went throughout Germany I found that the individual who knew how to speak English sought every opportunity to use it. When I entered a shop to buy something I invariably spoke German. Again and again the response came in English. Curiously enough the German to-day takes a certain pride in knowing how to speak the Anglo-Saxon tongue. He refuses, however, to employ French except when it is absolutely necessary. The one deep and abiding hatred in Germany to-day is for the French.

How much sincerity is attached to the professed friendship for America I cannot say, but I do know that I was treated with courtesy throughout my stay. This was particularly surprising when I discovered in Berlin that a complete record of my war activities with particular reference to my exposures of German economic propaganda in neutral countries was on file in the Foreign Office and that the late government had done me the particular honor of regarding me as a dangerous enemy.

One morning the telephone rang in my room in Berlin. I heard a German voice ask, "Is that Mr. Martinson, of Stockholm?" I replied, "No, this is Mr. Marcosson, of New York." At once the voice changed to English, saying, "I am glad to hear an American speaking." This experience and many other similar ones that I had show one strong tendency in Germany to-day:

Every possible effort is being made to conciliate Americans, for the simple reason that the German realizes that if any nation will help him it is the United States. In order to flatter the American visitor the German tells him that the American doughboy won the war. Of course he tells the Englishman that Haig's forces turned the tide, and when he does chance to have a conversation with a Frenchman he tries to put over the fact that Foch, and Foch alone, made possible the Allied victory. It is just

another phase of the tactics that Germany employed in her former well-organized campaign of world mischief-making.

Speaking of the German's employment of English reminds me of something that happened in Coblenz. When I went to the German passport office to get my permit to travel I spoke German throughout the whole transaction. The man in charge had been a soldier and I felt that he would be more at ease if I spoke his own language. He used a word, however, that I did not understand, whereupon a demure young woman who sat near by suddenly spoke up in English and defined it.

"I see you speak English," I said.

"Oh, yes," she replied; "I am a graduate of Wellesley College and I want to get back to America as soon as I can."

Wander round Germany and you have this sort of experience wherever you go. Moreover, practically every waiter who served me—and nearly all had worked in England or America—wanted to go back as soon as possible. "How soon will they let us in?" was asked me a hundred times.

I had some astonishing revelations of the new German attitude, especially toward America. At Frankfort I dined one night with a group of eight business men. They represented a half dozen large interests and as many important communities.

One member of the party, who happens to be the head of a powerful iron and steel group, made this remark: "Economic conditions in Germany could not be worse. Indeed they are so bad that, speaking for myself and my associates, I should be perfectly willing to see Germany become an American colony, provided that we were guaranteed protection against French revenge and rapacity."

Of course it was conversation for my particular benefit and to create a good will for Germany. But it did have the germ of a half truth in it, certainly as illustrating the German feeling about France. These two nations will do business together because they must, but so long as time lasts there will be bitter hatred between them. And France has good reason to hate.

Another phase of the German conciliation with Americans lies in the widespread and absurd explanation as to why we went to war. As usual, the German is trying to do the other fellow's thinking for him. The German believes, astounding as it may seem, that we were grossly deceived about actual conditions by the French and the British—not a flattering commentary on our intelligence.

"But why did you provoke America into going to war?" I asked scores of Germans of all degrees.

Invariably the reply was: "We did not expect America to enter the struggle. The unrestricted submarine campaign was a desperate effort to end the war."

At this point you smile and realize that when it comes to discussing the war with a German you are up against an absolutely hopeless proposition.

The Kaiser Not Quite Friendless

If you can persuade a German to do the well-nigh impossible and be frank, he will tell you that America gave Germany the surprise of the war. The government machine got over the impression that we should be a negligible quantity in the field and that we could not send over a big force and keep it supplied. Château-Thierry, St.-Mihiel and the Argonne smashed this illusion. When it crumpled the German hope of any kind of battle victory was gone.

I heard only one German express the slightest repentance over his nation's misdeeds in the war. When I asked for justification of the Lusitania, of the Sussex, of any one of a hundred horrors, the reply would be: "At that time Germany was suffering from mental illness."

This is as good a place as any to write about the status of reaction, for it is part of what might be called unrepentant Germany. There is still a considerable group of officers and statesmen of that departed day who cling to the delusion that some day they will come back. They are moving about on gum shoes, however. They hire private rooms in the restaurants, put on all their medals and toast the old régime. But that is about as far as they get.

Every once in a while you get some picturesque evidence that discredited as he is the Kaiser still has friends. While I was in Germany the school children in a small town went on a strike because his bust was removed from the chapel.

Though the present government disclaims even the slightest royalist tendencies Count von Bernstorff still has a strong pull at court. His secretary is one of the links between the Foreign Office and the newspaper men at Berlin. Until the present cabinet came into office he was quite a power behind the president's chair.

Writing about the reactionaries reminds me of one of the favorite indoor sports in Germany to-day. It consists of what we in America would call passing the buck. Everybody of importance who had any connection with the Kaiser or the conduct of the war is trying to put the responsibility on some other person's shoulders. Ludendorff is putting it up to Mackensen, and Mackensen in turn is laying it at the door of Hindenburg. In the same way Von Bethmann-Hollweg is laying all the blame on Michaelis or some other victim. It has gone so far that Germans with a sense of humor, if such a state is possible, are asking, "Who will be the next goat?"

The Attitude Toward Mr. Wilson

One of the industrial princes of Germany showed me a letter that he had just received from the Crown Prince. If that exiled expotentate really wrote it he must be given credit for more sense than the world has credited him with. In it he said, among other things: "I told my father after the First Battle of the Marne that the German cause was hopeless, but he would not believe it." Elsewhere in the letter he wrote: "It appeals to my sense of humor to see all our late associates trying to put the blame on someone else."

Be all this as it may the Kaiser business is doomed. Germany may have a military dictatorship or a constitutional monarchy, but so far as a Kaiser is concerned there does not seem to be the slightest chance for a resurrection of an All Highest. I found some sentiment in favor of a regency, if one is ever established, by the Crown Princess Cecilie. One reason is that she is attractive to look at; another is that, having been the wife of the Crown Prince all these years, she is entitled to some compensation for having served such a martyrdom.

Now comes one of the many curious inconsistencies that you encounter in Germany. Though the word "Welcome" is on the doormat and the glad hand is extended to the American generally, President Wilson is to-day the most abused and reviled individual in Germany. This procedure, which involves the abrupt change in national sentiment toward America's chief executive, is an illuminating example of the way the German mind works.

When the Armistice was signed Mr. Wilson was looked upon as little less than a redeemer, for he was hailed as the maker of a new world. The celebrated Fourteen Points hung with German hope. They constituted the creed of regeneration—a second Teutonic Bible.

Mr. Wilson's speeches, published in book form under the title of *Wilson Reden*, sold by the hundreds of thousands of copies. No German household was complete without one. Nearly every business man had the volume on his desk. He did everything but use it as collateral at the bank.

When the Peace Terms crashed into the German consciousness the little red-white-and-blue book that contained the President's utterances suddenly found itself in the wastebasket or on the garbage heap. The President's name became a hissing and a byword. Instead of being hung with hope the Fourteen Points suddenly bristled with hate. To mention them in polite society constituted a breach of etiquette almost as bad as professing love for a Frenchman.

Germany stood appalled and horrified at what she considered a breach of trust. How she got the idea that the President had obligated himself to a peace without fangs I am unable to say. One reason perhaps is that the German, once he sets his mind on having a thing done or convinces himself that a thing should be done, immediately assumes that the performance is either already achieved or in the natural course of events. In this way he deluded himself during the war in thinking the crimes of the German Army and Navy were part of organized and accepted warfare. The very fact that he believed a thing was right made it right in his eyes. He has not changed his mental processes.

But after all is said and done our chief concern in this article is with human interest, so we will move on to Berlin, once the fountainhead of empire. To-day it is merely a city trying to forget the war with every device that money can supply. Here you get the best and the worst of Germany, almost in a single street. Orgy and penury dwell almost side by side. The whole panorama of the nation in evolution is reflected in its life.

As my train slowly passed through Potsdam in the early morning and I got a glimpse of the church where the former Kaiser used to commune with the Deity, whom he claimed as intimate colleague, I thought about my last visit to the capital. It was late in the autumn of 1913 and Germany was at the high tide of her prestige and power. The world was yet to know the madness that lurked behind the Teutonic prosperity. I remembered that one afternoon I journeyed out to the immense Temperhof Field and saw what was perhaps the last great military maneuver before the troops that there marched so proudly plunged the world into horror with their advent into Belgium. On a knoll William Hohenzollern sat astride a milk-white charger, surrounded by his staff. He was then a king who could do no wrong.

Now I returned to that same city after four years of war had ravaged Europe. The name of a German had become synonymous with excess. The once exalted ruler who smilingly reviewed his army was a broken fugitive, shorn of authority, with all civilization clamoring for vengeance upon him. Time indeed had not stood still.

Outwardly Berlin seemed the same community, with its neat clean streets and the linden trees that were once the Kaiser's pride. Gayly dressed women still drove in the Thiergarten; the florists' windows were filled with gorgeous flowers; the jewelry shops glittered with dazzling displays of precious stones; the restaurants were crowded. There was opera every evening; dozens of cabarets contributed to a hectic night life; the town had even turned to boxing matches as its newest fad.

Life apparently moved on apace, just as if these people had not recently emerged from ordeal and suffering. It was only when you saw the mained wreck of a soldier in a doorway begging for alms that you got a hint of the human havoc wrought by the colossal struggle launched in this very environment.

When I went for my first walk, however, and saw the populace at close range I realized that much of the animation and show was a thin veneer. Scrape the surface, and anxiety, even desperation, are revealed. The Berliner is no longer the cocky self-asserting German of five years ago. There is something furtive in his look; even his stomach band has shrunk. Formerly the corpulent German was the rule; now he is the exception.

No More Swanking Officers

One evil is conspicuously absent—you no longer see the swanking monocled officer. In the old days life was one salute after another—a continuous click of heels. When a Prussian officer entered a restaurant he was not only the cynosure of all eyes but got the best table and the quickest service. His glory is dimmed, for he has practically vanished from the map. The officers visible look and conduct themselves like human beings.

Though Berlin is still under martial law you see few soldiers as compared with the immense number you saw before the war. Formerly there was an elaborate guard mount twice a day at the Brandenburg Gate. The only signs of it that remain are the unused gun racks.

No external change in Berlin, however, is more significant than is expressed in the bullet-ridden pile of brick and stone which housed Herr Hohenzollern. Once it was pointed out by the natives with a pride that bordered on piety; to-day you hear it designated by civilian and soldier alike as "the house where William lived." By an odd piece of mockery the balcony on which the former emperor was wont to stand and receive the cheers and plaudits of his subjects is now a shattered wreck. Whether by accident or design it was the particular target of the machine guns during the spring revolution.

Upon inquiry I discovered that practically all the Kaiser's belongings—medals, uniforms, college degrees, unpublished masterpieces and all other—had been removed from the structure and that it is likely to be converted into a museum. The first relic will probably be the battered remains of a misguided and self-hypnotized autocracy.

No less striking in some respects evolution of the famous Brandenbur round which much pageantry ce To-day you can see those once sacre plastered with posters announcing ings of the Independent Socialists, the abdication of the Kaiser the arch was scrupulously reserved fo equipage. A policeman always stoo to keep off the vulgar vehicle. That now wide open and the ice wag the milk cart rattle through with th ease as did the kingly chariot in t gone by.

In connection with the Brand Gate is one impressive piece of iron mediately adjoining it is the ope known as the Pariser Platz. It is on most commanding sites in Berlin. H Kaiser received addresses of welco also greeted his guests with pon splendor. A reformed government told me that so convinced were t mans of an easy triumph in Octobe that the palace authorities had rese the windows in the Platz so that the guests could there review the return victorious armies!

Always a city of statues, two memorials stand out with peculiar these overturning days. One is the bronze figure of Bismarck that h stood in front of the Reichstag B As I looked at it again in the light has happened these past five years dered what the Iron Chancellor wou said to the wrack and ruin of the em reared, and more especially to the imperial coxcomb who brought it Bismarck had no love for William guess is that he would have compres whole opinion in four eloquent wor told you so." He never would have his people into a war against the Instead he would have picked enemies one by one.

Headquarters of Conspira

Within stone's throw of the Bi statue rises the huge wooden fig Hindenburg, reared by a grateful p then in the throes of a temporary re As most people know, it had a usef pose in that it was used as a rallyin to raise war funds. The citizenry nails and then paid for the privilege ing them into the old warrior's bod Allied armies did a better job and them figuratively into his coffin.

The Hindenburg statue has becom a sad spectacle because the pressin of Germany have provided a more p use for the nails, which have all b moved. Hence the immense figur as if it were moth-eaten.

No Berlin experience of mine wa dramatic than my visit to the Office in the Wilhemstrasse. In th gray building the whole devious German world-wide social, econom political penetration was spun. Th banks that stand almost within its were the box offices of Teutonic sa and corruption. All through the wa seen the evidence of its cunning in Switzerland, Holland, Sweden; wherever the German could get h inside the door. Within these wal hatched the conspiracies that Be and Dernberg executed. It was the ing ground of German diplomacy, a meant that its rooms were soundpr its mysteries deep. You had to double password to get in and half a to get out.

A rather strange illustration of t Germany is forgetting her war anim toward the Anglo-Saxon was the pr tion early in October of George B Shaw's play Arms and the Man in I at a little theater in Unter den Lind was given by members of the I literature class in the University of In the audience were a number actors and actresses in the profe company now playing the piece in G at a well-known local theater.

To turn to practical matters, Berl in fact every other city in Germany serious housing problem. During t it was impossible to erect any stru because men and material were mo for the conduct of the conflict. Mea the living needs of the people ha panded. The result of the scarcity of as well as industrial buildings is littl of acute. The value of improved rea soared skyward. In Cologne, Fra

S e even went so far as to set up
l sses and turn out Russian and Rumanian bank notes. They hoarded gold and they broke every law in the calendar of self-respect, decency and ordinary patriotism. They waxed fat while Germany hungered.

You can spot the *Shiebers* because they are about the only persons in Germany who have rubber tires on their automobiles. Rubber is worth its weight in gold. The average taxicab has a tire made of steel springs. When you hear a flock of cars thus equipped on a cobbled street it sounds as if a boiler factory was in operation all round you. Incidentally I might add that it costs not less than one hundred and fifty thousand marks a year to run a car.

How do the *Shiebers* get their rubber tires? One unfailing source of illicit supply—whether for sugar, tires, gasoline, silk stockings, silks, French brandy, cigars, cigarettes or fine perfumes—lies in the elaborate system of smuggling which is one of the crying scandals of Germany. French and Belgian luxuries instead of actual necessities are pouring into the country.

The Reds Bid for Ludendorf

The German profiteer balks at no price. He pays five thousand marks for a bottle of brandy, and he would willingly give up fifty thousand for a French frock for his wife or lady love if it were available. He argues that sooner or later confiscation or revolution will get his pile. Most of them have smuggled nest eggs in actual marks out of Germany into Switzerland, Holland or Sweden, so they say, "Why worry?" This is one reason why the mark is down.

The carnival of corrupt extravagance is readily capitalized by the Bolshevist group in Germany in the same way that it is being capitalized by the radicals in England, France and Italy. Every time a *Shieber* is caught with the goods it only adds fuel to the flame of unrest that is sweeping the country. While the profiteers guzzle they simply hasten the red holiday. Communism may be the result.

The revolutionaries are on the job day and night, despite their overthrow last spring. A member of Ludendorf's staff told me that his late chief had been offered five million marks to join the reds. Prussian officers out of a job and who must earn a livelihood are being daily recruited for the Spartacus forces. While I was in Berlin the brother of one of Germany's air aces went over to the reds at a salary of fifty thousand marks a month.

"Where do the Bolshevists in Germany get their money?" you may ask. They get it in precisely the same way that Lenine, Trotzky & Co. get theirs. They make it, and there is no limit to the output of a well-oiled printing press.

Once the reds let loose in Germany there will be no half-hearted business. It is a well-known fact that German Communist murder centers have been organized in Hamburg, Munich, Berlin, Erfurt, Eisenach and Halle. Assassination has become a fine art. It is an interesting commentary on the results of the war that the German radical, who was formerly rather an amiable person, has developed into an extremist who hesitates at nothing. He has his full mate in madness not only throughout Europe but right here in America.

Throughout Germany I found conservative men getting ready for what they considered an inevitable revolution this winter. I noticed, for example, that one man's house was peculiarly bare of furnishings.

When I inquired the reason he replied: "I believe that we are going to have serious uprisings and that some of the cities are likely to be sacked. When the despoilers come they will at least have something to destroy or carry away. I have deposited all my valuables in a safe place in the country."

We now come to the one feature of Germany in transition of largest general interest. Everybody eats, therefore everybody is interested in the cost of living, whether it is in the land of our late antagonists in the field or elsewhere. Food is the universal leveler of all rank.

Immediately after the signing of the Armistice the food scarcity in Germany was acute. Thanks to America the shortage was relieved. When I arrived last September there was apparently an abundance. In Germany as elsewhere you can get what you want to eat if you are willing to pay for it. I discovered this in both the belligerent and neutral countries during the great war. Unfortunately not everyone is able to buy this way. As a consequence there is considerable suffering among the great mass of the German people on account of the excessive rise in the price of commodities. The increase ranges from one hundred to four hundred per cent.

I must confess that when I looked at the menu cards in unoccupied Germany—which is the only place where you can make an adequate measure of actual conditions—I was amazed at the variety and the price. At Frankfort I had an excellent luncheon of meat, vegetables, salad and dessert, with a bottle of mineral water, for forty-five marks. At the rate of exchange that day it represented only about one dollar and fifty cents in American money. When you compare this with our present prices it is almost worth while to take a trip to Germany and save money.

At Frankfort I touched a real German tragedy. It concerns that well-known and time-honored Teutonic institution, the sausage. The lowly frankfurter got its name from Frankfort, yet when I sought to order some in a restaurant there the German who accompanied me said: "I advise you not to eat any sausages. Most of them are made of horse meat and they are unsanitary."

"Where are all the dogs?" I asked.

Whereupon my companion replied, "The edible ones have gone long ago."

Hence it was a case of no frankfurters in Frankfort! It reminded me of war days when I could get no Swiss cheese in Switzerland and no Edam in Holland.

The decline and fall of the sausage is worth more than a passing mention. For hundreds of years the sausage has figured in German song and story. In Konigsberg, for example, at the New Year the butchers presented the bakers with a giant sausage. Back in the year 1558 this annual if unromantic gift was one hundred and fifty feet long and was carried by forty-eight persons. It has almost become a curiosity.

One of the contemporary German jokes about the 1919 sausage runs like this: A man bought a sausage in a Berlin meat shop. The butcher had no paper, so the customer used a subway ticket as a wrapper. When he got home he found he had lost the sausage. It had slipped through the hole punched in the ticket by the train conductor! This is a sample of the German brand of humor, as applied to the *wienerwurst*. Yet it shows that a one-time national staple has ceased to be a bulwark of Fritz's stomach.

The sausage represents only one phase of the food tragedy. Good beer, once the inspiration of German contentment, is as scarce as is morality among the Bolshevists. The beverage that made Munich famous has practically gone out of the market on account of the scarcity of malt and hops. I drank beer only once in Germany, and that was in a restaurant in Berlin. It was bitter stuff and absolutely unlike the beer that one got before the war.

Hotel Living Costs

In Germany as in any other European country during the war food regulations melt under the magic of money. To illustrate: I took three Americans to a fashionable restaurant in Unter den Linden, where I was told that I could get the best food in the city. The menu was elaborate but contained no beef. When I called the waiter's attention to this fact he leaned over and whispered, "Would you like to have some beef?" I said that such was my desire, and he remarked, "It will be all right, but it must be served to you as chicken."

That dinner, which included hors d'œuvres, some filet of sole, steaks *minute*, pastry for two, Mocha coffee and two bottles of German champagne, cost exactly three hundred and forty marks. At the rate of exchange that day, in American money it represented simply, plus a ten per cent tip, about thirteen dollars. Minus the champagne it would have been only two hundred and sixty marks. When you consider that this was for four people it is astonishingly cheap. At this point you must remember, however, that I had a great advantage over the German in buying because I had exchanged American money for marks at the lowest rate of exchange in German history.

The vagaries of the mark, I might add, which will be dealt with in more detail in the next article, constitute one of the real adventures in Germany to-day. When I was across the Rhine it had ebbed to a valuation of a little more than three cents. Before the war it was worth over twenty-three cents. Convert a hundred-dollar bill into German marks and you feel almost like a millionaire.

Bills for food and lodging whose totals startled the Germans, who can think of the mark only at its prewar value, were as jokes to those who use American and British money. My bill for lodging, breakfast and many incidentals, including laundry for nine days, at the Adlon was approximately five hundred marks. Before the war that would have amounted to one hundred and twenty-five dollars. At the rate of exchange when I paid it it was considerably less than twenty dollars. The collapse of the mark is eloquent evidence of Germany's decline.

When you eat table-d'hôte meals in Berlin, Frankfort, Leipsic, Hamburg or Cologne the overhead cost is not excessive, even from the German point of view. You can get, for example, a satisfactory luncheon consisting of soup, fish, meat and dessert for eighteen marks at either the Adlon Hotel or the Hotel Bristol, the two best-known hostelries in Berlin and at the Atlantic Hotel in Hamburg.

The two rarest things in the German bill of fare to-day are butter and milk. I went for six days without butter for breakfast at the Adlon. On the seventh morning my floor waiter showed up all atremble with excitement. When I asked him the cause he replied, "We have butter this morning."

The great scarcity in milk and butter is due to the shortage of livestock. There was a wholesale slaughter during the war to feed the armies, and under the terms of the Peace Treaty Germany has been compelled to hand over one hundred and forty thousand milch cows to the conquerors. The whole milk supply, as I have already intimated, is reduced about three-quarters. What cows remain are improperly nourished, on account of the absence of oil cakes.

Atrocities of Peace

One of the real atrocities of peace in Germany lurks in the coffeepot. Ask for plain coffee in a German restaurant and you are served with a brown mixture that tastes like a cross between gasoline and bilge water. In order to get something that has the faintest semblance to coffee you must demand Mocha, and even then you get a denatured and highly sterilized product.

Do not get the idea from this swift glimpse into the menus of expensive hotels that my experience is the experience of the great mass of the German people. The hotels and restaurants always have first choice of everything. Go into the German households and there you find a stinted diet and a flat pocketbook, because the price of foods in the shops is little short of appalling. A pound of ham costs nine and a half marks, when it is obtainable; a pound of bacon, five marks; a pound of coffee, fourteen marks; while cocoa sells for seventeen marks a pound.

Fuel goes food one better, or, I should say, one worse. The price of coal has increased in some localities twentyfold. At Kiel manufacturers are paying seven hundred marks a ton for coal that early in 1914 brought twenty marks a ton. This is one reason why industry is paralyzed, why homes are cold, and why, with this lack of one of the essentials of life, the German winter will be one of hardship and possibly worse. The German coal output on the day I left was less than forty per cent of the normal. This tells the whole story.

No less prohibitive are the prices of other necessities. A pair of shoes costs from one hundred and seventy-five to two hundred and fifty marks. An ordinary ready-made shirt that cost ten marks in 1914 now brings eighty marks. Though German wages have gone up they have not risen in proportion to prices, and a mark to the German still represents the prewar value.

Nor must we overlook a humble commodity like soap, which during the war was literally as rare as a jewel and almost as costly. It is still scarce and expensive. In 1917 and 1918 so keen was the demand for soap that men risked their lives and reputations to smuggle a few cakes across the frontier. More than one Allied prisoner of war escaped by bribing his jailers with soap. Very little was manufactured in Germany until recently, on account of the shortage of fats.

I cannot leave this whole problem of food without dealing with a picturesque condition not without its lesson for America. When you receive your bill in a restaurant in Berlin, Bremen, Hamburg or Munich you

will find that ten per cent has been added to the price of what you have consumed or bought. This is the so-called *Trinkgeld*, which is the German word for tip. Since the war the German cooks, waiters and other restaurant servants have formed such an effective organization that they have dictated this compulsory fee. Not only is ten per cent added to your bill in the restaurant but twenty-five per cent is also added to your room account at the hotel, which is supposed to cover the gratuities for valet and chambermaid.

This automatic tipping would be an admirable thing if it ended there, but unfortunately the patron who merely pays his bill, automatic fee included, and leaves the restaurant need not expect gilt-edged service when he returns. According to the rules of the union no waiter or hotel employee has the right to accept a casual or extra fee, but German servants, like all others, are human, and they expect a small gift in addition to the prescribed amount on the bill.

This extra fee, which is added to the bill, is paid to the employees in the shape of an increased wage, and does not go, as the average man would think, into a common pool shared by the help.

The German servant—and by servant I mean all employees of hotels and restaurants—is now the autocrat instead of the meek subservient cog in the work machine that he was before the war. If a waiter, for example, makes himself distasteful or becomes unpopular among his associates they have the right under the new union agreement to demand his dismissal by the employer. No matter how faithful or efficient or popular he may be with the patrons, once the union bans him he must go.

In discussing this situation with me the manager of one of the largest hotels in Berlin said: "The conduct of our establishment, so far as any control of the employees is concerned, has been taken entirely out of our hands. From scullery maid up to our head waiters we must pay the wages prescribed by the union scale and abide by every decision made by our help. A few weeks ago the waiters' committee informed me that one of my oldest waiters must go. When I remonstrated I was told that the whole staff would strike unless I submitted."

The Horrors of Tobacco Famine

Here you get a glimpse of one kind of democratization which is spreading throughout Germany. As never before the worker has a voice in the conduct of all activity that works for a wage. In the hotel organizations, for example, there is a general advisory committee of employees, which consists of a waiter, a porter, a chambermaid and the cook. This body really rules the establishment. In other words, the autocrat has left the breakfast table and sits enthroned in the kitchen.

Closely allied to commodity costs is another really unique situation. I refer to the scarcity of cigars and cigarettes. Germany is suffering from a genuine smoke famine. So keen is the hunger for cigarettes that you can bribe a baron with a package of American army cigarettes. It is no longer necessary to use money to buy your way into the presence of the elect. Hand the watchdog at the door a cigarette and he is your slave for life. The brother of a former member of the German cabinet and himself a financier of high rank asked me if I could sell him two packages of cigarettes. When I made him a present of a packet he said, almost with tears in his eyes: "Command me for any service." A package of cheap British cigarettes, known in the army in France as the "Tommy's delight" and which sells in England for ten cents, brings four marks in Germany. This is typical of all cigarette prices.

Offer a bell boy in a Berlin hotel a piece of money for his service and he will answer, "I would rather have a cigarette." It is hazardous to leave your boots outside your door or your wardrobe unlocked. This invites ordinary theft. The knowledge that you have cigarettes concealed in your room, however, almost marks you for murder.

It is no unusual sight to see a long line of men and women outside a Berlin cigar store waiting for a chance to buy the ration of cigarettes. Like New York and other American cities, Berlin has various chains of cigar stores. One of these groups specializes in cheap goods. Stocks are so low that cigarettes are sold only between nine and ten in the morning. Each customer is allowed only ten cigarettes. Hence the long queues, which begin to form as early as seven o'clock. This regulation is not confined to the cheap shops. On the door of the establishment de luxe of the most expensive tobacconist in Unter den Linden this sign is displayed: "This shop is open only between nine and twelve and three and four o'clock. Cigars and cigarettes are sold only on Saturday between nine and twelve."

Though cigarettes in considerable quantities are made in Germany—the center of the industry is Dresden, where it is controlled by Greeks—the average German prefers a foreign cigarette. Such American and British goods as find their way into the country bring six to eight times the price that they fetch in the United States.

This matter of cigarettes discloses another startling change caused by the war. Before 1914 Germany was essentially a cigar and pipe smoking country. Whenever you saw a portrait of a contented Teuton he was pulling away at a long meerschaum. The war, however, set the German, just as it set the Briton and the Frenchman, to smoking cigarettes. This was natural. Millions of men went into the army. During the long waits in the trenches or behind the lines a short quick smoke became the thing. Men smoked cigarettes who had never touched them before, and they acquired the habit. Last year thirty billion cigarettes were sold in Germany. It is almost double the former consumption.

Good cigars are scarce and costly. Before the war the well-to-do German liked an imported weed, though he did smoke large quantities of Dutch and native cigars. Some cigar prices are almost ridiculous. If you seek a certain premier after-dinner cigar made in Cuba, which sells in the United States for sixty cents, you may possibly be able to get it at a few exclusive restaurants for seventy-five marks. The prewar price in Berlin was four marks.

In one Berlin shop I saw a box of American five-centers that were part of a large consignment of excess A. E. F. Quartermasters' stores sold to the Germans. It still had the American army label on it, which included the army retail price of one dollar for the whole twenty-five. The box was selling in Berlin for exactly fifty marks.

Of course there is still a tremendous consumption of German-made cigars. Most of them come from Hamburg. The native cigar that sold for half a mark or a mark in 1914 now brings six to ten marks, according to size. In connection with these German cigars I can relate rather an interesting incident. I took a German financier to lunch at a well-known restaurant in Berlin. When the coffee was served I handed him an imported cigar. It was out of a box that I had bought in the American canteen at Coblenz.

We talked so long that our cigars were exhausted and I asked the waiter to bring a box of the best German cigars he had. To my astonishment the box he brought was labeled "Graf Bernstorff." On the cover was a picture of Bernstorff, flanked by the German Embassy at Washington on one side and the White House on the other. At the bottom was the reproduction of an American flag. The late German Ambassador to the United States was at least not without honor in his own country because he had had a cigar named for him.

Maximilian Harden

Up to this time I have dealt with Germans in the abstract. Now for the final phase I shall present a concrete personality in Maximilian Harden, the militant journalist whose denunciations of William Hohenzollern landed him in prison on more than one occasion back in the days when lese majesty was full brother to arson or murder in Germany. I felt that any study of the nation in process of evolution would be incomplete without a talk with the most interesting of all contemporary Teutonic figures.

Harden is the editor of Die Zukunft—The Future—a pugnacious weekly which was suppressed a number of times during the war. The son of a Berlin merchant, he became an actor after his graduation from college, and then turned to writing. There are many people in Germany who think that Harden has never ceased to be an actor. In any event, once he dipped his pen into ink he began to write strong stuff. Harden was among the first to get, as we would say in America, the right dope on the former Kaiser. He arraigned him as a weak self-willed near-degenerate, and was immediately put behind the bars for it.

It was Harden who exposed the nefarious ring round the Kaiser, back in the nineties, which led to a whole moral reform at the German court. Largely because of his criticism of the Hohenzollerns there developed a close friendship between the editor and Bismarck. They agreed on one thing, which was that the deposed Emperor was a royal false alarm.

On an afternoon late in September I motored out to the Grunewald, loveliest of all the Berlin suburbs, to have a look at the man who had so long and so consistently defied the imperial lightning. He lives in a neat flower-embowered villa surrounded by trees. In the library, whose walls were lined with books from floor to ceiling, I got my first glimpse of Harden. He is slight and wiry of figure and nervous of movement. His face looks like a cross between an actor and a scholar. His broad and his eyes are deep and He speaks in a low, gentle musical voice.

Though Harden understands English our conversation was entirely in German. With hi many other Germans I demon efficacy of one of the cardinal se in big interviewing, namely, tha always more at ease and im readily when you talk to him i tongue.

I found Harden eager to learn possible about the state of the mind. He not only has a trem miration for President Wilson b himself unreservedly in favor of Nations. He designated it as "a for good, part of the hope of the

Unlike the rest of his countrym is of the opinion that the Versa is a just visitation on Germany the only human being I met with fines of that former empire who regret over the misdeeds of th Army and Navy. He believes th criminals who outraged every cency should be brought to boo list of culprits includes the capt dustry "guilty of attempted des competing wealth."

"How about the trial of the I asked Harden.

"To try the Kaiser now," was "would be a mistake, because simply make a martyr of a rea He feels, however, that "the Gern should not be held responsible for of the military masters who de fooled them."

"Has real democracy come many?" was my next query.

Harden pondered a moment answered, "Not yet, but it is co the present time there are many who want some of the old order some of the new. They cannot cake and eat it too. I believe, that real democracy is bound to

"What has Germany learned war?" I asked.

"That she must think of others of herself," was the swift retort.

When we spoke about the fu tions between the United States many Harden said, "Though hatred must burn itself out I am that in time a new and real relatio develop between the two countr merly Germany ruthlessly culti United States as a weapon aga land. Now she will undertake to America for her own sake."

To summarize the situation in is to say this: The end of the war nation still possessed of a tremer tential strength. A year of ur indecision finds this strength ur but trembling in the balance. radical political upheaval it may into a serious menace to rehabilit permanent peace. Aided but ke drastic stewardship to prevent power, it can be converted into a tive force for world stabilization.

Editor's Note—This is the first of articles by Mr. Marcosson dealing with in Germany. The next will be devot industrial situation.

LET THE SELLER BEWARE!

(Continued from Page 10)

"So I asked every agent one question—'Have you a list of your trucks that have run more than 100,000 miles?'"

"What did they say?"

The purchasing agent laughed.

"A few of them tried to talk me out of an answer. The big majority of them just walked out and never came back. Of the forty or more who had been trying to sell me eight came through with an answer. Four answered that they had no such list. The other four had a roster of trucks that met the test—the Grand people gave me the names and addresses of more than ninety American firms or individuals owning trucks that had run more than 100,000 miles. Some had gone as high as 300,000."

"Um-m-m! Where did the Mileage get off in this test of yours?"

"To tell you the truth, the Mileage agent was one of those that dropped out without another word."

"Isn't that because they've only been making trucks a few years?"

"Probably. But that doesn't interest us, does it? What we want is a proved truck. My idea is to let the other fellow experiment."

"I don't think it would be an experiment with the Mileage truck," the president said with some asperity. "To be blunt, I'd like to try at least two Mileage trucks."

"Is that an order, Mr. Baker?"

"N-no," the president said hesitatingly. He was unaccustomed to this sort of cheek from subordinates and frankly disliked it. On the other hand he had a good deal of respect for his purchasing agent. At last he added, "No, I won't give you any orders. But I'm stating my preferences to you. We'll let it go at that."

The purchasing agent rose.

"You can depend on my using the best judgment I have, Mr. Baker," he said. "Remember that I'm buying the trucks for the company—not for myself. If we had an engineering expert in my department ——"

"An engineering expert?" the president interrupted testily. "I suppose that's the next thing we'll have to buy you, eh? But what for?"

"Yes, you'll have to come to that," Wiley said, smiling. "And when you have one I'll pass up tests and experiments to him and be able to get you better materials as well as better prices. But as long as we haven't an engineer I'll have to go ahead on judgment. I'll let you know what I find out."

With this information planted to be cultivated later the purchasing agent left. He was in a disagreeable position. He liked the president and the company. But he had been looking for something like this to develop and he rather welcomed the chance to have the thing over with one way or the other. What worried him particularly now was his own mental balance. He knew from experience and the teaching of his former chief, old John Greer of Sharp Steel, that he had not only to resist the appeal the president's wishes made to hi truck matter but he had also to r unconscious tendency in himself being antagonized and doing the an injustice. It would be easy t fluenced toward buying the Mil the fact that the president urg strongly; it would be even easier backward and adopt an unfriendly that had nothing to do with the n the question. As he had ten days i to make up his mind he took on lecture course on mechanics, rea books omnivorously and almost ru eyes pursuing the academics of truck operation. But everything he strengthened his early preference Grand and he decided to order four

Just before the order was to be gi president sent for him and introd salesman.

"This is Mr. Knibbs of the Motor Car Company, Mr. Wiley,"

(Continued on Page 57)

e een talking to him about his trucks
h has me more interested than ever."
he purchasing agent looked the presi-
i the eye.
A you buying the trucks then?" he
d
N that's why I called you in. I
g you'd like to get into touch with
K ibbs."
A right, sir. I'll talk to Knibbs."
n he started toward his own office,
r ng to the salesman. The president
n ed.
Y I don't need to go, Wiley," he said.
a a little time to spare and I'd like to
r is truck matter threshed out right
.
il turned round abruptly.
T n let me make the first talk, Mr.
e" he said quietly. "I was going to
K ibbs into my office and tell him that
i 't want his truck. Now I'll have to
h here."
he president bristled.
W at's that?"
I decided that the company can't
d o buy Mileage trucks and I've made
n mind on an order to another firm."
W at kind are you going to buy?" the
i at snapped.
I not ready to tell Mr. Knibbs."
y miled.
G ahead!" the agent said stiffly.
n mind me!"
B I do mind you, Mr. Knibbs. Sup-
p that I were negotiating with you
a other salesman came to me for in-
f on—would you like me to name you
y r line to him? Honestly, now?"
W ll, no," the agent replied after a
n t's hesitation. "I suppose that if
d he would immediately focus on
m nts that would show you where his
k eat mine. And the debate might
l n a lot of information I'd rather he
h ave."
E ctly! I make it a rule, Mr. Baker,"
p rchasing agent said, turning again to
p sident, "never to discuss one agent
h s commodities or his prices or any-
g bout him with a competitor. The
s ow that is my rule and they all like
I gives everybody an even break and
a s complications."
It a good rule, Mr. Wiley," the truck
m n interjected. "And I believe I'm
h way here. If you decide to reopen
t ck question, let me know."
n he walked out.
I ntime the president had been fidget-
i his chair. When the visitor was gone
u ed rather snappishly to Wiley.
Y u'd better clear up this truck ques-
r w," he said rather testily.
I ready, Mr. Baker. I don't find a
l eature about the Mileage to recom-
d t to us—there's the long and short
. 've decided to buy four Grands—in
. e requisition is written and lying on
d k now."
T n you'd better tear it up," the presi-
t id. He was headstrong and a trifle
p y and this flat opposition galled him.
h decided to have you buy four Mile-
t cks, but I will compromise with you
l you take two of each."
N , you won't, Mr. Baker," the pur-
s ng agent said. "You'll accept my
r tion. I will go back and dictate it
n ."
h president stared.
L you mean that, Wiley?" he de-
m d.
I mean just that, Mr. Baker, and I'll
y u why. Don't think that my trouble
w nded vanity or hurt pride, because
a n't any of either commodity in my
c , so far as I know. I think perhaps
' overlooked the importance of some-
t g said to you the first day I was here.
w hen that I wanted full authority in my
d partment. Remember that?"
Y s, perfectly. But you have practi-
c ll authority."
P ctically isn't enough, sir. Let me
s ou what would happen if you or any
a ment head could tell me what to buy
t hat not to buy. Understand, I'm
a open to suggestion and advice. I
d 't retend to know it all. About a great
m things the department heads, or
n me of your employees, can give me
d and spades. But when it comes to
f al decision I'm the lad who has to
k . If you can take details of my work
o my hands, the treasurer can, or the
p or the factory superintendents.
n you see? To-day you are wanting
b trucks—they would want to buy
pencils or account books or tires or cans or machines or something. And pretty soon we would be back where we were before I came—without a purchasing agent except in name. And that's what I meant when I first came here and said that I could be of service to the company if I was given authority and backing."

"But I am merely insisting that we have at least two Mileage trucks in our fleet," the president interjected stubbornly.

"I am certain that you would regret it if we bought them," Wiley said instantly. "And if we could both take the time I could prove it to you. I've been studying nothing but trucks for ten days and I've learned quite a little. But even if I thought there was a chance that the Mileage might prove a good investment for us there is a second and very strong reason why I would resign before accepting dictation from you or any official on such a matter."

"I suppose I might as well have it, young man," the president sighed.

"It is this: If the salesmen found out through one isolated instance that the officials of this company could use their influence on me in buying I wouldn't be worth a clerk's salary to you in a month."

The president leaned forward.

"What do you mean by that?"

"I mean that my principal value lies in my buying advantageously and economically over a long period of time, and that ability rests on my complete independence of all kinds of influences. If you are going to pick out our motor trucks you will be the man the motor truck salesmen will set out to sell. And not only that, but the word will go round and tire men, accessory agents, body builders and others will be trying to get to you. That opens the door. And the same thing applies to every department of the company."

"But I wouldn't let them see me."

"You let Knibbs see you."

"Y-yes, but that was because I was interested in Mileage trucks."

"Quite so—this time. But you would have to convince them all of the fact that this was an exceptional case. And as I said before, you've opened the door now. That, however, is not the principal point. The important thing is that salesmen would lose confidence in me at once, and confidence in me is what I have been trying to build up ever since I've been with you. If they thought I was a figurehead they would treat me as a figurehead—and they would be right." He broke off and studied the president for a moment. "Shall I go and write that resignation now, or do you want to hear something about my methods?"

The president smiled.

"We'll let the resignation go for the present. I'd like to have this thing out."

"So should I." The purchasing agent sat down. "I'm not going into the purchasing process very deeply," he said, "but I want you to understand how important it is to you—not to me—to give me free rein. To begin with, there is no department of your business where the personal equation enters so largely as it does into my work. Under the method John Greer taught me every salesman who hopes to do business with this company thinks of only one man here. That man is the purchasing agent. They have to sell that man and they have to do it on terms and with such treatment of him as to keep him sold. The ones who don't operate that way don't sell anything to us and, what's more, they know there is no use in trying.

"I'm in the market all right, provided they've got what we use, that it comes up to standard quality, at a fair price, promptly and just as it is represented to me. Obviously I can't go out and buy—the salesmen have to come to me. Those salesmen have to interest me and convince me. They know it. If I am a crook they find it out in a week. If I'm bull-headed and ignorant they have to think up tricks for getting round me. If they can flatter me into buying they will do it. If they can frighten me or get me panicky they invent wild tales and come in on the run. In other words, they play me like a fish. If they don't sell me they don't sell the company. So I'm the man the salesmen study.

"That puts a big responsibility on me, as you can see. Perhaps you haven't thought of that before. I know that comparatively few business executives realize the extent to which their buyers must be trusted to get the best results. A good many of them would faint if they knew what was going on in their purchasing departments. But every little while there comes a show-down like this one and then the executive has to learn and to decide for himself which system he is going to follow. The question is: Are you going to have a clerk at the head of my department who is a cog in your machine and nothing more, or are you going to have a real department chief who ranks with the other executives? It isn't a question of honor and glory—not a bit of it. It's a question of cold dollars and cents."

"I think I see what you are driving at now—the matter of initiative."

"Absolutely! The matter of making a job that is worth holding and then getting the right man to hold it. Maybe I'm not the man in this case. But whoever he is, he must have authority to match his responsibility and—and his load, we'll call it. I have to be keen, up on the markets, familiar with conditions in a thousand lines of trade, quick on decisions, watchful, easy to get along with and hard to fool.

"But there is another thing I have to be, and that is honest. If I were crooked I could make ten thousand dollars a month in graft right here under your nose. But how long would my graft last? About one month! Because the moment I began to accept bribes or presents or favors from salesmen this company would begin paying for those favors in hard cash and in poor goods. In the second month, moreover, it would begin to pay in increased prices, because the salesman who bribes a buyer expects to get his bribe back in the form of graft for himself or his firm—with interest. I've been at this work ten years now and the only three crooked purchasing agents I have known in that time are now down and out—ruined. It's worth thinking about—from your point of view."

"That's true," the president agreed. "I can see that. Go on with the lecture."

Wiley smiled.

"I don't mean to make it sound like that," he said. "But I believe it will pay to thresh the whole thing out and give you my angle on it.

"I've said that salesmen, when they think of selling anything to this company, think only of selling it to me. That means that there is an immediate and fairly close connection between the salesmen and myself. Those fellows are human. In the past buying was done in a very slipshod fashion. The successful salesman was the good fellow and mixer, the shrewd and clever man, the bright and compelling talker—or the crook. The sales manager's idea of a good salesman was one who could take a stock of shopworn or inferior goods or a line in which the house was heavy and clean it all out by his slick methods.

"Now that is all being changed—by purchasing agents—by the buyers. It is more true every day that honesty and fair dealing are the best policies in business. The men I do the bulk of my buying from are plain, straightforward, quiet fellows who know they can trust me to keep my word with them, who know what I want in the way of quality and who don't waste any time offering me poor goods or making me high prices. On the other hand, they are the kind of fellows I know I can trust. Mutually we are on this basis—truth telling, fair prices, prompt deliveries and ready accommodation on their side; fair treatment, an even break, prompt payment and friendly interest and appreciation on mine.

"My experience with Sharp Steel taught me a lot about the salesmen one has to avoid. When I came to you I met most of my old acquaintances and a good many new ones. In the last few months I have found only four men I couldn't trust. They don't call any more. But not a single salesman or agent has quit me yet because he couldn't trust me. That's the extent of the human equation in buying. Am I talking too much?"

The president shook his head.

"Go on," he said; "I'm listening."

"I'm about through. I had to lay a foundation, as the lawyers say. If you are willing to concede the correctness of my system you will have to go a step farther and agree that the whole thing falls to the ground if the salesman has reason to believe that I am only a straw man. Once or twice department heads here have tried to order goods or induce me to, but I've put my foot down. They don't try it twice. And now the salesmen never think of trying any other method of selling than the direct one of walking into my office and stating their proposition—showing their goods.

"Can't you see, Mr. Baker, that I must do the buying or else get out? If Knibbs here thought that you were buying trucks instead of me he would not only come to you for business but he would pass the word outside that I was only a straw buyer. If I told Wentworth of the Sellit Paper and Box Company that I would pay only two-fifty a thousand for cartons, his first hunch would be to appeal to you. If he couldn't get you he might try Meekins or Short or some of those fellows in the producing department. And my grip would slip. Now I can say to Wentworth, 'I'll pay two-fifty a thousand for butter cartons and not one penny more. Take it or leave it.' And the chances are that he will take it. But if he thinks a final answer can be got somewhere else he will hedge a while and then slip out to see how best to build a shoofly track round me.

"The whole thing comes down to this—more than anywhere else in your business you can't split authority in buying."

The president leaned back in his swivel-chair.

"I begin to see, Wiley," he said frankly. "And I think we'll buy four Grand trucks. Does that satisfy you?"

Wiley flushed.

"Don't misunderstand me, Mr. Baker," he said. "It isn't for the sake of satisfying me that I want you to pull out on the truck matter. I haven't even touched on the relative merits of the two ——"

The president broke into a laugh.

"No, you haven't," he cried, "and you're not going to! You're too fast a talker for me. Run along and operate your own department in your own way. And when I want your resignation I'll let you know. Good afternoon—and good luck to you!"

So the truck incident was closed—almost. Parenthetically it may be remarked that about a year later the president found on his desk a clipping reporting that the Mileage Motor Car Company had suspended its truck line because they had not been successful in bringing trucks up to the standards they had set and maintained for their passenger vehicles. President Baker smiled a little and sent for the transportation manager.

"Doane," he said, "we bought four Grand trucks about a year ago. I've been wondering lately how they have stood up for you."

The hard-boiled manager grinned.

"I'd hate to have you think I was getting paid for boosting," he said, "but the truth is that those Grands are the best investment we ever made. Only one of the four has ever been in the shop and that one was hit by another car—and dented. All four of them have run round fifteen thousand miles and they look to me to be good for ten years' more service."

"Thanks, Doane," the president said. "That's what I wanted to know."

President Baker picked up the clipping and wrote on the margin, "What's the matter—someone monkeying with your authority again?—J. B. B."

Then he sent it to the purchasing agent's desk. He thought he knew where the clipping had come from—and he was right.

In the meantime, however, many things had happened to increase the president's respect for his buyer. Shortly after the latter's threat to resign he walked into the office of the president with an anxious face and said abruptly, "Chief, do you know that there is a big labor strike coming that may tie us up tight ten days after it starts?"

The president laughed.

"That's a little off your beat, isn't it, Wiley?" he inquired good-naturedly. "What sort of strike are you prophesying?"

"Railroads. It may blow over, but it looks ominous to me now."

"You are making a mountain of trouble out of the molehill of labor agitation, son. If we believed everything we heard ——"

'No, this time it's the real thing."

"What makes you think so?"

"I get it through the purchasing agents' association. I've just heard this morning that the New Iron Works have ordered and stored coke and pig iron enough to run them for three months."

"Well?"

"Who owns the New plants, chief?"

"The Jacksons, I suppose."

"Backed by the railroad. You've guessed that, haven't you?"

"Um-m-m! I see! You think they have been forewarned?"

"I'm sure of it. And I want to stretch my authority a little and buy for a year ahead if necessary."

"A year is a long time, Wiley."

"Not so long, if we are running at full capacity, as a month would be if we were shut down."

"There's something in that."

"And if we were cut off from our raw-material supplies, even for a few days, we should be hamstrung. Another thing that I've figured is that most prices are going to go up—at least they are not going to go down. You know the state of the labor market. Wages are up to stay for the present. Everything in the world of business points to high levels. And so I figure that we couldn't lose much by buying, even if the transportation strike doesn't materialize."

"I'll leave it to you, Wiley," the president said. "But I think you are mistaken about the tie-up."

The purchasing agent went out and took off his coat. In ten minutes his office was humming like a top. Three weeks later a local railroad yard strike began suddenly and spread soon over the whole state. Manufacturers who had been caught napping went into the air. Purchasing agents everywhere began running for cover. Salesmen, jobbers, importers and producers of raw materials had to lock themselves in their offices to keep importunate buyers from mobbing them. The big manufacturing centers of the city were practically paralyzed.

But Purchasing Agent Wiley sat back and smiled at their woe. His own company was running to capacity. On the second day of the strike President Baker returned from a week's inspection trip by auto and the first man he sought was Wiley.

"Well, you were right!" he boomed. "But that doesn't make me feel much better. It was all right to order ahead, but how about deliveries? How long can you keep us going with the supplies on hand?"

Wiley leaned back in his chair.

"At capacity you can run for three months," he said calmly. "At our normal rate of production you could keep going without a pound of essential supplies coming in for five months."

"But, good Lord, man," the president cried, "where are you going to get the raw stuff? Where are our cartons and boxes and containers coming from—not to mention other supplies? How about chemicals? And tins? And the thing that worries me most is fuel oil!"

Wiley still smiled.

"You remember my asking you for more authority a little while back?"

"Of course I do! But that was for long-time contracts—it doesn't help deliveries on those contracts."

"I stretched my authority a little. Maybe I cheated, but I took the chance." He pulled four large photographs from a drawer and laid them out. "Do you recognize those buildings?"

"Yes—the Stone & Garrett warehouses and the one at Mission Street and the Delta. What about 'em?"

"We have a year's lease on these warehouses. For almost a month I've been cramming stuff into them by the carload. That's where our working supplies will come from as long as the strike lasts."

The president dropped into a chair and wiped his forehead.

"Well, son, you do beat time!" he exclaimed admiringly. "But what would you have done if there had been no strike? You would have been stocked up with ——"

"On five minor lines—yes—I would have been stung. But compared with the whole list my losses would have been as a bag of peanuts to a shipload of wheat. Everything I have in those warehouses except the five small lines I mentioned has gone up a few notches since I bought and most everything is still climbing. I was figuring just the other day that I could sell any time now on a rising market and net $25,000 on the deal."

The president shook his head mournfully.

"You youngsters are too fast for me," he complained—"altogether too fast! There's going to be a new president some day soon—the directors will pick up one of you youngsters and I'll be shelved! No, you're too speedy for my time!"

As it turned out the strike was broken in a few days and Wiley did sell a part of his hoarded supplies. But after a conference with the president it was decided to hold most of the materials as a sort of industrial insurance against strikes, tie-ups, disaster and delayed deliveries, and from that time forward there was always a sufficient amount of material on hand to prevent a serious impediment in production in the factory. And the important thing was that not a moment was lost by the company and all its many employees went steadily on with their work at high wages when thousands of others were laid off for a few days or weeks before their employers could readjust themselves to the situation. It was after that experience that President Baker began to refer to the purchasing agent's office as "the heart of the plant." And that, as he always insisted, was exactly what it was.

"Wiley keeps us going—operation, manufacture, raw materials, finished product, sales force and even the executive offices," he would say. "And when the rest of us are marking time or are held up he keeps right on storing up energy for our next spurt. His little office is the heart of the business and when he wants anything I'm going to see that he gets it."

One day at his club a big paper jobber crossed to him, holding out a hand.

"I want to congratulate you on shaking us down last week, Baker," he said laughingly.

"How was that?" the president asked guardedly.

"You don't mean to say you haven't heard of what that smart young buyer of yours did to us? It's the talk of Paper Row."

"I'm afraid I've missed something," Baker said.

"Is your house in the habit of buying a hundred thousand dollars' worth of paper without a conference on it?" the jobber asked incredulously.

"We're in the habit of buying about a million dollars' worth of goods a quarter without a conference on anything. Wiley buys for us—*carte blanche*. So you will have to tell me the story."

The jobber sat down.

"I didn't know that any purchasing agent in this city had that sort of authority except John Greer of Sharp Steel. Oh, I remember—your man Wiley came from Sharp, didn't he? Well, that explains that. About the paper—the story is that the six big paper men of this territory had a meeting a while back and talked over prices. We didn't fix them, you understand—just had a sort of gentlemen's agreement about throat cutting."

"I understand," Baker said dryly.

"Well, I don't suppose you believe me, but we'll let that go. At any rate we heard that your man Wiley wanted a big lot of paper. I sent a salesman over to see him and told him to quote our best price as round $115,000. Of course the other five dealers got in with their bids in a hurry. But nothing happened.

"A week went by and I sent our man up again. He asked Wiley what had been done about the paper order and Wiley just looked him in the eye and said, 'I can't tell you much, Summers. But I will say this—your firm is too high!'

"Summers tried to get him to tell him more, but Wiley closed up. The salesman came back and I began to scratch gravel. I concluded that you had got a better bid from some of the other fellows and that made me sore. I figured the job all over again and finally sent Summers back to quote your buyer a price of $100,000 for the order. Wiley shook his head. 'That's still too high, Summers,' he said. Summers asked him if that meant that someone was underbidding us and Wiley refused to talk. To make a long story short, I finally decided that one of our competitors was knifing us and I shaved clear to the bone and offered Wiley the paper for $96,000.

"The deal was closed last week with the People's Paper Mills—at a price round $92,000. Afterward I happened to meet some of the other men in the Big Six. We were all suspicious of each other, but we got to talking things over and presently we found that we had been outbluffed by the best poker player in the city—your man Wiley."

President Baker smiled.

"How do you mean, Nixon?" he asked.

"I mean that Wiley had forced us into showing our hands just by standing pat. We discovered that he had taken our bids as fast as they came in and stuffed them into a drawer. He had kept his mouth shut and waited. Pretty soon our salesmen began to drop in on him one after another, and he told each of them exactly what he had told my man, Summers—'You're too high.' And that's all he would say. Of course each of us thought that the others were cutting prices and each of us edged down a shade. When he had us at bedrock he took the lowest offer. And then he laughed at us—laughed in our faces. I sent our salesman over to ask what the game was and he came back with this message: 'Tell Nixon that I've been suspecting for a year that you jobbers were in a combine and now I know it. Give the Big Six my love!'"

President Baker laughed heartily.

"Busted you wide open!" he exclaimed. "I'll bet you haven't spoken to one another since! And it serves you right! You were busted, weren't you?"

The other man nodded gloomily.

"Yes," he acknowledged. "The combination, or gentlemen's agreement, or whatever you want to call it, is no more. It's defunct, deceased, dead and buried! Each of those other fellows is sure I'm a crook and I know all of them are—and so we've just quit playing in the same back yard. But that buyer of yours must be a wonder. If you ever get through with him, Baker, I wish you'd let me know. I'd like to have him on my payroll."

Later President Baker made an occasion to speak to Wiley about the paper deal. Wiley laughed.

"Oh, I knew they were jockeying with prices somewhere," he said. "The raw-material market, as I get it from trade journals and other sources, has been fluctuating a good deal; but the prices these road agents were asking were too uniform. That made me suspicious and I laid for them. I'm glad they smashed."

The president agreed.

"But won't this incident make hard feelings among the paper salesmen?" he asked. "Will they ever forgive you?"

"Why not?" Wiley demanded promptly. "I'm buying paper and they are trying to sell it. I didn't deceive them, even by implication. The trouble with them was that they were in a crooked deal and their consciences hurt and they suspected one another. As a matter of fact, I've made two stanch friends—the salesman I finally bought from and who had never had such a big order in his life before, and Mr. Nixon's salesman, Summers, because Summers hated the combination and was being kept out of some of his best business by it. Don't worry about paper, Mr. Baker—we've got them eating out of our hands now!"

"You talked to me once about your buying methods, Wiley," the president said. "Tell me what your experience has been lately. I'm interested."

Wiley thought a minute.

"There has been some change in the last year or two," he said then. "Salesmen are getting easier to handle—more reasonable and businesslike and less shrewd and smart. They know me and my ways now. They know my three hard-and-fast rules."

"What are those?"

"One is—give me your best price first. Only in exceptional cases, like that of the paper deal, will I buy from a man who tries me out with a high price and then allows himself to be beaten down."

"I see. But don't they take advantage of that rule to hold you up?"

"Not more than once. I've been trimmed once or twice, but the men who did the trimming don't come back for more business. And one sale doesn't make a salesman."

"There's something in that. Go on."

"Rule two—if you sell me poor goods or fool me on price or quantity or deliveries don't come back into the office."

"That's a good one—if they respect it."

"They do. I'll tell you a story about that in a minute—about soda ash. My third rule is—if you want me for a steady customer convince me that you are a dependable source of supply."

"What does that mean—exactly?"

"This: Every purchasing agent has an ideal—to find sources of supply on which he can depend year in and year out, unfailingly and without interruption or trouble. By that I do not mean only a source of supply that gives us good goods at fair prices; I mean a source that has the organization and machinery and reputation and a tradition that will keep it being dependable continuously. Of course I'm only talking about an ideal condition, because the biggest and strongest concern in the world will have its dependability interrupted once in a while by strikes, transportation troubles, a shortage of raw materials, or something that no human agency can foresee or prevent. Nevertheless there are a large number of big concerns—and an increasingly large number of smaller ones—that depend for their success and standing on keeping the supply coming steadily. That's the first thing the purchasing a asks about.

"There is another factor that enters dependability of supply source. Of c there is fair dealing and good faith—the thing that is often overlooked is in gent business. For instance, there certain national corporation handling g that we need. On one item—somet like fifty thousand dollars' worth a yea us—I have never been able to buy a p from them. That is because what the offering me is very close to what I wa stead of exactly what I want. I've lo the matter up and talked it over wit gineers and they say that the big pany could make a slight change in mixture and meet my specifications out a dollar's expense. Do they d They do not! They have been trying since I've been here to sell me, not by what I want them to do but by arguin out of my position. They have had experts and smooth salesmen up for that purpose than I could give tim They are just determined to convinc that I don't know what I want. That do go. I happen to know what I want, why, and I've demonstrated that I ca the commodity and that it does all mand of it. And yet my friends of th company are still arguing. So far the failed to get anywhere and they are g to continue to fail as long as I keep health."

"But you buy other goods from the

"No, that's the point. In many they have what I want. But I don't sider them a dependable source of su for anything—because they are an telligent source. Consequently I am p diced against all their goods."

The president grunted. "What w you were going to tell about the sales who violated your second rule?"

"Oh—if you double-cross me don't back for more business? That was Fr with his soda ash. Last July I boug small order of soda ash from French Awon Chemical Company. Two mo later French came in and urged me to on a large contract. He said the price going up and that I had better get in I could. The price he named was cents a pound on five hundred barrels.

"I objected that I didn't want that ash—that all I cared to sign up for enough to carry me to the first of the

"'That's all right,' French said, take what you want under this con and we'll take off your hands any you left.'

"I took him at his word and when first of the year came round I still about ninety barrels of soda ash comi me under the contract from the A people. I wrote them, reminding the French's promise and telling them t wanted the contract canceled. My re was that the market had broken in meantime and I could buy cheaper ash. The Awon flatly repudiated Fre agreement, so I took my extra soda paid up and shut up."

"What happened then?"

"What happened in connection with rule is that French came in shortly a ward with a dandy price on chem that we needed, but I wouldn't even li to him.

"He couldn't understand me. 'Do mean to say you'd hold a grudge ov little thing like a hundred barrels of ash?' he asked me.

"'No, French,' I said, 'life is too s to hold a grudge over soda ash in amount at any price. But a grudge cheap bargain for me if it reminds me a man or a company thinks more of a l thing like a hundred barrels of soda than it thinks of its own word.'

"French didn't have another remar make on the subject. As it happens, wasn't the end of the incident either."

"What happened?" the president as

"I put my extra soda ash in storage within a few weeks the market took a den upward slant. I happened to hea the Purchasing Agents' Association ro one day that Morton of the Tinker Can Company wanted soda ash. I told that I might spare him a hundred bar if he would let me know the best pric could get from the salesmen. A day o later he called up to say that French offering him what he needed at th twenty.

"I sold Morton at three-ten, which sha the market close, and French is still won ing what hit him. Some day I'll tell hi

Production Hours Made More Productive

THE need of business today—and for years to come—is greater production. With world necessities greater than at any time in history—with man power depleted as never before—Machinery ***must*** come to the rescue—***must*** do more and more of the work hitherto performed by human hands.

Over 100,000 of the leading manufacturing plants of the world depend upon "Clipper" Belt Lacing to keep the wheels of production constantly in motion. The speediest possible belt lacing service is now more than ever imperative.

The Clipper Belt Lacer
Laces a Belt in Three Minutes

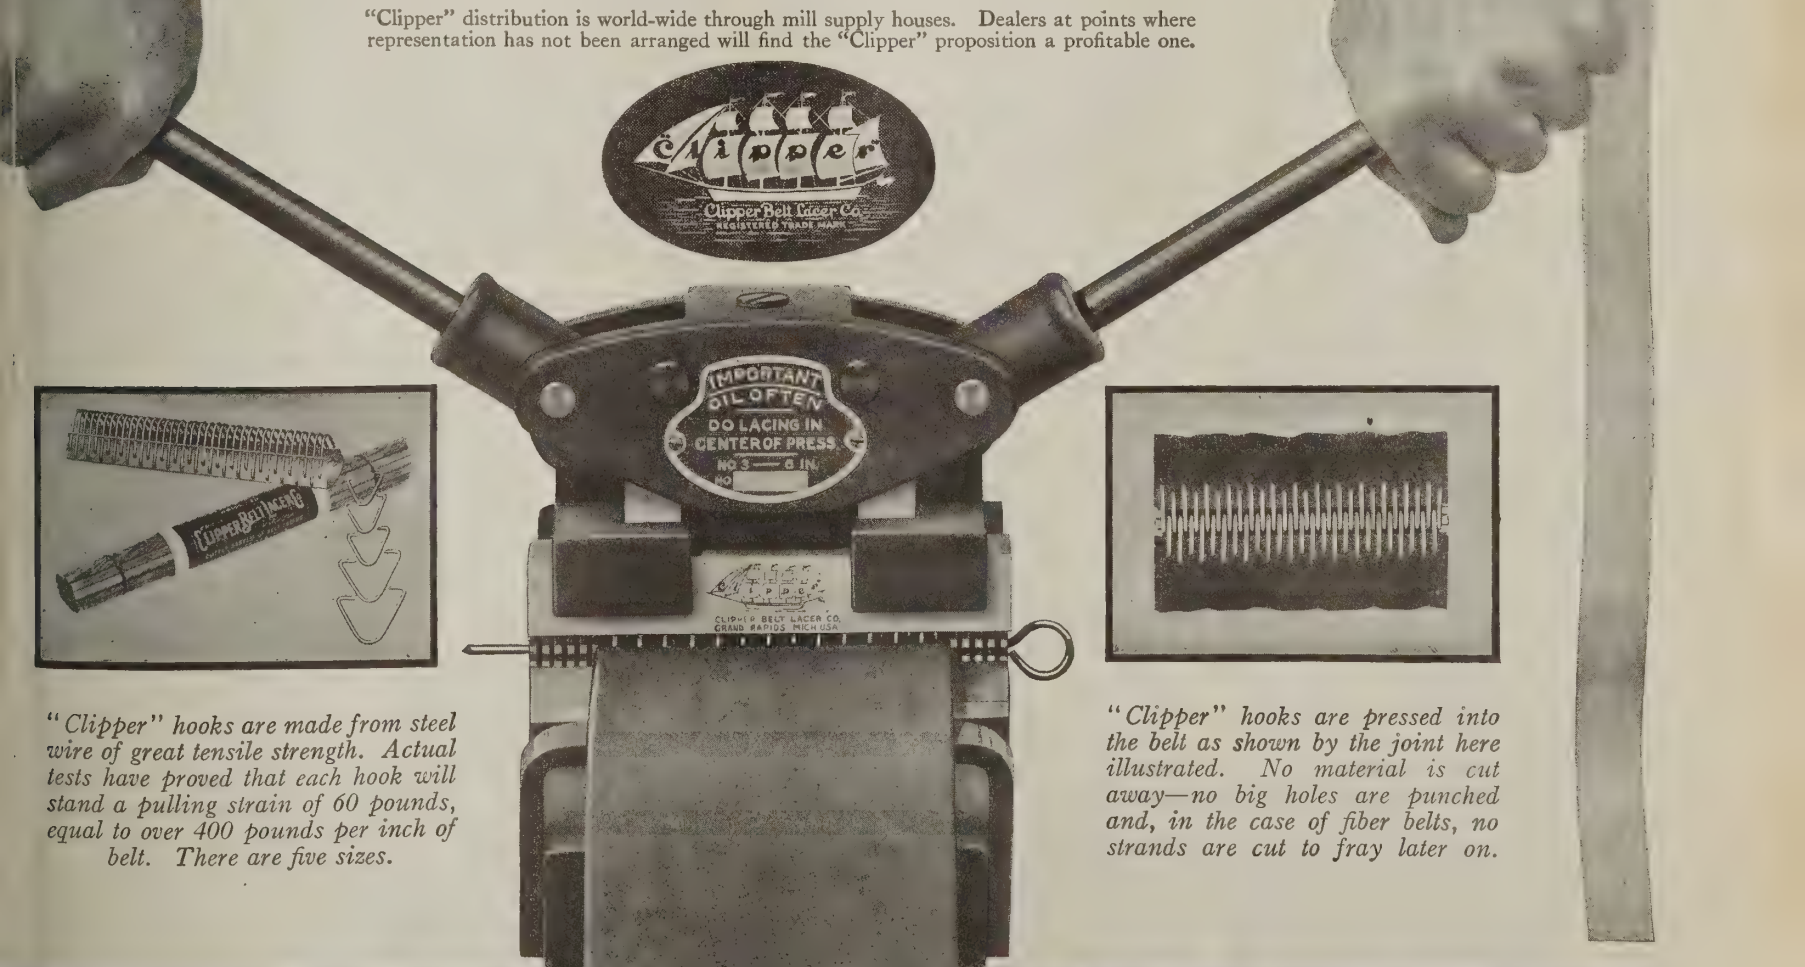
The "Clipper" makes a joint that is smooth, dependable, safe, and one that lasts as long as the belt itself. "Clipper" laced belts hug the pulley and develop maximum power.

Any shop workman can use the "Clipper" the instant a break occurs, without waiting for expert help. Its cost is slight and its saving beyond calculation.

Many manufacturers make their belt lacing service 100% efficient by keeping "Clipper" lacers in various parts of their plants.

The "Clipper" is the solver of belt lacing problems. It goes to manufacturers for a free trial in their own plants, and is backed by a perpetual guarantee.

"Clipper" distribution is world-wide through mill supply houses. Dealers at points where representation has not been arranged will find the "Clipper" proposition a profitable one.



"Clipper" hooks are made from steel wire of great tensile strength. Actual tests have proved that each hook will stand a pulling strain of 60 pounds, equal to over 400 pounds per inch of belt. There are five sizes.

"Clipper" hooks are pressed into the belt as shown by the joint here illustrated. No material is cut away—no big holes are punched and, in the case of fiber belts, no strands are cut to fray later on.

BIG PEOPLE

(Continued from Page 5)

"I mean opportunities, openings, chances to do better for myself than I've ever dreamed of doing before. Oh, I've got irons in the fire, don't you worry! Incidentally," he added with marked gratification, "the thing I'm thinking about, the one I think I'll take, will bring me right here to live—in little old New York."

His eyes beamed upon her. She was thrilled with his news.

"Oh, Russell, that makes me happy! You don't know how much I've thought about that—wondered if it was going to be hard for you to ——"

"Not on your life! It's one of the easiest things I do nowadays. Why, Fanny, I'm not quite the callow youth, without influence or position and never knowing where his next dollar was coming from, that told you good-by in 1917. Things have happened to me. You'll see!"

And then, leaning forward under the eye of hovering waiters, he said movingly in a changed tone: "How would—wouldn't you like to live in New York?"

"I? My dear! It's something I've never thought of."

"I'm asking you to think of it now. Fanny, you haven't forgotten the last conversation we had before I went away?"

Coloring, she answered lightly with some loss of ease:

"Women have long memories for some things, they say. Never breathe a word to them that you aren't prepared to stick to! But now—I'm simply dying to hear about your irons in the fire and how you got them and everything!"

He accepted the gentle postponement; glanced at his wrist watch, cautioned the waiter to show more celerity and went on with happy absorption.

"Well, you see, it was bull luck from my standpoint, Fanny, because I hadn't pulled any wires, but just went where they sent me—but the 300th was full of the most wonderful fellows. Everybody used to comment on it. Sons of some of the biggest men in the United States were my messmates—Sterter, Bradford, Fielding, Honeykamp and so on—and everyone a prince. Why, I was about the only officer in the regiment that had less than a million dollars—it's a fact!

"Well, naturally we all got thicker than thieves before we were through and, of course, it was an awfully good thing—a broadening thing—for me. I'd simply never had the chance to associate with men like that before, the life I'd led in Caledonia, and I tell you it was like opening up a new world! And yet at the same time, Fanny, it was like finding myself too. I think you understand what I'm trying to say. And then when I was banged up and got the ribbon—well it looked as if people couldn't do enough for me. It certainly was gratifying the way all my friends stood by me and came right up to the scratch. But the thing that attracts me most—the proposition I was speaking of—comes from Tom Bradford, who's one of the best friends I've got. He's ——"

"Oh, I remember Tom Bradford! You've often mentioned him in your letters."

"Well, you know who he is then—only son of old Joshua himself and a perfectly wonderful fellow. Incidentally Tom has a wad of his own from his grandmother—she was a Hardcastle from Butte. Well, Tom was in my company through it all from the camp days and we took a shine to each other from the start. He and I used to—— Well, for crime's sake! If there isn't General Wattrous! Look, Fanny!"

His stare directed attention to an elderly officer, who with a party of women was just being seated at a flower-decorated table some distance away. Very short in stature, this eye-catching son of Mars could hardly have tipped the beam at less than two hundred pounds. His figure was a hogshead's, his walk a waddle and he had a face that reminded Fanny of nothing so much as a gargoyle painted red. Nor was his case helped in contrast by the fact that the three women who accompanied him were all young, tall and beautiful.

"Russell, I never saw such a little Gila monster!"

Captain March, putting down his napkin, looked mildly shocked.

"Sh! Why, that's the great Wattrous! That's G—20! They call him the brains of the Army."

"Well, I'm glad to know he has brains!"

But the young man said: "I must pay my respects, Fanny—excuse me a minute. I know the old boy personally."

And he went away among the gleaming tables, limping badly without his stick, yet by no means robbed of his lean young grace. Many eyes followed him besides her own.

Fanny watched her soldier come smartly to attention at the elbow of his general. It was noted that the obese hero was in no haste to recognize his caller. When at last he glanced up from the menu he was studying his face wore a visible scowl, which was not observed to soften as the little pig-eyes rested upon Russell. Plain as day that look said over the spaces: "What the devil do you mean by speaking to Me?"

Apparently Russell, handsome and smiling, had to recall himself to the brains of the Army and apparently it took time. At length the old gargoyle was seen to nod a time or two and his look lightened a little—or rather his air of utter loathing relaxed by a mere trifle. Fanny considered that Russell should now have turned on his heel with the coldest dignity. On the contrary he stood there, soldierly and respectful but quite at ease, for several minutes, making a series of obviously amiable remarks in which by polite glances he seemed to include the ladies of the party—to whom he had not been introduced. The general appeared to respond to these civilities almost exclusively by jerking motions of his close-shaven poll. His attention remained with the official in a morning coat who was receiving the noble order.

The chief petty officer was not unfamiliar with the ways and manners of military caste. Still when Russell came back to her, having withdrawn from his respects with unruffled ease and perfect bows, she could not forbear to say, "I never saw anything as rude as that little monstrosity in my life!"

Russell laughed unaffectedly, and yet it was clear that her point of view surprised him too.

"Why, Fanny, that man couldn't be rude to me if he tried. I once heard a colonel say that to be kicked by Old Watty was an honor."

"I don't care! I think he's horrid!"

"He's got a right to be! What he says goes along the Front, let me tell you. Why, you know how it is in the Army, Fanny! The younger men all plume themselves if they have even a speaking acquaintance with any of the general officers, the really big men. It's considered an honor to say how-de-do to them—and incidentally it helps you sometimes, you bet! As a matter of fact, by a stroke of luck I was able to do General Wattrous a mighty good turn once."

"Oh, were you?"

He nodded with a full mouth.

"Found a bed for him one snowy night when his car broke down and when you might say there wasn't any bed. Just back of Dègremont, it was. He remembered about it just as soon as I reminded him of it."

"Dègremont? Wasn't that where you first went into the line, Russell?"

"It was that—just out the night I met Old Watty. Brigaded for three weeks with the British in what they called a quiet sector. Whew!"

Fanny prompted fearfully, and yet eagerly too: "Was it so—so very bad?"

"I'll say it was!" said Russell, and laughed. "Half an hour after we got in the first night my company was gassed all to pieces. Evacuated twenty-two men before morning. Second night the boches pulled a fierce raid to get acquainted—killed seven and grabbed four. Third night they bombarded and charged us three times. Fourth night they gave us large-caliber shells right along from dark to dawn. That's where Fritz Honeykamp got it, poor chap. Lying right next to me in the dugout, he was—head blown right off his shoulders. Jimmy Sterter got a nasty slash that night too. By the way, Bill Jaspar told me that Jimmy's in town with his new wife. I was sort of hoping we might run into them here or somewhere—I'd certainly like you to meet him. He's Sterter Steel, you know—a regular prince and one of my best friends. Rush along the dessert, waiter. My time's short."

Fanny thought his matter-of-factness splendid, and was ready to hear more; nay, she thirsted to hear more. But the talk inevitably slanted into more personal fields and flowed discursively. Bolting his artichoke to make up for lost time, Russell presently recaptured the thread where General Wattrous had broken it.

"It was this way, Fanny—you'll be so interested: You know, they gave me four days' leave last month as soon as I began to hobble round. Well, I have a little influence in the right places, the boys say—my opportunities were pretty good, you see, and I didn't neglect them—so I arranged for Tom Bradford to get leave at the same time. He and I and Harry Brooks went up to Paris together and I'll admit we had a time! Well, you see, Tom would never have had the nerve even to ask for leave, he's had so much, and so he felt awfully grateful to me. Insisted on paying all expenses—wouldn't let me buy a newspaper—and that's another reason I'm so flush to-day!

"Well, one night we got to talking about the future and the boys asked me what I was going to do. I told them I had several irons in the fire—from Jimmy Sterter and Johnson Fielding, for instance—but nothing absolutely definite had materialized so far, so I didn't know. Check, waiter! And then Tom spoke up and said, just as if it was something we'd often discussed: 'That's all settled, Russ. You're coming with Bradford and Vermilye in New York. My old man will fix you up. You leave it to me.' Tell the truth, I had sort of looked for something of the sort and maybe had thrown out a feeler or two, but I hadn't expected it and you could have knocked me down with a salted almond.

"Well then, Fanny, I asked him frankly what kind of position he had in mind, and he said, with my record as a soldier and my bad leg, I had a right to expect something pretty good. Said trust him for that—said he'd write to his father as soon as he got back to billets. Think, Fanny! Bradford and Vermilye!"

"It's glorious!"

"Check, waiter! Yes—right away! And you expected me to go to counting pay rolls again in Caledonia!"

The luncheon was over; they must hurry on upon the soldier's lively schedule. Drawing on her gloves and glancing over the glittering scene, Fanny thought of Washington and reflected that this first leave together was all too short. She also suddenly surprised the dim thought floating somewhere by: "Goodness, what a lot of social activity there is in the Army! I'd no idea!"

But she brushed away that fancy as somehow vaguely disloyal.

"What are we going to see, Russell?"

"Best musical show in town. Almost impossible to get in. Bill Jaspar had to bribe the agency to find me tickets."

The check came on wings. Inadvertently catching sight of the red-ink notation—scrawled in strange, Frenchy, hardly legible figures as it was—Fanny was mildly staggered. The host for his part disdained to glance at the items. On the contrary he won actual gratitude from the blasé waiter and rewarded the coöperating captain with a second bank note, saying carelessly, "Everything was very nice." Then at her round gaze he added gaily:

"It pays, Fanny. Remember, I expect to live in this town. Next time that fellow'll know me. We'll take a taxi."

She had been conscious of grudging to the theater solid hours that might have been spent in a hansom cab or on a bus top or even in the hotel library—just talking and talking. But this, of course, was Russell's day and she was happy in his good pleasure.

The best musical show had run to packed houses all summer and seemed good for another year or two at least. Its title was, Oh, Maria, Why Did You Kiss Him?—and to its composition nine musicians, lyricists and librettists had contributed their hard technique. Moreover the story to begin with—so the program said—had been "adapted from the French of Philippe Nocère." The cast included six beautiful show girls, thirty-two not quite so beautiful damsels of the chorus and twelve chorines for whom beauty would scarcely have been claimed by their own mothers. It also had a prima donna with a piano limb and an interestingly mobile diaphragm, and a comedian who relied largely on humorous paint and facial exploits for his f and demonstrated his success by the show girls twice in each act

Only this morning Fanny ha find her soldier over-sobered an she saw him now in the highest was boyishly pleased by every damsels delighted him; even t in the act in which four of th together, drew a word of cordial infectious laughter rang throug At one point—the scene in wh median, intoxicated upon a pate mistakes the prime minister fo and tries to ride him into th quarters of the palace—he beca vulsed that the great actor him it and remarked to the conduct make me laugh like that, doc. in-law is alive and hearty."

In the darkened house the often at his merry bronzed face. warmed to him.

The last intermission proving conversation about other matte play became possible. Eager t understand everything, to cat on these fifteen months, Fanny talk upon herself, supplying ne tails of her life and work in Was the office routine and Mr. Cha scorn of men who had chosen and kept happy; of the boardin the lonesome evenings and the house, fellow war workers, som went to lengths to escape that ness; of Harold Barstow from Fuel Administration, a nice ma stupid—who usually "took h Sunday afternoons. And Capt listened to everything with interest.

"You'll laugh, Russell, but doing more and more responsib the time. It makes me feel almost as if I were helping a l keeps one up. And personally, of whole experience has been a wo for me. I feel—it seems to m must have gained a lot from then ——"

"Just how do you mean, Fan

"Well," said she, a little en "you see, I'd never worked b anything real; never even thou very much in a—a grown-up had any experience at all. I learned a lot and may be grow wiser. Anyway—for better o sometimes feel that I'm simply the same person I was two year

He looked so unsettled at th sensed a personal implication that she explained at once gentl

"Just as you can never be quit Russell dear, or anybody who been through it—if only in thei

"Oh! I see! Yes, you're r I know I've changed—a lot. I sometimes ——"

A wild blare from the orc nouncing the opening *ensemble* drowned out his words. When fell again, terminating Maria, F with a start that it was five o'cl

Russell's train left at ten-twen expected other leaves; in fact o pital connection was establishe knee duly reëxamined and doc the wounds from the operation yet healed—he hoped to find h to come and go pretty much as But their time of remeeting, whi anticipated with so peculiar a was fast running out, and she w with vague dissatisfactions.

And then as her thought jump to the quiet tête-à-tête over the when at last Russell would reall talk to her, there came a new d and an unlucky one. Emerging ir and jostle of the lobby, they ra a fellow officer of Russell's, a st man with a simple red counte notable vocal cords, who cried starting eyes:

"Jumping Judas! Ethel, he March!"

Fanny's heart instantly sank. enough, just such a contingency across her mind at the lunch t knew who this officer and Ethel out introductions—none other th Sterter of Sterter Steel and his looking young wife—married, F

nt, since Lieutenant Sterter's return, lied, in October.

h two officers, who had not met since n were obviously delighted to see each r It was only too clear that they l not separate easily. After the first t "When did you get over?" "How h leave you got?" "Where're you i here?" the inevitable question fol- "What're you doing now?" Lieu- n Sterter, having put the query, ed it himself, as it were: "Trotting o e Biltmore for tea. You come right g

N we're going to the Plaza," laughed e with a glance at Fanny. But he o iged to add: "Why don't you come ?"

C't be done—asked you first! You'll s he favor, won't you, Miss Hardy? s you will—make her, Ethel." The g ng-looking girl stated briefly: "Oh, y you will join us," while Mr. Sterter l ard to chuckle to Russell aside: t not say no, old cockalorum! Got t ing werry good for you upstairs."

s so settled, of course. The four g people bowled away together in a n ich—it seemed—the prodigal Ster- k t chartered by the day.

n best that Fanny could say for the r sed square party that followed was i didn't last very long. Oddly the n e of the others seemed to be somehow s e—as if this were generally recog- l s but the necessary dull interlude l uch merrier possibilities.

e sat at a table too small for them r m which—though large—was too l r the people packed into it, and e tea which nobody wanted. For t ly they took tea in the literal sense; r orms eliminated choice and chance, Jamy Sterter cast constant sheep's a more exciting potables beckoning v ry hand. However, hope lurked fi bly in his limpid black eyes; doubt- n inner eye was turned upstairs. To y he seemed an open and sanguine g man, jolly enough, though faintly n to overbearingness when argued . he new wife roused reflections of a r t sort. She was a warm sleek crea- l done in browns—skin, eyes, hair, n —and her manner was marked by a e languid insolence suggesting con- n in a charm, which in fact she did s eously exude. To Fanny's common- s she responded monosyllabically, if l.

n wo men had the conversation vir- y themselves. It consisted chiefly of r iniscence, of brother officers and of s ey had had separately and together r ce. Despite her pleasure in Rus- s joyment of the reunion, Fanny was s y when the moment came for guests l their leave. The Sterters indicated m nent, by unmistakable signs.

s ell walked with her to the elevator. a been agreed that she should have an t rest before dinner, and now he im- s it upon her ardently not to take a t longer.

I te to give you up for a whole hour— c ly as we've had to share our time. 't orget now—seven o'clock exactly! o standing right there by that palm "

a ny smiled and promised, and the lift r away upward. She had meant to d alf of the rest hour in dressing, half r ing to her mother—no less—giving s n the spot, as it were, of Russell's r and her own exploit in journeying n him. Once in her own small eyrie, e r, and the door shut, the girl became c is of an unwonted lassitude. Hav- p ly undressed, she stretched herself h ed for just a minute—with the not q nt result. When she woke, with a r start, it was quarter of seven.

n athed hurriedly, changed into the l evening dress she had brought along t dinner and descended at speed, t ologies on her lip. However, Rus- w not at the meeting place. There n to be thousands of people in the y yer, but the tall figure of her war- w s nowhere among them.

h in a minute or two she descried him y g from the direction of the elevators. n far she saw that his pleasant face c en signs of trouble.

A ully sorry, Fanny—awfully! I can't y ! I just could not get away. The t simply hung round my neck."

I all right, Russell. I was very late "

"But here's the devil of it: The Sterters insist on our dining with them. Just wouldn't hear of anything else. I ——"

"Oh!"

She must have looked very blank at these tidings, for his face took on an access of worriment which immediately softened her.

"I mind it more than you do—I'll bet on that! It simply knocks our day, that's all—it's a nuisance! But, Fanny, what're you going to do? I refused a dozen times point-blank, but it didn't have the least effect. I never saw people so insistent."

Laughing down—not easily—her sense of all but childish disappointment, Fanny became the comforter.

"Why, I think it'll be very nice, Russell. He's so—so jolly. And we'll still have a little time afterward—and more, let's hope, later on when you're out of the hospital."

Russell said gratefully: "You're a brick, Fanny. Nobody could be sweeter. . . . Of course I don't want to offend Jim. He can help me in lots of ways—has helped me in fact. His people own about all of Herkimer, Pennsylvania. They'll be down in a minute."

They found seats in the small alcove which makes an inlet in the thronging lobby and sat down to wait. Undoubtedly Russell was conscious that the Sterters had rather overborne him and that Fanny so understood it. Possibly also there was in his mind her attitude of affectionate disparagement in years gone by—that attitude which—beyond his knowledge—she had so recently deplored to Mr. Wollaston.

Having briefly described his visit in the Sterters' sitting room, he was impelled to explain himself a little further:

"Jim's a wonderful fellow really. But for the fact that we simply haven't got the time to-day I'd be glad of the chance for you to see something of him. You ought to see the fuss they made over him on the other side—whew! Colonels, generals, distinguished visitors, big people in Paris—I tell you everybody was tickled to say they knew Jim Sterter. And still you know, Fanny—well, when it came to getting something you wanted—to putting a thing across—I don't consider Jimmy had anything on me, if I do say it. In fact—well, you see Jim's got a little way with him at times that people don't like. He's a little quarrelsome—sort of truculent, you might call it—especially if he's had a drop too much, and that offends a good many people. I think I can honestly say that while I know most everybody I haven't got a single enemy in the Army. After all, it was I and not Jimmy who was going to be put on the divisional staff. And that was my own ——"

"On the staff? Why, I hadn't heard about that!"

Captain March said with an air of mingled feelings: "I was keeping it as a surprise. Of course—it didn't come off. First I got sent down with this broken knee and then the blooming war ended on me. But I've good reason to think it was practically settled. Colonel Enright was pulling hard for it. He said that while he'd be sorry to lose me I had exactly the right qualifications ——"

"And would you have liked that—being on the staff?"

"I should say so! No more trenches! Like it? Why, I consider it about the softest thing there is in the Army. And besides there's the association with the higher officers—the big men, the picked minds of the Army. Why, socially you're simply in another class!"

He told at some length of his meeting with Capt. Sir Eric Parmlee in the town of Bailleul, and of a good deal that Sir Eric, himself a staff officer, had said on this point. And gradually, as he talked on, the girl's gaze upon his unconscious face became marked by a curious fixity, at once searching and introspective; and her hidden thought turned backward. All at once she had remembered vividly some large words she had used one day in the office of a personage. She became aware that she regretted those phrases. It was clear that she had been rhetorical, overemotional that day, and the memory embarrassed her.

Precisely at that moment Russell—having caught the sudden strains of the dining-room orchestra—touched her abruptly and profoundly by interjecting in his anecdote:

"There's Smiles again, Fanny! Gad, I'd like to trip the light fantastic once more!"

Her heart fluttered within her.

The Sterters did not come down in a minute—or several minutes. In the end Russell had to go up for them. It was after eight when the four young people sat down to dinner.

To one member of the quartet that meal seemed to pass in a kind of cloud. Table talk was copious and lively enough in all conscience, but seldom indeed was it of the sort that you could remember and take home with you, as it were. Reminiscence naturally continued to be the prevailing note; only among the recurring names of officers other names—names feminine and Frenchy—began to drop from the lips of Jimmy Sterter, vastly to the interest of his young wife, whom Fanny—womanlike—had early conceived as having a deteriorating effect upon the whole conversation. Mrs. Sterter still talked exclusively to the men—she had learned to call Russell by his name upstairs, it seemed—but she talked much more than at the tea table. She spoke chiefly in French and her running observations, rarely more than a sentence in length, drew frequent guffaws from her spouse, in which Russell readily joined. She herself produced an odd staccato laugh like a rather pretty bark, which attracted some attention from neighboring tables. As for Jimmy, his rubicund countenance seemed rosier than ever, his manner more jocund. But he was quite severe with the Slovene waiter, whom he addressed as Peanuts, and revealed a desire to talk continuously. Even Russell, after his second ascent to the sitting room, seemed somewhat freer of tongue.

He told the Sterters about Tom Bradford and Bradford and Vermilye, and Jimmy Sterter's interruption was:

"Point is, was he sober at the time? Bet you a dinner at Maxim's he's forgot he ever said it."

"Well, I'll admit he was a bit spiffy," laughed Russell. "We were in Paris, remember—but he won't forget it, not if I know it! In fact I happened to be writing to him on the boat about another matter and I ——"

"What do you care if the rotter backs out? Jumping Judas! You come to me! I'll attend to you—fix you up something better'n you ever had in your life!"

"I'm listening, Jimmy! Who knows but I may call on you?"

"That's right, Fanny—Miss Hardy, I mean," said Jimmy, turning to her with immense gravity and reassurance. "Don't you worry for a minute. Jumping Judas! Rusty March's my friend—my very good friend! I'll never let him lack for a job—no, sir, not as long's my grandfather stands there and waves. D' you get my figure? Comparing my grandfather to The Star-Spangled Banner—understand?"

"I got your figure instantly. And a very ingenious one it is too, in my opinion."

"Think so? Shoo! I think up those little things all the time. No trouble to me—it's a gift. Say, you seen this show the missus and I're going to to-night?"

"Probably not. I've seen very little. And I don't know what you're going to."

"It's called Combien, Yvonne? Name suggest anything to you? Hey?"

"It doesn't seem to at the moment."

"Ho, ho! Just what I thought. The sly rascal's keeping things back from you. I'll make him come through—don't you worry! Listen to him! Bet he's telling Ethel about the time he lunched at the embassy—what'd I tell you? Here, Rusty, you dog, what do you mean not telling Fan—Miss Hardy here—about Mademoiselle Yvonne? Come on now! Come through right on uncle's knee! Feel better when it's off your chest."

The episode was typical. Allusion this time was to a Mademoiselle Dufranc, a girl of excellent family in Sègneville, who, it seemed, had been kind to Russell when he was in hospital the first time—"as she was to everybody," he explained with a pardonable air of annoyance at having to explain at all. Jimmy, however, noisily insisted upon a peccadillo and in this he had the loyal support of his wife, who said in sum: "Tell me all, Russell—I was never shocked yet."

"How about that hot letter she wrote you afterward?" insisted Jimmy. "You know darned well what I mean—meal baissays!" And finally, disgusted with his inability to get a successful rise, he said something *sotto voce* to Ethel in French which threw that amazing young person—she was just nineteen, it seemed—into a fit of strange merriment.

Halfway through the banquet, talk did turn for a moment from the personal to the general. Russell, telling the Sterters about his last leave in Paris and the people he had met there, happened to mention John Ames Fordyce—from his own home state. Fanny, who had known and admired the famous publicist as long as she could remember, was interested at once.

"But I thought he was in Russia."

"Just back from there—got to Paris the day before I saw him. Seems he'd got some sort of appointment with the big conference they're going to have there and ——"

"The Peace Conference? Oh, I'm so glad!"

"Yes—yes. He just said the conference, but that must be the one. Said we had our work cut out for us to see that we got what we'd been fighting for—I remember that. Gave us a lot of inside information on the whole situation. This is Dr. Ames Fordyce I'm speaking of, Ethel—probably the greatest living newspaper editor; one of the biggest men in the country. I've known him ever since I was born—great chum of my father's. We ran into him in the Place de l'Opéra ——"

At the first opportunity Fanny said eagerly: "How interesting, Russell! What else did he tell you—about the peace, I mean?"

"Well, let's see. He said he was afraid some of our Allies weren't converted—I think that was the word he used—and were going to try to grab everything they could. Said everything depended on the President standing up for our ideals—otherwise we were in for a lot more wars. That's about the gist of what he said, as I remember. Lots of big people were stopping to speak to him at the time, and tell the truth I didn't listen as hard as I might. As a soldier, I suppose I don't take much stock in the talking end of the game. Well, Harry Brooks told him a story ——"

The eyes of the Sterters had begun to wander, but here young Jimmy bounded noisily back into the conversation:

"Right you are, Rusty! Talk makes me sick. Talk 'bout ideals makes me specially sick. Ugh, ugh!"

Fanny retorted warmly: "But isn't talking about ideals absolutely necessary just now—in fact the most necessary and important thing in the world? You soldiers, who fought to accomplish certain things—you more than anybody else are entitled ——"

"What things're you talking about, Fanny—Miss Hardy, I mean? Jumping Judas! Don't you know what we fought for? Well, I'll tell you. We fought to lick the Germans, and by God, we did it!"

As if pleased by the citation of the Deity, Ethel beat the table with small hands, crying: "Hear, hear! Three rousing cheers for my Jimmy!"

"But licking the Germans won't help very much unless we ——"

"Now listen!" said Jimmy. "Listen while I tell you! All this talk about making the world safe for democracy and bein' sweet to small nations and all that is good enough for bringing sentimental slackers into the war and selling Liberty Bonds, but it never touched the fighting man. No, sir! What holds the fighting man is the sporting end to the business—that he's going to beat up those swine so bad they can never look him in the face again. That's something to bite on, don't you understand? That keys a fellow up in the zero hour when chinnin' about ideals wouldn't help him more than a glass of buttermilk. No, sir! Take it from me—that guff's just for writing chaps and the fellows that just sit round and think while the soldiers're saving humanity!"

Russell, who had been nodding his head up and down, now said: "Hear, hear! And I guess that's about right too."

Surprised and somehow really chagrined, the girl addressed herself to him, in a changed tone:

"Of course I understand, Russell, that a soldier needs every help he can find, just for getting through. But after it's over and the war is won? Just think of what Doctor Fordyce said—more wars unless this one's settled right. You certainly don't want to go through all this again."

"Ha, ha! We should worry about that!" laughed Jimmy. "Don't you fret, Fanny! It'll be the other fellow's turn next time!"

Russell said: "Far as I'm concerned—for one thing, the Army doesn't want cripples. Looks as though I've given about all I've got to give. Why, Colonel Enright said to me ——"

"Don't you fret, Fanny," repeated Jimmy triumphantly. "Rusty and I've talked this

(Continued on Page 65)

Velie Six

First Authoritative Example of the New Style

Thousands are enjoying the luxury of the New Velie Six

NEW LUXURIES everywhere in the Velie have called forth the unbounded enthusiasm of owners. Its mirror-like planes and unique appointments are attractive beyond words. There is distinction in every detail.

The open cars—Touring, Speedster and Roadster—have weather-proof tops and snugly-fitting tailored curtains opening with the doors. Not a requirement has been overlooked which would add to the pleasure of motoring, whatever the season.

The Sedan and Coupé provide every comfort against chilly blasts. Here you have warmth and coziness as you relax on cushions of mohair velvet. Noiseless windows (raised or lowered by automatic lifts) regulate the temperature to please.

Luxuries of mechanism are in keeping with the luxury of this Authoritative Style. The motor has an internally-heated vaporizer burning low-grade fuel and vastly increasing miles per gallon. There are power and speed to spare. Velie specifications are a story of quality from first to last.

Whatever your individual or family preference, you will find it in the Velie line. The nearest Velie dealer will gladly show you. Catalog describing all models on request.

d it, if you don't! Lemme tell you
anecdote to illustrate."

ssell was here detached by Ethel for
f another sort. Jimmy, continuing his
rks in the general tone of a victorious
er, did nothing to charm away the
of indignation he had unwittingly
d in the breast of Fanny Hardy; on
ontrary he managed to increase it
edly. Struck by the repetition of the
, she asked presently, with no special
ation, who Colonel Enright was.
y's more than pink features regis-
surprise.

ook here, old Rusty don't seem to've
you advised about things at all! Why,
ht's our regimental commander—
er-in-law of Mrs. Hickson Smith, as
would say. He's the fellow that got
his cross. You ought to know En-
Must arrange to have you meet him
day."

king no effort to conceal her astonish-
and distaste, the girl said: "Got Rus-
is cross! What on earth do you
? I supposed that Russell got that
mself by what ——"

re he did, Fanny! Everybody knows
Point is, you see, lots of fellows
e crosses by what they do, but every-
can't get 'em, don't you understand?
mping Judas—they wouldn't be any
! So a little friendly word from the
quarter—at the right moment—helps
w like the devil. Get the idea? And
usty always stood in with ——"

t his colonel, the head of the regi-
would hardly have chosen ——"

h, don't plague the men any more
the war, Miss Hardy!" said young
s finished voice. "You're spoiling the
Jimmy, I'm going to tell Rusty my
nny story—do you dare me? Only
ll it in French, Miss Hardy, for it
the least little bit *jeune fille*."

t was quarter past nine when the Ster-
s ft the table for the theater. "I adore
sg the first few acts," noted Ethel
ry, as they rose. Arrangements were
jected for an early remeeting with
sl, which occasion—Jimmy assured
—ould be "a time."

The ultimate departure in the chartered
i was attended with some boisterous-
s. And Jimmy gave the doorman a
p of dollars and called him Peanuts
).

Captain March and Fanny stood in the
refoyer by the revolving doors. In the
mnt of their restored privacy they re-
d each other. His face looked faintly
ged, she thought, but still there was
g in his eyes. And something deep
h the girl seemed determined that he
u be the first to speak.

"Well," said Russell, laughing. "I'm
d ou and Jimmy didn't come to blows!
u ad me pretty nearly nervous there
a inute—he's so touchy at times. But
't e a prince, Fanny? And she's what
al he real thing."

All hope died then in Fanny's heart of
ti anything out of the ruined day.
Le look went away from him and she
d a let-down way: "Is there still
e or a drive, do you think? Or shall
ju sit here till ——"

Re said that by all means they should
ve heir drive—there was still an hour.
su ing their interrupted schedule, the
un pair pushed through the circling
ors hardly a minute behind the Sterters.
The drive was through the shadowy park
On Hundred and Tenth Street and back
the tation at Thirty-second. The night,
arm and singularly mild for January, was
opious; the cab gave a seclusion such
th had not enjoyed before that day.
sse's conception of the moment was
earl loverly. However, the girl proved
resonsive, though in a gentle way too
sua to rouse remark. It was easy to
ver the leads he gave toward their per-
nal elation and the near and distant
tur But she yielded him her hand, not
awil g to establish some connection be-
ween this hour and the gladder time of
eetig in the morning.

They talked a little of Caledonia, of old
end and old times. But it was clear
roun everything they said that his
oug flowed strongly toward the newer
orld and the bright new place he was to take in it. One thought he did give her, however.

"What we were saying at dinner about the war, Fanny—of course Jimmy overdid it, picturing the ideal soldier as just a fighting animal. That certainly isn't my view. Of course a man's got to make himself callous, as far as that goes—it's just like a doctor. If a soldier was all the time thinking about the suffering, the horrors of the thing—all that makes war just a misery and a hell—you can see he wouldn't be good for very much. He's got to be callous and unfeeling and hard or he can't do his job efficiently. Still I don't hold—and never have—that a soldier ought to be just a shooting-and-sticking machine. No, I think he ought to think! I think it's his duty to keep saying to himself: 'Yes, this is an awful mess, but by George, I'm going to get something good out of it!' That's the way I've tried to do. What's the matter? Isn't that right?"

The question, sudden as a pounce, seemed to gather in the girl's thought with a jerk. She said with some effort: "Did I look surprised? I suppose what you said seemed a—a sort of coincidence."

"Coincidence? How d'you mean?"

"Nothing worth talking about. Just that I heard a very able man say the same thing the other day."

"Been over?"

She shook her head.

"He's a civilian doing desk work in Washington."

"I don't know that he's got a right to an opinion, but still—anyway—that's been my principle. And I think I can say with all modesty that I've succeeded too. You remember, you said this afternoon you weren't the same person you were two years ago. Well, I'm not either. I've changed and developed more than I'd have believed possible. You see that, I expect. Don't you, Fanny?"

"You forget—I've hardly seen you at all, thanks to the Sterters. In what way do you notice the change most yourself?"

Captain March answered without hesitation: "In my ability to meet all sorts of people and make an impression on them—to capitalize my abilities, as Sir Eric Parmlee put it, and take what's fairly coming to me. I can see now that was exactly my trouble before. If I met anybody who was rich or important or distinguished I just assumed that he was naturally better than I was and sat back and let him run things. Well, I've learned that doesn't pay. I've learned from association with big people that the world's going to take you at your own valuation, and the way to be important is to act important. Bluff, bluff, bluff! By George, that's what about half of life comes down to, once you see it that way! Why, Fanny, sometimes there in Paris when I was sitting round with colonels and admirals and high commissioners and titled Englishmen I used to snicker to myself and say, 'And this is Russell March of Caledonia!'"

"You've certainly met some unusual people."

"You've said it! And it's done so much for me—that's what I'm trying to say. Yes, turn here, driver—back to the Pennsylvania Station. Why, take it this way, Fanny: Two years ago I was perfectly satisfied to spend my life in Caledonia and if I'd risen to be cashier time I was forty I'd have thought myself mighty successful. Now—well, you know my plans and you heard what Jimmy said at dinner. Highest salary I ever got was two thousand dollars a year—now I expect to be taking down ten thousand dollars within two years at the outside. That's putting it about as concretely as I can, I guess. And then from the living end of it—the social side! Why, Fanny, of course I want to visit Caledonia and see the folks and tell them my experiences—make a few speeches at banquets if they insist—but live there? Why, it's simply not big enough to hold me any more. It's provincial, that's what Caledonia is! It's country! It's small! Just compare Caledonia with this—with what we've been seeing and doing to-day! Compare Jimmy and Ethel Sterter with the boys and girls at a country-club dance!"

He summed up with a pleased laugh: "Oh, I don't feel that these two years—almost—that I gave to my country have been wasted by any means! Lord, the way things were breaking for me these last few months, it was enough to make me sorry the war ended so soon!"

Fanny's face, shaded in the dusky cab, had been turned toward the window and the passing sights. Now her eyes suddenly closed. At the same moment she was moved by an abrupt emotion toward the man beside her, a poignant feeling that was not quite love, and her fingers involuntarily pressed the large hand she held.

He was fresh from profound and terrible experiences. He had been shot, he had been gassed, he had felt the bayonet's deadly bite. He had stood solitary in the last blackness of night and himself spoken the word which took hopeful lads out to inconceivable hazards and frightful ends. Half dead, he had lain in the trap of No Man's Land, a lonely human atom helpless amidst uproars that cracked the skies, watching with half-faded eyes the red sun rise to a dawn which seemed certain to be his last. With cries of senseless rage and triumph he had leaped to grapple with mortal enemies; his hand was dark with the blood of men. He had known fear that froze the spine, joy like the dream of waking up in heaven. For days and weeks on end he had lived and kept his being on the threshold of eternity. And these things he had suffered, not as a log suffers a mill, but as a sentient and causative part of a mighty upheaval in human relationships, a cosharer in conscious, grim, enormous issues such as plumbed men's souls to the uttermost.

Now his voice, speaking on and on, drifted through her thought as from afar:

"Well, Mrs. Ambassador said I was just wasting myself—that was all there was to it. Then she asked me straight out, as I say, if I had ever thought of diplomatic life, and when I said, 'Well, only in the most general way,' she said, 'Well, you think of it in a very particular way.' She said, 'With your abilities, your distinction as a soldier and your social gifts, your game leg and your ribbon, you should go far.'

"By the way, Fanny, lots of people seem to think this leg of mine's going to be a big asset for me—in a commercial way, I mean. Shouldn't be surprised if that was right too. Well, several big people were standing there listening to the whole thing; and Commander Wainwright—the naval attaché, you know, and a great friend of the ambassador's—said, 'Ah, there, Russell! And let me tell you this lady always knows what she's talking about!'"

He stopped short and ejaculated in a new tone: "Oh, Lord, here's the station, Fanny! Our day's over."

The taxi indeed was already turning into the half-lit runway of the vast teeming edifice; rapidly it slanted downward toward the bottom, toward the end, where the waiting redcaps clustered. A flying glance at his watch now advised Russell that it was twenty minutes past ten. He had but five minutes to make his train and his ticket was still unbought.

The moment of parting, coming precipitately as it seemed, was necessarily hurried.

"Aren't you getting out with me?"

"It would be no use, Russell. You'll have to get right on. In fact you've barely ——"

"Afraid you're right. Only wish I could see you off. What time's your train?"

"Twelve-twenty. Plenty of time to get back to the hotel, change and pack up. I thought I'd just keep this taxi."

"That's right. And you don't think you can possibly come up next week-end if I can ——"

"I don't see how I can ask for leave again so ——"

"Then I'll do my best to run over for a day before ——"

"It must be a Sunday! I have to work like mad every other day. And then won't you—oughtn't you to go to Caledonia?"

"The deuce! Yes, yes, of course I must. But I'll fix up something—you see! I'll wire you. Well, good-by! You were so sweet to come up and it's been a wonderful day."

At the last moment, heedless of the horns behind them crying out at this blocking of the procession, the soldier thrust his head back through the window of the cab and caught her hand in a hard grip. Fanny saw that the look on his face was slowly altering, as if a new thought, and an unsettling one, had just touched the edge of his consciousness.

"Fanny, you—you haven't changed toward me while I was away, have you?"

Her heart stirred at the hint of trouble in her lover's voice. But all that she brought herself to say, with the gentle shake of her head, was:

"I feel toward you just as I used to, Russell dear."

Captain March, oddly, seemed satisfied with that.

Chief Yeoman Hardy's absence from the office was but for a single day. Moreover that day was a Saturday, which Ensign Frothingham, for example, scarcely considered as leave at all. Her commendably prompt return for the opening of business on Monday morning evoked guarded enthusiasm from Lieutenant Charles, who showed his appreciation by giving her within the first hour enough work to last the week.

She became intensely busy. It was half past seven before she left the office on Monday evening. On Tuesday and Wednesday she "came back" after dinner by request, and was hard at it both nights until eleven o'clock. On Thursday when she woke—not entirely rested—it was to the prospect of a day stiffer than any that had gone before.

At eight-thirty o'clock that morning, as she hurried officeward with the gathering army of unwounded desk workers, she had an unlooked-for encounter with Mr. Wollaston.

It was a misty raw morning, faintly drizzling and otherwise disagreeable. But Fanny liked the matutinal walk down Seventeenth Street, which was her only exercise and which further never failed to give her a stirring sense of being part of a gigantic whole, a small necessary unit in a thrilling enterprise in coöperation. In addition the moment was favorable for high thinking, and this morning—it seemed—her thoughts were especially preoccupied. She trudged oblivious to her surroundings; took the crossing at H Street in a vein of perilous abstraction. From the rolling stream in the middle of the thoroughfare a car detached itself abruptly, curved sharply and slowed with squealing brakes to the curb not ten feet away. She neither saw nor heard. However, a passenger dismounting from the vehicle took his stand upon the sidewalk directly in front of her. So looking up, the girl ran full upon the gaze of the celebrated Board Chief, discovered in the act of removing his hat.

"Well met!" said he in a friendly tone. "Let me give you a lift down."

The confrontation was sudden and to Fanny considerably disturbing. The moment her eyes rested upon him she knew that, without her realizing it exactly, this man had constantly hovered in the background of her thoughts through these four days. The unexpected sight of him in the flesh proved disconcerting to a hardly explicable degree. She felt the blood rise in her cheeks, and the consciousness of the foolish symptom at once enhanced the cause of it.

Nevertheless, despite these feelings, despite her known preferential attitude toward the walk, it did not seem to occur to her to reject his courteous proffer.

As she seated herself in the beautiful equipage Mr. Wollaston went on, quite like an ordinary person:

"Have you been away? I don't seem to have seen you for some time."

The girl answered with excessive sprightliness:

"Oh, I have been away—that's true—but only for a day, and that was last week! It's just happened we've had nothing to trouble you with, you see, since we settled the awful problems of trade with Mesopotamia! Goodness, what a load that was off Mr. Charles' neck! He was actually worried about it, and admitted it—a perfectly amazing thing, you know, in our office apostle of suppressed emotions!"

"Ah? Well, he'll have Siberia to worry about next, I imagine. Omsk seems to be ripening right along, don't you think? However, I'm glad to have run into you in this way, if only to greet and say good-by. I'm clearing out next week. As you ——"

"Clearing out?"

"Leaving the Board. Rather unexpectedly, or to put it exactly—like a navy memorandum—unexpectedly soon. You ——"

"Ah! I'm sorry—and Mr. Charles will be really upset when he hears. Really you must know that your place here—so far as our office is concerned—can hardly be filled."

If her manner was as matter of fact as his own, that indicated some poise perhaps; if Mr. Charles would be upset when he heard this news, his assistant—morally speaking—was experiencing a sensation not far removed from that while she spoke. Fanny Hardy, in fact, confronted a second discovery. She perceived as if for the first

THE Bearings Service Company was organized as the service division of our corporations and is the sole medium of distribution in United States and Canada for our service and parts replacements.

time that she had long ago come to think of this man, not as the most stimulating of the war chiefs at all but, in a strange way, as her friend.

"It would be pleasant to cherish a delusion of that sort," said Mr. Wollaston easily, "but I don't. Thank you all the same."

"I am painfully sincere. This is a real blow. But then—I suppose the rubber business simply cannot get along without you any longer?"

"No—n-no. It isn't that exactly. Let's say rather that all things, however agreeable, must have an end. We pass from stage to stage."

"But why did you smile? Was I funny?"

"Did I smile? Then I must have thought that you were funny."

"Well—but won't you throw your mind backward and analyze for me how and why? For my future guidance, since I imagined myself as serious—weighty even?"

"Certainly. You conceive me—if I follow you correctly—as chucking all this interesting work here to rush home and make as many rubber tires as I possibly can, to meet a buoyant market. Humor, they say—or one large section of humor—grows out of the incongruity between somebody's conception of a fact and the fact itself. The fact here is that I sold out all my rubber interests six months ago."

The girl turned in the silently rolling limousine and gave him a stare as straight as a man's.

"But—I didn't know that! Why, you've never hinted at such a thing! I ——"

"It was in the papers, as I remember. However ——"

"But I didn't see it! I didn't know! Why—what made you do it?"

"Very simple. I got an offer—and a pretty good one—for my stock."

But his air of amusement hardly sustained itself under that steadfast scrutiny, and he paid her the compliment of adding almost seriously:

"And then—necessarily—I'd lost some of my personal enthusiasm for making rubber—in April two years ago. No, let me see—I really suppose it was two years before that, or thereabouts. And making money—to look at it that way—is a pretty dry cause when one's heart is gone from the work."

"Yes—yes, of course! But—but this work here? Isn't it—worth while? Hasn't it seemed to you important and—and valuable?"

"Yes, certainly—for the most part. At least it's seemed on the whole the best that I could do. Of course I've had to remember I'm not a young man—fit to shoulder a gun. That's galled at times naturally—but crying over spilt milk never helped anybody yet. Let's see—yours is B Street, isn't it?"

She nodded, and her engrossed gaze, turning from him, lost itself out of the open window through which the thin morning mist, like smoke, perpetually streamed.

"By the way," continued Mr. Wollaston, "I was sorry you couldn't come to lunch that day. As she'd heard something about you—for women naval officers don't grow on every bush, you know—my sister was quite anxious to see you for herself. And I really think you would have enjoyed her. She's what you might call a card."

"Oh, I didn't doubt my enjoyment—and I did appreciate being asked, so much," said Fanny. And, considerably confused, she acknowledged an obligation to explain a little further.

"You see—you understand that—a woman situated as I am here can hardly expect—well, any sort of social life—such as she might have at home."

"No, I don't understand that exactly. It all depends, I should think. However, that is for you to decide, of course. I remember our last talk very well. In fact I've speculated a little. Of course I should like to ask a question or two, but one draws the line at impertinence. We approach our destination, I note. Possibly you won't be coming to the Board again between now and next Wednesday? Then I'd better take this occasion, as the public speakers say, to tell you how much pleasure I've had in our—official relations. Don't tell a soul, but you've been the most uniformly satisfactory coworker I've found in Washington. Yes, tell everybody, for it's simple truth. I can't recall one man here, certainly not one young man, who's brought to his work as much good sense, good judgment and imagination as you have."

She said after a moment, "I—do you really mean that?"

"My dear Miss Hardy, I gave up saying things I didn't mean a long, long time ago. It simply doesn't pay."

"Then," said she, "I'll tell you how much I think of it. I'm going to write it to my father before I sleep to-night."

The speech seemed to please the Board chieftain, but he only said: "Good! For it's very, very true. Well, here we are! And how much longer do you intend to stay a sailor?"

"Oh, indefinitely! I'm one of the bitter enders, I think."

The car had halted before the main entrance of the great new Navy Building into which hundreds and thousands of uniforms—male and female—were pouring for the labors of a new day.

Chief Yeoman Hardy made no instantaneous move to join her thronging work fellows. Indeed, as she saw it, from more than one point of view this conversation was not finished.

"What's rather more important in the history of the world—isn't one to know a little more about your movements? You've only told me that you're leaving the Board—and have given up the rubber business. I'm dying to ask you what you're going to do next."

"I? Why, I'm going immediately into another business. Don't some things go without saying?"

"Well, was I being amusing again? This becomes embarrassing."

"No, I'm the humorist this time. Or so I considered, trying to say what I thought you expected of me."

"Ah, but possibly you don't know what I expected? At least—what is the business? Do tell me!"

"I think I will tell you—as my colleague in a confidential arm of the Government. I'm sailing for Paris Saturday week. The President wants to see me."

"Oh!"

Mr. Wollaston added in an offhand sort of way: "It's a secret as yet—in fact I haven't even said this to my associates on the Board—but I believe he wants me as one of the economic advisers to the commission."

"Oh!"

The confidential colleague, who could sum up a knotty question on a sheet of paper as well as another, was aware of the inadequacy of her rejoinders—she couldn't seem to help it. In truth she was staggered by his revelation; staggered by the simple but brilliant fact that this undemonstrative man, her friend, whom she had attacked with bitterness for insensitiveness to his times, had been moved through these years to overthrow and rebuild the foundations of his life. And she was dazzled by the vista of usefulness and honor which her mind's eye saw opening before him. In her own ears her voice sounded little and mortifyingly flat.

"That's splendid! It's—it's perfectly great! I congratulate you—a thousand times! And of course I won't tell a soul."

"Thank you. It's a chance— a door perhaps. Who knows?"

At that point, with no special aproposness or grace, Miss Hardy made a movement indicating descent from the car. Mr. Wollaston politely preceded her. Facing her for the second time that morning upon a jostling sidewalk, he amiably re control of the conversation.

"I'm not going to tell you good- dislike good-bys on principle, and I I imagine I'll see you again—if not the Board, then somewhere else la It amounts to an intuition."

"I think it is a nice one," saic Hardy.

And then she added hastily, wit a little loss of breath: "But—please your hat. There's something—no, th two things—I want to say."

Having thus committed herself turning back, she glanced away do crowded street and took the plunge for some minutes contemplated, in from which self-control had pressed a But the strain turned her a little wh

"You mentioned the last talk we and in a way you implied a question you were perfectly entitled to ask wanted to tell you that I've remer that talk too—especially in the la days. I remember saying some qui things. I've wanted to say that I'v sorry for them since."

"Really? I don't seem to recal saying anything of that sort."

"If you mean that too I'm ver But I did say them, and I—I abho rhetorical. Of course what matters what people do; it's what it means t as they do it. . . . It seems to m all there is to say."

Mr. Wollaston, who could hardl felt completely enlightened, replied "It is enough, I assure you. And, hardly add, I appreciate your sayi

"And then another thing that per I'm sorry for—that you're leaving s As our work looks now, I'll not be to the Board again."

"Ah! And that's an impasse, as I stand you?"

"Well, I—I wondered—I supp you're going on Wednesday you're busy—and, of course, every bit of yo will be filled till then?"

The Board Chief looked down rather pale petty officer, whose fringed eyes had stirred the fancy of than Ensign Dawson, and an od flitted briefly over his face and was

"Before answering that question ask plainly whether it involves any intentions on your part?"

She managed a smile at that, helped considerably, though not q much as she could have wished.

"Dreadfully serious, I fear yo think! I—you see, I wanted to ask i if you could lunch with me at my c- one day—any day you could come- you went? I—it's considered quit I mean the cafeteria."

"For example—to-day?"

With instantly recovered ease—I shall dumfound a woman?—she an "A perfect example from my po view."

"I was lunching with a fellow- He shall wait. Where and when meet you?"

"Well, I won't ask you to come office. That would seem infra di peace commissioner, don't you think you meet me here on the sidewalk casually—at one o'clock?"

"I'll meet you here on the side one o'clock. I say nothing about t ualness. Do you know, I think doing a very nice thing. *A rivederci*

"*A rivederci*," said Miss Hardy.

The inflowing tide of naval re swallowed her up. Five minutes late tenant Charles gobbled her com She was burdened with many cares. theless, toward eleven o'clock she su the dim thought floating somewhere

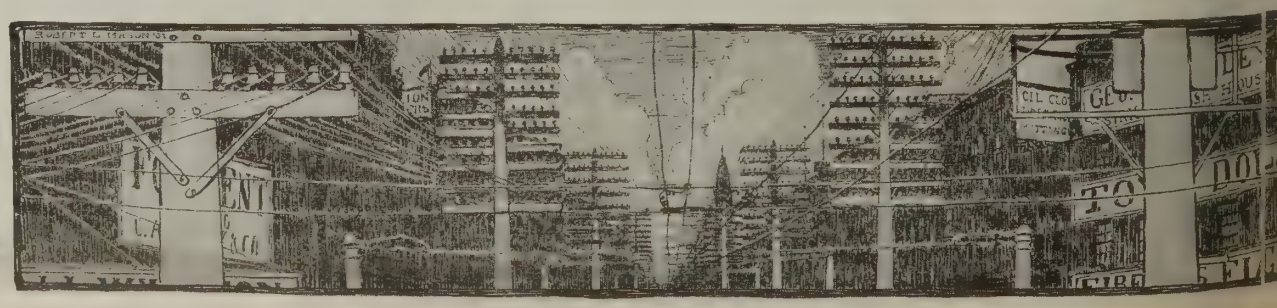
But this time she did not bru thought away.



TUTT AND MR. TUTT

(Continued from Page 9)

"ood afternoon, Mock Hen! You are rht-to-day."

Mck took her hand and stroked it af- t nately.

"go Fulton Mark' buy li'l' terrapin. orn on way to see dear Miss Fan'."

T y stood thus for a moment, and while e lid so the clock struck four.

"o now!" said Mock suddenly. "Four k already."

"s early," answered Miss Fanny. 't you stay a little while?"

"go now," he repeated with resolution. d-by, li'l' teacher!"

S watched until his lithe figure passed rgh the door, and presently returned t back room. Mock waited outside t he had disappeared. Then he changed c the clock.

"e've got you, you blarsted heathen!" e Mooney hoarsely as he and two oth- om the Central Office threw them- upon Mock Hen on the landing tle the door of his flat. "Look out, na. Pipe that thing under his arm!"

"s a bloody turtle!" gasped Murtha, ering.

"hat's the matter, boys?" inquired o. "Leggo my arm, can't yer? What'd ant, anyway?"

"e want you, you yellow skunk!" re- rt Mooney. "Open that door! Lively w"

"ure!" answered Mock amiably. "Come i! What's bitin' yer?"

unlocked the door and threw it open. "ake a chair," he invited them. "Have air? You there, Emma?"

Emma Pratt, clad in a wrapper and lying e big double brass bedstead in the rear , raised herself on one elbow.

"ep!" she called through the passage. the bird?"

Mck looked at Murtha, who was carry- e terrapin.

"ure!" he called back. "Sit down, What'd yer want? Can't yer tell a l?"

"e want you for croaking Quong Lee!" ed Mooney. "Where have you been?"

"ulton Market—and Hudson House. here quarter of four. I haven't seen g Lee. Where was he killed?"

Mooney laughed sardonically.

"hat'll do for you, Mock! Your alibi worth a damn this time. I saw you lf."

"ou saw someone else," Mock assured politely. "I haven't been in China- n."

"ay, what yer doin' wit' my Chink?" nded Emma, appearing in the door- "He was sittin' here wit' me all fternoon, until about just before four t him over to Fulton Market to buy a Who's been croaked, eh?"

"w, cut it out, Emma!" replied ney. "That old stuff won't go here. Chink's goin' to the chair. Murtha, through the place while we put Mock e wagon. Hell!" he added under his th. "Won't this make Peckham sick!"

r. Tutt had just finished his morning when Willie informed him that Mr. g Get desired an interview. Though old lawyer did not formally represent Hip Leong Tong he was frequently re- ed by its individual members, who held in high esteem, for they had always d him loyal to their interests and as h a stickler for honor as themselves. eover, between him and Wong Get e existed a curious sympathy as if in e previous state of existence Wong Get nt have been Mr. Tutt, and Mr. Tutt g Get. Perhaps, however, it was merely use both were rather weary, sad and dly wise.

ong Get did not come alone. He was mpanied by two other Hip Leongs, the e forming the law committee appointed etain the best available counsel to de- l Mock Hen. In his expansive frock and bowler hat Wong might easily e excited mirth had it not been for the eme dignity of his demeanor. They e there, he stated, to request Mr. Tutt rotect the interests of Mock Hen, and were prepared to pay a cash retainer sign a written contract binding them- es to a balance—so much if Mock ld be convicted; so much if acquitted; uch if he should die in the course of the l without having been either convicted or acquitted. It was, said Wong Get gently, a matter of grave importance and they would be glad to give Mr. Tutt time to think it over and decide upon his terms. Suppose, then, that they should return at noon? With this understanding, accordingly, they departed.

"There's no point in skinning a Chink just because he is a Chink," said Tutt when his partner had explained the situation to him. "But it isn't the highest-class practice and they ought to pay well."

"What do you call well?" inquired Mr. Tutt.

"Oh, a thousand dollars down, a couple more if he's convicted, and five altogether if he's acquitted."

"Do you think they can raise that amount of money?"

"I think so," answered Tutt. "It might be a good deal for an individual Chink to cough up on his own account, but this is a coöperative affair. Mock Hen didn't kill Quong Lee to get anything out of it for himself, but to save the face of his society."

"He didn't kill him at all!" declared Mr. Tutt without moving a muscle of his face.

"Well, you know what I mean!" said Tutt.

"He wasn't there," insisted Mr. Tutt. "He was way over in Fulton Market buying a terrapin."

"That is what, if I were district attorney, I should call a Mock Hen with a mock-turtle defense!" grunted Tutt.

Mr. Tutt chuckled.

"I shall have to get that off myself at the beginning of the case, or it might convict him," he remarked. "But he wasn't there—unless the jury find that he was."

"In which case he will—or shall—have been there—whatever the verb is," agreed Tutt. "Anyhow they'll tax every laundry and chop-suey palace from the Bronx to the Battery to pay us."

"I'd hate to take our fee in bird's-nest soup, shark's fin, bamboo-shoots salad and ya ko main," mused Mr. Tutt.

"Or in ivory chopsticks, oolong tea, imitation jade, litchi nuts and preserved leeches!" groaned Tutt. "Be sure and get the thousand down; it may be all the cash we'll ever see!"

Promptly at twelve the law committee of the Hip Leong Tong returned to the office of Tutt & Tutt. With them came a venerable Chinaman in native costume, his wrinkled face as inscrutable as that of a snapping turtle. The others took chairs, but this high dignitary preferred to sit upon his heels on the floor, creating something of the impression of an ancient slant-eyed Buddha. Wong Get translated for his benefit the arrangement proposed by Mr. Tutt, after which there was a long pause while His Eminence remained immovable, without even the flicker of an eyelid. Then he delivered himself in an interminable series of gargles and gurgles, supplemented by a few coughlike hisses, while Wong Get translated with rapid dexterity, running verbally in and out among his words like a carriage dog between the wheels of a vehicle.

It was, declared Buddha, an affair of great moment touching upon and appertaining to the private honor of the Duck, the Wong, the Fong, the Long, the Sui and various other families, both in America and China. The life of one of their members was at stake. Their face required that the proceedings should be as dignified as possible. The price named by Mr. Tutt was quite inadequate.

Mr. Tutt, repressing a smile, offered the box of stogies. What amount, he inquired through Wong Get, would satisfy the face of the Duck family? A somewhat lengthy discussion ensued. Then Buddha rendered his decision.

The honor of the Ducks, Longs and Fongs would not be satisfied unless Mr. Tutt received five thousand dollars down, five more if Mock Hen was convicted, three more if he died before the conclusion of the trial, and twenty thousand if he was acquitted.

Mr. Tutt, assuming an equal impassivity, pondered upon the matter for about an inch of stogy and then informed the committee that the terms were eminently satisfactory. Buddha thereupon removed from the folds of his tunic a gigantic roll of soiled bills of all denominations and carefully counting out five thousand dollars placed it upon the table.

"H'm!" remarked Tutt when he learned of the proceeding. "His face is our fortune!"

"Look here," expostulated District Attorney Peckham in his office to Mr. Tutt a month later. "What's the use of our both wasting a couple of weeks trying a Chinaman who is bound to be convicted? Your time's too valuable for that sort of thing, and so is mine. We've got three white witnesses that saw him do it, and a couple of dozen Chinks besides. He doesn't stand a chance; but just because he is a Chink, and to get the case out of the way, I'll let you plead him to murder in the second degree. What do you say?"

He tried to conceal his anxiety by nervously lighting a cigar. He would have given a year's salary to have Mock Hen safely up the river, even on a conviction for manslaughter in the third, for the newspapers were making his life a burden with their constant references to the seeming inability of the police department and district attorney's office to prevent the recurrence of feud killings in the Chinatown districts. What use was it, they demanded, to maintain the expensive machinery of criminal justice if the tongs went gayly on shooting each other up and incidentally taking the lives of innocent bystanders. What was a district attorney for anyway? Wasn't the law intended to cover Chinamen as much as Italians, Poles, Greeks and niggers? And now that one of these murdering Celestials had been caught red-handed it was up to the D. A. to go to it, convict him, and send him to the chair! They did not express themselves precisely that way, but that was the gist of it. But Peckham knew that it was one thing to catch a Chinaman, even red-handed, and another to convict him. And so did Mr. Tutt.

The old lawyer smiled blandly—after the fashion of the Hip Leong Tong. Of course, he admitted, it would be much simpler to dispose of the case as Mr. Peckham suggested, but his client was insistent upon his innocence and seemed to have an excellent alibi. He regretted, therefore, that he had no choice except to go to trial.

"Then," groaned Peckham, "we may as well take the winter for it. After this there's going to be a closed season on Chinamen in New York City!"

Now though it was true that Mock Hen insisted upon his innocence, he had not insisted upon it to Mr. Tutt, for the latter had not seen him. In fact, the old lawyer, recognizing what the law did not, namely that a system devised for the trial and punishment of Occidentals is totally inadequate to cope with the Oriental, calmly went about his affairs, intrusting to Bonnie Doon the task of interviewing the witnesses furnished by Wong Get. There was but one issue for the jury to pass upon. Quong Lee was dead and his honorable soul was with his illustrious ancestors. He had died from a single blow upon the head, delivered with an iron bar, there present, to be in evidence, marked "Exhibit A." Mock Hen was alleged to have done the deed. Had he? There would be nothing for Mr. Tutt to do but to cross-examine the witnesses and then call such as could testify to Mock's alibi. So he made no preparation at all and dismissed the case from his mind. He had not seen a dozen Chinamen in his life—outside of a laundry.

On the morning set for the trial Mr. Tutt, having been delayed by an accident in the Subway, entered the Criminal Courts Building only a moment or two before the call of the calendar. Somewhat preoccupied, he did not notice the numerous Chinamen who dawdled about the entrance or the half dozen who crowded with him into the elevator, but when Pat the elevator man called, "Second floor!—Part One to your right!—Part Two to the left!" and he stepped out into the marble-floored corridor that ran round the inside of the building, he was confronted with an unusual and somewhat ominous spectacle.

The entire hallway on two sides of the building was lined with Chinamen! They sat there motionless as blue-coated images, faces front, their hands in their laps, their legs crossed beneath them. If anyone appeared in the offing a couple of hundred pairs of glinting eyes shifted automatically and followed him until he disappeared, but otherwise no muscle quivered.

YOU want style, of course, in your Fall Overcoat.

But you want real sterling worth also.

A good way to be sure you are getting honest value and fashion is to look for the "R & W" label. It's your protection.

CHICAGO

"Say," growled Hogan, Judge Bender's private attendant, who was the first to run the gantlet, "those Chinks are enough to give anyone the Willies! Their eyes scared me to death, sticking me through the back!"

Even dignified Judge Bender himself as he stalked along the hall, preceded by two police officers, was not immune from a slight feeling of uncanniness, and he instinctively drew his silken robe round his legs that it might not come into contact with those curious slippers with felt soles that protruded across the marble slabs.

"Eyes right!" They had picked him up the instant he stepped out of the private elevator—the four hundred of them. If he turned and looked they were seemingly not watching him, but if he dropped his glance they swung back in a single moment and focused themselves upon him. And every one of them probably had a gun hidden somewhere in his baggy pants! The judge confessed to not liking these foreign homicide cases. You never could tell what might happen or when somebody was going to get the death sign. There was Judge Deasy—he had the whole front of his house blown clean out by a bomb! That had been a close call! And these Chinks—with their secret oaths and rituals—they'd think nothing at all of jabbing a knife into one. He didn't fancy it at all and, as he hurried along, supremely conscious of the deadly cumulative effect of those beady eyes, he fancied it less and less. What was there to prevent one of them from getting right up in court and putting a bullet through one? He shivered, recalling the recent assassination of a judge upon the bench by a Hindu whom he had sentenced. When he reached his robing room he sent for Captain Phelan.

"See here, captain," he directed sharply, "I want you to keep all those Chinamen out in the corridor; understand?"

"I've got to let some of 'em in, judge," urged Phelan. "You've got to have an interpreter—and there's a Chinese lawyer associated with Tutt & Tutt—and of course Mr. O'Brien has to have a couple of 'em so's he'll know what's going on. Y' see, judge, the On Gee Tong is helping the prosecution against the Hip Leongs, so both sides has to be more or less represented."

"Well, make sure none of them is armed," ordered Judge Bender. "I don't like these cases."

Now the judge being recently elected and unfamiliar with the situation did not realize that nothing could have been farther from the Oriental mind or intention than an attack upon the officers engaged in the administration of local justice, whom they regarded merely as nuisances. What these Chinamen supremely desired was to be allowed to settle their own affairs in their own historic and traditional way—the way of the revolver, the silken cord, the knife and the iron bar. Once enmeshed in Anglo-Saxon juridical procedure, to be sure, they were not averse to letting it run its course on the bare chance that it might automatically accomplish their revenge. But they distrusted it, being brought up according to a much more effective system—one which when it wanted to punish anybody simply reached out, grabbed him by the pigtail, yanked him to his knees and sliced off his head. This so-called American justice was all talk—words, words, words! From their point of view judges, jurymen and prosecutors were useless pawns in life's game of chess. Perhaps they are! Who knows!

When Judge Bender entered the court room it was already packed with blue blouses. A special panel of two hundred talesmen filled the first half dozen rows of benches, the others being occupied by witnesses, policemen and the miscellaneous human flotsam and jetsam that always manages somehow or other to find its way to a murder trial. Inside the rail O'Brien, the assistant district attorney, was busy in conversation with three cueless Chinamen in American clothes. At the bar sat Mock Hen with Mr. Tutt beside him, flanked by Wong Get, Tutt, Bonnie Doon and Buddha.

The judge beckoned Mr. Tutt and O'Brien to the front of the bench.

"Is there any chance of disposing of this case by a plea?" he inquired.

O'Brien looked expectantly at Mr. Tutt, who shook his head. The judge shrugged his shoulders.

"Well, how long is it going to take?"

"About six weeks," answered the old lawyer quietly.

"What!" ejaculated judge and prosecutor in unison.

"A day or two less, perhaps," affirmed Mr. Tutt, "but, likely as not, considerably longer."

"I shall cut it down as much as I can," announced the judge, appalled at the prospect. "I shall not permit this trial to be dragged out indefinitely."

"Nothing would please me better, Your Honor," bowed Mr. Tutt with the shadow of a smile. "Shall we proceed to select the jury?"

The accuracy of Mr. Tutt's prophecy as to the probable length of the trial was partially demonstrated when it developed that most of the talesmen had a pronounced antipathy to Chinese murder cases, and a deep-rooted prejudice against the race as a whole. In fact, a certain subconscious influence affecting most of them was formulated by the thirty-ninth talesman to be rejected who, in a moment of resentment, burst forth, "I don't mind trying decent American criminals, but I hold it isn't any part of a citizen's duty to try Chinamen!" and was promptly struck off the jury list.

"I say, chief," disgustedly declared O'Brien to Peckham at the noon recess as they clinked glasses over the bar at Po "you've handed me a ripe, juicy Me all right! I won't be able to get a We've been at it since ten o'clock an haven't lured a single sucker into the b

"What's the matter?" inquired D. A. apprehensively.

"I can't quite make out," answ O'Brien. "But most of 'em seem to a sort of idea that to kill a Chinaman a crime but a virtue!"

"Well, don't tell anybody," whisp Peckham, "but I'm somewhat of that wi thinking myself. Set 'em up again, Jo

However, by invoking utmost celerity a jury at last selected and swo the end of the ninete day of the trial. As a O'Brien confidentially mitted to Peckham it w much! But what could expect of a bunch who willing to swear that hadn't any prejudice ag a Chink and would as acquit him as a white n The truth was that they all gentlemen who, ha lost their jobs, were willi swear to anything that w bring them in two dolla day. The more days the ter! And it is historic that during the sixty- days of Mock Hen's pr cution not one of them tested at being kept a from his wife and chil his business or his plea On the contrary they slumbered peacefully ten until four—and when trial ended, on the whole rather regretted that it over, the only genuine ion regarding the case b that the Chinks were a funny as hell and that Tutt was a bully old boy

The evidence respecting death of the unfortu Quong Lee made little pression upon them. S ingly they regarded the s much as they did tha Elisha and the bears or and the dragon—as a so apocryphal narrative w they were required to li to, but in no wise boun believe. They were muc terested in Quong's sui chain mail, however, and f time to time awoke to e the various verbal encoun between the judge and Tutt. As factors in the ceedings they did not co except to receive their dollars per diem, board, l ing and hack fare.

The trial of Mock being conducted in a for language the first judi step was the swearing o interpreter. The On C had promptly produced whom O'Brien told the c was a very learned man graduate of the Impe University at Peking, an Son of the Sacred Drag Be that as it may, he was prepossessing in appe ance and Mr. Tutt assu Judge Bender that far fr being what the district torney pretended, the n was a well-known gamb who made his living larg by blackmail. He might a son of a dragon or he mi not; anyway he was a sor Belial. An interpreter v the conduit through which the evidence must pass. If the official w biased or corrupt the testimony would distorted, colored or suppressed.

Now he—Mr. Tutt—had an interpret the well-known Dr. Hong Su, against wh nothing could be said, and upon wh fat head rested no imputation of partia a graduate of Harvard, a writer note, a ——

O'Brien sprang to his feet: "My int preter says your interpreter is an opi smuggler, that he murdered his aunt Hongkong, that he isn't a doctor at

trial will degenerate into nothing but
a ight if we are not careful." Then a
l idea suggested itself to his Occi-
t mind. "Suppose I appoint an
c umpire to say which of the other
terpreters is correct—and let them
who he shall be?"
Th proposition was received with
n of satisfaction by the two antago-
s who conferred together with aston-
n amiability and almost immediately
d ted into the court room a tall,
a ted Chinaman who they alleged was
ily satisfactory to both of them. He
s cordingly sworn as a third inter-
t and the trial began again. It was
e ed that thereafter there was no dis-
e hatever regarding the accuracy of the
t ony, and as each interpreter was
d r his services at the rate of ten dol-
s day it was rumored that the whole
a had been arranged by agreement be-
e the two societies, which divided the
n, amounting to some eighteen hun-
d llars, between them. But, as O'Brien
e ard asked Peckham, How in thunder
lk you tell?
Th court's troubles had, however, only
ru Ah Fong was a whimsical-looking
s, who gave an impression of desiring
m e himself generally agreeable. He
s, course, the star witness—if a China-
n an ever be a star witness—and pre-
m ly had been carefully schooled as to
manner in which he should give his
t ony. He and he alone had seen the
o l tragedy from beginning to end. He
w if anybody, who would tuck Mock
n mfortably into his coffin.
Th problem of the interpreters having
n olved Fong settled himself comfort-
y the witness chair, crossed his hands
o r is stomach and looked complacently
Mck Hen.
"ll, now let's get along," adjured His
n. "Swear the witness."
M Tutt immediately rose.
"Ithe court please," said he, "I object
th swearing of the witness unless it is
d o appear that he will regard himself
b d by the oath as administered. Now
s an is a Chinaman. I should like to
k n a preliminary question or two."
"at seems fair, Mr. O'Brien," agreed
urt. "Do you see any reason why
utt shouldn't interrogate the wit-
s?"
"(, let me qualify my own witness!"
ord O'Brien fretfully. "Ah Fong, will
a spect the oath to testify truthfully,
b to be administered to you?"
Th interpreter delivered a broadside of
in e at Ah Fong, who listened atten-
el and replied at equal length. Then
e interpreter went at him again, and
air Ah Fong affably responded. It was
er inable.
Th two muttered and chortled at each
he ntil O'Brien, losing patience, jumped
a called out: "What's all this? Can't
a k him a simple question and get a
np answer? This isn't a debating
ie."
Th interpreter held up his hand, indi-
in that the prosecutor should have
ti e.

"*Ah-ya-ya-oo-aroo-yung-ung-loy-a-a-ya oo-chu-a-oy-ah-ohay-tching!*" he concluded.

"*A-yah-oy-a-yoo-oy-ah-chuck-uh-ung-loy-oo-ayah-ayoo-chung-chung-szt-oo-aha-oy-ou-ungaroo-yah-yah-yah!*" replied Ah Fong.

"Thank heaven, that's over!" sighed O'Brien.

The interpreter drew himself up to his full height.

"He says yes," he declared dramatically.

"It's the longest yes I ever heard!" audibly remarked the foreman, who was feeling his oats.

"Does not that satisfy you?" inquired the court of Mr. Tutt.

"I am sorry to say it does not!" replied the latter. "Mr. O'Brien has simply asked whether he will keep his oath. His reply sheds no light on whether his religious belief is such that it would obligate him to respect an oath."

"Well, ask him yourself!" snorted O'Brien.

"Ah Fong, do you believe in any god?" inquired Mr. Tutt.

"He says yes," answered the interpreter after the usual interchange.

"What god do you believe in?" persisted Mr. Tutt.

Suddenly Ah Fong made answer without the intervention of the interpreter:

"When I in this country," he replied complacently in English, "I b'lieve Gees Clist; when I in China I b'lieve Chinese god."

"Does Your Honor hold that an obliging acquiescence in local theology constitutes such a religious belief as to make this man's oath sacred?" inquired Mr. Tutt.

The judge smiled.

"I don't see why not!" he declared. "There isn't any precedent so far as I am aware. But he says he believes in the Deity. Isn't that enough?"

"Not unless he believes that the Deity will punish him if he breaks his oath," answered Mr. Tutt. "Let me try him on that?"

"Ah Fong, do you think God will punish you if you tell a lie?"

Fong looked blank. The interpreter fired a few salvos.

"He says it makes a difference the kind of oath."

"Suppose it is a promise to tell the truth?"

"He says what kind of a promise?"

"A promise on the Bible," answered Mr. Tutt patiently.

"He says what god you mean!" countered the interpreter.

"Oh, any god!" roared Mr. Tutt.

The interpreter, after a long parley, made reply.

"Ah Fong says there is no binding oath except on a chicken's head."

Judge Bender, O'Brien and Mr. Tutt gazed at one another helplessly.

"Well, there you are!" exclaimed the lawyer. "Mr. O'Brien's oath wasn't any oath at all! What kind of a chicken's head?"

"A white rooster."

"Quite so!" nodded Mr. Tutt. "Your Honor, I object to this witness being sworn by any oath or in any form except on the head of a white rooster!"

"Well, I don't happen to have a white rooster about me!" remarked O'Brien, while the jury rocked with glee. "Ask him if something else won't do. A big book for instance?"

The interpreter put the question and then shook his head. According to Ah Fong there was no virtue in books whatever, either large or small. On some occasions an oath could be properly taken on a broken plate—also white—but not in murder cases. It was chicken or nothing.

"Are you not willing to waive the formality of an oath, Mr. Tutt?" asked the judge in slight impatience.

"And wave my client into the chair?" demanded the lawyer. "No, sir!"

"I don't see what we can do except to adjourn court until you can procure the necessary poultry," announced Judge Bender. "Even then we can't slaughter them in court. We'll have to find some suitable place!"

"Why not kill one rooster and swear all the witnesses at once?" suggested Mr. Tutt in a moment of inspiration.

"My God, chief!" exclaimed O'Brien at four o'clock. "There ain't a white rooster to be had anywhere! Hens, yes! By the hundred! But roosters are extinct! Tomorrow will be the twenty-first day of this prosecution and not a witness sworn yet."

However, a poultryman was presently discovered who agreed simply for what advertising there was in it to furnish a crate of white roosters, a hatchet and a headsman's block, and to have them in the basement of the building promptly at ten o'clock. Accordingly, at that hour Judge Bender convened Part IX of the General Sessions in the court room and then adjourned downstairs, where all the prospective witnesses for the prosecution were lined up in a body and told to raise their right hands.

Meantime Clerk McGuire was handed the hatchet, and he approached the coop with obvious misgivings. Ah Fong had already given a dubious approval to the sex and quality of the fowls inside and naught remained but to submit the proper oath and remove the head of the unfortunate victim. A large crowd of policemen, witnesses, reporters, loafers, truckmen and others drawn by the unusual character of the proceedings had assembled and now proceeded without the slightest regard for the requirements of judicial dignity to encourage McGuire in his capacity of executioner, by profane shouts and jeers, to do his deadly deed.

But the clerk had had no experience with chickens and in bashfully groping for the selected rooster allowed several other occupants of the crate to escape. Instantly the air was filled with fluttering, squawking fowls while fifty frenzied police officers and Chinamen attempted vainly to reduce them to captivity again. In the midst of the mêlée McGuire caught his rooster, and fearful lest it should escape him managed with truly surprising dexterity to decapitate it. The body, however, had been flopping round spasmodically several seconds upon the floor before he realized that the oath had not been administered, and his voice suddenly rose above the pandemonium in an excited brogue.

"Hold up your hands, you! You do solemnly swear that in the case of The People against Mock Hen you will tell the truth, the whole truth and nothing but the truth so help you God!"

But the interpreter was at that moment engaged in clasping to his bosom a struggling rooster and was totally unable to fulfill his functions. Meantime the jury, highly edified at this illustration of the administration of justice, gazed down upon the spectacle from the stairs.

"This farce has gone far enough!" declared Judge Bender disgustedly. "We will return to the court room. Put those roosters back where they belong!"

Once more the participants ascended to Part IX and Ah Fong took his seat in the witness chair. The interpreter's blouse was covered with pinfeathers and one of his thumbs was bleeding profusely.

"Ask the witness if the oath that he has now taken will bind his conscience?" directed the court.

Again the interpreter and Ah Fong held converse.

"He says," translated that official calmly, "that the chicken oath is all right in China, but that it is no good in United States, and that anyway the proper form of words was not used."

"Good Lord!" ejaculated O'Brien. "Where am I?"

"Me tell truth, all light," suddenly announced Ah Fong in English. "Go ahead! Shoot!" And he smiled an inscrutable age-long Oriental smile.

The jury burst into laughter.

"He's stringing you!" the foreman kindly informed O'Brien, who cursed silently.

"Go on, Mister District Attorney, examine the witness," directed the judge. "I shall permit no further variations upon the established forms of procedure."

Then at last and not until then—on the morning of the twenty-first day—did Ah Fong tell his simple story and the jury for the first time learn what it was all about. But by then they had entirely ceased to care, being engrossed in watching Mr. Tutt at his daily amusement of torturing O'Brien into a state of helpless exasperation.

Ah Fong gave his testimony with a clarity of detail that left nothing to be desired, and he was corroborated in most respects by the Italian woman, who identified Mock Hen as the Chinaman with the iron bar. Their evidence was supplemented by that of Bull Neck Burke and Miss Malone, who also were positive that they had seen Mock running from the scene of the murder at exactly four-one o'clock.

Mr. Tutt hardly cross-examined Fong at all, but with Mr. Burke he pursued very different tactics, speedily rousing the wrestler to such a condition of fury that he was hardly articulate, for the old lawyer gently hinted that Mr. Burke was inventing the whole story for the purpose of assisting his friends in the On Gee Tong.

"But I tell yer I don't know no Chinks!" bellowed Burke, looking more like a bull than ever. "This here Mock Hen run right by me. My goil saw him too. I looked at me ticker to get the time!"

"Ah! Then you expected to be a witness for the On Gee Tong!"

"Naw! I tell yer I was walkin' wit' me goil!"

"What is the lady's name?"

"Miss Malone."

"What is her occupation?"

"She's a gay burlesquer."

"A gay burlesquer?"

"Sure—champagne goil and gay burlesquer."

"A champagne girl!"

"Dat what I said."

"You mean that she is upon the stage?"

"Sure—dat's it!"

"Oh!" Mr. Tutt looked relieved.

"What had you and Miss Malone been doing that afternoon?"

"I told yer—walkin'."

Mr. Tutt coughed slightly.

"Is that all?"

"Say, watcha drivin' at?"

Mr. Tutt elevated his bushy eyebrows.

"How do you earn your living?" he demanded, changing his method of attack.

Bull Neck allowed his head to sink still farther into the vast bulk of his immense torso, strangely resembling, in this position, the fabled anthropophagi whose heads are reputed thus to "grow beneath their shoulders."

Then throwing out his jaw he announced proudly between set teeth: "I'm a perfessor of physical sculture!"

The jury sniggered. Mr. Tutt appeared politely puzzled.

"A professor of what?"

"A perfessor of physical sculture!" repeated Bull Neck with great satisfaction.

"Oh! A professor of physical sculpture!" exclaimed Mr. Tutt, light breaking over his wrinkled countenance. "And what may that be?"

Bull Neck looked round disgustedly at the jury as if to say: "What ignorance!"

"Trainin' an' developin' prominent people!" he explained.

"Um!" remarked Mr. Tutt. "Who invited you to testify in this case?"

"Mr. Mooney."

"Oh, you're a friend of Mooney's! That is all!"

Now it is apparent from these questions and answers that Mr. Burke had testified to nothing to his discredit and had conducted himself as a gentleman and a sportsman according to his best lights. Yet owing to the subtle suggestions contained in Mr. Tutt's inflections and demeanor the jury leaped unhesitatingly to the conclusion that here was a man so ignorant and debased that if he were not deliberately lying he was being made a cat's-paw by the police in the interest of the On Gee Tong.

Miss Malone fared even worse, for after a preliminary skirmish she flatly refused to give Mr. Tutt or the jury any information whatever regarding her past life, while Mooney, of course, labored from the beginning to the end of his testimony under the curse of being a policeman, one of that class whom most jurymen take pride in saying they hold in natural distrust. In a word, the white witnesses to the dastardly murder of Quong Lee created a general impression of unreliability upon the minds of the jury, who wholly failed to realize the somewhat obvious truth that the witnesses to a crime in Chinatown will naturally if not inevitably be persons who either reside in or frequent that locality.

Twenty-four days had now been consumed in the trial, and as yet no Chinese witnesses except Ah Fong had been called. Now, however, they appeared in cohorts. Though Mooney had sworn that the streets were practically empty at the time of the homicide forty-one Chinese witnesses swore positively that they had been within easy view, claiming variously to have been behind doors, peeking through shutters, at upper windows and even on the roofs. All had identified Mock Hen as the murderer, and none of them had ever heard of either the On Gee or the Hip Leong Tong! Mr. Tutt could not shake them upon cross-examination, and O'Brien began to show signs of renewed confidence. Each testified to substantially the same story and

The Drying of Shoes

IN drying wet shoes, never place them in an oven, near a radiator or over a register. Place trees in the shoes which should then dry naturally.

Wear in a shoe is hidden. Hence the necessity of a brand that means something to you when selecting a shoe. The name CROSSETT on your shoes is a definite guarantee of full value and longer wear.

they occupied seventeen full days in the telling, so that when the prosecution rested forty-two days had been consumed since the first talesman had been called. The trial had sunk into a dull, unbroken monotony, as Mr. Tutt said, of the "vain repetitions of the heathen." Yet the police and the district attorney had done all that could reasonably have been expected of them. They were simply confronted by the very obvious fact—a condition and not a theory—that the legal processes of Anglo-Saxon jurisprudence are of slight avail in dealing with people of another race.

Now it is possible that even had Mr. Tutt put in no defense whatever the jury might have refused to convict, for there was a curious air of unreality surrounding the whole affair. It all seemed somehow as if—assuming that it had ever taken place at all—it had occurred in some other world and in some other age. Perhaps under what might have been practically a direction of the court a verdict of conviction might have been returned—but it is doubtful. The more witnesses testified to exactly the same thing in precisely the same words the less likely it appeared to be.

But Mr. Tutt was taking no chances and, upon the forty-third day of the trial, at a nod from the bench he opened his case. Never had he been more serious; never more persuasive. Abandoning every suggestion of frivolity he weighed the testimony of each white witness and pointed out its obvious lack of probative value. Not one, he said, except the Italian woman, had had more than a fleeting glance of the face of the man now accused of the crime. Such an identification was useless. The Chinamen were patently lying. They had not been there at all! Would any member of the jury hang a dog, even a yellow one, on such testimony? Of course not! Much less a human being. The people had called forty witnesses to prove that Mock Hen had killed Quong Lee. It made no difference. The On Gee could have just as easily produced four hundred. Moreover, Mr. Tutt did a very daring thing. He pronounced all Chinese testimony in an American court of justice as absolutely valueless, and boasted that for every Chinaman who swore Mock Hen was guilty he would bring forward two who would swear him innocent.

The thing was, as he had carefully explained to Bonnie Doon, to prove that Mock was a good Chinaman and, if the jury did not believe that there was any such animal, to convince them that it was possible. His first task, however, was to polish off the Chinese testimony by calling the witnesses who had been secured by Bonnie Doon under the guidance of Wong Get. He admitted afterward that in view of the exclusion law he had not supposed there were so many Chinamen in the United States, for they crowded the corridors and staircases of the Criminal Courts Building, arriving in companies—the Wong family, the Mocks, the Fongs, the Lungs, the Sues, and others of the sacred Hip Sing Society from near at hand and from distant parts—from Brooklyn and Flatbush, from Flushing and Far Rockaway, from Hackensack and Hoboken, from Trenton and Scranton, from Buffalo and Saratoga, from Chicago and St. Louis, and each and every one of them swore positively upon the severed neck of the whitest rooster—the broken fragments of the whitest of porcelain plates—the holiest of books—that he had been present in person at Fulton Market in New York City at precisely four-fifteen o'clock in the afternoon and assisted Mock Hen, the defendant, in selecting and purchasing a terrapin for stew.

Mr. Tutt grinned at the jury and the jury grinned affectionately back at Mr. Tutt. Indeed, after the length of time they had all been together they had almost as much respect for him as for the judge upon the bench. The whole court seemed to be a sort of Tutt Club, of which even O'Brien was a member.

"Now," said Mr. Tutt, "I will call a few witnesses to show you what kind of a man this is whom these highbinders accuse of the crime of murder!"

Mock, rolling his eyes heavenward, assumed an expression of infantile helplessness and trust.

"Don't overdo it!" growled Tutt. "Just look kind of gentle."

So Mock looked as gentle as a sucking dove while two professors from Columbia University, three of his landlords in his more reputable business enterprises, the superintendent of the Rising Sun Mission, four ex-police officers, a fireman, and an investigator from the Society for the Suppression of Sin swore upon Holy Writ and with all sincerity that Mock Hen was not only a person of the most excellent character and reputation but a Christian and a gentleman.

And then Mr. Tutt played his trump card.

"I will call Miss Frances Duryea, of Hudson House," he announced. "Miss Duryea, will you kindly take the witness chair?"

Miss Fanny modestly rose from her seat in the rear of the room and came forward. No one could for an instant doubt the honesty and impartiality of this devoted middle-aged woman, who, surrendering the comforts and luxuries of her home uptown, to which she was well entitled by reason of her age, was devoting herself to a life of service. If a woman like that, thought the jury, was ready to vouch for Mock's good character, why waste any more time on the case? But Miss Fanny was to do much more.

"Miss Duryea," began Mr. Tutt, "do you know the defendant?"

"Yes, sir; I do," she answered quietly.

"How long have you known him?"

"Six years."

"Do you know his reputation for peace and quiet?"

Miss Fanny half turned to the judge and then faced the jury.

"He is one of the sweetest characters I have ever known," she replied, "and I have known many ——"

"Oh, I object!" interrupted O'Brien. "This lady can't be permitted to testify to anything like that. She must be limited by the rules of evidence!"

With one movement the jury wheeled and glared at him.

"I guess this lady can say anything she wants!" declared the foreman chivalrously.

O'Brien shrank down in his seat. What was the use!

"Go on, please," gently directed Mr. Tutt.

"As I was saying, Mr. Mock Hen is a very remarkable character," responded Miss Fanny. "He is devoted to the mission and to us at the settlement. I would trust him absolutely in regard to anything."

"Thank you," said Mr. Tutt, smiling benignly. "Now, Miss Duryea, did you see Mock Hen at any time on May sixth?"

Instantly the jury showed renewed signs of life. May sixth? That was the day of the murder.

"I did," answered Miss Fanny with conviction. "He came to see me at Hudson House in the afternoon and while we were talking the clock struck four,"

The jury looked at one another and nodded.

"Well, I guess that settles this case!" announced the foreman.

"Right!" echoed a talesman behind him.

"I object!" wailed O'Brien. "This is entirely improper!"

"Quite so!" ruled Judge Bender sternly. "The jurymen will not make any remarks!"

"But, Your Honor—we all agreed at recess there was nothing in this case," announced the foreman. "And now this testimony simply clinches it. Why go on with it?"

"That's so!" ejaculated another. "Let us go, judge."

Mr. Tutt's weather-beaten face was wreathed in smiles.

"Easy, gentlemen!" he cautioned.

The judge shrugged his shoulders, frowning.

"This is very irregular!" he said.

Then he beckoned to O'Brien, and the two whispered together for several minutes, while all over the court room on the part of those who had sat there so patiently for sixty-nine days there was a prolonged and ecstatic wriggling of arms and legs. Instinctively they all knew that the farce was over.

The assistant district attorney returned to his table but did not sit down.

"If the court please," he said rather wearily, "the last witness, Miss Duryea, by her testimony, which I personally am quite ready to accept as truthful, has interjected a reasonable doubt of the defendant's guilt into what otherwise would in my opinion be a case for the jury. If Mock Hen was at Hudson House, nearly two miles from Pell and Doyers Streets, at four o'clock on the afternoon of the homicide, manifestly he could not have been one of the assailants of Quong Lee at one minute past four. I am satisfied that no jury would convict ——"

"Not on your life!" snorted the fore airily.

"—— and I therefore," went on O'B "ask the court to direct an acquittal."

In the grand banquet hall of the Shan and Hongkong American-Chinese Re rant, Ephraim Tutt, draped in a blue darin coat with a tasseled pill box rak upon his old gray head, sat beside Get and Buddha at the head of a long surrounded by three hundred Chinam their richest robes of ceremony. Lan of party-colored glass swaying from rafters shed a strange light upon a cloth marvelously embroidered and with the choicest of Oriental dishes upon the pale faces of the Hip Tong—the Mocks, the Wongs, the and the rest—both those who had tes and also those who had merely been if duty called to do so, all of whom now gathered together to pay honor they felt honor to be due; namely, shrine of Mr. Tutt.

Deft Chinese waiters slipped si from guest to guest with bird's-nest guy soo main, mon goo guy pan, si fin and lung har made of shreds of lo water chestnuts, rice and the suc shoots of the young bamboo, while musicians in a corner sang through noses a syncopated dirge. "Wan ang-ang!" it rose and fell as Mr. Tu neck encircled by a wreath of lilies, es to manipulate a pair of long black sticks. "Wang-ang-ang-ang!" Abou were golden limes, ginger in sirup, nuts, pickled leeches.

Then he felt a touch upon his sh and turned to see Fong Hen, the sl standing beside him. It was the d Fong Hen to drink with each guest— than that, to drink as much as each drank! He gravely offered Mr. T pony of rice brandy. It was not th lava he had anticipated, but a soft, car nectar, fragrant as if distilled from ce flowers of the time of Confucius. slipper swallowed the same quantity gulp, bowed and passed along.

Mr. Tutt vainly tried to grasp th that he was in his own native city o York. Long sleeves covered with re purple dragons hid his arms and hand below the collar a smooth tight surf silk across his breast made access pockets quite impossible. In one of reposed twenty one-thousand-dollar his fee for securing the acquittal of Hen. Yes, he was in New York!

The monotonous wail of the instru the pungency of the incense, the su light, the humid breath of the carried the thoughts of Mr. Tutt far Before him, against the blue misty sur rose the yellow temples of Peking could hear the faint tintinnabulat bells. He was wandering in a gard grant with jasmine blossoms and ac with ancient graven stones and carv statues. The air was sweet. Mr. Tu very tired.

"Let him sleep!" nodded Buddha, conveying to his wrinkled lips a d morsel of guy yemg dun. "Let him He has earned his sleep. He has sav face!"

It was after midnight when Mr. heavily laden with princely gifts of and jade and boxes of priceless emerged from the side door of the Sh and Hongkong American-Chinese taurant. The sky was brilliant with and the sidewalks of Doyers an Streets were crowded with pedes Near by a lantern-bedecked rubbe wagon was in process of unloading it of seekers after the curious and un some. On either side of him walked Get and Buddha. They had hardly r the corner when five shots echoed in succession above the noise of the traff the crowd turned with one accor rushed in the direction from which just come.

Mr. Tutt, startled, stopped and back. Courteously stopped along Get and Buddha. A throng was fas ering in front of the Shanghai and kong Restaurant.

Then Murtha appeared, shoulder way roughly through the mob. Ca sight of Mr. Tutt he paused long to whisper hoarsely in the lawyer "Well, they got Mock Hen! Five in him! But if they were going t in hell couldn't they have done it months ago?"

STANDARD EIGHT

A Powerful Car

THE New Standard Eight conforms to the most modern ideas of motor-car vogue. Its lines and appointments are artistic, dignified, and in good form.

Underneath its hood are eight powerful cylinders waiting for the touch of the throttle to assert their supremacy over the steepest of hills or the most difficult of driving emergencies.

To sit at the wheel of a Standard Eight, over roads of your own selection, is the only way fully to appreciate what is meant by Standard Eight Power. Arrange with the nearest dealer for a demonstration.

CABELL DRIVES THE NAIL

(Continued from Page 17)

a youthful face, keen, rather cold blue eyes that seemed to see farther than eyes are meant to see, and a determined chin.

Cabell hesitated between an ecstatic rush to him, with a lifting of her flowerlike face for a kiss—the expression is hers—and a sweet shyness. Before she could make up her mind he had swung across the room, taken her hand in a hearty grip, said "Well, Cabell?" and turned to the boy. There was no time to say anything.

The man actually seemed interested in Doug, who couldn't do more than half grin and look foolish.

"Murphy's out stumping for me to-night against Clarkson," said the candidate when they were presently all seated. "One of those affairs where the populace asks questions afterward. I'd back Murph' against any man in the world on that. His Irish will make 'em laugh so they'll forget it if he doesn't know the answer. Clarkson's the kind that gets mad. Heard they lined up the Fifth Ward solid for Woodward. Looks a little as though I'd lose in my own county, but Murph' said last week that the northern part of the state was mine sure."

"Pretty even race," commented Mrs. Smith, and they talked of it eagerly, apparently forgetting there were such things as lovely young daughters.

"Who are you running against?" blundered Douglas.

Cabell laughed prettily. She didn't know, either, but it looked awful not to. Mrs. Smith said she must make him read the papers intelligently.

"Christie Woodward. Nice fellow, Doug. Don't know anybody I'd rather see governor—excepting your humble servant—than Chris Woodward. That's what makes beating him so hard. Nothing against him."

"If it were his cousin ——" began Mrs. Smith.

"Oh—Lance Christie! Different as chalk from cheese."

The name brought Cabell from the dreams the dullness of the conversation had evoked.

"Lance Christie!" she repeated involuntarily.

"You know, Cabell. His wife opened the Red Cross rooms."

"I see the young rascal at their headquarters every now and then—Lance, not his wife. . . . I'll take you with me, Doug, one of these days."

"Oh, boy! Can I run the car?"

The shrilling of the telephone bell broke in on Mr. Brewster's easy assent. Cabell and Douglas both leaped to the instrument, and there was a swift altercation before Cabell, who held the receiver, was able to reach the transmitter Douglas clutched, and give a honeyed "Hel-lo-o!" into it.

"Cabell! Douglas, let your sister have it. Aren't you ashamed?"

"Oh!"—a decidedly downward inflection. "Yes, he's here. Doug!"

"I toldja it was my call. . . . 'Lo. Uh-huh!"

The boy turned his back on them and pressed the transmitter close over his lips. He tried to keep his voice low, and his replies unintelligible. One foot beat a nervous tattoo on the floor.

"Both expecting something important," smiled the parent elect.

"They know better. One reason I'm glad is because I'll have more time for them." It wasn't necessary to mention what she was glad about. "I've had to leave them more or less to their own devices these last ten years. Is Stelle going to call up, Cabell?"

"I don't know." It had been fear that Lance Christie would disregard instructions that had sent her scurrying. The uncomfortably keen eyes of Mr. Brewster made her nervous. It seemed as if he must know whom she had expected.

"I got fi' dollars. . . . I can't. . . . Well, I can't. I can't help it. . . . I can't if I can't, can I?" Doug's voice was raised in exasperation, and the bridegroom-to-be removed his regard from the daughter to the son.

"Doug's always needing money," sighed Doug's sister. "What the boy does with it is more than I know." She felt that this was very grown-up. She was rewarded with an electric glance from the keen blue eyes.

"I'll come over." Douglas jammed the receiver back on its hook and dived into his room. His voice came out desperately. "Goin' out, mom."

"No, Douglas."

"Yes'm; I've got to." He appeared with his cap and began to skirt the crowded room toward the outer door.

"I said 'No.'"

"But, mamma, I tell you I got to! I'll be back in a min-nut!" The boy's impatient eyes sought Mr. Brewster's beseechingly. "You make her let me go. You can." His fingers fumbled at the knob of the door.

"What is it—money?"

"Wallace—please. He mustn't take it."

Mr. Brewster smiled at her as he rose. "Leave him to me this time, Shirley. Come out here, Doug. How much?"

Douglas drew a quivering breath. "A hundred; I mean, ninety-five. Mom gave me five." He showed the bill as confirmation. "I can't tell you about it though. I promised. . . . Only I might have to go to jail if I don't get the money."

The man counted out the bills. "Here. Can you settle it for good? And understand! After this—cut that out."

"Oh, it isn't anything you could do twice. It's not gambling or anything. I won't—I mean, I will. Thanks." He started for the elevator.

"But I didn't have to make him tell me about it, Shirley," Wallace Brewster explained later. "One of my men will have the whole thing half an hour after I put him on it. Seems an unfair advantage. I'll let you know. Fine boy. Always wanted one like that. . . . Exactly the kind of mother I fancy, too"—with the shadow of a grin on his very young face.

Cabell said a publicly sweet farewell to her mother next morning, before she rushed back to the apartment and seized the ringing telephone. Doug had gone out an hour ago.

"This is Miss Cabell Smith. . . . Oh, how are you? Why, mamma wants me to lunch with her in town and shop. I'm dining with Mr. Brewster—Wallace Brewster, you know; running for governor?" So casually! "I'm afraid ——"

He was not to be put off like that. The stupendous news of Cabell's coming relationship to Mr. Brewster—she called him "daddy" because it sounded intimate—added to Lance Christie's desire for her society. He persuaded her to give him an hour that morning.

She met him two blocks below the Stratford, her blouse exposing a section of smooth young chest, her nose carefully whitened, her mouth blossoming with a shade of unnatural cerise. She and Stelle had bought the lip sticks weeks ago, but never dared use them. Now Cabell flattered herself she looked sophisticated, charming, quite the rival of the women in Lance's set. She dallied lightly with the idea of learning to smoke cigarettes—the extreme of wickedness.

They swung about the outskirts of the city, stopping once at a station for oil. Lance sent a small boy hustling into a near-by store for hot coffee. It was so much more grown-up to have coffee than chocolate sundae, which was what Cabell really wanted.

Then they began threading the traffic in the narrow Saturday-crowded streets. Lance was to drop Cabell in the neighborhood of Skelton's.

It had been an adventure. Cabell enjoyed exchanging what she thought was clever repartee with a man always described as fast. Besides, wasn't Lance misunderstood? She had suspected it yesterday, from the fact that his one mention of Mrs. Christie had been accompanied by a quick turning away of his head, a swift "I can't talk about her," and a change of the subject.

To-day he got so far as to say that a heaven had opened on his wedding day, but someone pushed the gates shut before he got inside. That sounded touching, even if she wasn't able to puzzle out its meaning. At any rate he hadn't been treated properly.

"I know people say a lot of pretty raw things about me. Well—no doubt some of them are true!" bitterly, with the right curl to his lip.

Cabell sympathized. She was misunderstood too. She forgot to duck the French tam to hide her face when they were caught in the next jam, and so suddenly found herself gazing into a pair of keen cold blue eyes, set in an absurdly youthful face. Her future parent was sitting in a big car with a number of other men. There was no doubt he had recognized her.

Her hands were cold and her throat tight all the way in. What in the world was she going to do? How could she account for it? Oh, dear! Oh, dear! Oh, dear!

She said good-by without lingering, jumping out of the car and disappearing into Marcey's swinging doors with a mere "'By!" She fairly ran to the waiting room to wash off the cerise and rearrange her blouse.

"What's the use, anyway?" she muttered almost aloud to her reflection. "He'll go and blab and I might as well be dead. Oh, dear!"

She was a little late at Skelton's. Mrs. Smith was already at their usual table, and the first course was being brought in as Cabell hurried from the elevator.

"Missed a car," she murmured breathlessly.

"I tried to reach you all morning both at home and at Stelle's. Stelle said she hadn't see you."

"Why—how funny! I was home. No, I wasn't. I took a walk and—and just before I came down I was at the park looking up that leaf for botany—the one I told you about." Why did she bother to fib? In a few hours the whole thing would be out.

"I wanted you to bring down a piece of that pink chiffon. We might match it in ribbon."

"Oh, mamma, I don't want that baby kind of dress! Why can't I have some style? Goodness, the papers will write up what we wear, I don't care how informal you are. S'pose I want it blazed all over that I had on a kid dress like a sixteen-year-old?"

"You're only seventeen, aren't you?"

"Well, my goodness, there's some difference!"

Her mother smiled. "We'll go to Marcey's and see if they have a little Georgette, then."

Two women took possession of the vacant chairs at their table and private conversation was impossible, even if what they said hadn't put all minor considerations out of Cabell's head.

"If there isn't Mrs. Lance Christie!"

"Lucky she didn't see her husband half an hour ago. Who was that girl?"

"I don't know. Did you see the paint on her lips? Chorus, probably. Shame!"

Cabell kept the tam ducked to shield her hot face. Another day her mother could not have been blind, but now she was apparently deaf also. The girl stole a glance at Lance Christie's wife. Why, she wasn't a bit pretty! She didn't look as if she was anybody.

"I heard that her aunt arranged that wedding," one of Cabell's neighbors confided to the other. "She was brought up in a French convent, and when the Germans began their drive they dragged her—the aunt did, I mean—over here and got her safely married. She had money, and I suppose she was accustomed to the French way of having someone else select the man."

"They say Lance was wild about her."

"Yes, indeed. You know how he is—the newest face. And she was different. Looked like a little nun. Remember?"

Mrs. Smith touched Cabell's sleeve and Cabell gladly got away.

The afternoon was a blur. The only thing that seemed real was the haunting fear of what Mr. Brewster would do about the drive. She couldn't have told whether the frock selected was white or purple; or whether or not they finally decided on the serge coat.

The rush to the Stratford to dress for dinner and the hurry back to the St. Saen Hotel was one mounting agony. She didn't even complain about the satin ribbon her mother insisted on tying on her hair—Cabell's hair.

The candidate for governor was waiting for them in one of the parlors, listening to Doug's chatter as if he liked it. He met them eagerly, and had much to say to Mrs. Smith before he turned to Cabell.

"Cabell! What have you been doing with yourself all day?" His eyes were colder than ever.

Why, she'd been shopping with mamma.

"All day?"

No. They'd lunched together and shopped all afternoon. They'd bought ——

"And this morning?"

She'd had a lot of little things to do and—she'd walked in the park ——

"Cabell missed her car or we'd have had time to see you before you went over to the capitol," put in Mrs. Smith.

"So she missed the car, did she" looked at his future daughter as if h bore to her very soul, and Cabell's over her frightened eyes. He wait after the meal though. Then: and I have something to say to eac Doug can tell you what we've hee all afternoon, Shirley."

Mamma couldn't be in love with or she'd object, and not sit there satisfied. Oh, dear! Oh, dear! lagged to the door of the empty room, feeling none of the thrill tha have been hers last night if he'd sto then for her to enter, in this gallant

"amma, did you know why Doug
nd that money?" burst out Cabell
e the two were alone.
"-heard."
"eard that he and his bunch stole the
y's car and smashed it up and had to
y get it fixed or go to jail?" in one
ed, amazed breath.
"mething like that."
"amma! And you don't care? Stelle
die. She saw them smash up. Stole it!"
"r. Brewster took the matter up with
as, Cabell."
e knew—and didn't make a fuss?
el" She couldn't go on. It was too
s. He thought it was all right for
as to run off with a car and nearly go
, but if she rode with a man who took
ful joy in her society —— Yes, that
s nother thing! He was unjust, unfair,
y and a brute.
She threw herself into a mission chair and
ld up the Sunday paper. She prayed
e nail to be delivered into her hand.
e use it. No fear she wouldn't use it.
The sheet she had been staring at became
a once intelligible. There was an article
o the gubernatorial candidates:
"ne entire outcome of the election de-
s on the Camberley County vote. The
who swings Camberley has the state."
the only had the Camberley County
n her possession how gladly she would
nit to Christie Woodward and defeat
e utocratic Brewster! What pleasure
s here in being a governor's daugh-
? He wouldn't let her enjoy it. Any-
y she wanted to hurt him. It ought
t him worse than anything not to
ected. . . . Only she didn't have
ste.
Douglas came in bubbling with excite-
n He and dad had been over to Cam-
l and he'd driven the car. Gee, it was
a They'd had a big mass meeting and
d ld 'em a few. Say, did they know our
rt had a big electric sign on top of
ney's with "Brewster: Prosperity and
a-" on it? You ought to see it flash
:d off! They'd plastered the whole
ry with bills about dad too. And say,
o what kind of stunt Murph was pull-
-morrow night? Going to stand on
the City Hall with a megaphone and
ka speech. Doug was going to go with
nd throw down bombs with campaign
r ure in them. Wasn't that a big little
ea? He'd say it was!
Cabell leaned back in her chair and smiled
cynical smile. She observed that in her
n Woodward would swing Camberley
d nat settled the election.
"it get what you can out of it," she
ved languidly.
Her mother stopped reading, and Doug
ind round.
"ke fun Woodward's got Camberley!
ot it in our pocket right now. Guess
u aven't seen the papers. Gee, that
t sheet! Y'ought to read the Times.
ne you'd get the dope."
"nerace is unusually even," commented
rs Smith. "We can't claim Camberley
t, m afraid."
"ad says the least little thing'll sweep
n ne way. If we knew what they'll do
t big strike we'd have 'em—or if they
t old of our position on the Right of
a Over Public Property Bill! That's a
g ing to Camberley."
"hat is our position?" asked Cabell
gely. She hadn't the ghost of an idea of
n a right of way might be or how it
ul affect an election.
Douglas was vague. He didn't like to
m that he didn't know. But gee, girl,
in we'd let those birds know? Not by a
o lot! Dad can get by without letting
t ything he don't want known.
"r. Brewster isn't dad yet—if ever."
"ire he is. I asked him. He likes it.
Juan call him it if you want. I'm going
ve his little auto for mine, and work
h office when I'm out of school, and lots
ties I'll chauf for him."
"ou're his pet!" flared Cabell, and
rned into her own cubicle. Doug could
ything and have everything. She
uldn't even choose her own friends. She'd
n ver to Stelle's and ——
She escaped without telling more than
e white lie, and minced off down the
rd avenue. High hedges shut in most
t houses on the block, and great trees
o the sidewalks. Leaves drifted down
d rmed crackling piles underfoot. The
tt -sweet smell of frost was in the air.
Cabell snuggled into the new coat, let her
in sink deep into the soft collar and
stepped to a new Marseillaise. Wallace Brewster was the Tyrant and she the Brave. When the election returns were in and the autocrat found himself beaten, and was sunk into his chair, head bowed in inglorious defeat, she would calmly announce that it was to her he owed his bitter failure. It was an evidence of her power. Perhaps after this he'd have pause before he took that high and mighty tone with her. "Have pause"—that was pretty good.

A car stopped gratingly and a voice drawled: "In a dashing rush, little pal?"

She had almost passed him, but she came back at once, the fascinating smile in play, her walk superelegant. "Mr. Christie!"

He took her outstretched hand and kept it, warming it between both of his. "What made you run away from me yesterday?" His voice sounded like a warm sea, lapping her round. "Oh, yes, you did! Afraid to be seen with me by any of these good people?"

She denied that. Heavens!—they all said "Heavens!" in books—did he think she was so narrow? Really, she rather enjoyed shocking these good people. They both intimated that being good was tiresome, provincial and common.

"How about a little spin?"

Oh, no, she couldn't. She was just going to Stelle's and mamma might call up over there and—well, ten minutes, then; not more.

It was not much more, even though in the time it was necessary to confide the hateful story of Wallace Brewster's tyranny, and arrange a method of communication. Letters could be sent through Stelle.

When the car drew up before Stelle's ivy-hung dwelling Cabell was beginning to enjoy her martyrdom. It made her a heroine—a properly persecuted heroine. She considered whether or not it might be even more romantic to have a secret code. You couldn't signal with lights from an apartment window. In the first place the lights weren't movable, and in the next it would be an endless job to count the scores of windows to find hers!

Again that odd long look, that gleam of white teeth in the dark, that "Good night, little pal!" What a lot she had to tell Stelle!

She was halfway up the terrace steps before she recognized the man coming down the flight leading to the ivy-clad porch. She felt, as she told Stelle afterward, "full of frozen screams." The man was Wallace Brewster.

"I told Shir— your mother—I'd call for you. It appears that I'm a bit previous."

She said "Not at all!" with a well-done shrug, and they proceeded to march down the street, shoulder to shoulder. They had reached the avenue before either spoke. Then he said with a frown that was evident even in the dark: "I don't suppose you're actually in love with that—man!" Apparently adjectives failed him.

"In love!" That hadn't occurred to her. She had been taken up with her daring in associating with the notorious Lance Christie, and with the novel position of little pal to a sadly misunderstood soul.

"Not that you know how to love anybody. You're too selfish to be capable of the real thing."

Selfish! The idea! She drew herself up.

"You don't understand!"—pityingly. How could he hope to comprehend the beautiful relations of Lance and herself?

"Don't understand? I understand the sort of man who calls a girl 'pal' because it's a neutral word that means anything and nothing. Ought to be abolished from the language. The use of it stamps a man for what he is. Of course you think he's madly in love with you—the world well lost and all that. That's what you think now. Wait till it's too late. You haven't got the real thing, and you wouldn't know what to do with it if you had."

"Love has nothing to do with it! Old people always think a man can't look at a girl and a girl can't have a man friend unless it's something like that. But we modernists are—are different." She ended weakly, because she wasn't sure of "modernists." She and Stelle had come across it in a magazine.

"Then it won't matter to you if you never see him again," the candidate for state honors observed after a pause, during which Cabell worried over the selection of "modernist." Maybe he was laughing at her.

"It will matter to him!"

"I shan't lose sleep on that account."

They had reached the drive and paused at the gate, Cabell picking at the drying leaves on the spireas, the man boring holes in the gravel with his cane.

"It will mean that a man who might be—be helped, will go straight to the dogs! You don't know what my being nice to him stands for. Just because everybody else gives him a push you want me to throw stones too. You want me to help send him to—hell!"

She half whispered the last word. Her eloquence brought tears to her eyes. He didn't seem impressed.

"I don't care where you send him. Seems to me that's his wife's business anyway. I never had any sympathy for those fellows who had to be coddled along step by step. If he's fond of dogs he'll probably find his way to them without assistance."

"It's a matter between myself and my own conscience"—grandly.

His glance was quizzical. "What a lot of ways there are for convincing ourselves that it's right to do wrong!"

"You're not fair. You let Doug do anything. You let him steal and—and everything!"

"No, I don't. Doug is to earn and pay back every cent. He wants to."

"Oh, yes, Doug is perfection! You want to tyrannize over me, that's all. You want to show you can boss me. Take away my friends and lock me up in schools. You think you'll break my spirit. But you won't! I can write to him. You can't interfere with his mail."

"Perhaps your mother may hit on a plan ——"

"Oh, tell her! I don't expect you to have any honor. Tell her right now. With the whole world against me I won't give him up!"

"Do you know you're very funny, Cabell?"

"Am I? I would be to you. You're the kind who laughs at a broken heart!"—crushingly, as she marched to the entrance, chin held high.

He followed in silence. She couldn't decide whether he was angry or amused, but she wouldn't let him think she cared. She chatted brightly to Walker, to whom her new relationship gave her a real standing at last.

Douglas sprang at them.

"Say, the Times called up, dad. They got to have something from you about the strike. I'll get 'em on the wire. . . . Main Five. . . . Woodward's come out with a string of soft-soap promises that'll haul in votes wholesale. . . . Times? Say, I got Governor Brewster here for you. . . . Yeh; Governor—that's what I said. . . . Here, dad."

Cabell slipped into her own room and locked the door. She'd never lower herself by calling the monster "daddy" now! If he was elected she'd call him "Your Excellency"—like that, distantly. If not she supposed "Mr. Brewster" would have to do. It wasn't so effective.

She wondered what mamma would say about Lance Christie. Old people never understood. They set to work and carefully taught you to be kind to everybody and do unto others and all that, and when it came right down to it they went out of their way to make you stop! Stop doing the very identical things they'd pounded into you all your life!

She took off the stupid girlish challis and put on a negligée. Anybody can look sophisticated in a negligée with her hair down and really nifty slippers—she and Stelle had exchanged birthday presents of slippers allowing the other to choose her own. Let Wallace Brewster demand her in there and he'd see that she wasn't the infant her mother pretended. Of course it would probably shock that lady unconscious.

He didn't demand her. Cabell waited—sometimes high-hearted and defiant, planning to burst into the room with a ringing laugh; sometimes chilly with fear, when the thought of crossing the threshold was a stark impossibility. And nobody disturbed her. The little ivory clock on her dressing table crawled from ten to eleven. She heard doors open and shut and the gradual cessation of voices. And silence.

At length she opened her door. The living room was dark. Doug's room showed no light. Her mother's was also wrapped in gloom.

"Want anything, Cabell?"

"N-no, nothing."

"Do go to bed, child. You can get up early and finish studying."

It was clear he hadn't told. She crept into bed uneasily. He wanted to play with her, like a snake with a charmed bird. Well, he'd discover what kind of partner he had in that game. The thought of the Camberley vote came back temptingly. If she just knew what his position was on that right of way, and what to do with it. . . . Lance! Why didn't she ask Lance? His cousin was the opponent. He ought to know.

She could hardly go to sleep for thinking of it. She'd get Stelle to mail a letter to Lance, telling him to meet her. Let's see: Better not go out in the car. Somebody would be sure to see and tell. Why not have tea together at Serodino's? They had booths like little private rooms and they could go in separately. The very thing!

Wallace Brewster had met his match!

She made the appointment for Tuesday afternoon. She was supposed to be at Stelle's, and Stelle had instructions to say she was there but couldn't come to the phone just now.

"Tell them I've swallowed wrong and can't speak, and I'll call up. Then phone me right away and I'll call from there. I don't know what on earth anybody'd phone for, but they might. If you get Vergil write it out for me. . . . Oh, I'm so excited!"

The loyal Stelle was no less so. "You'll come back here and tell me the whole thing? I can't wait. Goodness, Cabell, aren't you sort of afraid of Lance Christie? He's got such an awful name. My cousin says he don't know whether he ought to have introduced us that day."

Cabell executed her favorite shrug and left.

She was going to be very casual about entering Serodino's—just saunter in as if attracted by something in the window or as if she thought about something else. She practiced sauntering down Fourth Street, with side glances at the window mirrors to observe the effect of Stelle's mother's new hat, which she had confiscated for the meeting. It had a delightful stick-up that added to her height. She bought a spray of scarlet salvia and thrust it into the belt of her suit.

The casual entrance being effected she slipped into the third booth. Three is a symbolic number. Lance Christie hadn't come, but it wasn't time. She took out her vanity case and applied the cerise stick to her lips and the powder to her nose and waited. Still he didn't come.

The waitress asking again for her order awed her into having an éclair. Cabell ate it in a rush. It would look so odd for her to be eating if he came; and it was such a messy thing. She had to fix her lips all over again.

She had made the hour three-thirty. At four-thirty she put on Stelle's mink scarf and fastened her coat. He couldn't have had the letter.

But as she rose she saw the low red car draw up outside and Lance swing across the pavement. He met her with well-simulated amazement.

"If it isn't my little pal! What are you doing here?" taking her back to the booth with an imperious "Waiter, please!" over one shoulder.

He hadn't meant to be late. It was this last violent rush of the election. What would she have? Tea? Tea was all the go on the Continent. He rather liked it. So she had tea and a salad, because salads are more grown-up than ice cream.

It was hard to get started about the revenge. Lance apparently thought her invitation a commendable longing for his society. When she finally came to the point he seemed doubtful.

"We'd like to have the file—we'd finish in a blare of glory. But I believe Woodie will beat Brewster anyway. If you had the papers you could mail 'em to our headquarters to Clarkson. He never lets his conscience overwork. Still, you can't get 'em."

"Where would they be? What would they look like?"

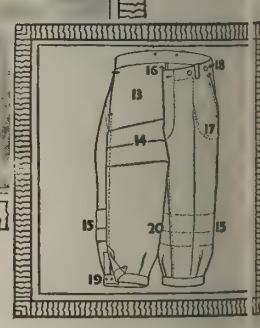
He wasn't clear. There would probably be a private file of papers on the right of way—something definite as to whether Brewster would let the railroads put a spur track over land belonging to the public, thus cutting off teamsters from the river and making boat loading difficult in high water.

"We don't know which way he'll jump. We're pretty sure it's the wrong way politically or he'd have come out with it. We've insinuated, but that doesn't prove anything. The file might be in his private safe."

"His private safe!" It might as well be in the Tower of London.

(Continued on Page 81)

Dubbelbilt Features: 1. "Cravenette" finish. 2. Retains shape. 3. Front won't break. 4. Seams won't rip. 5. Double thickness elbow. 6. Collar hugs neck. 7. Rip-proof pockets. 8. Buttons won't come off. 9. Guaranteed fabrics. 10. Pockets double-sewn.



Dubbelbilt Features: 11. Repair kit. 12. Resists water. 13. Sanitary lining. 14. Double seat. 15. Double thickness knee. 16. Seams won't rip. 17. Double-sewn pockets. 18. Buttons riveted on. 19. "Governor Fasteners" adjust knee straps. 20. Knee rub protection.

Boys' DUBBELBILT Clothes

"Cravenette" Finished

Guaranteed for 6 Months Service

MOTHERS, you know how *you* would make your boy's clothes if you could—how you would build them *strong* in those places that keep your mending-needle busy evenings.

We know, too. That's why Dubbelbilt Clothes are *doubly strong* where strength is needed. Double thickness of cloth at elbow, knee and seat—buttons riveted on—20 distinctive Dubbelbilt, double-wear features, that bring longer service and lessened cost. All backed by our unbreakable guarantee—"*six months' wear without rip, hole or tear—or we will repair garment free.*"

And the smart, clean-cut *style* you want your boy's suit to have, you'll find in Dubbelbilt Clothes. They're $14.75—$16.75—$18.75—$20.75. Same prices throughout the entire United States. A wide assortment of styles for Fall and Winter to select from. Sizes 6 to 18 years.

DROP in at the store where you buy your boy's apparel and ask to see Dubbelbilt Clothes. Notice especially our Walcloth all-wool fabrics—good-looking grays, greens, browns and olive. Blue serges and mixtures, too. All guaranteed fast color.

Look at Dubbelbilt suit No. 7072 at $16.75. It comes in navy blue serge—all wool—Cravenette finished. Has a smartly tailored waist-seam coat with removable belt; full-lined knickers. See picture at bottom of page.

Ask also to see No. 7027—in good-looking long-wear corduroy, Cravenette finished. Similar style features to 7072. Price $14.75.

If your regular store doesn't sell Dubbelbilt Clothes, send us your boy's size and a money order for the amount mentioned and we'll have No. 7072 at $16.75 or No. 7027 at $14.75 delivered *direct*. Get *your* boy into Dubbelbilt Clothes.

el Lance had been very interesting, it as late. Cabell would have to go d ails to-morrow. She put on the ch am and picked up her books.

St e! Oh—Estelle! Is Cabell there? e on the phone for her!" came the Stelle's busy mother.

Ye she's just going. I let 'em think we up here. I've been talking to my- ou loud all afternoon!" giggled Stelle. bl giggled, too, but it didn't sound so y usual.

Ie o? . . . Oh, mamma, I'm just n . . . We were studying and we g math and we forgot the time. . . .

rht away. I've got my things on. " ler face was crimson. Ordinarily wi ld have considered that she had s mething commendable in thus reply- bu not to-night.

m of the stars were gone. No doubt cl ds would smother every one. Poor ! nce, 'way before the war, a girl in on nt may have looked at those s. . . . Five years ago! Cabell had d child. She shrugged again. Had she ever been so innocent as Mrs. Lance Christie looked?

The remembrance of Lance's attempted kiss came back, sending a hot wave over her. Was there any good in her? Was she really a sham? A sham! That was an ugly word.

She hardly noticed Walker. The sickening thought had come to her that it was true. She didn't love Lance Christie—at least, how did you know? Yet she was deliberately taking him from his wife. Probably he was wild about Cabell—wanting to kiss her and all. She'd ruined his life and she didn't want him. She was—as she had suspected, and told Stelle often—cold and heartless, a Cleopatra or George Sand or one of those women who break men's hearts—no, that was the Lorelei. They'd had them—her—in lit last week.

After dinner, while Douglas alternately scowled over his books and brought up various sound reasons why he ought to be campaigning with dad instead, Cabell looked up the Lorelei. Stelle had found the reference and as usual forgotten to note where. Only the poem, copied in Stelle's flowing hand, with the long tails to the y's and wide tops to the t's, rewarded her search:

The most beautiful maid is reclining
On the rocks, so wondrous fair;
Her glorious jewels are shining,
She is combing her golden hair;
With a golden comb she combs it,
And sings a song thereby,
That thrills with its mystic meaning
And wonderful melody.
It seizes with wildest yearning
The boatman, entranced in his skiff;
He sees not the treacherous breakers,
He gazes alone on the cliff.
And soon will the waves engulf them,
Both boat and boatman strong,
For thus in her toils hath she bound them,
The Lorelei with her song!

It might have been written especially for Cabell—that bit about the golden hair and her singing. She'd always wanted to have her voice cultivated, only mamma was so fussy about her studying anything but lessons. If she couldn't get those half the time what chance was there of doing justice to vocal work, argued Mrs. Smith. As if voice culture was work! Maybe Lance felt that way—you know—wild yearning. It was thrilling to think about.

"Mom, can I go with dad to the labor meeting Thursday night? Can I?"

"Does he want you?" Mrs. Smith didn't look up from the list she was preparing for the wedding announcements.

"Sure. He's going to get in from the north 'long about eight and I got to rush him to the hall. Clarkson had that Quicksilver fellow spillin' it into the labor unions to-day—and gee, if that man wasn't smooth! I shinned up a post and listened on the fire escape. Oh, baby! He got me going so I almost believed him myself. I beat it to dad's office and told him, and dad and Murph got on the job, and boys, oh boys, we've got some hot shot! . . . Why, I ain't hurting your old table!"

"Your shoes are. Put them on the floor. Right down, Douglas! I suppose you may go if dad said so. Cabell, what's Marian Hastings' new address? Oakley or Oakland? . . . Oh, yes! . . . By the way, come to the office after school to-morrow. I'm having some white kid slippers sent in from the wholesale house and you can try them on. Oh, and Cabell! Wallace—dad wants you to have a gift from him—both of you—whatever you want. You may choose it yourself."

"Any mortal thing?"

Her mother nodded abstractedly.

"Then I want earrings—long ones, in jade."

"Cabell! I meant anything in reason."

"Well, I think that's reasonable. Goodness, it's what I want, isn't it? My heart, you'd think I'd asked for poison!"

"Oh, you vamp!"

"Never mind, Douglas. Think it over, Cabell, and select something you can wear. A pretty pin or ring or a girlish necklace."

"Oh—girlish! I'd just as soon not have anything!" Cabell flounced into her room and sulked over the Vergil Stelle had written out wrong. If she couldn't have earrings she'd have a ring with a perfectly e-nor-mous stone—long, you know, reaching to her finger joint. Maybe she ought not to take Wallace Brewster's jewels. He said she was no good—that is, he said there must be some good in her; meant the same thing. Well, he was wrong—right—oh, dear! She couldn't help being fascinating, could she?

A sham! Did Mrs. Lance Christie think so too? What did it matter if she did? She'd have to learn some day that nothing's very nice in this old world. Stelle and Cabell had known that since sophomore year. They frequently shook their heads over it. . . . What on earth made Stelle translate like that? Now you couldn't trust to luck on any of it.

But all through the feverish haste of getting a passable rendering the word "sham" persisted. Maybe it wasn't smart to "embellish the golden truth," as Stelle put it. Sham—sham—sham! In desperation she borrowed Doug's pocket dictionary and hunted the definition.

"A trick, fraud, make-believe, counterfeit." Her cheeks flamed and she lost the place. The word "sincere" leaped at her. That meant "genuine, upright, honest."

Cabell dropped the book with a bang.

Mrs. Smith was guiding her successor through the mazes of the private ledger when Cabell arrived, and merely nodded at the white boxes on her desk, so Cabell made her own selection. They had the sparklingest buckles—they were going to wear buckles again—and white chiffon rosebuds. They were darling.

Her mother absently approved the choice. Her mind was on something else.

"Cabell—let's see: You know where dad's office is?"

"Mr. Brewster, do you mean? In the Cole Block."

"Yes. Do you think you could take a packet to him right away? He left it by mistake and he needs it. He sent a messenger, but goodness knows what has become of him. He must have it at once. You won't stop for anything, will you?"

"Oh, do I have to? Help!"

"Cabell!"

"Well, I'm going. But I'm not crazy about it." Cabell jerked the laces of her school shoes into a knot crossly.

"Give it to dad—nobody else."

"Oh, all right. I'll give it to Mr. Brewster."

Now was the opportunity, wasn't it? She could lose the important packet and get revenged. It would be pleasanter to do something he couldn't trace to her. Her feet found their way to the Cole Block, and presented her at the door of the candidate's suite. It occupied the fourteenth floor—a model in green rugs and shining mahogany, lights dispersed evenly from beautiful hanging bowls, partitions of steel made to resemble mahogany, with frosted glass tops, and men—men at the laden desks, men at the giant filing cabinets, men at the bookcases lining the walls, men at the endless telephones.

One of them came to meet her, and it was suddenly an enchanting adventure. He treated her as she liked being treated, as if she were a visiting princess. He didn't ask who she was. Cabell wondered if he knew from the picture the Sunday papers carried in connection with the announcement of Wallace Brewster's engagement. Or if he'd seen her at the theater Saturday. The simple explanation of her mother's message that Cabell was on her way didn't occur to her.

"Mr. Brewster will see you at once, Miss Smith. Will you come with me?"

Other men glanced up as they passed. That their interest was due more to the fact that their chief was to marry her mother than to her own prettiness didn't dawn on Cabell.

Mr. Brewster was with a long, loose-jointed man who appeared half buried in campaign literature. What Doug called the map of Ireland was on his face. They both showed the effect of too little sleep, too much work and the long strain.

"Draw another five hundred for him, then. He'll have to make a whirlwind dash if he's going to do anything, but every chance is one more. . . . Cabell! Much obliged. Sit down while I look it over. . . . My little girl, Murphy. . . . Believe I can give Quicksilver a knockout if I pull that profit-sharing plan at the mass meeting. . . . That for me?" The candidate yanked an extension phone nearer.

Murphy dragged himself from the lithographs and print and smiled at Cabell. "Hear you're to lead the younger set at the Capital this winter."

"Oh—I don't graduate till June."

"Next year, then. Lucky divils!" He intimated Irishly that her path would be strewn with men's broken hearts.

Cabell blushed and dimpled. She had an answer ready and Murphy's ready

You'll Have Countless Uses for These

"Fingers of Steel"

In your home, in the garage, in the shop and factory, there are countless uses for "Red Devil" Pliers. They will give service because, in the materials used and in the workmanship, "Red Devil" Tools cannot possibly be made better. In *design* they are distinctly superior. For example, the handles of "Red Devil" Pliers fit the hand snugly and do not pinch.

Red Devil
REG. U.S. PAT. OFF.
PLIERS

No. 1024

For all-around use. The thin nose gets into tight corners. Slip joint gives wide range to gripping jaw. Wire cutter and screw driver handle end.

No. 700

Shear cutter; side cutter; burner grip; screw driver; scratch awl and reamer. Gun metal handles and polished steel head.

No. 999

For handling nuts, pipe, wire, or as a hand vise. Heavy enough for use as hammer. Ideal for heavy work in general.

SMITH & HEMENWAY CO., Inc.
262 Broadway, New York City
Factories: Irvington, New Jersey

laugh rose constantly. She felt she was a success. She would be able to conduct a sort of *salon* next winter. Younger set, indeed!

"You're turning the child's head. Don't notice him, Cabell. He's Irish and can't help it. She's a little girl, Murph, and she'll be at school for the next three years." He crossed the room to the safe, whose thick outer doors stood wide open, and thrust a key into the thin inner one.

A totally unnecessary remark, when she was proving herself so irresistible! Her anger rose again, and she moved toward him impulsively. The safe, unlocked, disclosed a row of files below the cash box, each carefully labeled. The third from the right was plainly marked: "Right of Way, Public Landing."

Yes, there it was—and there it was likely to stay.

She watched her future parent put away the packet she had brought, relock the safe, take his hat from a mahogany stand and stride to the door.

"Come, Cabell! Got to talk to Judge Peters about the Cobb case, Murph. You had better get back to headquarters and see what's doing. Afraid Dudley will fall down on us. . . . Oh, the phone! . . . Hello!. . . . Yes, coming. This minute. . . . Come on, quick, before someone else stops us." He hurried them out unceremoniously, one hand on Cabell's shoulder. To help out the picture of devotion Cabell couldn't help looking up at him with the fascinating smile. For two minutes at any rate she'd play the part of lovely pampered daughter to the governor.

They parted at the door of the Cole Block, Mr. Brewster directing that she run right home now and get her lessons. Insulting! If she could just pay him back!

She didn't know afterward how the idea occurred to her. It was suddenly there, full-grown, and she acted on it without waiting for second thought.

She hurried back to the offices they had just left, demanded the secretary to Mr. Brewster, put on the expression of innocence embarrassed—getting to be too well-known among the faculty at school—and said that daddy had sent her back for the papers about the right of way to something or other. They were in his safe, in the third pigeonhole. Could she please have them at once?

A dreadful fear that the safe couldn't be opened in Mr. Brewster's absence died at the alacrity with which the unsuspicious youth unlocked it and found the precious packet.

"Could you put it in a big envelope? And seal it? And hurry! Daddy's waiting."

He could and did. Cabell flashed him her prettiest smile and darted out again. She did not pause at the street door this time. She went at once to the post office to address the sealed envelope.

When she was sitting at the family table that evening the first misgiving smote her. Wouldn't the secretary immediately mention having given her the papers? She put down her fork.

"What is it, Cabell? Isn't your meat well done?"

"No—it's all right."

"Eat it, then. You really must stop stuffing yourself with those abominable sundaes. You and Stelle won't have a complexion between you when you're twenty."

"Gee, I forgot! Stelle told me to be sure and give you this, Cab!" Douglas extended a much-handled envelope. "She's got a new dress or hat or something to show you. . . . If you want me to I'll drive you over there in my car."

He made the offer with elaborate casualness, one eye on his mother.

His sister made no immediate reply. Slitting the grimy envelope had disclosed a second one, inscribed in a masculine hand. What did Lance want?

"You may go over for a little while, Cabell, if you and Stelle have lessons. Douglas will call for you. I shall be at the Metropolitan." Mr. Brewster was speaking there.

Cabell agreed listlessly. Everything depended on what Lance had to say.

What he had to say was not enlightening. He must see Cabell. Could she manage to get out to-morrow night for a ride? It was important. He'd meet her in the park by the fountain. Please come. He was her devoted pal. Oh, she couldn't be bothered with him! Maybe for what she'd done Mr. Brewster could send her to a reform school, and everybody would know it and she'd be disgraced forever! What had made her do such an idiotic thing? She began frantically to think of ways for undoing it.

"Doug," she said when they were seated side by side in the auto, "take me round by the post office." She'd demand the return of the envelope.

"Right. Watch her spin. Say, you know how many miles she can do?"

Cabell didn't, and she didn't listen when she was elaborately told. Her mind was fixed on repairing wrongs. Why had she deliberately gone on proving that her new parent was right about there being no good in her—after she'd admitted to herself that she was a sham? If she ever got this straightened out she'd tell the truth, and let other people's husbands alone, and study her own lessons and—and even wear the terrible girlish models mamma was always picking out!

Followed by Douglas' brotherly "Get a move on! Don't be lollygagging in there all night!" Cabell hurried into the almost deserted post office. Fear and hope lent wings to her feet.

When she came out she walked as if her knees were shaking. They were. Nobody in the post office knew anything about the envelope; nor could they offer suggestions for its return. Cabell gathered that once committed to the charge of Uncle Sam a piece of mail goes on to the bitter end. You can no more take it back than you can tempt the moving finger of Fate to erase what it has written.

"Hey, Cab! Come on, for Pete's sake! You're getting my engine hot."

She came, and sank into the vacant seat without even a fleeting thought of how she was like a crushed flower or a bird with broken wings. The thing was too real for that. She couldn't go to Stelle's. She wanted to go home. She didn't feel well.

She hadn't the heart to quarrel with Douglas about changing her mind or make any reply to his taunt about girls never knowing what they wanted anyway. She could hardly wait to get back to the Stratford to throw herself on her pink-and-white bed to cry. And then she couldn't cry. It was too dreadful for tears.

She got up and looked at herself in the mirror. To-morrow everybody in the world would look at her picture—the horrid one they'd used last Sunday that made her look about twelve!—and say what a shame it was that a girl with such a nice mother was like that. She was a nice mother. She'd earned their living as far back as Cabell could remember—cheerfully, capably and successfully. She never wanted anyone to be sorry for her, though she worked so hard. Sometimes at night too. That winter Doug broke his arm and had to be amused, and mamma came home with something gorgeously interesting every night. That year Cabell was so ill, and mamma had stayed up with her night after night, and gone to work day after day, because so much money was going for doctors and that nurse Cabell was so hateful to. They lived over on State Street then, in a little bit of a flat.

Now for the first time mamma was going to get something out of life. Wallace Brewster wanted to be governor and mamma was to be his lady. And Cabell had deliberately ruined his chances and disgraced the family!

In their funny way she supposed mamma and Mr. Brewster were in love. They never said anything about it—at least not to Cabell. They didn't behave as lovers did in books. Well, after the papers came out to-morrow no doubt all happiness was over forever for them all.

She heard Doug dart in in a tearing hurry, and knew it must be late. Doug had seen mamma coming. Cabell got into her nightdress wearily and put out her light. Then she raised the window, hardly noticing the bitter wind that had risen and blew upon her. Afar off the light in a clock tower shone like a gold star. They put gold stars into service flags when soldiers were dead. But nobody'd want to put any kind of star out for her.

Mr. Brewster did not come up with his fiancée, and Cabell's newborn resolution to tell him what she'd done and give him a chance to kill Clarkson and get the papers back died. She wouldn't have had the courage anyway.

After an apparently endless night the little room grayed into morning.

Cabell was up and dressed before six. She wrapped the despised new coat round her and unbarred the apartment door. The elevators weren't running yet, and she had to use the stairs. When she reached the entrance the janitor told her shortly that the newspapers hadn't come. So she walked up and down the drive, her teeth chattering with something besides the chill of the morning.

How much longer would she be obscure little Cabell Smith, whose only claim to distinction was that her mother was to marry the candidate for governor? How soon would she be pointed out as a traitor to her party's cause, a cheat, a thief and a sham?

A yell burst out down the avenue, the figure of a boy on a bicycle came into view. Presently Cabell and the janitor were disputing over the possession of the package of newspapers on the low step. Cabell took her winnings—the Courier—to the stairs inside.

The headlines chronicled international items, uninteresting to Cabell. There was a column or so devoted to Christie Woodward, but nothing about the right of way or Cabell Smith.

She couldn't understand it.

It was at breakfast, when her mother was commenting anxiously on the girl's heavy eyes and lack of appetite, that the explanation occurred to Cabell. The mail hadn't been delivered in time for this issue. She inquired as offhandedly as possible when the morning papers were printed.

"Gee, some of 'em are on sale at eleven o'clock the night before! Bet they'll hold the presses for what dad's got to say to-night though. They'll get an earful, too, I'll say!"

Reprieve. For how long? Would they give it to an afternoon paper? The Press was for Christie Woodward.

Cabell's Latin teacher sent her home, because she burst into tears when newsboys began shrieking their afternoon editions by the academy. She was advised to go to bed and sleep. Of course she didn't. She bought a Press from the first howling young merchant she met, and searched it, leaning against the iron fence of the school yard. Again not one word. Maybe they were saving it for a later edition.

She bought them as they came out, with the same result.

Doug was too full of the labor mass meeting and his own importance as escort extraordinary to "Governor" Brewster to pay attention to his sister. Mrs. Smith was putting in some extra hours at the office finishing up the transfer of the books. This was her last day; her last happy day, her daughter corrected—but to herself—when she received the message.

She couldn't stay there alone. Nobody could. She'd go mad.

She would go out for a walk. No use going over to Stelle's. Stelle didn't know about it.

Cabell's high heels clicked over the leaf-strewn pavements. It sounded like an army on parade. Was that her Latin teacher coming along the avenue? It was. Nobody could be expected to talk to a Latin teacher to-night.

She ran across the street and entered the winding pathway into the park. She came to an abrupt halt by the fountain. There was the low red car. There was Lance Christie, one foot on its step, the tip of his cigarette glowing in the dusk. She had forgotten all about him.

"Little pal!"

The flash of white teeth again. Only this time they reminded Cabell strangely of the smile of the wolf who tried to double Red Riding Hood's grandmother.

"Oh! I—I didn't know you were here. I mean, I forgot."

"I see you did. What a pretty little thing it is to-night, isn't it?"

"I—can't stay, Mr. Christie. I—I'm in a hurry." She turned to run back along the winding path.

"Coy, to-night? Get my note?" He kept right beside her.

It would never do to drag him out to the horrified gaze of the Latin teacher. Cabell paused under a bare young sycamore.

"Yes. I can't go. Please don't waste any more time on me."

"Waste time! The last thing I'd call it. You know you just want to tease me. You want me to coax you. Well, all right! Come now—I'm dying for your society. You pretty thing, you! Just one little spin. I've something good to tell you." With that odd look from his long eyes.

Cabell caught her breath. "No; I can't. I'm not ever coming again. You don't know me. I'm not nineteen, as I said. I'm seventeen. I've never had any love affairs, either—not all my life. And I never used a lip stick before last ... day, and my mother'd die if she knew ... And I don't know what you're t... about half the time! And—that's a...

m to-morrow night!"

She gathered that they were to await returns at the Cole Block, with all the important members of "our party," but she didn't thrill at the prospect. Even Mr. Brewster's invitation to Stelle next day to join them for Cabell's sake failed to interest Cabell. She didn't care what she wore!

It was like a party, Stelle said, bubbling with excitement. Douglas was in his element, rushing madly about with telegrams from various parts of the state, taking messages over the private wire, and hanging on the words of the wrought-up enthusiasts who continually dashed in and out. Mrs. Smith sat at the candidate's desk, flushed and smiling and confident. The wives and sisters of other important individuals were there too. Someone had brought in a great blackboard and every few minutes some late returns were posted. They conveyed nothing to Cabell, though everyone apparently knew when to groan and when to give vent to wild applause.

It was near midnight before Murphy came in. Pandemonium reigned outside. Cabell had slipped into an outer office and sat in the darkest corner. She was beyond caring what happened.

"I say, Miss Cabell, we're in! Camberley returns! Woodward's just swamped!"

He was shaking hands with her—both hands—and she was standing. Then she wasn't standing. They were executing a wild little jig of joy.

An outburst of enthusiasm from the rooms beyond indicated the receipt of the report there. Murphy managed an extra leap and a packet fell from his crammed pocket to the floor.

They scrambled for it.

The words "Right of Way—Public Landing," blazed from the manila of the envelope. Cabell screamed.

"What is it? Hurt yourself?"

"No. That. Where—where'd it come from?"

"Come from?"

"Yes. How did you get it? I stole it and sent it to Clarkson." She faced him desperately.

He chuckled at that. "That's how! Well, that's how!" he repeated. "I couldn't imagine when the postman gave it to me for Brewster, while B. was stumping Friday ——"

"Postman gave it to you?"

"Sure. I took his mail for two days—campaign stuff."

"But—the postman?"

"Oh!" His ready laugh rang out. In spite of herself Cabell joined it. "It was returned for postage. You see, you forgot to stamp it."

Her heart was a winged thing, fluttering in her throat.

"Does—daddy know?"

"Brewster? No. I haven't had time to tell him. I was going to put a man on it tomorrow. But now ——" He laughed again.

"You won't tell him?"

"Of course not. You little desperado!"

How lovely of him to think it funny! What a beautiful party they were having! What a wonderful time! She would remember it all the rest of her life.

She kissed her mother and Stelle and the elected candidate fervently, and would have kissed Douglas too if he hadn't avoided her with a "Have a heart! What d'you think I am?"

The whistle on the Leeds Building began blowing deafeningly. The owner was a Brewster man. Everybody sang He's a Jolly Good Fellow without regard for tune or the fact that no one could be heard.

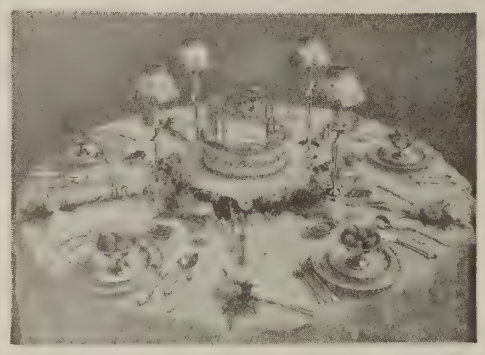
Cabell and Murphy watched the searchlight on the Times Building blazing due north—the signal announced for the election of Brewster. They were both supremely happy.

"Give me first dance at the inaugural ball," he begged. "Though I don't expect to be invited—worse luck!"

She dimpled and promised. She was herself again. She hoped the curl wasn't coming out of her hair and the powder off her nose. . . . He did have the darlingest grin! . . . Yes, she'd give him the first dance at the ball. If he wasn't there she'd sit it out alone and think of him.

She didn't voice her own shrewd suspicion that she wouldn't be there either.

WALLACE SILVER



How to set your table correctly

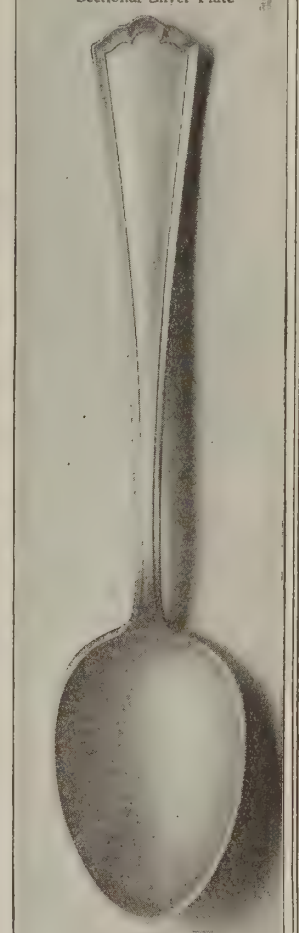
WOULD you like to have a book, illustrating the *correct* table-settings for formal Breakfasts, Luncheons, Teas and Dinners, and explaining authoritatively the little niceties of etiquette connected with Weddings, Linen Showers, Buffet Luncheons, "Coming Out" and Birthday Parties?

The Wallace book of "*Table Settings and Social Conventions for Every Occasion*," written for us by Winnifred S. Fales, a recognized authority on social matters, tells, in text and pictures, just what every woman needs to know to give her assurance on all occasions and to win admiration as a hostess. Sent postpaid for 20 cents in stamps or silver.

R. Wallace & Sons Mfg. Co.

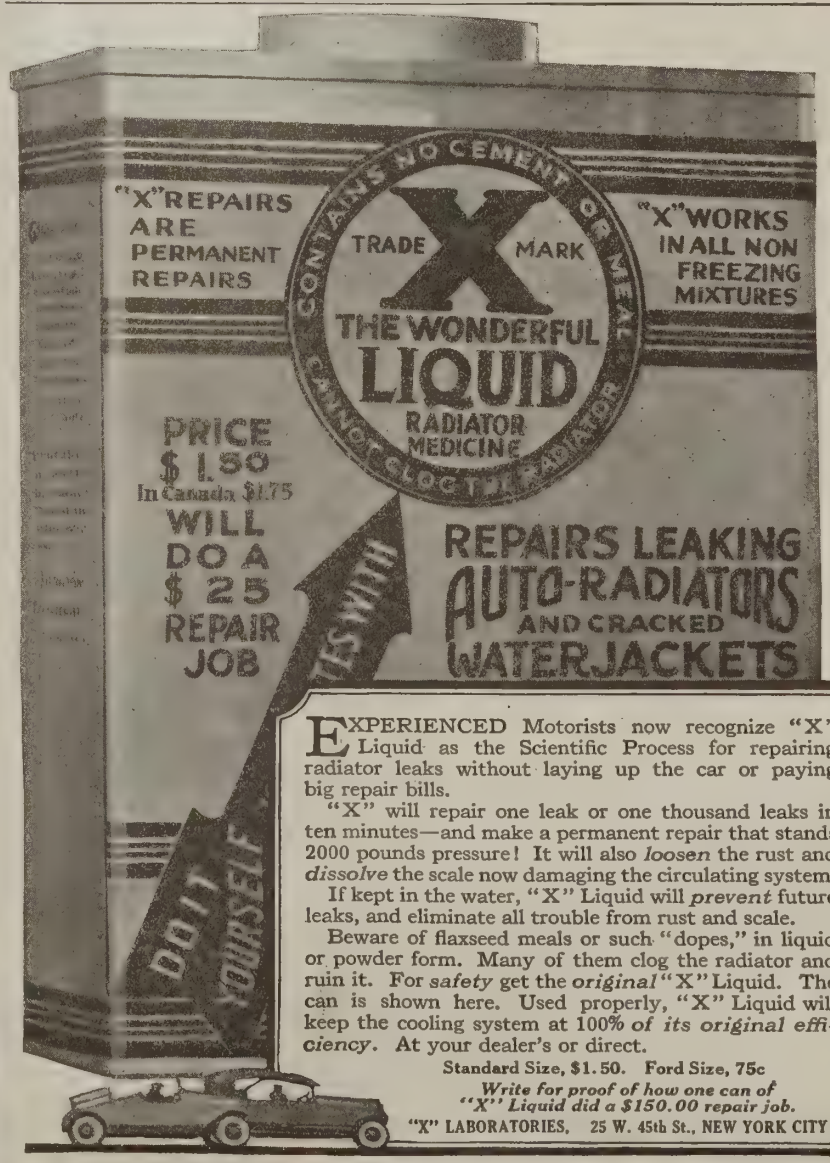
Dept. of Publications *Wallingford, Connecticut*

A very graceful pattern in "R. Wallace" Sectional Silver Plate



The Hudson

Tea Spoons $2.75 the Half Dozen
Prices of other pieces proportionately moderate



EXPERIENCED Motorists now recognize "X" Liquid as the Scientific Process for repairing radiator leaks without laying up the car or paying big repair bills.

"X" will repair one leak or one thousand leaks in ten minutes—and make a permanent repair that stands 2000 pounds pressure! It will also *loosen* the rust and *dissolve* the scale now damaging the circulating system.

If kept in the water, "X" Liquid will *prevent* future leaks, and eliminate all trouble from rust and scale.

Beware of flaxseed meals or such "dopes," in liquid or powder form. Many of them clog the radiator and ruin it. For *safety* get the *original* "X" Liquid. The can is shown here. Used properly, "X" Liquid will keep the cooling system at 100% *of its original efficiency*. At your dealer's or direct.

Standard Size, $1.50. Ford Size, 75c

Write for proof of how one can of "X" Liquid did a $150.00 repair job.

THE GIRL ON THE HILLTOP

(Continued from Page 25)

"Sit down," she said.

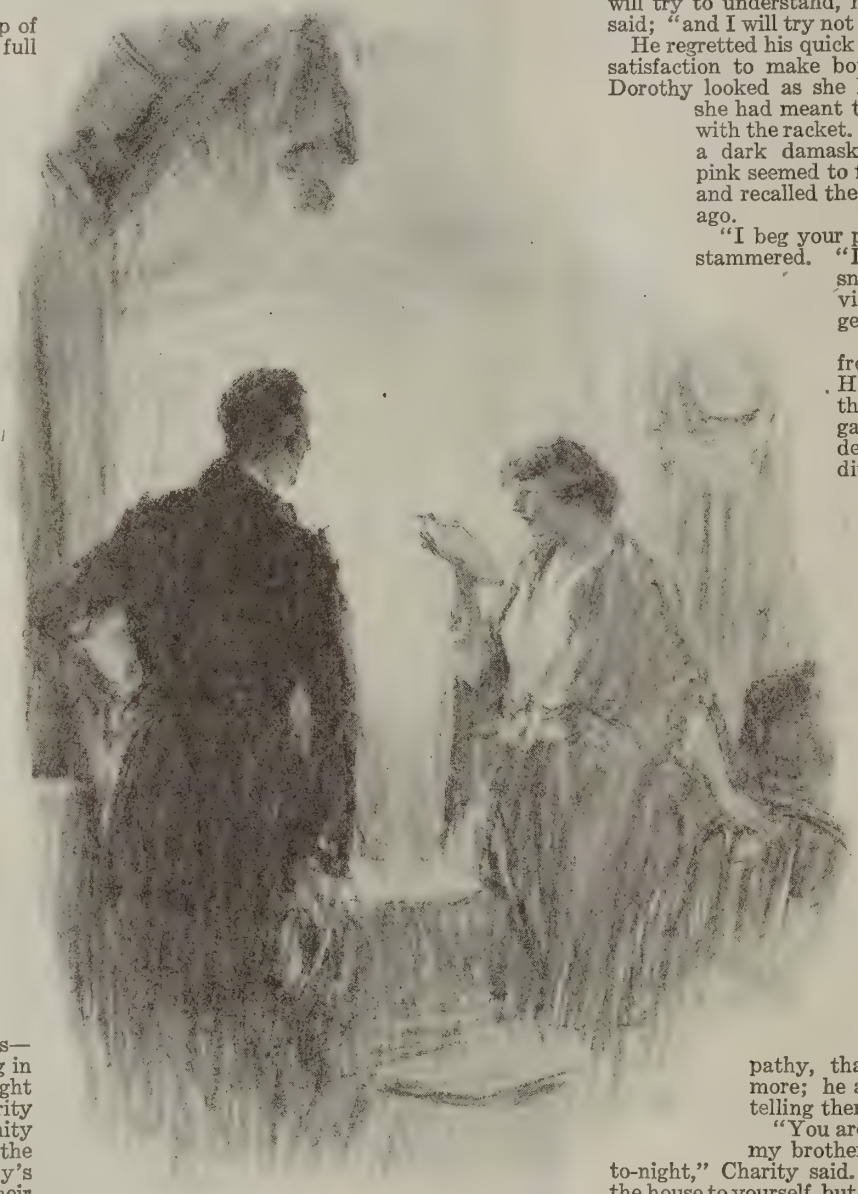
She turned her head and flashed a kindly smile, which was sharply cut off as she resumed her intent, concentrated work. He saw that the chubby pink cheeks had gone. She had cheek bones now, and a skin as brown as his own. Her eyes glowed with health and vitality, but their expression puzzled him. He did not know that they no longer subtly sought his approval. Charity, like all the rest, was busy, and the days in which it had been her natural bent and her occupation to please men had long gone by.

Dorothy paused to sip a cup of tea; and now he could see her full face. It had not changed as had Charity's, for it had not been plump. She was very handsome, a striking brunette, a real brunette with vital crimson hinted at beneath the dark skin. He was surprised at the absence of marks of sorrow. He did not know that one of the sacred hereditary rules of Lingard life was to keep your sorrows for your own room if possible; if not, to your own home.

Roger had thought to find a clinging Charity, troubled by war, anxious about her home, subtly asking sympathy; a broken Dorothy, mourning her dead, crushed by her changed position, needing help; he was relieved.

He was intensely interested to find them so busy, so practical, for snatches of talk showed that they were occupied with estate matters.

Charity's snappy comment about this farm and that farmer made him want to laugh. Her soft attractiveness had certainly gone, but there was something magnificent about her efficiency, her mental and physical quickness, and the grace which her man's coarse dress could not entirely hide. He found laughable the contrast between her fine taffy-colored hair, like a kid's, and the rest of her. How they differed, these two cousins—the dark Dorothy shimmering in the spotless armor of the Knight Templar, the light-haired Charity saved from complete masculinity by the feminine face and the tousled baby hair. Charity's nose—he was always getting their profiles against the window—was not perfect like Dorothy's, but he liked her face the better.



Charity Whipped it Open. She Started, Frowned, Glanced at the Clock, Then Reread the Note

Charity wheeled on him with a sudden question. "What can I do for you?" she asked. She suggested a business man who spares five grudged minutes.

"They said Miss Turle might tell me where I could get a room," he answered submissively.

"We can hardly pack away our own." She eyed the metal letters on his shoulder which named his regiment. "Are your people about here?"

"I saw the place once and liked it," Roger said. "It looks good to a Canadian. I thought ——"

"Oh, Canadian? You haven't got an accent; and you are in the British Army." Her voice was a little softer, and she seemed more interested.

"If you," he answered, "had been nearly four years ——"

"Four years? You enlisted in 1914?"

"In August."

She came toward him. "Have you the Mons ribbon?"

He nodded.

Charity's arm shot out and her hand closed on his. The palm was hard and he felt callous lumps, but he clung to a grasp so firm and friendly.

"He could have one of the groom's rooms over the stables, Charity." Miss Lingard was also inspecting him with appreciation. "I am sure my cook could manage his meals."

Her next words were addressed to him. "We want to do everything we can for Colonials," she said with a smile. "It's nice that you come because you like it here."

"Perhaps we can do better than that, Miss Lingard," Charity said. "What is your name?"

"Sergeant Hill."

"Where are your chevrons?"

"My kit has been lost. I hope it will turn up at Castlechepe. My parade tunic is in it."

"You should get it. You should wear your belt. You should carry the silly little switch cane. There are a lot of officers about here—too many of them—and as most of them have not been to the Front at all they are sticklers for parade dress on the roads." Charity laughed. "From what part of Canada?"

"Vancouver."

"Oh, out there. Have you traveled about? Did you ever go to California? Did you know a place called Moke-lum-ne Hill?"

He did not correct her mispronunciation. He had invented his name from his birthplace, and Mo-kel-um-ne Hill might suggest Kellie Hill to others than himself.

"I do not remember the place," he answered truthfully. He had been taken from there when a baby. He was a little annoyed by the sharp, precise interrogations, and surprised to find that they had got so far in their search for him.

"You forget the absurd distances over there, Charity," Dorothy intervened; "and, besides, the letter said that the whole family had left the place many years ago."

"I'm ridiculous of course. Still, you never know. On leave of course; fourteen days?"

"Three months."

"Three months? But that's sick leave." Charity's voice was soft again. "What's the matter?"

"You were a sergeant major," Roger answered quietly, determined to stop this orderly-room interrogation. "Now you are a doctor."

Surprised, Charity bent back sharply, frowning and looking into his eyes; then she laughed good-humoredly. "Sorry," she said.

But Dorothy still frowned. She spoke in French. "Have a care about these Canadians," she said. "They do not understand our life nor keep their place."

Roger promptly answered in French. "I will try to understand, mademoiselle," he said; "and I will try not to presume."

He regretted his quick retort. It was no satisfaction to make both cousins blush. Dorothy looked as she had looked when she had meant to whack his head with the racket. Her face became a dark damask rose. Charity's pink seemed to flood over the tan and recalled the girl of four years ago.

"I beg your pardon," Dorothy stammered. "I was a beastly snob." She was obviously mortified, genuinely penitent.

Roger liked her from that moment. He proved how thoroughly he forgave her by frankly describing his condition. He was one of the mustard-gassed men who must be lazy for a time lest outraged lungs invite tubercle. He did not say how hard it was to be patient, nor explain that a commission in the United States Army almost certainly awaited his discharge. He found the atmosphere electrically altered. His two cousins seemed now to embody his dreams of the trenches. He was so happy in their kindness, their frank sympathy, that he longed for more; he almost thought of telling them who he was.

"You are very welcome to my brother's room here for to-night," Charity said. "You will have the house to yourself, but I will see that you don't starve."

"Thank you very much, Miss Turle."

Dorothy signed the last letter. She flung down the pen and rose. A memorandum on the table caught her eye. She flushed. "June 11, 1894." She murmured the words, but Roger heard distinctly the date of his birth. What she was thinking of him was evidenced by what she did. A tortoise-shell snuff box inlaid with gold, in which she had brought a ration of granulated sugar for her tea, lay on the table. She snatched it up and slammed it angrily into her hand bag. She did the same with a glass-lined monk's inkpot which had contained a morsel of butter. Ladies were all rifling their drawing-room cabinets in these days and applied their antique rarities to strange uses. She calmed down in one of those swift repressions which Roger had already come to know. She held out her hand with a winning smile.

"If there is anything you need or we can do, Hill, you'll let us know, won't you?"

"I certainly will, Miss Lingard; and I'm very much obliged to you."

He watched her as she passed the window outside, spotless, charming.

He turned to surprise Charity in an intent study of him. Her smile rippled, widened, and ended in an infectious laugh. Recognition was in her eyes. She held out her two hands.

"I knew I had seen you before!" she cried. "It has only just dawned on me. If you fought in the trenches as you did in the park you are hung all over with me[da]l crosses." She held his hand as she [st]udied his face. "You have changed [a]lot." She shrugged her shoulders. "So have [I]. What a mad day it was and how [m]any silly—but still ——"

She laughed again, and so did [he]. She rained questions about his service, his record, but his replies were quiet [and] brief.

"You are like all the rest," [s]he said, "you will not talk about yourself." She eyed him soberly. "It's jolly nice [of] you to come back to us for your leave," [s]he said. "Was it because I plumped you [down] into the middle of our silly little set? You seemed to like it. I have often [thought] of you, and wondered what became [of] you. Why didn't you write? We should [have] written and we should have sent [par]cels. We should have loved it."

"I wish I had," he answered. "I [was] a lot."

She punched a cushion and placed [it] in a Jacobean armchair which had [cross] pillars in the back. He sat down, [not] but protesting.

"I'm no invalid," he said. "I'm not afraid of being one. You have had [a lot] of changes here. I've heard about [the] Lingards."

"Changes? Oh, I should think so." She sat companionably near. "We are too busy to think or brood or be sorry. There's something funny, something absurdly ridiculous in Miss Lingard's position as mine. It's the tie between us. She and I are in the same boat."

"Tell me," Roger pleaded as [she] stopped short. "You make this seem [funny] to me."

"That's just what I want to do," she answered with an earnest sincerity [that] it's so odd. You saw us only one [evening] on opposite sides; and now [we] are us—well—friends, Miss Lingard [and] I. Yes—I'll tell you a bit of family [history]. Everybody knows, I suppose. [We] have no secrets. Except my brother [and] haven't told him."

"Well—in the same boat?"

"A Lingard married a Turle ages [ago]," Charity said, "and they went to the United States. My old grandfather died and found a deed that showed that the [land] really belongs to their heir over there; so does St. Dyfrigs Park and all the [rest] estate here." She paused. The [cross]sion of her level brows relaxed. "It's [all] of Fate," she went on. "Our [name] swallowed up in the estate after a century, and the Turles are no longer lords like the Lingards." Her [voice] rang hollow. "Poor old Tom; he's [my] dad, and I haven't worried him, but I hit him hard. Not the value of coupons, the sentiment. You can't understand, Hill, but it meant a lot to him, and [to]—"

"Oh, but I can understand," Roger [said] earnestly. "That's rough luck. I ——"

"We've had a letter," Charity [inter]rupted; "or Miss Lingard had. The [de]loper has been traced. At least [we] that he was born and is twenty-four [years] old."

"He'll never take the cottage," [Roger] asserted.

"He'll have to," was Charity's [reply]. "Tom accepts nothing from anybody, even if the Yankee should turn out [a] half decent it simply couldn't be done."

"False pride."

Charity shook her tousled head. "The Yankee gets the cottage and the rest when my grandfather died," she declared. "I know Tom."

"But if he turned out to be all right—a friend—a real friend ——"

"We Turles don't accept favors. Miss Lingard is just the same," she added. [She] rose. "She vows she won't even accept [her] usual allowance. That's going to be, of course. It's always done. But she—[her] proud is a weak little word to describe [her]. She never gives in, but—oh, well, [there's] some bitter hours, I'm sure of that."

Roger bent his head, troubled.

"We force fun out of it," she [went] on. "After all, isn't it ridiculous?" She [turned] toward the door. "Yes, Miss Lingard and I are in the same boat. It's floating on the tide, waiting for a young man. He's him of course. We shall pretend to be [afraid] of course. We shall hand him out [to] and—well, I won't say vanish, but hunt up lodgings somewhere. No [one]

...What food am I entitled to?"

"Two ounces of butter a week, eight ounces of sugar, two of margarine, about twelve ounces of meat, two ounces of tea. Cheese you cannot buy in this neighborhood. Bacon and pork are unrationed, but they're so fat and hard cured you can't eat them. You can get fish once a fortnight. You can get extra as a soldier, but you've been pampered in hospital and won't eat what you can get. You'll end by filling up with dry bread, just like the rest of us."

"But surely—in the country—on a farm ——"

"We stick to the rules here," Charity said. "And don't think I am kicking for myself. I'm only explaining why I can't give you more. There are food hoggers about of course, and some of the farmers do themselves well. But most of us think that is contemptible."

The meal was over by nine o'clock, but it was still light. Charity scoffed at an invitation to a stroll. The Lapp would wash up, but she had plenty to do. Roger made his way to the park.

White-topped stumps dotted the grass as far as he could see and many big trunks lay flat. He knew that his estate had thus been marred by a government imperatively demanding timber, and cursed the Germans as he had not cursed them when going over the top. Their vandal hands stretched everywhere. They had overthrown his oaks and his elms and his beeches even here in this walled-in circle of peace. He encouraged his delightful sensation of ownership. He saw a fractured bole which had been cut to fall wrongly, and he pretended to resolve that he would find out about that. He saw a Hereford heifer with a very young calf at foot and he thought that she ought to be housed; he would see the cowman about that. Turf was encroaching on the road; he must have a word with the gardeners. There were deep ruts; the road must be fresh metaled. He had helped to macadamize more than one road in France and knew much about it, including the English word for the process.

He came at last to the house and stood and looked at it. Four years before—he thought of that—Charity had warned him that to stand and admire was to trespass with the eyes. That he might now freely gaze brought not exultation but humility. Level sun rays on mellow brick façade and vine-covered ells invested the manor house with a haunting beauty. He gazed, drawing long breaths, profoundly moved, profoundly impressed and oppressed by the thought that this wonder of solid beauty and medieval charm was his possessor. It did not belong to him. He belonged to it. He could not sell it. He could not give it away. Those two ells stretching toward him from the main building were arms drawing him, dragging him into a net of laws and customs and traditions that would bind him helplessly.

He did not fear responsibilities, but he had the American individualistic inheritance and training, and he was impatient of hampered and conditioned possessions. Over there if you owned something you owned it. You knew where you were. Because he could not give it to Dorothy he gazed at the sun-warm Elizabethan manor house with a pleasant melancholy resentment.

He started violently, conscious of a voice. A lady stood by his side. He looked into eyes that were so intently fixed as to arouse fear that he might have been talking aloud. He lifted his cap, against all military rules.

"Are you going to St. Dyfrigs," the lady asked, "and could you take a note?"

"With pleasure."

"Thank you. Come with me. You were lost. I called. I spoke three times."

"I am sorry."

Her face was a long oval, her heavy hair was iron gray, and her eyes were very large. She had a high distinction of manner and appearance and a throaty, kindly voice.

"Was it the beauty of the house?"

"I feel as if I had been found asleep," Roger said.

"Never mind," she said. "You were not on sentry duty." She glanced at him, smiling, curious.

"We don't have that in Canada." He pointed to the house.

He noted the expected quick change, slight though it was; the expression of the mother country's appreciation of the loyalty of her children, partly genuine, partly wise policy imposed from above and encouraged by newspapers.

"Would you care to see the inside?" she asked.

His response was so eager that the great lady was further pleased with him, and she showed it. She told him to come on Thursday at three.

"Ask for me," she said; "the commandant."

They were close to the front now. Several officers were sitting or lounging about in long comfortable chairs, some drinking after-dinner coffee, some smoking, some chatting and laughing. The commandant led Roger to a man sitting alone, writing in the fading light.

"I've found a messenger for you, colonel," she said.

Roger saluted, though the officer was dressed in white flannels.

"Duchess," the colonel exclaimed in protest, "I did not mean ——"

"I heard you ask. I saw this kind soldier passing. There you are."

"Thursday at three," she said to Roger as she passed on.

"Thank you, duchess."

She smiled. The officer glanced up from his writing. "You should say 'Your Grace,'" Colonel Bickley Ryker corrected.

"I will remember, sir," Roger answered, scanning his old antagonist with interest. Ryker had improved and he had progressed, Roger thought. He looked a keen officer and had the manner of one who thinks and acts quickly. His face was stern, but not repellent as of old, and the sulky look had gone. Roger was glad that Bickley Ryker had won a commission and such good promotion. He must have earned them well.

Roger slipped along and stepped just within the doorway. Thus he crossed the threshold of his house. He saw tall columns and a great stairway, and at its foot stood Dorothy, talking to the duchess.

"Cousin Dorothy belongs here right enough," was his thought. "Do I?" With her haughty head held high and the startling red cross on her breast she looked the Knight Templar at home.

He heard her laugh. It sounded jolly to him. He backed away, smiling.

"Do you know the Home Farm?"

"Yes, sir."

The colonel tore up his note and reflected. He was evidently not finding it easy.

"If they've gone to bed wake them up," he said.

Dorothy came out and nodded pleasantly to Roger. "It is you, then, sergeant," she said, smiling. "I thought so." She turned to the colonel. "Sergeant Hill," she informed him, "is to inspect the hospital." She laughed again and shot a glance of amused curiosity at a soldier who had caught the vagrant fancy of a duchess.

The colonel glanced up. "Parade dress," he commanded shortly.

"Yes, sir." Roger had thoroughly learned discipline, respected it, and was never sullen under it. Besides, he honored this man whom he had once thrashed, who must have a fine record, and who had been wounded.

"Are you sure you're quite fit, colonel?" Dorothy asked. "Ought you to go straight away?"

The colonel had finished the second edition of his note. He addressed the envelope.

"I beg your pardon, Miss Lingard? I was thinking of the farm. It is overstocked. I am sending a line about it. You asked ——"

"Can't you get a short leave?" she said. "You should have a few days in London."

"I'm on to my job," he answered. "I shall be with my regiment the day after to-morrow."

He thrust his hand into his pocket.

"Never mind the tip, sir," Roger said. "A little courtesy I'm glad to do for you."

The colonel frowned. Dorothy smiled.

"The sergeant," explained the latter, "is a Canadian."

"Even a Canadian," the colonel said as he handed over the letter, "likes a glass of beer or some cigarettes. No? All right, then. I'm much obliged to you."

Roger saluted, and again, defiant of regulations, lifted his cap to Dorothy.

"Don't keep the duchess waiting." She chuckled and Roger went away with that pleasant sound in his ear.

He walked fast, for farmhouse hours were early and it was ten o'clock now. He could just make out that the note was addressed to Charity. Why must a message about an overstocked farm be delivered that night? If the house was closed he resolved to leave the message under the door. If the note was about steers and grass it would keep. If the colonel had lied that was his lookout.

The front of the house was dark. He went through the farmyard. A flood of light poured out of the open kitchen door, but the room was empty. He rapped on the table and presently Charity came.

"A pint here, a quart there—it's maddening!" she cried blithely. "I was just making out the horrid milk accounts. They drive me mad. Now what's gone wrong? Can't you find sheets? Or is it a candle?"

"I went past the hospital," he said. "I was asked to bring this note."

She whipped it open. She started, frowned, glanced at the clock, then reread the note.

"Good night," said Roger. He heard her response as he was ten feet from the door. His word had only then reached her ear.

He sat by the sweet peas in the open window considering this incident. It was good to be thinking out schemes for forcing houses on girls. It was amusing and delightful and sentimental. It was a mighty fine way of resting after doing your part. But the romance paled when another man came into it. Why should he play Harun-al-Rashid and go about secretly among his people to find a way to present Bick Ryker's bride with half a house. Roger grinned and called himself an idiot. His two cousins were in their separate ways more than usually attractive. Dorothy was not engaged, he knew, or the whole confounded village would not be twittering about a marriage with the mysterious heir; but it was almost certain that in these quick, exciting times she was deeply interested in somebody. He resented the conviction. He argued away from it. He was jealous. And Charity? Well, a marriage with Bick Ryker would be fine; a topping couple, hustlers both. But, hang it, inside his skin Ryker was a sullen dog and a bit of a bully! Not good enough for bright, cheerful Charity by a long way. Roger became annoyed, angry. He was jealous.

Charity sped down the street. He could just hear in the utter silence the light patter of her quick feet. He could just see through the darkness that she was dressed in white, and he thought that she wore roses in her belt. He knew now that he had been waiting to see if she went by.

He slipped the window down as silently as such windows will close. He fastened the wooden shutters. He thrust home the great bolts of the front door. Thus he barred out temptation to watch for her return. He went to bed angry with Bick Ryker, annoyed with the man Dorothy was interested in, whoever he might be, and astonished again to remember that in France there was war.

V

CHARITY passed beneath the oak and through the gate into the park. She followed the wall to the left and presently she was face to face with Bickley Ryker.

"I knew you would come," he said.

"You ordered it, colonel." They looked at each other in the fitful moonlight.

"I asked it. You have hardly changed."

"You have, a lot. You look a colonel."

"Hard, you mean?"

"Yes, that—and more." She was studying his face with questioning eyes. "I expected the change." She moved forward and he walked by her side. "Everybody is proud of you," she said. "Everybody is glad that you have got well. You will come back next time a general. Only a bullet can stop you now."

"I am no more than major."

"With temporary rank as lieutenant colonel and actually in command of your regiment."

"You watch closely."

"You would know that I do," she answered. "We watch all who went from here."

They did not speak for a little while. Charity knew what he wanted. She waited for him to ask. She glanced about and stood still. He, too, looked round, and then into her eyes.

"You never answered my telegram," he said.

"No. Explanations were due."

"Couldn't you guess?" he asked.

"Oh, yes. I could guess what you did; your reasons too; but not which reason. That is what I want to know."

"You make it hard, Charity."

"Did you make it easy for me?" she retorted with a spirt of flame that died down instantly. "I kissed you here. We sat there on the stone. I put my arms about your neck and cried."

"You were excited, wrought up," he interrupted. His utterance was as cold as

W it my birth?" she said.

He considered. "I never thought things out like you do," he answered at length. "I found myself suddenly in the running and—I just shook you off. And that's the God's truth."

"You were a private in the army once, an officer's servant," she said. "What were your people?"

"Like yours," he answered; "peasants."

"That will not matter to you—to a man." She thought for an instant. "Not so long as you learn the manners of the mess. That's what I meant when I said you looked a colonel. You've caught the manner. You've learned a lot besides your military duties, colonel."

"If I thought I had learned half as much as you ——"

"Wasn't it because I had been a barmaid?" she demanded in sharp interruption.

He had taken off his hat. She saw perspiration in beads on his forehead shining in the now fuller moonlight like grotesque little pearls.

"Everything," he answered. "I had my chance. I didn't foresee that it was coming. I didn't expect it. It came. It was the career—or you."

"Had I the education? Had I the manners? Should I make mistakes? Could I dress? Should I meet officers for whom I had mixed whisky-and-sodas? Would their wives be decent to me? You asked yourself those questions?"

"For God's sake, Charity! Why ——"

"Did you?"

"Yes."

"You would not have known, nor noticed, four years ago, so you may have been in doubt: Did you ask yourself if I had a provincial accent?"

He jumped to his feet, galled to the limit of endurance.

"There's nothing to keep you except common decency," Charity said.

He sat down again.

"I thank you for your honesty, Bickley," she went on. "I wanted to find out something. I had to know it. They write, they talk a lot about women's chances, new openings, and all that. Is it rot?"

He was startled, moved by her intensity, by the deep feeling with which she spoke.

"I wanted to know just why you threw me over," she cried. "If I knew exactly, I might alter it. If it is birth and the barmaid, can I live it down? I want to put my foot on the ladder too. I want to climb. Has the war changed women? Will the sort you have a chance to know now give a helping hand? They don't here. Can I climb, Bickley? You have."

A long silence, then: "I have a profession, Charity."

"That means that I cannot."

"Your ambitions are vague."

"I have them, since you killed love in me," she said with a fierce repression. "I'll tell you a secret, Bickley, a woman's secret. There's a class war, they say. They say that labor flames with hatred against capital. Well, there's a deeper hatred than that, more bitter, soundless, never ending. It is the hate of the woman worker for the lady loafer."

"God, but you are bitter!" he said under his breath, but she heard.

"You have made me so," she answered to that. "Ladies work at the hospital. They will, in wartime. Maggie Colling is a V. A. D. there too. They keep her at arm's length. They bar her in a thousand ways, ways a man would not see. Is it the same everywhere? Is it a lie that war has broken down class distinctions? Is it a lie that women are just one woman to another, just friendly, and kind—and equal? Yes, that's it—equal—in France, in London? Is it only here, in this corner, where we are so far away and shut out of everything, that girls like me tear out our hearts against invisible barbed wires? Are women different from men? You were a ranker. That's not remembered now. You are man to man with your brother officers. I'm doing here the work you left. I'm running the Home Farm because there was no one else to do it. I am doing more. I am practically running the estate. Miss Lingard does not understand, cannot learn, and does what I tell her. It's for my country. It's to produce wheat and meat and milk. I was a ranker just like you. I've done good work just like you. I'm a captain here, on this estate. But I'm barred from the officers' mess. Is it the same everywhere?"

A long silence, then he said slowly with a bitterness that equaled hers: "Women never change."

"I was afraid it was all rot," she uttered mournfully. She rose to her feet. "That settles it. When the war ends I am going to the States."

"The same—there." He stood by her side.

"I dare say. But I shall not be the same. I can leave some things behind." They walked slowly along the shadow of the wall. "I am sorry for my outburst, Bickley," she said in a friendly way. "Don't believe everything I said. You've been very decent. You haven't said you were sorry. You haven't said you were unworthy of me. You haven't asked me to forgive you. You've just let me work it off and you've been truthful."

"You forced it," he admitted. "I was ready to play the rotter." An instant's silence, then he added with a convincing sincerity: "I should never have sent the telegram if I had foreseen this night."

"I believe that," Charity quickly accepted. "I'm glad you said it. I've grown too, and you didn't think of that. May I give you one word of warning? It's to spare you."

He stopped with a jerk, his muscles taut.

"If you would rather not ——"

"Go on," he said. His voice was thick.

"You've been in that hospital a month. You came, broken, nervy. You could just hobble about. You were not in her ward, but you were where she was when you could be. Your eyes followed her always when they could. We hear everything in the village, remember. Nobody thought anything of it. You had worshiped her always. You had been her father's orderly, her slave. You asked me to come here tonight. You wanted that letter back. Why, after two years? I can think of only one reason. You are going to-morrow. But before you go you intend to propose to Dorothy Lingard."

She had put her hand on his arm. She could feel that he was trembling. He opened his mouth to speak, but he could utter no word. He had been literally rendered dumb by her extraordinary insight.

"Don't do it, Bickley," she pleaded. "She does not understand. She hardly realizes that her position is altered. She will forget that yours is changed. You will get the humiliation of your life."

He bent his head to her ear. "Too late." His voice was a broken whisper. "I told her to-night—just now. She stared, just stared, and she couldn't speak. When she could she said: 'You—a common soldier!' I caught her by the shoulders. I shook her. I shook her till her teeth chattered. I left her with her hair down and her head on the table, sobbing, sobbing. Perhaps she's there yet."

He turned and strode away.

Charity went home, breathing hard all the way.

VI

SOMETHING hit Roger on the head. He sat upright, to receive a stinging pebble on the cheek. He heard others tinkling on the window panes. He jumped from his bed and looked out. Charity, in a clean cowman's smock, laughed her troubles out in twenty words. Inside as many minutes he was at the farmhouse.

"Take their names and the quantity," Charity ordered.

The ninth cottage at which he ladled out milk was that of Mat Colling. Waiting for a jug he heard the voice of a girl in the kitchen: "And she was crying and crying. I heard her as I passed the door. And then Muriel Ward and I came home together and he passed us, just near the gate. He never seemed to see us, nor said good night nor anything, he was that upset, and we hurried, and then in front going up the street was Charity. And then ——"

But the little girl returned with the quart pitcher.

"Tell your mother," said Roger, "that she must send for the milk after this. We give it out between seven and eight every morning, and five and six every evening. Tell her there is no one to keep accounts any more. She must send the money."

He had said this at every house. He had grasped a situation. He would teach the village efficiency.

When he came to the house of Muriel Ward he heard part of an eager discussion amid the clatter of teacups. "—— found out he was snooping off to a secret meeting with Charity and taxed him, and he just left her crying and went ——"

"'Tis nonsense, Muriel! A Lingard taking up with a Ryker!"

"It is not, mother. He's a colonel now, and grand in his ways and there's two ribbons on his tunic. And what's she now; what's she?"

"'Tis so," came in the voice of Martin Ward. "A landless maid and him His Majesty's officer. 'Tis right."

Roger was at the hospital by nine o'clock, but Colonel Ryker had already gone. He went to the railway station at Castlechepe, but the colonel did not come until the train was approaching. Roger saluted, asked a word in private, and followed the colonel to a deserted end of the platform. He saw wearied eyes and a haggard face.

The colonel appeared to see only clothes, for his first words were: "I said 'Parade dress.'"

The train had stopped. Roger wasted no second of precious time. "I am Roger Lingard," he said. "I have two cousins, orphans. One has no brother. The brother of Miss Turle is in Bagdad. Their affairs are my affairs. After hospital hours last night, village gossip says, you left one crying to go to meet the other."

The surprised and mortified Ryker could with difficulty maintain the dignity of an officer. "I am sorry," he said. "I am deeply sorry. I will write to the commandant. I am greatly to blame."

"Will you ask the duchess to protect Miss Turle as well as Miss Lingard?"

"I owe that to both," was the answer. "I owe nothing to you. You are here under false pretenses."

"For the best of reasons," Roger interrupted. "For the sake of my relatives, not my own. I'd rather you didn't tell, but you must do as you will about that. What are your relations to these two young ladies?"

"None with either," the colonel said as he moved toward the train. "I turned one down; the other turned me down."

He took his seat and looked through the open window. "I am deeply sorry," he repeated. "I will write to-night. I will not give you away." He put his head out of the window, gazing intently. "I've seen you before," he said.

"Four years ago," Roger called out as the train moved. "At the oak door in the park."

The colonel nodded and returned the soldier's salute with a punctilious courtesy.

Roger found his baggage, which included a trunk, procured a ration book from the food office and then went to the Boar's Head for lunch. The contrast with four years before was a shock. The cheerful bar parlor was closed. All the whisky in the country, he was told, had gone to make munitions. All the wines had been sold and there were no ships to bring more. Beer was so scarce that they rationed it at six o'clock every evening, and it was all gone by seven.

An elderly woman waited in the coffee room. She was the mother, she explained, of the girl who had been there in peace times. Her daughter was filling shells at Oldport. The mahogany sideboard was bare. So was the cupboard, it seemed, for all he could get was a slice of ham, so fat that he could not eat it.

The little town had lost all its quiet peace. Its narrow, rambling streets were overcrowded. Officers and soldiers were everywhere, for hundreds of enlisted men of the engineer corps were billeted in huts and working in the great suddenly improvised factory. Roger had to search long for some means of getting his trunk to St. Dyfrigs, for there was nothing to be hired. A kindly farmer finally gave him a lift.

He spent all the afternoon among such of the villagers—and these were only the very old and the mothers of young children—as were not in the fields. He explained his milk scheme a dozen times over, laughed away objections, gleaned information about village needs and hopes, and explained Dorothy's tears and Charity's moonlight walk with the precise knowledge of one who has invented a good working tale. His khaki opened all lips; his companionable, friendly manner opened all hearts; he was accepted without question as one of themselves. Never had landlord such a chance to know his tenants and to make them his friends. After the village, the farm and the farmers; he was eager for that.

He went to the dairy to serve out milk at the appointed hour. Charity, by agreement, was not there. She had laughed in the morning when he had told her of his

TYPE WD

Phantom drawing showing detail construction of the Brascolite. The reflector-canopy of Type WD is finished in Bronze, with bead design as illustrated.

1 —Brascolite Improved Supporting Tripod—simplest device for attaching to any kind of electric outlet.

2 —Brascolite Socket, made of porcelain with protected terminals—no wire splicing or electric troubles.

3 —Brascolite Pull Switch of new toggle construction in insulating material, 660-watt capacity.

4 —Brascolite Reflecting Plane made of white porcelain on steel—positively will not discolor.

5 —Brascolite Spindles hold reflector-canopy flush with the ceiling and also support the bowl. Adjustable to correctly position the bowl for controlling every ray of light, thus insuring uniform light distribution with maximum efficiency.

6 —Scientific configuration of the white g bowl thoroughly breaks up the int light rays of the Mazda lamp and sof them by diffusion. This principle a made Brascolite the ideal light for health and comfort, exceeding in efficie that of any other light-diffusing fixtur the world.

7 —Ventilation upward through the assures long lamp life and least a u mulation of dust.

fixture in the world

(Continued from Page 95)

plan, and predicted utter failure. But half the people came, and half those who came brought the money. Empty-handed children, astonished, went away with empty pitchers. Mothers came, angry. They had not a penny in the house.

"I will lend it to you out of my own pocket till to-morrow afternoon," the milkman in khaki said. "It is not fair to Miss Turle to ask her to keep books. You must do your part."

Some came after hours. If they had young children, as a great favor he opened the dairy door. There was an awkward moment with a captain's wife. The soldier was courteous but unyielding. That news spread over the village and did nearly as much to insure the success of the revolutionary scheme as Roger's patience and tact. In this modest manner the Lord of the Manor of St. Dyfrigs began to organize his village.

He was glad to slip away before Charity came. He was so tired out that he did not want her to see him. He ate some dry bread and some canned beef which he had brought from Castlechepe, and tumbled into bed.

At eleven the next morning Charity led him across fields up the hillside. She had heard that the Tudds had empty rooms. If he could get in there he would be more comfortable than at the cottage, where there was no one to look after him. He watched her with sympathy and admiration. If she had been turned down by Bickley Ryker none could have guessed. She seemed to be in the highest spirits. She laughed when a small sheep with a long tail jumped a four-foot hawthorn hedge.

"I told Staines he couldn't keep Welsh sheep from Merioneth in any field," she said, "but he wouldn't listen."

"Patchy," she said of a wheat field. "It's old pasture. Staines couldn't believe he had no rights on his own farm in wartime and he held off plowing up till the magistrates fined him ten pounds. There'll be half a crop here—say fifteen bushels to the acre."

"Not even an American average," Roger said.

"Ours is thirty-two," Charity answered; "but they don't manure properly over there and the heart soon goes out of the land."

"They're beginning to," Roger answered.

A mixed flock of jackdaws and rooks, chattering and cawing, jumped as a unit into the air. Charity chuckled.

"Old Martin farms ninety acres," she said, "and he fought against tractor plows. They're new to us and we had a lot of trouble to get them used. 'I sticks to horses,' old Martin announced, 'so as the rooks'll follow the furrow and eat the wireworms. They're afeard of tractors.'" But Charity added: "His horses didn't stick to him. The army took them, and now he swears by tractors."

She pointed to grazing two-year-olds, crossbred Shorthorns and Herefords. "No linseed or cottonseed cake," she deplored. "We shan't be able to fatten them in the autumn."

"Chaps who have been in Egypt tell me," Roger said, "that they're burning cottonseed there in railroad engines and hotel kitchens."

"Rather funny," Charity exclaimed—"locomotives in Pharaoh's land eating the food of our cattle."

They passed a haystack. "Last year's," Charity explained. "Forty tons, I should think. Manners had to sell stock in the winter for want of keep. He dared not touch that rick. See the label, 'W. D.' That means War Department, and the owner can't touch a wisp."

She pointed to a neat, tiny path through a hole in a hedge. "Badger," she said. "His sett is in the next field but one. I've seen him twice. There are not many about."

She stopped and pointed. Roger saw a hundred yards off a rabbit apparently pursuing one of the weasel tribe in an always-narrowing circle. "It always looks like that," Charity said. "The rabbit is larger and seems to be chasing the stoat." They saw the stoat pounce.

A lapwing rose and wheeled beautifully, uttering mournful cries. Charity scanned the adjoining pasture. "There!" she cried. "There—in a line with that tree, the hen-bird, sidling, slipping away. A second brood, late. Mark her, and see sometime if you can find the nest or the young."

They came to a rough lane. "This will lead you to the farmyard," she explained. "I must go on. If her price for rooms is too high, never mind. There's a fund, you know, for convalescing soldiers."

He told her that he had some money.

She looked at him with kindly eyes. "I ought not to have asked you to deliver that milk," she said. "You look tired still."

"My scheme will work," he predicted confidently.

Charity admitted that she had a faint hope. "See if you can get some butter," she said. "It's against regulations, but there's a little consumptive girl in the village."

"Margie Jenkins," he interrupted. "She's waiting for a government vacancy in a sanatorium."

"You know everybody," she said, smiling. "The Tudds are very well off," she added, "but they work hard and they've lost nearly all their men. If nobody's at home, search the fields."

She went on her way with a gay wave of the hand. He watched her out of sight, relieved to think that Bickley Ryker had never cost her an hour's sleep.

He crossed the farmyard, astonished at the solid stone outbuildings and estimating that the estate—his estate—had put just about five thousand unnecessary dollars in them. He entered through the open scullery door, noted the absence of fire from the kitchen range, and correctly inferred that the family was in the fields. He crossed to the dairy, inspected shelves, lifted lids of crocks, examined the separator, peered into the churn, and finally opened the gauze door of the meat safe. Yes, at last; a quarter pound pat of butter; but it lay on a plate on a tray. This luncheon tray held a small silver pepper pot and a silver saltcellar, some delicate slices of cold lamb, a slice of cheese, a roll baked from pure white flour, some potato salad, a tomato, and vinegar in a cut-glass bottle. A small silver vase held one William Allan Richardson rose, and the tray was covered by a teacloth of fine linen embroidered so exquisitely that Roger noticed the border and touched it with his finger. He frowned angrily. Tudd was well off, and he had heard that Mrs. Tudd had had her own runabout until the authorities cut off gasoline. Why, then, should she do things like this for any of these luxurious boarders who were eating the neighborhood bare?

He eyed the butter indignantly: four ounces, two weeks' legal allowance for one person, all in a lump; villagers were doled out margarine by the grain, and spread it so thin that their children denied that it was there. He frowned at the slices of lamb. To kill lambs was illegal. He peered at the white roll, appetizing, unlawful. Where could fine flour have come from? The cheese was real Cheddar, made of unskimmed milk, he thought; even Caerphilly cheese, of skim milk, he had been told, had been rare for two months in that neighborhood. The tomato was a curiosity. Experts who grew luxuries under glass were fighting now or planting swedes and mangolds. All this was for some useless, ornamental woman. The old wheelwright, by his own computation, had eaten half a pound a day, for forty years, of fine old mellowed Cheddar, ripened on his own shelves. Yesterday he had supped on bread and onions; so he said, at all events.

As Roger went back through the kitchen he cast his eyes to the ceiling. Not a ham, not a side of bacon hung from the black oak beams. Farmers in this 1918 summer of food controllers and rationing were not, so to speak, wearing their hog products on their sleeves. He had been told of one farmer whose locked spare bedroom was like a provision store, and of another whose feathering house was no longer devoted to plucking geese and fowls.

He glanced at the oil stove in the scullery and saw that the oven was still lacking. As a loyal American he was glad that American manufactures were entering distant farmhouses, but regretted that submarines had got the ship that held the ovens. He had been told this in London; here was the proof. He sauntered across the farmyard and made his way round to the front. He was sure that the room had been taken, and that no Tudds were at home; but he was curious to see what manner of person so luxuriously violated a dozen food laws on one lunch tray.

A sudden din and clatter drew him at a run to the open front door, where he saw a frantic colt kicking the hatrack to pieces. He stretched out his leg, clasped the animal's head and wrestled. As the colt's hind heels were high in the air, of course he scored a fall. It toppled, so did he. His head banged a door open. He lay sprawled, panting, almost breathless, half his body in the room, the colt's head beneath him. The colt was helpless. So was he. If he moved, the colt might jump up and kick this room to ruin.

"What shall you do next?"

The startled Roger lifted his head. A girl was standing in the middle of the room—an unreal, unfamiliar kind of girl who provoked instant antagonism. He stared. She was very pretty. She was beautifully dressed. She was beautifully useless. In a farmhouse in this busy time, in a filmy white dress with ruffles and furbelows and silk stockings and high-heeled slippers—oh, but she was decorative, anyway. His stern brow relaxed.

"Well?" she demanded. She came and sat in a chair near him and in two senses looked down on him. Her manner was arrogant and lacked the unobtrusive condescension that most great ladies extended to soldiers. She was not a great lady. She was too young to be that; but she would be, one day. She had the beginnings of the grand manner.

"I beg your pardon," the young man stammered, flushing red. He looked in vain for a relenting gleam in the cold, blue-gray eyes. There was no smile in them. There was on the lips. It was supercilious.

"The mare," he faltered, "must be in the field. If you—if you—would step out of the window and drive her to the door——"

He paused.

"Well?"

"Well, I might push the colt's head out and shut this door, and he wouldn't kick this room to flinders by joining mother through the window."

The girl looked at him, then down at her helpless, high-heeled slippers. His eyes followed hers. The new dark bronze slippers shimmered insolently of luxury. The bronze silk stockings glistened with opulent idleness. They were an insult to this solid, oak-beamed farmhouse. They were a slight to the countryside, where almost every resident gentlewoman and every serving maid was working in a hospital or in the fields.

"I heard the clatter on the stone floor," the girl said. "I opened the door. That frightened the colt. I shut the door again. The hatrack was already in ruins. There was nothing else to break. If you had not come the colt would be in the field now."

He jumped up, fuming, hoping the colt would choose the window. It darted through the front door.

"How simple," the girl remarked dryly.

The colt passed the window kicking high its off hind leg, whose pastern was circled by an absurd frill of gauzy white. Roger hoped and believed that the frill had once been her hat, and he was glad.

It checked at the open gate, wheeled, and jumped exultantly into a bed of glowing French poppies. Roger rushed out and drove it off. He picked up the handful of bent wire and tulle and lace and placed it on the gatepost. Then he shut the gate, himself outside. It was the first time in his life that he had turned his back on a girl or snubbed one; the hat on the post was meant for a snub. He turned away.

"Please bring it," she called. Her voice was very pleasant. It included a softened, husky note which gave it character.

He looked up. She beckoned imperiously. She stood leaning indolently against the casement, luxurious, exquisite. His scowl vanished. He obeyed the summoning finger. Perhaps she would redeem or explain herself. If only she would be one per cent as good as she looked; he smiled as he handed her the shapeless trifle.

"The dustbin for that, I'm afraid," he said, but his manner showed that he was not afraid, but pleased. She glanced up, and the cool eyes nipped his smile.

She was absorbed in the hat; he, in her. She was pale, he saw; but he saw, too, that the healthy, creamy pallor was that of the prehistoric girl who used sunshades and protected her complexion. He noted her hands, delicately white.

He had heard and read that helpless hands had been admired in older days. Yet her fingers were strong, supple and dexterous; they deftly ripped and dissected. In the end he saw her wind about them a strip that even his ignorant eyes recognized as rare lace.

"I didn't know," he said, slightly apologetic.

"I did not expect you to," she a

THINK of any ten persons you know. They're all different. That's individuality.

Think of any ten photoplays you have seen. A good many of them are just like the rest of them. Then think of any SELZNICK PICTURE you have seen. It was different. It had individuality.

Some pictures are made by mixing guesswork with hope—like a bride making a cake. SELZNICK PICTURES have achieved individuality through years of consistent effort to build up the ideal producing organization.

At the best theatre in your neighborhood you can see for yourself that SELZNICK PICTURES create happy hours.

Lewis J. Selznick

(Continued from Page 98)

tips to meet. She shook her head when he held out the resplendent cigarette case; she nestled in the cushions and stared up at cool depths of green.

He watched her through fragrant smoke. His cigarette was decorated by no meretricious blazonry of monogram or gilded crown, but its quality matched that of the gold case. He had not had such a smoke in months.

"I dreamed of a village where they went on just the same old way," she said. "They said it was three miles from a railway, that newspapers never came, that mails were always a day late, that old men basked against sunny walls. Oh, who is the patriarch with the beard of Abraham and the great hairy hands of Esau?"

He told of the old saddler and harness maker. She asked about the gypsy-eyed woman with the nose like a scimitar. A seaman's wife, he told her, from the north. She questioned about others. She had driven through the village yesterday, she told him, and had seen these quaint people. He was astonished by her keen observation, by the sharp vignettes which she cut in words. He asked questions in his turn, cunning, artless, looking at her from ingenuous, candid eyes. She did not seem to evade, though sometimes she ignored. He learned nothing—just nothing.

Two spots of light ran down the tree trunk and made two bright circles in her brown hair like two Australian sovereigns, which are ruddier than English coins. The soldier glanced down the hillside. Five hundred yards away the sun was making molten fire of a cottage window.

"I came to find Sleepy Hollow," she said. "Instead I find a horrid, bustling little town and a village bursting with people. Tell me how it came about."

She had become so much more human that he thought of a child begging fairy tales. She looked just like that to him now. He gave her part of what everybody knew, speaking guardedly about munitions, and she listened with growing interest. She asked about generals and colonels in command at Castlechepe, and the German prisoners and their camp, and how many soldiers there were, and what regiments and battalions were represented. With his jolly smile Roger dodged her queries. It was ridiculous to think her a spy, he thought, but he had learned to be cautious.

She looked over the circled park and spoke of the romantic story of the missing heir. What was the young lady like? Was she as lovely as Mrs. Tudd had said? And that striking girl who wore such a beautifully hand-smocked, weird old garment—was she as clever as she looked? She was in the story somehow, Mrs. Tudd had told her; how?

"How long have you been here?" Roger asked bluntly.

"Since yesterday."

"And where did you see Miss Turle?"

"We passed her in the village."

"You see everything," he said in an awed tone, "even to the stitches in a girl's clothes."

"They don't do such work nowadays," she answered indifferently. "Tell me about her, and the other one."

He sketched his two cousins, painting a picture that interested the girl.

"He should marry her," she said when he had finished.

"Which one?" he asked.

"If Miss Lingard refuses him," she responded, "he is bound to propose to the other."

"You go further than anybody else," was the response.

She dropped that subject and asked him about that pretty girl whose chestnut was so well groomed and who had such a good seat, and he said with censure in his manner that this young lady was one of the swarm.

She lifted level brows in a question.

"Of locusts," he explained, eying her. "They came in the spring. They lighted everywhere, these officers' wives and daughters who ought to have stayed at home. They begged and pushed their way into every farmhouse and cottage. They have lapped up all the milk. They have bought all the bacon. Churns have stopped. Cheese has stopped. Do you see the point? In their own homes, from their own neighbors, the villagers cannot get their usual food. They would not mind if these people worked, but they only make work."

The girl got as red as any ripe cherry on the tree in the orchard beyond her. He could hear her quick breathing, could see her breast storming up and down. He leaned his head back and tried to blow rings of smoke up through layers of horizontal fan foliage. The rings were not round, because his lips twitched. He had never rebuked a girl before like that. He waited to be ordered away, but there was only silence. Well, anyway, he was something more to her now than a wooden soldier guidebook to the neighborhood. He made her blush with shame; and, well, deserved it.

He glanced down suddenly. He surpr vivid, eager eyes as curious as his own, the hitherto indolent figure alertly cur in interrogation as she thrust her head ward in questioning poise. Their gla held. She dissolved into another girl a looked, a girl aloof, indifferent and lo ing. The transformation was quick, b was a glide.

It was no crude clapping on of a m but an apparent inward transition of ing, shown outwardly by a correspon change of face and of attitude.

Tiny arrows of light shot across his and made him blink, then flashed on tree trunk and on her dress.

"What did that?" she asked.

He pointed to the flaming window d the hillside.

"The sun playing tricks," he said. he knew better.

Faint far-away notes from a bugle g him an excuse for rising.

The girl set the soldiers' words to call. She sang softly: "Come to the c house door.

"You have been very interesting," said. "Thank you. You have also been expectedly frank. I will forgive that."

She bent her head in dismissal.

Roger slipped round to the back, s her butter and then went hunting for man—or woman—who was spying on t through a pair of field glasses.

ANYONE CAN WRITE

(Continued from Page 21)

If she doesn't I'll have to try. But I've no flair with women, Bassy. Betty, tell Miss Middleton that the directors are adjusting that matter now, and will let her know about it. And Betty ——"

"Yes, Mr. Graftleigh?"

"Please close the transom from the other side."

"Yes, Mr. Graftleigh."

"Hope that will give the old hag a jar. Well, Bassy, we might as well get busy. I've got a new form letter to dope out. Your end of this game is a lead-pipe cinch. I have to do all the dirty work."

"Glad you think so."

Beveridge resumed his examination of manuscripts, and there was silence in the private office until Miss Reynolds reappeared. Her eyes gleamed with excitement not wholly unpleasurable. She left the door slightly ajar.

"Miss Middleton wants to know how soon you can let her know about the royalties," she said. "One of the clients has an appointment for twelve."

"Tell Miss Middleton she shall have the report within five minutes," said Graftleigh, speaking slowly and distinctly. "That is all, Miss Reynolds."

"Well, Bassy, wish me luck," he whispered a moment later. "I've got to make the plunge. That was an S O S call."

Squaring his shoulders he opened the door wide, strode into the outer office, and faced a tall gaunt gray-haired woman with beady black eyes, a Roman nose and a square chin.

"Pardon me just a moment, madam," he said with a low bow which did not soften the expression of withering scorn with which the visitor regarded him. "The directors have decided, Miss Middleton, that our favorable negotiations will not involve any change in the royalty rates originally offered. Now then, madam, won't you be seated?"

He smiled ingratiatingly at the purple plumes that surmounted Miss Goodell's turban, but that lady shook her head.

"Your airs and graces are quite wasted on me, young man," she snapped. "I came here to find out why you have not complied with the terms of your contract, and I don't intend to leave until I do find out, and until my forty dollars is refunded."

"But my dear madam, there must be some mistake. Miss Middleton, have you investigated this lady's claim?"

"There's nothing about me for that young woman to investigate," broke in Miss Goodell; "and I don't propose to be insulted, Mr. Graftleigh, by a man of your character. You signed a solemn contract to furnish first-class music for my song and to put it on the market in consideration of an advance payment of forty dollars. I was fool enough to put up the money, which you have simply pocketed. But don't think you can escape the consequences of your crime."

"You are talking in riddles, madam. Any contract made by the Merriweather Music Company is adhered to in the smallest particular. Miss Middleton, have you the record of this case?"

"Yes, Mr. Graftleigh. Everything is quite in order, as I have already explained to the lady. We received the manuscript of her lyric, entitled I Always Knew My Boy Was Not a Coward, on November eighth, wrote a letter on November fifteenth, offering our special contract providing for music to be composed by Mr. Beveridge, and agreeing to refund the regular fee of forty dollars in case the song was not accepted for publication within thirty days after she had O. K'd. the music. We received a contract with her signature and a post-office order for forty dollars on November twenty-first, and forwarded to her on November twenty-fifth a duplicate contract signed by you as president of the company. On December third we sent her the manuscript of the melody and accompaniment for her lyric composed by Mr. Beveridge, and received a letter from her on December tenth, stating that she approved of the music as written, and authorizing us to submit the words and music to publishers in accordance with the terms of the contract. The Verdi Publishing Company notified us on December twenty-seventh that it would bring out the complete number at the earliest possible date, copyrighted in the name of Abby Goodell, and that Miss Goodell would receive a royalty of four cents on each copy sold. We sent a copy of the publisher's letter to Miss Goodell on that same date. On January twenty-fourth we were notified that the Verdi Publishing Company had published the song, and that thirty copies had been forwarded to the author.

"A letter was received from Miss Goodell on February twelfth, stating that she had received no royalties from the sale of her song, and inquiring how many copies had been sold. We replied on the same date, explaining that our connection with the matter ceased with the acceptance of the song for publication, and suggesting that she apply to the Verdi company for any further information desired."

"Quite correct," remarked Miss Goodell sarcastically. "The young woman has already recited it to me. Now perhaps, Mr. Graftleigh, you will be kind enough to listen to my record."

"Nothing would give me greater pleasure, madam, but I have only a few moments at my disposal."

"A few moments are all I need. After receiving your communication of February twelfth, I wrote three times to the Verdi Publishing Company and finally received a letter from them stating that they made reports to clients only once in six months and that mine was not due until September. What have you to say to that?"

"Officially, madam, I can say nothing as to your arrangements with the Verdi company. As, however, you are one of our clients and have asked for my advice, I don't mind telling you informally that so far as I know the terms offered you by the Verdi company are quite in accordance with the general custom of publishing houses. In fact, I believe some of them make settlements with authors only once a year."

"That may be true, but how do you account for the fact that though my song was published about seven weeks ago it has not been placed on sale anywhere in New York City or Philadelphia?"

"If such is the fact, madam, I could not account for it, as I have no knowledge of the Verdi company's methods of distribution. But are you quite sure you are correct in saying that the song is on sale nowhere in New York or Philadelphia?"

"Sure enough for all practical purposes. I have communicated with thirty-five music dealers and with eight department stores, and every one of them said they had never heard of the song and were sure it was not on any of their publishers' lists. Under the circumstances, Mr. Graftleigh, I must ask you to refund the forty dollars I paid you."

"I am very sorry, madam, that you feel you have not had efficient service from the Verdi company. Spring, you know, is the busiest season of the year with publishers, and then, too, distribution of new publications is seriously handicapped just at present by the freight situation and—er—complications in the post-office department."

"Your apologies do not interest me, Mr. Graftleigh. Kindly return my forty dollars, and you may have my four cents royalty on the first thousand copies sold."

Graftleigh achieved a short laugh. "You are pleased to be humorous, madam. You do not, of course, think that the fee paid to the Merriweather Music Company is in any way contingent upon royalties you may or may not receive from the sale of your song?"

"You certainly agreed to market the song for me."

"We certainly did not." Graftlei manner became a trifle more aloof an spoke more rapidly. "We agreed, in sideration of a payment of forty dollars have an original melody and piano acc paniment prepared for your lyric by Basil Beveridge and to submit the s for your approval within three weeks a the receipt of the fee. We agreed furth submit the completed number as appro by you to music publishers on a roy basis, and we stipulated that you sh not be required to pay any fee to the p lishing company accepting the song, that the song should be copyrighted in y name. Because of the unusual excellenc your song we added a special clause to y contract providing that in the event of failing to secure a publisher's acceptanc the song on a royalty basis of at least t cents on each copy sold, within thirty d after our receipt of the approved ma script of the music, your fee should be turned to you. According to our rec which you have admitted is correct, which is otherwise confirmed by docume in our possession, all the terms of the c tract signed by you as author and by m president of the Merriweather Music C pany have been complied with. In fact, did much better than we promised in curing you a royalty rate of four cents most unusual concession and one we not always able to obtain."

"But this is all on paper," objected M Goodell a little uncertainly. "What dif ence does it make what the royalty rat if the songs are not sold?"

Graftleigh shrugged his shoulders. "T is a chance which publishers and auth always take, but in this case you are so what premature in assuming that y song will not sell. Frequently songs do go well at all for several months and th suddenly become great hits."

"If my song were introduced into sc popular musical comedy wouldn't chances of selling be greater?"

"Very probably they would."

"Why don't you do it then?"

Graftleigh and Miss Middleton exchan glances of shocked surprise.

"You have evidently drawn false c clusions from remarks you have overhe regarding the affairs of some of our o clients. I cannot, of course, discuss matter with you, but I am willing to ass you that any arrangements of the sort mention have been made by our clie themselves. Some songs are specia adapted to the personality of particu stars. I don't say that yours is not. I hope that it is."

(Continued from Page 102)

"I don't even get my money back until a thousand copies have been sold," said Miss Goodell after a moment's frowning reflection.

"No, but you have the satisfaction of literary achievement."

"Fudge! How many copies of my song have been printed?"

"I haven't the slightest idea, madam. Doubtless your publisher can tell you."

"Do you mean to say that you do business with these publishers right along, and don't know how many copies of a song they print?"

"My own affairs, madam, are sufficient to occupy my time. The size of editions of songs is a matter which concerns the publisher and the author."

"I am glad you admit it concerns me."

"I am willing to admit anything, madam, that does not involve me in matters which are entirely outside of my jurisdiction and beyond my control."

"This Verdi company is obviously dishonest," declared Miss Goodell, "and I shall hold you responsible for mixing me up with it. Return my forty dollars immediately and get my song back from them within three days or I will have you arrested."

"I will overlook your unwarrantable language, madam, as you are evidently laboring under strong excitement," said Graftleigh with an obvious effort to retain his detached manner; "and I must ask you to excuse me now, as I have an imperative engagement. Miss Middleton, do not hold any further conversation with this lady. If she wishes any additional information in regard to her contract with this company she must take the matter up with our corporation counsel, Mr. Victor Benson. Good morning, madam.

"Water, Bassy!" he moaned a moment later as he sank into the chair opposite Beveridge. "The curse has come upon us. She was too tough a nut for me to crack and I had to send her to Benson. Call him up quick, and ask him to meet me at Deene's for lunch. I'll have to put him wise. And you'd better grab the first train for Philly, Bassy, and coach your people so they won't make any break if the Housatonic poetess descends upon them suddenly. If Benson can't pacify her she's likely to make the Verdi her next stopping place. Well, ta-ta. Make Benson understand it's a must."

Late that afternoon Beveridge, sitting at the rented piano in the little room off the main office of the Verdi Publishing Company, painstakingly evolving original melodies with the aid of two volumes of college songs and a collection of choice selections for banjo and guitar, was interrupted by the entrance of Miss Genevieve Dale, manager of the advertising and circulation departments, and secretary to the president.

"I don't quite understand this telegram, Mr. Beveridge," she said. "It has just come, and it seems to be urgent."

Beveridge paled slightly as he took the yellow slip, but a glance at it reassured him.

VERDI PUBLISHING COMPANY,
Blank Building,
Philadelphia.

Rush Middleton fifty copies Goodell song. Distribute remainder immediately. All well. W. G.

"You remember what I told you about Miss Goodell, don't you, Miss Dale?"

"Oh, perfectly, Mr. Beveridge; and Tommy is packing the music now to take to the express office. But just what do you suppose Mr. Graftleigh means by 'distribute'?"

Beveridge pondered a moment. "How many copies have we left?" he asked.

"Twenty. We sent thirty to the author, you remember."

"Miss Dale, I shall have to ask you to go yourself to four music dealers and persuade them to put five copies each in conspicuous places on their shelves. Offer them any inducement. It is unusual, I know, but ——"

"I quite understand, Mr. Beveridge. I will attend to it at once."

A special-delivery letter came the next evening:

"March 12.

"Dear Bassy: Hope you got wire and that copies of song are on the way. As soon as they arrive, Middleton and Betty will hustle them round to some of the smaller dealers. Betty's red curls ought to put over a few if the kick is too strong on the lyric. Of course the music will pass. Called up Benson just now, and the old bird hasn't been to see him yet, but I gave him the whole tale of woe yesterday, and he says she hasn't a leg to stand on if we prove we've made an honest effort to sell the thing. She seems to be so hot on the trail, however, that perhaps you'd better have a hundred more copies struck off, and when she tackles you, hand her a good one about the first edition being exhausted and the second on the press. You might be able to work off the whole second hundred on her for the dealers in her own home hamlet. Show her a sale record of a dozen or so, and offer her half a dollar in royalties if she doesn't want to wait until September for a settlement.

"Three new contracts came in this morning with money orders. I inclose lyrics. It looks like a ten-strike for us, Bassy, if we don't make any slips. Yours truly is no highbrow, but he's surely all there with the form letters. Might be a good idea to start Betty and Miss Dale distributing some of the stuff we have on file. Comb it over anyway, and shoot on fifty copies of everything that's at all possible. Try to place the other twenty in Philadelphia. As I recall our publications no dealer is likely to accept them through the mails even on a 99 per cent commission basis, but the girls are good-looking enough to get away with some of them. Betty is strong on pathos too.

"That's about all, Bassy. Push your melodies along. Give them either zip or molasses. Don't be too classy, and don't worry. Will keep you advised. BILL."

Beveridge replied at once:

"Dear Bill: Your idea of trying to coax the dealers to take some of the least hopeless of our songs had already occurred to Miss Dale apropos of the Goodell incident, and she has been at work on the proposition all day. She succeeded in distributing half a dozen of them among five small shops on a fifty-fifty basis. One man even promised to push the sale of the Goodell gem with some sort of a sob story. As in each instance the arrangement was made as a personal favor to Miss Dale the outlook for actual business is not encouraging. Our position may be, as you say, slightly improved technically. Hope you have been able to do as well in Manhattan.

"I inclose ten melodies and lyrics which inspired them. Will send the remaining four to-morrow if I can dope them out. Am taking your advice about old favorites, and have impressed Moody and Sankey into the service. DICK."

In the correspondence between the Merriweather Music Company and the Verdi Publishing Company during the next three weeks there was no further mention of the lady from Housatonic nor was any other complaint on the part of a client recorded. Forty money orders had been received with no string attached but a lyric. Graftleigh was jubilant and Beveridge was so busy concocting melodies to fit the various types of meter submitted to him that he had scarcely time to eat or sleep. Immediately after reading his mail on the first Monday in April, however, Beveridge told Miss Dale that he was obliged to go to New York, and might not return until Wednesday.

"I trust there's nothing wrong," observed that astute young woman, noting his frown.

"Oh, no; just a matter of consultation. If you have copied that music I gave you the other day I'll take it with me. And, Miss Dale, be careful not to give any information whatever regarding our methods of business, except that we take no fees from authors and that we accept no lyrics for publication without musical accompaniment. See that Tommy doesn't talk at all."

As soon as he was on the train Beveridge took a bulky letter from his pocket, and his frown deepened as he read:

"April 5.

"Come as soon as you get this, Bassy, and gag Miss Dale and Tommy before you start. Things have looked a bit queer to me for the past ten days, but I didn't want to halt your muse, so keep mum.

"In the first place, our hearing nothing from old Abby has seemed a bit thick to me. She's not the sort to let go quite so easily, and I've had a hunch all along that she's got something up her sleeve. Benson laughs at the idea, but he hasn't seen her.

"Secondly, Middleton has been pestered to death by all sorts of freaks, male and female, old and young, wanting to know the full story of our lives, what we eat for breakfast and how much we pay the office boy. She has managed to keep most of them out of my way, but three or four of them have slipped past her, and I've had a tough time getting rid of them. What worries me most is that none of them seem to be actual clients. Some pretend to be inquiring on behalf of a friend and others are thinking about sending us lyrics later on. One or two look like correspondence-school detectives.

"But the one that really gets me is the Beautiful Girl.

"Bassy, she has been camping on our doorstep for a week. After three séances with Middy and two with me, she brought in that horror I sent you about pansies and broken hearts. Since then she's been here twice a day to find out whether we've received the music for it.

"I hope you've doped out something and that you'll bring it with you. She's crazy to see you. Says she's writing another about red roses and somebody's grave and wants to read it to you herself. I told her you'd be here Monday sure. In heaven's name, take the first train!

"S O S, BILL."

It would have been obvious to the most careless observer that the president of the Merriweather Music Company was troubled. There were dark circles under his eyes, his lips twitched nervously and he started violently at the sound of a telephone bell. Beveridge tried in vain to convince him that his state of mind was probably due to indigestion.

"You're dead right, Bassy," he said despondently. "We're a lot farther within the law than we were the last time you were over. Betty told me this morning that two or three little places on Sixth Avenue have actually sold some of our songs. In fact there is about sixty cents in royalties due to one client, and twenty-seven to another, and if I remember Miss Dale's last report correctly Philadelphia has fallen for seventeen copies of I Always Knew My Boy Was Not a Coward. Benson says that so far as the courts are concerned we're almost pillars of the publishing world. But all the same, Bassy, when I listen to that Russell girl talk about putting her younger sister through college and realize that she's dropped forty dollars of her good money in our till, and plans to separate herself from another forty dollars, I feel like the forty thieves rolled into one."

"Well, I'm ready to quit if you are."

"That's not quite so easy as it sounds, with about fifty songs in the process of publishing, and the money paid in. We can't go back on our contract, you know. Besides, it's a peach of a game if we can only keep personalities out of it. By the way, I dashed off a few lines myself the other day. It's not highbrow, of course, but it has a sort of swing. Listen, and see if you think you could fix up a tune for it:

Be a little kinder to me, honey,
My heart is all aflame with love of you.
Your golden curls have surely set me crazy,
I'm mad about your eyes of sapphire blue.

CHORUS

Don't run away and leave me all alone,
Don't ring off when I get you on the phone.
You know that I adore you.
Don't tell me that I bore you.
You can write your name on everything I own.

Honey, there's a limousine a-waiting,
Upholstered in a spiffy shade of gray,
That will make a swell background for your complexion.
Oh, hurry up and name the happy day.

"Well, what do you think of it?"

"I think this Miss Russell's first name must be Lillian. I'll do my best with a melody after I've seen her, but it wasn't sportsmanlike for you to run in a chorus. Makes twice as much work for me."

"But they go so much better with choruses. All of the hits have ——"

"Hits? Say, look here, Bill, you're not taking yourself seriously, are you? If you are, all I want to say is that as a poet you are a great writer of form letters. Don't weaken!"

The door opened to admit Miss Reynolds. "Miss Russell to see Mr. Beveridge," she announced stiffly.

"Speaking of angels," muttered Graftleigh sheepishly. "See here, Bassy, don't pull any of your sarcasm on her. She's a perfect lady, even if her lyrics don't just appeal to you. Why in thunder didn't she go in the movies or the beautiful model profession? She'd ring the either, but she can't write."

It was quite true that Miss I couldn't write. It was also true th Evening Record cheerfully paid salary that enabled her to live comfo and dress almost fashionably even a war prices. Nature in withholding pen had been otherwise generous. first place, golden-brown hair, sa blue eyes, pink cheeks, slightly ret nose and a confiding smile forme miraculous blend which brings to t face the protective instinct latent in male.

In the second place, she was not with the superfluous sense of humor has been the handicap of so many p ing careers. It did not seem to her least mirth-provoking that the presi the Bronx Theater Club should expr publication her views as to the prope ishment for the Kaiser, nor that column cut of the pretty secretary Housekeepers' League should ado front page of the Record just above a ment of that lady's theories regardi League of Nations.

In the third place, she possessed t of dramatic instinct which, plus the n ability to juggle phrases, would have her a second Laura Jean Libbey. combined with a heaven-sent naiv asking leading questions, not infreq drew from interviewers most unex and valuable revelations.

In the fourth place, though she have Anne Archer's peculiar knack panding a "Yes, I believe in capital p ment," or a "No, I am decidely opp it," into a column and a half of b exposition which a leading club would read with complacency under priate headlines as the product of h brain, she seldom took notes, and hac during her six months' connection the Record been accused of misq anyone.

The city editor called her Minnie, l manner in so doing, though he w under thirty-five, was distinctly fa It may be added that his feelings t her were of the same character. The ing editor had once taken her to with his wife and daughters, an chosen the main dining room of a and exclusive hotel, much to the dis his family, who preferred the Bro cabarets.

During her first month Miss Arc response to a request from the city to show the kid the ropes, invited accompany her on many of her own ments.

"But I really can't do it any mor Edwards," she said at length. " Bolshevist Ball at Dempster Hall th night they cut out three thrilling d went specially to see, just because idiot enough to introduce her to the man of the floor committee; and yes morning the most advanced femi that conference of radicals cast one at Minnie at the press table and pro to make a speech that would hav mild for a Y. W. C. A. secretary. Le of the men play nursery governess while."

The dramatic editor dubbed Mis sell "Edwards' Folly," and the name until one afternoon in March, wh rushed into the city room with hat disheveled hair, red eyes and tear-s cheeks, and went straight to the desk out waiting for the star reporter to his report on the big assignment of th

"She admitted she did it, Mr. Edw gasped Minnie tremulously. "She t all about it! It was her first offens she did it for her child."

The city editor waved away the s porter. "Do you mean she confes he demanded.

The girl nodded. "She was driv it," she began. "Don't you thin could ——"

"Ask Miss Archer to come here," rupted the city editor, turning to an boy, "and see if Mr. Sims is in the a partment. Now then, Minnie, go c you really have the goods on Ethel A we may get out an extra. Anyway I p it up to Mr. Greaves."

se Don't Wiggle Your Eyes That
T days later he had on file a sheaf
s Minnie's round childish hand-
, hich gave him a fairly accurate
conception of the man described by Miss Goodell as a despoiler of widows and orphans.

As for Beveridge, simultaneously with his first glimpse of Minnie in a box-coated blue serge suit and sailor hat which cooperated in subtracting five years from her apparent age, came a regret that he had not had time to get a haircut before leaving Philadelphia. After two minutes' conversation he beheld Graftleigh and himself as confidence men of the lowest type, and Minnie as the innocent victim of their greed for tainted gold. When she rose to go he heard himself begging her to take tea with him that afternoon in some quiet place where they could go over her lyrics together and consult about the accompaniments.

"And honestly, Mr. Edwards," said Minnie the next morning, "I'm sure Mr. Beveridge is perfectly all right. You've no idea how hard he worked revising that first song of mine that begins, 'Pansies purple and golden lay at her throat so fair,' and he's going to show me the music to-morrow. And he advised me not to do anything about getting the second song published until we saw how the other one went. So you see he can't be mixed up in any scheme to get money on false pretenses, Mr. Edwards, and he's so wrapped up in his art!"

"I see," said the city editor. "Did you find out just what his connection is with the Verdi company, and the exact relation of the Verdi to the Merriweather? Try to clear up those two points this evening. I suppose it's all right for you to dine with him. Better insist on one of the big East Side hotels, though, and be sure to get rid of him early. Send the minutes of the meeting to my house by messenger before eleven if you can. Armstrong is going over to Philadelphia in the morning."

It is, of course, ridiculous to suppose that all the details in regard to the suitable adaptation of a melody and accompaniment to a lyric could be settled at one conference—or two—or three. As a matter of fact it was ten days after Beveridge's first dinner with Minnie at the Beaumont before the final draft of words and music was pronounced satisfactory by the collaborators.

"If you're quite sure he has left town," said Edwards with a quizzical glance at the girl's flushed cheeks, "you may drop the publishing business for a day or two and start that series of interviews with society women on how they feel about taking up the old life now that the war is over. Get real heart-to-heart talks, with plenty of personality, and Miss Archer will help you to whip it into shape. Try Miss Van Huyden first."

Graftleigh had viewed his partner's marked interest in the new client with growing disfavor and had upon one occasion earnestly but ineffectually voiced his opinion on the subject:

"I don't deny, Bassy, that she's a very beautiful girl. I saw her first, you know. But that only makes her the more dangerous. I don't mind telling you, now that I'm cured, that I had her in mind when I wrote that little lyric of mine. But it's always a mistake to mix sentiment with business. That's why I picked Middy. Faithful, efficient, but not alluring—those are my specifications for female help. As for female clients, Bassy, the less one sees of them the better. Limit your communications to dictation and a rubber-stamp signature. Take it from me, it's the only safe way."

"There's considerable safety also in minding one's own business," retorted Beveridge without looking up from the ruled paper on which he was setting down notes, rests and bars.

Graftleigh sighed and shrugged his shoulders. "I've a hunch there's trouble ahead, but what's coming comes," he muttered fatalistically.

He was accordingly distressed and perturbed but not greatly astonished when Beveridge, the morning after his delayed departure for Philadelphia, reappeared in the president's office of the Merriweather Music Company and after carefully closing the transom announced grimly: "I was served last night with papers in a suit to recover damages for one thousand dollars for not properly carrying out the terms of the Verdi contract with Rachel Arkwright."

"Any particulars?"

"Here's the document," said Beveridge, tossing a folded paper on the table.

Graftleigh examined it hastily. "Yes, I see. Charges misrepresentation, failure to advertise, failure to put on the market, failure to print a reasonable number of copies. Who the devil is Rachel Arkwright?"

"To the best of my knowledge she is the author of some verses entitled Under the Elm by the Brook, which I set to music sometime in November and which the Verdi company published on February second. She lives in Bethlehem."

"Was hers by any chance one of the gems Miss Dale induced some amiable dealers to put on their selling lists?"

"It was not."

"Just our all-fired rotten luck to back the wrong ones! But dry your tears, Bassy. I'll tell Benson to have his Philadelphia man write to her—Hollis, I think his name is—and if she's really peevish you can formally resign all claims to her song and send her the copies you have in the cellar. I'll call up now and see if Benson can eat with us."

"Sorry, but I have an engagement. I'll see you before I go back. Anything you and Benson decide will suit me."

"Still batty over that Russell girl, eh? Something tells me she's no mascot for the Merriweather. Well, don't let her hold you up later than three. I have a date myself. And see here, Bassy, don't make any plans to stop in town overnight. You've got to get home and keep an eye on things."

Beveridge lunched with Minnie at the Brevoort and arranged to run over to New York again on Sunday to show her the proofs of her song. Having been assured by Graftleigh, after the latter's interview with Benson, that the adjustment of the Arkwright matter would be mere child's play he returned to Philadelphia in an optimistic mood. Three days later, however, he dictated a letter that caused the usually placid Miss Dale to frown continuously as she typed it:

"*Dear Bill:* I didn't get to town Sunday as I planned. Went to Bethlehem instead, and I might better have stayed away. Hollis could do nothing with Miss Arkwright. She insisted on pushing the suit, even after he had offered her $100 in addition to absolute ownership of the song. I went to hunt her up at his suggestion. He had some crazy idea that perhaps she didn't like lawyers, and might listen to reason from me. He was wrong. My arguments seemed to have about as much effect on her as a round of cartridges would have on the Rock of Gibraltar.

"I didn't offer her any more money, because Hollis advised against it, though I would willingly have paid another $100 out of my own pocket to get rid of her. She's a lanky drab-colored little thing, about thirty. Says she's a telephone operator. She boards in a little frame house on one of the poorer streets of the town, and doesn't look as if she had $10 to her name. Her lawyer, George Mason, lives in Philadelphia, and has a box of an office on Chestnut Street. Hollis says he's just a kid.

"What do you make of it all? Could you or Benson do anything with this Mason if you came over? Hollis says there's a nigger in the woodpile.

"Yours, R. B."

"Middy," exclaimed Graftleigh, rushing into the outer office less than five minutes after his personal mail had been placed on his desk, "look up the next train to Philadelphia; and, Betty, get Benson on the phone. I'm in a hurry."

Miss Middleton rose and faced her employer. "Don't go to Philadelphia, Mr. Graftleigh," she said.

Graftleigh stared at the girl incredulously. She was paler than usual and her voice trembled slightly, but her eyes met his unflinchingly. "Don't you know," she went on, "that this whole suit's a frame-up? Wouldn't a poor little country hello girl jump at the chance of getting a hundred dollars for a song if she wasn't being paid not to?"

"Where'd you get all that dope and what are you driving at?" demanded Graftleigh angrily. "You seem to know a hell of a lot about my private affairs."

Miss Middleton flushed. "I beg your pardon," she said stiffly. "I considered it my duty to give you some information I had obtained, and I intended to go to your office as soon as I had finished sorting the mail. I see now that I shouldn't have interfered."

"There, there, Middy, don't get huffy," said Graftleigh conciliatingly. "I'm a bit on edge this morning. What is it you've heard?"

Miss Middleton hesitated. "It probably won't do much good to tell you now, except that it may keep you away from Philadelphia. That Rachel Arkwright is merely a blind. The Record is paying all the expenses of her suit and giving her money besides, and has promised to print the song she wrote and her photograph. If you enter the state of Pennsylvania you will be subpœnaed as a witness, and they will get the Merriweather too. Miss Goodell set the Record on your trail, and she would have brought suit herself if she hadn't lived in another state. I don't know how they found Rachel Arkwright, but her song is the only one we have published as yet for a Pennsylvania client, though we have a contract with someone in Scranton. The Record is going to feature the trial and send over one of its best men and Anne Archer, so that even if Miss Arkwright loses the suit the two companies will be put out of business. My sister had the whole story from a friend of hers in Raleigh's. Didn't you know that Raleigh was counsel for the Record? He's the trickiest lawyer in town, and he has charge of the case. Mason is working under his direction."

"That all?" asked Graftleigh as she paused.

"About all."

"What's the rest?"

"I've told you the main facts."

"What's the rest?" reiterated Graftleigh.

"The Russell woman is a Record reporter," replied Miss Middleton in a tone that she strove to make indifferent.

"The Russell woman?" echoed Graftleigh uncomprehendingly. Then he swallowed hard and cleared his throat.

"Thank you, Miss Middleton," he said. "You have been very—er—efficient. Will you kindly call Mr. Beveridge at the Philadelphia office and tell him I am ill? Ask him to come over as soon as possible. Betty, ask Mr. Benson to meet me at Deene's at twelve. I can't see anyone this morning."

"Little rat!" he muttered as he closed the door of his private office; "and it's up to me to put poor Bassy wise."

Just at that time the city editor of the Record was having his first bad quarter of an hour with the usually docile Minnie.

"See here, Minnie," he said, "you're making a bugbear of a very simple matter. I've explained that Mr. Raleigh will see you are subjected to no unpleasantness whatever. All you have to do is to tell the jury just what you've told me, and remember not to reply to any question of the opposing counsel until our man has had a chance to register an objection if he wishes to. You can choose your own hotel and take a girl friend over with you. I'll O. K. any reasonable expense account for the two, and I'll tell our Philadelphia correspondent to look you up. It will be a nice little change for you."

"I'm sorry, Mr. Edwards," replied the girl with the baffling obstinacy of the superficially meek, "but I cannot be a witness. I know those lawyers are trying to hurt Mr. Beveridge in some way and I know he wouldn't do anything wrong for the world."

"If he is innocent the truth won't hurt him. All I've asked you to do is to tell the truth."

Minnie shook her head. "I've never been to a trial myself, but I've heard that Mr. Raleigh can make witnesses say anything he wants them to and can make black look like white."

"That's just what you're trying to do, Minnie—make black look like white. This fellow Beveridge is one of the principals in a scheme to defraud innocent persons of their money. Some poor girls actually go in debt to get the forty dollars to send to this fake music company, just as Rachel Arkwright did; and they have as much chance of getting it back as I have of owning the Record."

"If their lyrics become successes they will get their money back all right. It isn't Mr. Beveridge's fault if they are not good."

"Rubbish!" snapped Edwards. "I'm amazed at you, Minnie. Why, on a four-cent royalty basis they'd have to sell a thousand copies of one of those songs to cover the author's fee, and it takes a pretty fair song with some pushing to go as well as that. Now this Verdi company publishes any old thing it's paid for and limits its editions to a hundred copies, part of which it sends to the author, and buries the rest."

(Concluded on Page 111)

The force behind the symbol

BELIEF in the future of the truck as an efficient, economical mode of transportation has long been dominant in the Firestone program.

To instill this belief in the public mind and broaden it in industrial and commercial circles, Firestone inaugurated the "Ship by Truck" movement and contributed the above symbol.

The idea expressed in this emblem, "Ship by Truck," has met with quick acceptance. It symbolizes the vision and business faith of all motor truck interests.

It is a direct notice to all shippers that the truck industry has taken its right place as a big element in transportation.

Guided along sound business lines and placed on a substantial, practical footing, motor truck express lines are now established and operating successfully as allies of the railroads.

Without the motor truck today, the delivery systems of our big cities would break down completely. And in the modern industrial field the motor truck is as essential to production as the plant machinery itself.

"Ship by Truck" is the slogan that has common significance for all these interests and for the public at large. The force behind the symbol is an awakening appreciation in all quarters of the truck's value in solving the nation's problems of distribution.

The Firestone Ship by Truck Bureaus, with headquarters at Akron, are in operation in the principal cities, to serve all interests as a clearing house of information and promotion.

Firestone

Engineering and America's Truck Tonnage

Providing the right truck tire and rim equipment for every road and load has been a Firestone responsibility since the first truck was built.

Good roads have been slow to come—but trucking has gone forward regardless.

Firestone, keeping pace with the trucking industry, has solved problem after problem, until trucks are hauling a large proportion of America's tonnage and are strong allies of the railroads in inter-city traffic.

Firestone engineers designed the first truck tire, and from that day to this the history of truck tire progress is Firestone history.

As the truck builders advanced they found Firestone ready, not only with the right tire but the right rim.

Firestone introduced the channel type of tire, the removable type, the cup cushion type, the giant type, the grooved tread type. Firestone was first to build a complete line of truck tires—a type suited to every road, load and condition of service.

Firestone was first to establish adequate truck tire service dealers everywhere; over 700 now serving every trucking center in America.

Firestone was first with the demountable rim, that made giant cords practical and efficient. And Firestone is the only manufacturer that makes the tire and the rim complete.

Firestone engineers were ready, too, for the problem of quick changes for the giant pneumatic tire.

Here they went beyond the tire and rim and designed a feature of wheel construction for truck makers, also a spare tire carrier device that makes one man able to change tires easily regardless of weight.

These examples of Firestone Engineering are vital factors in the success of the "Ship by Truck" movement.

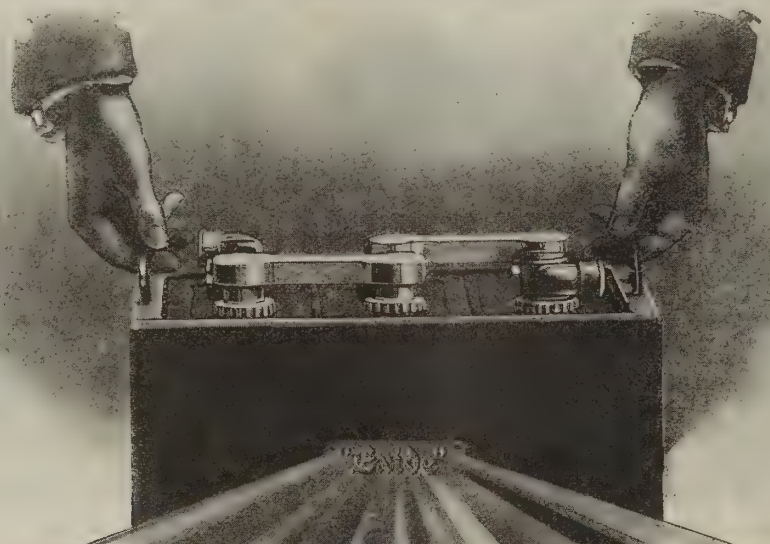
And Firestone Ship by Truck Bureaus in large trucking centers are giving daily aid to truck operators of all classes and to shippers.

Today over half the truck tonnage of America is carried on Firestone Tires.

This is the reward of sound engineering; tires, tubes and rims of commercial perfection; service that is intelligent, adequate and on the spot.

There is a Firestone Tire for every load, road and condition of service.

THE ELECTRIC STORAGE BATTERY CO.



"Exide"

Exide

This Name is Your Surest Guarantee of All Round Year Round Starting Battery Rightness

You wouldn't buy a house just because it had a strong front door—you wouldn't buy an automobile just because it had extra-heavy wheels.

What you want is inch by inch, detail by detail, *Quality*.

And that is exactly what you *get* in the **"Exide"** Starting and Lighting Battery.

No one part of it has been developed at the expense of any other part. Its handles are just as right as its separators, its straps and connectors just as well made as its plates.

It is a complete starting and lighting battery, as technically and practically correct as thirty-one years' experience in the manufacture of storage batteries for all purposes can make it.

"Exide" *Service is nation wide and as thorough in principle and practice as the* **"Exide"** *Battery. It meets the needs of any make of starting and lighting battery. The address of the station nearest you will be sent on request.*

'rd to be misunderstood by at least
' the very persons for whom she is
'r to make the most heroic sacrifices,
'es no special virtue in spending an
'afternoon cooped up in a boarding-
'sbedroom. Besides, it really wasn't
't Di—er—Mr. Beveridge, to repay all
'kdness by refusing him an interview
'c he so earnestly desired and from
'c one might glean facts that would
'atsh his innocence even in the skeptical
's the city editor.
'nie accordingly spent twice the usual
'e rranging her hair, donned her most
'ute blouse, purchased a bunch of
'epeas to brighten her dark-blue coat
' rived at Eugene's five minutes be-
'e vo. Beveridge was sitting at her
'ore table. He rose and bowed for-
'ly.
'Vell, I've lost my bet," he said sar-
'tilly. "Mr. Graftleigh was sure you
'd come. In fact he staked $10 on it.
'is better judge of women than I am.
'n you be seated?"
'The pink in Minnie's cheeks deepened to
'an. "I don't understand," she fal-
'ed
'Beveridge laughed cynically. "Isn't that
'ére rôle becoming a trifle wearisome?"
'inquired. "At any rate, suppose you
'p for a while. I've ordered grapefruit
' boiled chicken, and I may as well clear
' atmosphere by telling you that I've
't en Mr. Graftleigh, and that I know
'th details of the frame-up from start to
finish. I came here only because I hope you will satisfy my curiosity on one or two points. Does the Record pay you real money for converting yourself into a combination of ferret and vampire or was it simply that I appealed to your sense of humor?"

There is a certain amount of mournful satisfaction to be derived from being called a vampire by a handsome young man. But the phrase "sense of humor" was uttered in a tone that would have indicated to the most casual listener the speaker's absolute contempt for the quality in question. It was obvious that Beveridge was deliberately insulting a poor girl who was facing the loss of her job because she was unwilling to testify against him. Martyrdom in such a cause was not only painful but inglorious. Having explained her point of view in half a dozen passionate and unpunctuated sentences Minnie swept haughtily through the restaurant and out onto the avenue, leaving her accuser a prey to various conflicting emotions, each of which in turn assumed temporary ascendancy over the others.

The ultimate control went to a red and righteous rage against the unscrupulous city editor who had perverted the flowerlike charms of a sweet and innocent child to the despicable uses of the worthless sheet which enslaved him. Suppose he could put both the Verdi company and the Merriweather out of business, and their presidents in jail! Were his power multiplied a thousandfold it should not stand in the way of his hearing a gentleman's opinion of his conduct!

Beveridge accordingly took the most speedy route to the Record office. "I'll get to him if I have to fight his whole staff first," he muttered dramatically as a mild-looking old man in livery disappeared down a long corridor with his card.

Edwards, however, was more than willing to see the defendant in the Arkwright suit.

"Come to cry '*Kamerad*,'" he chuckled. "I suppose Minnie put him on, but I don't believe the kid meant to, at that."

The interview that followed abounded in mutual disillusionments.

To Beveridge's amazement Edwards did not look like a combination of sleuth and brigand, did not chew a cigar, bellow at reporters or strew the floor with pages of rejected copy. The top of his desk was almost bare, his manner impersonal, his smile distinctly boyish. The young men seated at typewriters might from their appearance have been a haphazard collection of college seniors, bank clerks and traveling salesmen, glorified by the splendid presence of a young duke. The last mentioned chanced to be the youngest cub, who received a salary of twenty dollars a week and belonged to three of the most exclusive clubs in town.

Anne Archer was out, so the newspaper atmosphere was furnished entirely by Jimmy, who had the mouth of a cherub, the eyes of a sage, the pallor of a cigarette fiend, and the accent, tousled hair and grimy hands of a street urchin.

One glance at Beveridge compelled Edwards to admit to himself that the president of the Verdi company was neither a typical confidence man nor a pseudo-Greenwich Villager. Of his supposed desire to conciliate the representative of the all-powerful Record there was not the slightest evidence.

"Talks like someone who's had his name spelled wrong," he reflected before he grasped the full significance of the situation.

Then he scowled. It was to be expected, of course, that sentimental complications would rise sometime in connection with an assignment of Minnie's, but it was peculiarly unfortunate that they should be involved in this case.

"It is our policy to expose fraud and to protect its victims whenever we find it possible," he said curtly as Beveridge paused for breath at the end of a scathing arraignment of the methods of yellow journalism. "As for Miss Russell's connection with our investigations, there has never been a moment when she was not under our direct protection."

"Protection!" thundered Beveridge. "Do you call it protection to turn a sweet innocent girl into a spy? To compel her to betray the confidence of her friends? To induce her to trifle with the most sacred ——"

Edwards held up his hand. "If you care to talk for publication," he said quietly, "I will assign a reporter to take the interview. We might be able to use it. If this is merely bluster, however, you are wasting my time and your own. I have no objection to telling you that Miss Arkwright has consulted us regarding her claims against the Verdi Publishing Company, and that we have advised her to push the case."

"I'm all kinds of a fool," snapped Beveridge, "but I have sense enough to know that Miss Arkwright is merely another one of your tools. I don't know what your game is and I don't care. You're out to crush me and you're likely to succeed. I haven't the money to fight you. Do your worst and be ——"

The sentence was never finished, because what he intended to say simply isn't said in the presence of a lady, and at this particular moment Minnie appeared upon the scene. She wore an expression of righteous indignation and carried a small traveling bag. Advancing haughtily to the city desk she placed a letter upon it and without a glance at either of the two men hurried to her own desk and began stuffing books and papers into the bag.

Edwards glanced at the contents of the letter, and the lines about his mouth relaxed. "Wait just a moment, Mr. Beveridge," he said. "It may be possible to make some adjustment of this matter. Suppose you telephone to Mr. Graftleigh and ask him to come over."

"I should like to see that letter first," replied Beveridge grimly.

"Well, I can't show you the letter, but I gather Miss Russell thinks she has discovered some new evidence which might place your conduct in a less unfavorable light. Miss Russell is, I fear, considerably distressed."

Beveridge flushed. "I am obliged to leave at once," he said, "to keep an important appointment uptown, but I will communicate with Mr. Graftleigh, and if he consents to come here I will come with him."

Edwards nodded. "Better make the appointment for five o'clock, and perhaps you will be good enough to tell Miss Russell on your way out that I would like to see her at half past five."

"Minnie," stammered Beveridge, "I know I'm a cad and a brute, but there's something I must say to you. I will wait for you downstairs. You will come, won't you? Don't bother about the desk."

"Very well," assented Minnie with cold dignity.

"Perhaps I'm what the highbrows call a moral imbecile," said Graftleigh some two hours later, "but I must confess I don't get your point of view, Mr. Edwards. You talk as if the Merriweather Music Company and the Verdi were some sort of menace to society. Now I think we're public benefactors. Don't we inspire hundreds of people to develop literary talent they never dreamed they possessed? Don't we give them the satisfaction of seeing their poems published with a fine musical setting? Don't they get through us the chance to make fame and money if their stuff is any good?"

Edwards raised his eyebrows. "I thought we had been over the ground pretty thoroughly, Mr. Graftleigh, but if it isn't clear to you yet that your game is up I will repeat that it can be proved you didn't even make a bluff at putting any of your publications on sale until a little over a month ago, when one of your clients threatened you with arrest, and that no attempt has ever been made to distribute them through the regular channels."

"But," protested Graftleigh, "you didn't give us time. We're a new firm, and naturally the big authors didn't send us even their pot boilers the minute we hung out our sign. We were going to do all the usual stunts of advertising and so forth as soon as we got hold of a song that would justify ——"

"Not good enough, Mr. Graftleigh. If those songs possessed any merit you have been obviously dishonest in not advertising them and placing them on the market. If they are worthless, as undoubtedly ninety-nine per cent of them are, you have been equally dishonest in inducing the authors to pay forty dollars each for their publication. As for the musical settings, they probably would furnish some interesting side lights in court.

"But I don't care to split hairs over moral issues. The matter stands this way: If you will return to clients whose verses you are now holding pending publication their manuscripts and whatever fees they have paid in, and make over to the authors of the songs you have published the full rights to words and music, and wind up the affairs of the two companies as speedily as possible under the supervision of a public accountant, I will advise Miss Arkwright to settle her claims against you for one hundred dollars plus the return of her fee and rights to the words and music of her song. If these terms are satisfactory you might as well go right over to Raleigh's offices and sign the necessary papers. It goes against my conscience to make things so easy for you, for schemers like you should be exposed for the protection of the public. I'm stretching a point, however, for the sake of Mr. Beveridge, who, I understand, hopes soon to arrive on Broadway. It would be a pity to have a promising musical career ruined by one false step. I must warn you, though, that should either of you ever again be involved in a scheme of a similar nature the Record will show no mercy."

"I appreciate your consideration," said Beveridge stiffly.

Graftleigh rose. "Well, sir, I surrender. I'm licked. Don't imagine the lawsuit worries me. No jury would give Rachel Arkwright two dollars damages, but I shrink from the thought of what your sob artists would do to the Merriweather. Come, Bassy, let's go over and sign."

"Perhaps it's just as well," he said confidentially as the partners crossed City Hall Park arm in arm. "We were getting so darn successful that other busybodies would be bound to consider it their duty to investigate our methods, and you wouldn't have time for your end of the business anyway. As for me—I can live comfortably for a while on the job you've landed for me in the Daw & Flanger Press Bureau."

"Is she really going to be married?" asked Miss Archer the next morning when the city editor told her to go on with the series of interviews with prominent society women previously assigned to Minnie.

Edwards nodded. "Fairly decent chap—just sold an opera to Daw & Flanger. But I'm sorry to lose her."

Miss Archer smiled cryptically. "It may be all for the best though," she said thoughtfully. "She seemed a nice enough girl, but she can't write."

"Write!" echoed the star reporter scornfully. "Anyone can write. But Minnie—why, Minnie was almost a journalist."

Reproduced from actual photographs taken at Edison Recording Studios, New York

The blindfolded jury hears Hempel sing "Io non sono piu l'Annetta," while she stands beside the New Edison.

THE BLINDFOLD TEST is the most severe of all musical tests; shutting off a person's sight greatly increases his acuteness of hearing. Yet even the blindfold test has been successfully met by the New Edison.

Frieda Hempel, prima donna soprano of the Metropolitan Opera Company, New York, appeared before five of Thomas A. Edison's musical experts to perform the test. She stood beside the New Edison. The blindfolds were adjusted over the eyes of the five men. As shown in the first photograph, Hempel then started to sing. The selection was "Io non sono piu l'Annetta" from the opera "Crispino e la Comare." Suddenly Hempel stopped singing, but the song continued. The New Edison had taken up the song and was singing alone. The five experts, even though their hearing faculties were at highest concentration, were completely unaware that Hempel had ceased and that they were listening only to the New Edison's RE-CREATION of her voice.

Two million people have heard similar tone-tests, publicly given by forty different artists. Five hundred representative newspapers have publicly recorded the fact that no one has been able to distinguish the artist's living art from its RE-CREATION by the New Edison. The proof of this is founded upon scientific fact; it is piled mountain-high. The New Edison brings you all the living artist can bring, excepting his physical presence.

No di

The NEW

"The Phonograp

Thirty seconds later! Hempel has ceased. The blindfolded jury is not aware that the New Edison is singing "Io non sono piu l'Annetta" alone.

ference!

FRIEDA HEMPEL is called "Hempel of the Voice Supreme." You might think this is because of her technique—so flawless, so superb! Or because of her notes, pure as the chiming of silver bells.

But Hempel is infinitely more than a vocalist. Hear her sing some song she loves, and suddenly you understand what it is that makes her great among the greatest in opera and concert. For you fall under the spell of a mysterious, lifting power—a power which transmutes every note into gold and every bar into angel-music. It is Hempel's sublime artist-soul. Soul is that electric something, that transcendent something, that eternal something, which makes music the mind's solace and inspiration. The soul of music is what Edison has caught and perpetuated in his RE-CREATIONS. That is why he considers the New Edison the greatest of his inventions. That is why the heart of the music-lover responds to a RE-CREATION by the New Edison, even as it responds to the art of the living artist. *Go hear the New Edison. Hear it with your eyes closed, for that is the best way to listen to music. You will feel that the artist himself is standing before you—alive!* Write to Thomas A. Edison, Inc., Orange, N. J., for the most interesting phonograph story of the year, "Edison and Music."

EDISON

with a Soul"

RIDE 'IM, COWBOY!

(Continued from Page 15)

lariats and prods from the chute leading to the corral. Near by a cow-puncher, his hat slanted over one eye, careened awkwardly beneath the weight of a saddle half as big as himself. The operation of saddling up an outlaw in the bucking-horse contest for the championship of the world was on, and Cal watched it eagerly.

"That's ole Tar Baby," he confided as he rubbed a sleeve of that rainbow shirt across his lips. "He ain't ever been rid."

In fact, Tar Baby looked it. Legs wide spread, ears back, lips pulled back from the heavy teeth, Tar Baby gave excellent evidence that he never had been ridden and didn't intend to be. Clustered about him a trio of cowboys swirled their lariats lazily, waiting the inevitable break. It came while Tar Baby caved in the chest of a wrangler, broke two ribs for another and started straight for the ten thousand or so persons packed in the grand stand. The ropes wheezed through the air, cow ponies sat on their haunches and Tar Baby came back to the gunny sack and the saddle again.

With ropes taut they held him, bridled him with a rope snub, put the saddle on his quivering back and cinched it tight. A man in white chaps climbed into the saddle, while the wranglers hung more doggedly than ever to Tar Baby's ears and the gunny sack which still obscured the beast's sight. Cal McMillan, of the kaleidoscopic shirt, cocked his head.

"That's Lee Cunnin'ham! Good boy! Beat me out in the finals last month at Boss Creek, but I'm for him! Swing-g-g-g to 'im, Lee!"

A scampering of horses, wranglers and chaps with cowboys in them. A tawny figure that stood shaking as Lee Cunningham's hat descended sharply on his flank. Then a pitch, a twisting leap and the fight was on. Cal's spurs flashed in the sun.

"Ride 'im, cowboy! Ride 'im!" he roared. "Hook him—that's the boy—hang-g-g to 'im, cowboy! Oh, Gawd!"

Already he was running across the wide field. One great reeling toss and Tar Baby had fallen backward with Cunningham beneath.

Out came the ambulance. The rider was unconscious. Tar Baby, lariated again, was on his feet and fighting his best against the approach of the wranglers. Into the crowd shot Cal McMillan.

"Gimme that hoss!" he shouted. "Gimme that hoss!"

A judge, his forty-five hanging loosely from his hand, clattered up.

"You ain't in this contest!"

"I know I ain't! But that hoss throwed Lee Cunnin'ham!"

"What of it?"

Cal scratched his head. "Well, nothin'—if you put it that way. But I'd shore like to ride him!"

"Shucks! Take him then!"

Cal McMillan grinned like a kid playing hooky. Ten seconds later he was bouncing on Tar Baby's back, while the outlaw bucked and tore about the great inclosure, slammed his way into a crowd of horsemen who could not escape in time, sunfished, reared, bucked, pitched, leaped, jumped, broke through the heavy-planked fence, ran a hundred yards, then stopped, coughing and sweating, subdued at last. Cal, one leg painfully injured in the smash-up at the fence, dropped to the ground, grinned, waved his arms toward the grand stand and ran, limping, for the hospital tent. Cunningham had just regained consciousness and Cal beamed down at him.

"I rid him, Lee!"

"Good medicine!" Cunningham raised far enough from the cot to jab forth a hand. "That's shore good shootin'!"

An hour later both of them—revived, refreshed and bandaged, both foolishly happy and grinning—were entered in another contest. I've seen a hundred Cals and a hundred Cunninghams since then; they're all the same, playing the parts of apostles to something they don't know is dead. Which brings up the tale of Milt Hinkle.

I saw him first in Bovina, Texas, in 1916, a crumpled thing of broken glories and dust-strewn colors as they lugged him off the field to a hospital. Three months later—it was Cheyenne again—a howling, squawking maniac hobbled round the entrants' stand on crutches, roaring his approval of each event and momentarily attempting to stand without his supports. In vain. It was with that bad luck at Bovina hangin' over me. I'm entered in the bulldoggin'!"

"The what?"

"The bulldoggin'!"

Milt said it as innocently as though he were about to play pinochle for the championship of the Bronx. Slow straightened his crippled leg and atter to stand without his crutches, but in Then he grinned.

"I'll use these hosses until I climb the saddle. Then I won't hurt none.

Far away a shot sounded—the c the bulldoggers. Milt hobbled awa grinning.

A man with a broken hip, escaped f hospital, he was going to this: Fr wooden chute a long-horned steer is sh by yelping, screeching cow-punchers. suing him on one side is the bulld while on the other is a second cowbo ing his pony to the limit of its spee lariat in readiness to check the fright maddened beast in case it decides t off the track into the grand stand. and faster the pace becomes, un last—the maximum reached—the a ant cowboy shies his pony to one sid the bulldogger leaps from his saddle, four or five feet through the air, gras steer by its horns, and by his catap speed and weight endeavors to thro animal to the ground with such force i cannot rise. What becomes of the bul ger doesn't seem to enter much int calculations. Sometimes the steer g while the bulldogger doesn't.

And it was into this sort of thing Milt Hinkle, with an unknitted hip hobbling on his new yellow crutches.

The man with the megaphone di esteem the act of sufficient interes announce anything more than the s fact.

"Nex' bulldogger, Milt Hinkle, o vina, Texas!"

Out from the chute came the stee just behind it Milt Hinkle, one foot ing loose from the stirrup. The div Hinkle caught fair. The beast, wit pounds suddenly crashing upon his and neck, stumbled, then turned a plete somersault, taking the crippled puncher with him. A dazed, dusty s in which the steer struggled to its sought to shake loose the arms that hooked about his horns, staggered feet bawling and dragged itself along yards before sinking finally to the gr The red flag dropped—the signal t timers. Milt—dusty, grimy, clothin and face skinned—waved a hand wea the announcement that his work was A couple of lank cow-punchers pulle out from beneath the neck of the ste lugged him off the track grumbling the fact that he had missed the w record by a full sixth of a minute.

Milt was nothing if not enthus With a broken hip as a mascot h counted seriously upon beating a rec six seconds—and the starts the instant the leaves the chute to tinue until the beast is less on the ground. V Padgett, who set record, by the way unconscious when picked him up.

That same afterno vestigating a noisy wr between two starte horseback, who were g ulating heatedly to someone on the grou found the object of it be Milt Hinkle. He w to ride in the wild- race and was plumb gusted because the st were afraid he might his hip again!

And what does the think of all this? Wh Nero think when he his parquet seat in Coliseum? The worl changed very little then. A gasp, here there a scream as a goes through a fen throws its rider, a mass of thousands o sons that they may a better view—then settle to await the e thrill.

Yet it is not h heartedness or cruelty simply the working

The Finish of Roping and Hog-Tying a Wild Steer

(Continued from Page 114)

range freak of psychology hich seems to take place the stant the first horse plunges to the arena and the first ild yelp of "Scra-a-a-tch im!" comes from the throat f an excited cowboy. After at a woman who would int at the sight of a bleed- g finger can watch the tram- ling of a wrangler by an out- w horse, scream a few times ith the rest of the excited ass, then thrilling sublimely ok at the program for the ame of the next rider.

Perhaps, too, the knowledge at these suicidal maniacs ut in the arena appear to ke such an extreme delight getting scarred up may ave some effect on the action the sympathies. One feels r worse when a cowgirl fails win a race through some ivial drawback which costs e precious second of victory an when her saddle cinch osens, dumping her off on an ebrow. Someway, there is e settled certainty that after e doctor has sewed up the ceration she'll be back in the ntest ready to ride the worst nfisher in the corral or make r date to dance for the cham- onship of the state at the en-air pavilion in town that night. And e best of it all is that the certainty ually wins.

There is never a rodeo without its acci- nts. The usual average is two a day, or elve to the week—accidents which in- ude everything from a fall off an untamed rro, or Rocky Mountain canary, to the ling up of from six to eight horses in a ppodrome race. As a rodeo fiend I've en some three hundred smash-ups. I've ver seen a man killed or so seriously jured that he didn't bob up grinning at me other wild-west festival before the ason was over. Maybe they're too rd-boiled to be killable. Certain it is at they daily go through experiences at would send the ordinary man to padded cell—and think nothing of it.

One large town—as large towns go in e West—has been holding a Frontier ays Celebration for twenty-nine ars. Inasmuch as many of the rld's championships are fought out this particular place, the casualty te runs at least twenty to the sea- n. That makes a total of three hun- ed and eighty accidents, ranging all e way from broken bones to con- ssions and wholesale lacerations. here has never been a death or a per- anent injury.

Therefore any crowd can be excused r its seeming lack of the realization horror when a maddened buffalo, r instance, being ridden without sad- e or bridle, dumps its would-be con- eror and butts him all over the lot. he crowd knows that while a stretcher ay carry him away a horse will bring m back.

It is a condition which lures and a ndition which has grown throughout e West until it is as much of an in- tution as a national holiday or a anish fiesta. This year the little wn of Rocky Ford, Colorado, held annual watermelon day. Of course ere was the usual stampede, with is result: The census gives the pop- ation of Rocky Ford as slightly more an five thousand and that of the tire state of Colorado as about a llion. During the celebration there re seventy thousand visitors to the ttle town—about one-fourteenth of e population of the whole state! Pen- eton, Oregon, holds annually its Stam- de, one of the big wild-west shows of e Northwest, and has been known to ve more than ten thousand persons tching the events. The population Pendleton is less than five thou- nd. Cheyenne, Wyoming, is very glad have twelve thousand citizens. Its ontier Days Celebration rarely fails bring more than three times that mber from the surrounding country. nsider also Calgary, Thermopolis, ise and the hundred or so other wns in the West that annually re- rt to type and bring back the days when Indians and savages meant some- thing else besides trade-marks for motor- cycles and firearms.

The program? One printing would do for the whole maddened season; the riding of wild burros, a cow-pony race, an Indian race—to say nothing of the inevitable war dances—a squaw race, a Roman standing race, a pony express, or relay race, for men—and one for women—steer roping contests, a wild-horse race, bulldogging, trick-and-fancy riding, wild-steer riding, and the bucking-horse contests. I have never seen a stampede or a rodeo without someone being injured in every event ex- cept the Indian war dances—the most harmless thing of the lot. Nor have I ever seen anyone who showed even the semblance of a streak of yellow. On the other hand ——

It was in 1918 that Prairie Rose Hender- son, bedecked as all cowgirls are bedecked during the days of the contests, decided to win the championship in the women's relay race at Cheyenne. The start was made, the horses thundered round the track and back to the grand stand, where other mounts awaited the contestants. Prairie Rose was on the ground before her horse had been stopped, and uncinch- ing the saddle ran toward her second mount. The animal shied as the cowgirl slammed the saddle on his back. Pre- cious seconds were passing. She couldn't wait to assure herself that the single jerk she had made at the cinch had secured it. A leap and she was on the horse heading it toward the rail. Then ——

The saddle slipped and Prairie Rose with it. Her spurs caught in the stirrup as she sought to leap clear. The horse plunged on, dragging the cowgirl for what seemed to be miles. Then the spur loosed and the girl lay on the track unconscious while the rest of the field galloped over her.

The ambulance clanged for- ward and carried Prairie Rose away. Not long afterward, when the time came for the women's bucking-horse con- test, a figure strangely familiar to the grand stand roamed round the great arena await- ing her mount. The announcer raised his megaphone.

"Prairie Rose is th' nex' rider, on Tango!"

In the intervening time no one had taken the trouble to announce whether Prairie Rose ever again could look at a powder puff. But here she was, back on the field, mounted on a high-pommeled saddle and yelling for the wranglers to pull the blind from the horse's eyes. What is more, she rode Tango, and that night I saw her in a cafe in an evening gown doing a bit of a tango herself.

So it goes. In a similar race a few days later Mamie Stroud's second mount knocked down the cowboy who sought to hold it, smashed against the fence, caught Miss Stroud's right calf and knee between its body and the heavy railing. Muscles and tendons were torn, but Mamie Stroud fin- ished that race. In 1913 in another similar race three women, the Astle sis- ters and one other, were unconscious on the track at the same time, while two cow-punchers, trampled by mad- dened relay horses, were injured and gasping not far away. But the next day they were all back again. Is it any wonder, therefore, that in the sheer admiration of superhuman grit one- fourteenth of a whole state should de- scend upon a town of five thousand?

There's a story for every event. Last summer Walter Stirling, small, almost tow-headed, not too heavy in the shoul- ders and certainly not a superman in appearance, was dragged from be- neath the kicking, struggling forms of six horses where they had piled up on him in a hippodrome race. Someone shoved a bottle of ammonia under his nose and he blinkingly came to con- sciousness, to stare about him and ask, "What's the next event?"

"Steer ropin', Walter," said the pur- veyor of ammonia. Stirling limped off the track, squawking for his lariats.

And steer roping, when a cham- pionship is in the offing, means more than it sounds. The roper pursues a long-horned steer, lariats it by the horns, then swerves his horse in such a fashion that the rope circles the plung- ing animal's hind legs, throwing it to the ground. The roper then leaps from his horse, runs fifty feet or so back to the steer, jumps on it before it can rise, binding the hind legs together, then bringing the rope forward and tying it round the forelegs. And when Stir- ling's turn came the piece of hash meat that had been a man before those six hippodrome horses sat on him wobbled out into the arena, roped his steer, dumped it to the ground, staggered from his horse and hog-tied it—all in thirty-one and a half seconds. The world's record is not much faster.

Here again is an explanation of why there's not a casualty list in the grand stand as well as in the field. Things happen too swiftly to be understood in their full purport until they're all over and the grinning, bandaged ma- niac is back in the game again.

Ordinarily a minute doesn't mean very much, especially if interest is

Everywhere on Everything

Industry's painting demands are many. On the buildings, on the equipment, and on the product itself, "everywhere on everything" there are innumerable opportunities for the practical and economical service that Glidden Finishes can provide.

Factory upkeep is a recognized necessity. Building investment must be protected. The life of equipment can be prolonged by paint and varnish. Industry's product, too, needs its protecting and decorating coats.

Besides providing the right material, Glidden Service Men are prepared to determine the proper schedule to meet the most exacting needs. Number of coats, order of application and the proper time codes are all important paint-shop questions for which Glidden experience will readily find the correct solution.

This service for the manufacturer is a specialized service. Glidden Service Men are especially trained through many years of service. Glidden Service is available upon request. An early conference can be arranged by phone or wire.

GLIDDEN

AINTS ~ VARNISHES ~ COLORS ~ INSECTICIDES

~serving Industry and Home

Clean white cupboards, spick and span shelving, a bright snappy kitchen. What a joy!

What pleasure there is in having these surfaces washable and sanitary, in having them protected and, more important still, in having them *stay* in that condition for the longest possible time.

For the many finishing jobs about the home the proper Glidden product is *Jap-a-lac*—Jap-a-lac Household Finishes. When the outside of the house is to be painted or entire rooms are to be decorated there are suitable Glidden Paints, Varnishes, Stains or Enamels that will exactly suit your painter's need and the results are Glidden insured.

Glidden Dealers in every locality will gladly assist you in the selection of colors and give you reliable painting advice—Interesting literature will be sent upon request.

making the second hand move faster. Consider then ——

Roy Kivett, of Little Horse Creek, Wyoming, swung his rope at a Wyoming rodeo last summer, watched it travel outward and settle over the horns of a steer. Quickly he veered and scratched his horse into greater speed. The rope caught the hind legs of the steer, threw the beast high into the air, then crashing downward. Kivett leaped from his saddle, the tie rope in his hand. But the horse fluked.

It failed to keep a strain on the lariat, thereby allowing the steer to rise. Kivett raced back to his mount, got on its back, once more plunged the beast to the ground and for the second time leaped from his saddle to hog-tie that longhorn. But bad luck still was with him. The tie rope caught in his spur, making a loop over the pommel of the saddle. The horse, frightened, reared, then began to plunge, while Kivett hung to that tie rope by one foot, and the prostrate steer was dragged fully fifty feet at the end of the lariat. Thus blocked, the horse began to wheel with such swiftness that Kivett was lifted and whirled at the end of the tie rope like a piece of lead on a string. Again and again the horse circled, until watchers grew dizzy from the sight of the spinning man, his arms and legs sprawling, his head bumping against the sun-baked ground with every revolution. At last the horse stopped short and began to kick. Three times he missed Kivett's head only by inches. Then a hoof struck that tie rope and knocked it loose.

Kivett was free. But did he complain of dizziness, spots before the eyes and a general run-down feeling? He did not! Weaving, he gained his feet, grabbed the tie rope, staggered toward the steer and hog-tied it before he sank from exhaustion. And the official time of the whole proceeding was one minute and fifteen seconds!

Harry Walters, in a nice pink shirt, was the other member of the pile-up in the hippodrome race. A horse rolled on one knee and otherwise carved Walters in a fashion usually guaranteed to produce at least two weeks in a hospital. Walters took more time to recover than Kivett. He did hardly anything until the next day. Then with his horse traveling at a gallop he stood on its neck, crawled under its belly, picked silver dollars out of the dust, rode backward, forward and "Andy-over"—this accomplished by vaulting from the ground on one side of the speeding horse to the same ground on the other side—jumped straight out of the saddle, hit the ground behind, grasped the horse's tail and leaped over his back into the saddle again, thereby winning the trick-and-fancy-riding championship of the world. Perhaps the secret after all lies in the fact that you can't kill 'em.

That must be it. At a little one-horse rodeo last year I saw a fifty-four-year-old cow-puncher fight for the chance to ride an outlaw. He broke the record by staying on the horse's back eleven long seconds, then he broke his collar bone in the descent. The next day he was riding again—and not pulling leather either. At the same show a cow-puncher, scarred and battered, his face a mass of bandages and one arm in a sling, waited his chance at a tough bronco. I naturally became sympathetic.

"Get thrown somewhere?"

"Nope." There was a look of sadness in his eyes. "Hit's jest plumb tough luck. I fell offen a cliff last week up by Tufted Buttes. But I reckon it won't stop me from ridin' in this shebang."

It didn't—that is, for a half minute or so. Then he broke the other arm.

How they do it or why they do it is a bit beyond the conception of one who figures his life according to the standards of paved streets and accident insurance. Try to figure it out and you lose your perspective.

The natural conception, for instance, of personified trouble is a wild horse. Yet one of the ordinary events of every Western stampede is a wild-horse race.

Hedged about by cow-punchers and with from one to five lariats on each animal, a herd of from fifteen to thirty horses that never have felt the touch of a saddle are brought into the track at once. Because of the fact that a thin wooden railing forms the only protection and operating under the excuse that it's the last event, anyway, the lower half of the grand stand suddenly decides to go home. But not the cow-punchers, the wranglers and rastlers. With some of the horses lying flat on the track, with others standing on their hind legs and pawing whatever comes close to them, the shouting, laughing Suicide Club manages to put blinds over the bloodshot eyes and snub ropes over the nostrils. Then at a signal saddles are placed on the quivering beasts, cow-punchers boost comrades on the horses' backs and the race is on.

Some of the outlaws merely stand still and buck. The rest run and buck. Some stay on the track. Most of them go through the fence—grand-stand side preferred. Out of it all there are a few that can t to make the distance, bucking and p round the half-mile track, while starting point all hands clear aw casualties to make room for the It is one of the best means ever inve ruin the human constitution—yet everyday event.

SYNDICALISM STRIKES

(Continued from Page 11)

since the Armistice, where wages were much higher than the average in other industries of the nation, you would have sensed that feeling of "nothing can happen" which clung to us up to the final moment of the walkout of five thousand men. Many cannot tell you after all these idle weeks why they walked out, except that somebody promised them they would be freed from the masters and somehow become owners of the mills.

If you had stood with us that morning you could not have pictured that which was to come within the hour, when a babel of languages from those very lands we had saved would sound threateningly through these streets. You could not have realized that Americans were to cower within the shelter of doorways, with the same cold fear on their hearts that has clutched at the souls of the women and children of the Hun-ridden towns of Belgium and Italy and France and Serbia. It could not be; no, impossible, you would have said, here in this great free land that is American—that has boasted of its protection for all peoples. Yet I say to you that it was and it is—a fear that came with the muttering mob of eight thousand or more surging through the streets with menacing gutturals that told of the blood of class hatred burning in their veins, of the roused prejudices and inherited grievances of a score of European countries. Yes, American citizens slunk into doorways or fled unheroically to their homes, to await what might come. That fear, quiescent as I write, with troopers at hand, still rests upon every home in this once carefree, contented community that is in the heart of America. It should not be, of course. But again let me say that it is there. It is not cowardice; it is common sense; the acceptance of conditions as they have come to be.

Lessons of Hatred

Eight thousand menacing marchers. Toilers from the mills; yes, eight thousand of a score of nationalities, who in recent months and years have been blessed for the first time with freedom, high wages and opportunity to become citizens and home owners in a land that has known no class or caste. Eight thousand hate-inspired hearts and souls, the tongues of them loosened and their hands ready to be raised against whom? "The masters"—their employers—their neighbors and their friends. Coats bulging here and there with deadly weapons. Their judgment and their viewpoint warped back to the same plane on which they had stood when famine and misery and oppression crushed their souls and spirits in those European countries from which they came.

Their reason? Nonreason sat upon it all. Blind desire to seize that which belongs to others. Yes, all of that was there, for it had been preached to them in their own tongues. In their own languages it had been spread broadcast that they might read. In a few brief months, despite their prosperity, their high wages, conditions in the mills and in their homes that were a paradise compared to those from which they had fled at home—despite all this, in these few brief months they have been taught that all who are not workers beside them in the mills are their enemies. They have been taught to believe that this is a land of oppression, taught to forget that the men with whom they have toiled have given their time, their money and their thought to making them more secure and more contented. Eight thousand of them swung in that sinuous column down that happy street of early morning, and those same voices that had bandied true Yankee jests spoke in hushed tones of awe, of caution, of fear itself.

That all this was being repeated from American town to American town through the length and breadth of one of the greatest industrial valleys of the nation, on that same morning, is something of which I need not speak. There are others who know, as we to-day know, that all of this and more is true. Potential riot and disorder, disregard of law and the tenets of civilization, have marched past our front door. Our eyes are opened. You who have not seen cannot yet know why and how they are opened to a broad vision of the truth. The serpent of syndicalism has struck. Its fangs are buried deep in this one portion of our industrial life, the steel-producing region of the United States.

Across the face of the steel town bellies the banner of trailing smoke. It is the master purpose of this Monongahela Valley to produce steel. Always steel, more steel, more than the neighboring steel town. Brawn and the skill of brawn alone enter into the production of steel, the kind of muscular effort that in a matter of weeks can be converted into skilled labor. Your roller and your furnace charger are for the purposes of their jobs just so much concentrated energy. Little of the skill and knowledge that attach to many other crafts of labor artistry enter into their work. Given the strength and medium brains, the worker in steel becomes speedily an earner of comparatively high wages.

For that reason it has been possible to assimilate the alien worker in the steel industry more rapidly than in almost any other class of work. He comes, a hardened product, from the mines or the fields of Europe. His sole education has been the doctrine of work, muscular effort, with less call for mental effort than is found in countries other than his own. Thus under the banner of smoke pluming the steel industry of this valley we have gathered from many nations what abroad constitutes unskilled wage earners, and to them has been paid and is being paid to-day more money than skilled American laborers are drawing from a hundred other industries.

Aliens Who Vote

Pay for the laborer in the Donessen mills ranges from $4.62 for ten hours to $8.50 and $10.35, dependent on the department in which he is employed. For wire drawers the scale ranges from $6 to $12 a day, with the pay roll showing the greater proportion of the men earning an average of $10 daily. Mechanics in all departments range in pay from $6 to $10. Rod mill and open-hearth rollers—comprising a class of labor that is practically unskilled and produced after a few months of tutoring—are being paid from $12 to $26. In some exceptional instances the pay ranges higher, and in some rare instances lower. The rod-mill workers are on duty for twelve hours, working every other half hour, a total of six hours actually rolling iron and six hours resting. In the blast furnace the wages range from $6 to $8. The general average of all wages paid, exclusive of officials in the plants but including the clerks in the offices of the Donessen mills, is $7.18. The total pay roll for 4000 employees has for six months averaged $800,000 a month.

Quickly, therefore, the workmen find themselves the possessors of means. The first few hundred dollars are to them a fortune compared to those few dollars of passage money which were eked out sometimes from months and years of toil in their home countries.

At once, the average man would say, they should grasp American opportunity and along with it American principles and ideals. In this town of Donessen there are more than fifteen main groups of foreigners. As one citizen puts it, these groups represent "just little bits of Europe set down in an American town," each independent of the others, each clinging to its native prejudices, customs and attitude toward government and what from childhood they have been taught to regard as the governing classes.

The Croatians remain Croatians. They have their Croatian Beneficial Association, an organization that speaks Croati scribes for Croatian newspapers, nates Croatian pamphlets and whi things that it is and does is still Cro

(Continued from Page 120)

t ne polls, and that in some way this lets ha into the voting booth, they know ite of the ballot system. Hundreds are ik Andrew. He explained that he could ge all his home news from the Croatian aer, and added that he had a little laghter at home who is learning to read Eglish and that sometimes she reads to hi from the American newspaper.

et Andrew is only one type. There is a rge group, represented among all the nationalities here, of which much capital has been made by agitators as the "workers wl exist in miserable shacks." Certainly he is no dispute about that. They do livin miserable shacks—filthy, insanitary, ovded quarters, wherever they may find pe to shelter their families and all the borders they can induce to share their mserable shacks with them. If you lived directly above a group of foreigners who ex in just that way you would get what wean.

orced into this by wage slavery? No. Neither principle altogether is involved. The banks of Donessen are thousands of dollars accumulated by the workers in the miserable shacks. Living amid squalor, hundreds are the possessors of thousands of dollars. Why? Well, they have one object in view—that time when they can return to their native land and live the remainder of their lives in comparative opulence. And this ambition is passed on to their children.

Since the strike had its advent, one month ago at time of writing, scores of these aliens from the most undesirable homes have acted in on their intentions and their savings. One foreign agent in Donessen can show the sheaf of passports, the bundle of receipts for thousands of good American dollars converted into foreign money. They are of the group now going home; that has invaded to go home from the moment their feet touched these shores; that has lived apart from Americans and American ideals in ideas, for the reason that their hearts have remained a part of Europe.

ases are common of the worker, the unskilled laborer, living amid the filth of his miserable shack, who has exchanged a worn pocketbook for five thousand dollars to ten thousand dollars after a few years under the smoke plume of the steel industry. Americans earning less than half the average wage of the foreigner in the steel mills of Donessen are maintaining comfortable homes and giving their families with every needed advantage. Various forms of Americanization effort have reached out to include the wives of aliens. Each has been repelled or ignored. Little Italy lives within itself, Little Italy to the end, its population decreased from time to time by those who are going back or increased by those who have been induced to come over and share in the freedom and prosperity of America—later themselves to go back.

The Helplessness of the Law

mong these for whom America is a temporary residence has come the agitator of the Finnish reds, the Russian unionists, the I. W. W., the syndicalist, the superanarchist. Is it a strike of labor? Yes, and as such, as an effort at union organization, it is greeted for the most part with neutralition on the part of the American citizen not directly involved.

et—the American in Donessen has had case to think. A few weeks ago the Donessen authorities arrested and jailed fourteen Russians in one house. Literature denouncing the United States Government, calling for "the workers to arise and establish a soviet," was taken on the persons of the Russians.

n the midst of the strike thousands of pamphlets advocating "the dictatorship of the workers, the overthrow of the American Government and the abolishment of all law" were plastered throughout Donessen and other towns of the Monongahela Valley. These came from members of the "Communist Party" in Donessen. Seizure of the industries and ownership of the steel mills when "this revolution" shall have ended are telling strings that have inspired the alien hurt to violence and to "arising against the master class."

gitators come and go. Aliens with hundreds of dollars in savings, with many Liberty Bonds, are being taught to threaten and intimidate Americans who have refused to have further relations with the so-called strike after its revolutionary ideas had breed to the surface. In Donessen and in every steel town of the valley is expressed the opinion among Americans that only drastic measures—summary action on the part of Congress, real power in the hands of the Department of Justice—will end the menace of syndicalism inoculating the souls of the foreign-born and foreign-living residents.

As for the intentions of the agitators, there is this example: Every gun store in the valley was invaded prior to the calling of the strike. Hundreds of weapons were bought before the authorities could stop the sale of firearms to any person not an officer of the law. Thereupon a gun store in Monongahela City was broken open and fifty guns taken. The state police have taken scores of revolvers from the homes of aliens, new shiny weapons all.

These are not the conditions of Donessen alone. Working like unholy leaven throughout the mass of more than 150,000 alien workers in the steel towns of Charleroi, Monessen, Donora, Clairton, Duquesne, Homestead, Braddock, Carnegie, Johnstown, New Castle and others, the one-time much-exploited melting pot has been heated to overflow with the brew of radicalism and anti-American propaganda. There is nothing furtive about it. It is boldly, glaringly, defiantly against all government. As one witness told the senate committee, it is "syndicalist anarchy."

Clergymen have sought to counsel the foreigners against wild theories and blood-spilling teachings, trying to instruct them that these are against all the tenets of the church. One clergyman in Donessen was threatened with the destruction of his home. Leaders among the aliens in the church demanded of the bishop that this clergyman be removed.

Another clergyman of Donessen in a public sermon said this:

"I am not here to defend or condemn either employers or the workingmen, but as your spiritual adviser to call your attention to the right or wrong of your acts. I have watched the movement, read the public sentiment, read the investigation by the senate committee and have thus come to my present convictions.

"If you have taken part in bringing about this strike you must have been either in the right or wrong. There is not any neutral ground. To be in the right you must have a just cause and serious grievances to be corrected.

"Now in all the investigation thus far by the senate committee no evidence has been forthcoming to show either just cause or serious grievances.

"It has been shown that your wages are just, even higher than is paid in any other industry in the world; that the great majority of the men are perfectly satisfied with their wages, their treatment and the hours they work. Hence I am led to conclude that you are in the wrong. Only a small percentage work long hours. Many men are paid on the eight-hour basis, with time and a half for overtime.

"The eight-hour day would be given if the corporation had sufficient men to do so. Why pay time and a half for overtime work if it could be done for straight time? Why, for instance, pay six dollars for the same work that could be done for four dollars? Does this not prove that the eight-hour day would be given if only they had the men?

"The country and the world at large need the production, and that is why you are working more than eight hours. And the men themselves admit they are being paid for it, and want to earn the money. Where, therefore, is any just grievance?"

Andrew is of Croatian origin. The home of Andrew, as he has described it to me, was on a Croatian hillside. He had there his wife and two children. Below in the valley lived the master to whom he was a subservient peasant. His home, his daily life, his family—all were enslaved to the will of the master who lived in the greater house far below the rutted hillside. The daily fare of Andrew's family was black bread and beans. On Sunday there was a bit of soup bone and great feasting on that thick soup of beans, with the ever-present black bread.

Andrew told me this as he stood one evening in an American meat market and purchased a dollar's worth of juicy steak. "Oh, yes," said Andrew, "there is meat every day here in America." There is a plot of garden at Andrew's home, and there is a savings account, besides the five Liberty Bonds.

I cannot tell it in the broken language in which Andrew told it to me shortly before the strike. But he said in effect:

"My boy, he is going to be a great engineer some day. He is going to take up mechanics and I am sending him away to that school where they teach him more. Yes, I earn plenty money now. Sometimes it is that I have four hundred, maybe five hundred dollars in the month."

Pride beamed on the face of Andrew. He spoke in happy accents of his little girl, of the splendid grades she is making in the town school, and how she would never know of the miseries amid which she was born on that Croatian hillside. He told me of his little girl's mastery of the piano, and of her advancement in her drawing lessons. Yes, Andrew has in his home everything that speaks for comfort and even of luxury. For Andrew was a skilled roller in the mills, though he came here with nothing but his two hands four years ago. There was all of contentment about Andrew before the strike.

And it was before the strike, too, that I had reason to ponder upon the satisfied opulence of John. The home of John was in Poland. In Poland he had the dribblings from the table of the master over the land on which he and scores of others like him were permitted to live and toil. He had no country he told me one evening recently, as we sat in the bleachers at the town baseball grounds, where many of his fellow countrymen are players in a home-town league. In his own way he told me how his country had been bandied about between Prussianism and Russianism, how its people had had no voice in their own affairs since his earliest remembrance, and how it took three years of effort to save money enough to come to America.

John laughed as he said: "Yes, this two weeks' pay I save me as much as what it took that two, three years—and see him, my beautiful pipe."

You would have to know John's weakness for fancy pipes to appreciate this. The deftly turned meerschaum bowl and real amber stem he proudly held out to me.

"Why, that's a great pipe, John. Where you get him?" I asked.

"Oh, me buy him down at the city yesterday," said John. "Him cost me fifty dollars."

John's Fifty-Dollar Pipe

And John held the bowl tenderly as he stuffed it with the cheapest and rankest tobacco to be found this side of the cabbage country. I relate this merely as one of many incidents that might be brought out to show how even in the face of the high cost of living the skilled mill workers have been sufficiently, even prodigally, supplied with money through the highest wages ever known in this country.

It was men like John who bought twenty-two mechanical piano players in one day in Donessen; men whose wives buy ninety-dollar suits.

Over there John was the virtual slave of the landowner. His people had no voice whatever in the footballing of their country about between the greater nations. At home in Poland he knew not whether the peasant hut of his parents would be there when he returned from the long hours of toil in the fields.

Eventually there came an evening when it was not, and John does not know just what happened to his parents. But that is another story, John's own story, as there are many such stories among these men in the mills of the Monongahela Valley.

So this is John, of Donessen, this happy, contented, prosperous mill town of yesterday. John told me how when the Spanish influenza spread its ravages across the valley his mill boss and the superintendent

(Concluded on Page 127)

Manufacturers Offered

A Deep Water Port and Railway Centre

NOTE

As its name implies, the Du Pont Chemical Company is not a real estate concern. We have a limited number of Hopewell factories, factory sites and other equipment—our peace surplus—which we offer for immediate sale *direct* to manufacturers at attractive terms. In these announcements we are employing the most powerful and the quickest means for disposing of them—of acquainting the public with the opportunities Hopewell offers. It will be a matter of first come, first served. Quick action is advisable. Write or wire today for data.

In offering DIRECT to manufacturers its peace surplus of factories, factory sites and equipment in the Petersburg-Hopewell Industrial District of Virginia, the Du Pont Chemical Company also is offering a manufacturing location of great strategic value for the shipment of products to domestic and foreign markets.

This District, at the junction of the Appomattox and James Rivers—in reality a part of Chesapeake Bay—has steamer connections with trans-Atlantic, South American and coastwise ports. Products may be loaded on ships at the Hopewell wharf or transported in barges to vessels at Norfolk or Newport News. Vast quantities of war munitions were shipped overseas from Hopewell, and thousands of troops from Camp Lee, in this District, were transported to France.

The District is served by the Norfolk and Western, the Atlantic Coast Line and the Seaboard Air Line, three great trunk-line roads which, with their connections, give Hopewell manufacturers rail access to all important market centres, North, East, South and West.

The District has many other advantages of commanding impo tance besides transportation. These recommend it as a solution the problems confronting the manufacturer who, because of adve conditions affecting his business, desires a change of plant locatio the manufacturer seeking a site for a branch factory, or the pr spective manufacturer looking for a place to begin business.

Among these advantages are factories and railway sidings alrea built, factory sites affording ample room for expansion, an adequa labor supply and freedom from labor troubles, splendid housi facilities, low-priced and abundant power, water and fuel; nearn to sources of many raw materials used in basic industries, low livi costs to workers and a climate most favorable to industrial activi and health. (See opposite page for specific data.)

These factors enter vitally into the problems of increasing pr duction, keeping down factory costs and raising the margin of profi

Labor and Housing

Labor unrest and labor shortage are the two most serious conditions now affecting industry. Both tend to lower production and boost costs. Hopewell is free from these problems. Its supply of labor, skilled and unskilled, male and female, is sufficient for present and future needs. Living and working conditions are too favorable to breed discontent and strikes.

The Du Pont Company obtained 30,000 workers at Hopewell, and maintained an operative force of 20,000 while the war lasted. Most of these workers were recruited from the surrounding territory of Virginia, Maryland and the Carolinas. So-called "war wages" were not necessary, because of low living costs. While workers received less in wages than at most war industrial centres, their actual savings were higher. Compared with prices in other cities, the Hopewell worker's fifty cents buys a dollar's worth of goods.

The housing problem is so closely allied with the problem of labor that a manufacturer these days must interest himself in what sort of homes are available for his workers. The scarcity of houses and consequent high rents lower the efficiency of lab as well as limit its supply.

No employee can do his or her best work if c stantly worried over where to move or where next month's rent is to come from. Likewise t mental effect of unpleasant home surroundings l sens the efficiency of workers. Happy and conten labor makes for efficient labor.

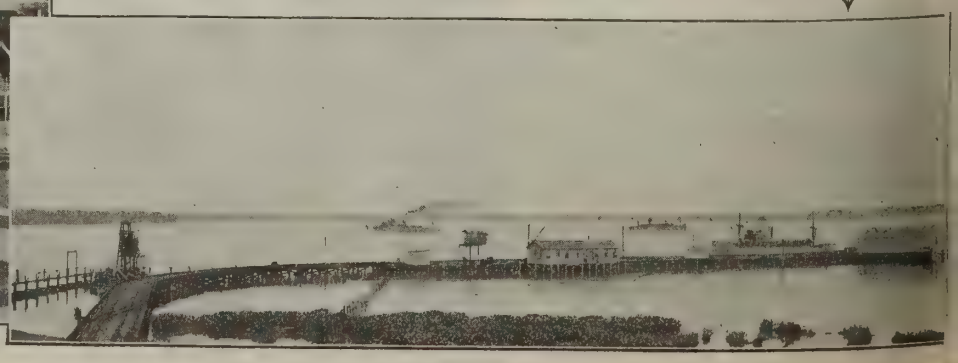
Hopewell has no "housing problem." To acco modate its vast army of workers at Hopewell, t Du Pont Company built hundreds of cottages, bun lows and dormitories. These pretty homes, with law and gardens bordering on well-paved streets, a equipped with electricity and all modern convenienc

For executives there are a large number of attr tive houses on the bluffs, overlooking the James Riv The rents for these are comparatively as low as t workers' houses.

Photograph on lower left—A few of Hopewell's attractive homes overlooking the James River. Similar houses, cottages and bungalows for 12,000 workers are available.

Photograph below—A Hopewell pier extending into the James River. It is lar enough for a number of ships to load and unload at the same time.

A Scene on a Hopewell Deep Water Wharf



Manufacturers Offered A New Gateway to World Markets

Where Hopewell Is

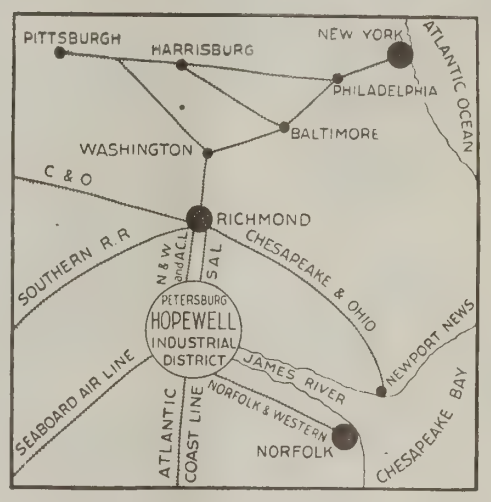
The District is in the Chesapeake Bay area, lying 23 miles south of Richmond, the capital of Virginia, and but 80 miles west of Norfolk. The approximate first-class mail time between the District and ten large cities follows:

Washington, D. C., 4 hours 30 minutes; Philadelphia, 7 hours 40 minutes; New York, 9 hours 40 minutes; Pittsburgh, 14 hours; Savannah, 13 hours 22 minutes; Atlanta, 16 hours 37 minutes; Boston, 16 hours 22 minutes; Cleveland, 17 hours 5 minutes; Chicago and St. Louis, 25 hours.

What Hopewell Is

Hopewell, during the war, contained the largest gun cotton plant in America and a population of 40,000. In addition to its manufacturing plants, it has churches, schools, clubs, hotels, theatres, stores, a commissary operating on a cost-plus basis, storage garages, Y. M. C. A., Y. W. C. A., electric lights, alleys, sewerage, fire and police protection, and in fact everything that constitutes a modern city.

Hopewell's climatic and health conditions are among the best. It never is ice, snow or flood bound, being free from extremes of weather that interfere with business. The two rivers afford splendid opportunity for fishing and boating, and game is plentiful in the woodlands. Garden and farm products are supplied from the surrounding districts at low cost, and groceries, etc., are sold at the commissary below regular market prices. In brief Hopewell is an ideal place to live and rear a family.



Natural Resources

To manufacturers in certain lines, Hopewell offers preferred opportunity in its nearness to supplies of raw material. Within a radius of fifty miles are produced annually 555,000,000 feet of timber available for lumber or for pulp and paper making; 25,000,000 pounds of tobacco, 3,000,000 bushels of corn, 2,000,000 bushels of peanuts and other crops valued at over $5,000,000. Cotton not only is grown in considerable quantity near Hopewell, but the railroads reaching up from the South afford excellent facilities for getting the product from the great cotton belt.

There are also important deposits nearby of brick, tile and pottery clays; shell marls suitable for cement; mica, soapstone, moulding sand, mineral paint and Virginia limestone.

What Hopewell Has

Three modern power plants with a total capacity of 60,000 horsepower—enough to supply steam and electric power, light, heat and air pressure in any desired quantity. Electric power is sold to manufacturers as low as 1½ cents a kilowatt hour.

Filtration plant with a daily capacity of 50,000,000 gallons—enough to supply a city of 500,000. Filtered water costs as low as 5 cents per 1000 gallons and unfiltered water 2½ cents.

Houses, cottages, bungalows and dormitories sufficient to accommodate 12,000 additional workers. Rents average between $11 and $15 a month. Attractive homes for executives overlooking the James River at low rentals.

Available factories having floor areas of from 100,000 to 150,000 square feet; 1200 acres suited for factory sites with railroad sidings already built; 20 miles of broad gage and 23 miles of narrow gage.

Average summer temperature 75°; average winter temperature 41°; mean for entire year 58°; annual rainfall 46 inches; snow rarely remains on the ground more than a few hours.

Best fire protection in the world. This means low insurance.

Consult Our Experts—Free

Our experts—Technical, Industrial, Traffic—will gladly study your specific requirements, and investigate your problems of raw materials, manufacturing processes and transportation. They will give you an unbiased report as to the adaptability of Hopewell (plant sites, present available equipment, raw materials, etc.) to your special needs. This service is free. It may lead to the solution of your problems. Get in touch with us promptly, for, as stated in the "Note" on the opposite page, we intend disposing of our surplus quickly.

n to his home, and how they had his
ny removed to the bigger city hospital
daw that they had good food and medi-
l ttention; though at that time John
mself had been ill and had not worked
r any weeks, and the money was low in
e family purse.

A home in Poland John was one of the
a little sheep on the hillsides, to be
ntered or driven to toil as it pleased
o of a class greater than he. In Don-
s John is a citizen of the great land, a
n of affairs, the equal of the burgess of
own, the mill boss, the superintendent,
s John has begun to feel—the equal of
e resident himself. When he talked to
e had nothing of complaint to utter.
old me he was being paid the highest
s he had ever received, a wage of $21.80
, for John has learned to direct those
e muscles of his with skilled efficiency.
s John's wage income has risen to above
) a year, and the high cost of living
s not worried him nearly so much as it
s thousands of salaried men with white
ls at office desks. But that aside.

A Heritage of Suspicion

I oint you this town of Donessen. Five
sand merry children play in its broad
y streets of a sunny evening. It boasts
babies to the square inch than any
h town of its size in America. Here,
gh this town celebrated its twentieth
versary only the other day, is a com-
nity of 15,000 souls. Here hundreds of
o ers within the last few years became
pjective or actual home owners and
pherous, contented citizens.

Jan give you first-hand facts to show
e the wages paid the workers of Dones-
have been and are higher than the
rage wages paid in any other industrial
rtunity. The result has been that this
become known as a town of cheerful-
s a town that in the great world out-
rped all other towns of its class in the
ain in oversubscribing Liberty Loans,
e purchase of War Savings Stamps, in
countless other means of helping win
ar. It gave from its 15,000 population
0 ons to actual fighting service.

Donessen, three months ago, was one of
most contented communities in the
ned States. Yes, there were miserable
es here, too, as there are miserable
es everywhere. There need have been
, but wherever apparent poverty or
e of comfort sits on the doorsteps of a
e in Donessen I have investigated and
d that had an income ten times
ter been wished upon that home it
d still have been miserable. There are
e folks like that.

his town has forged ahead among the
ers in the upper Monongahela Valley,
i a promise of becoming one of the first
s of the valley. It is a town that was
oing its millions of dollars' worth of steel
ructs out each year to help meet a world
e and, and in return has lined its pockets
i the gold of high wages. Wages in these
i, to the actual labor in the mills, have
eased since the war more than one hun-
r and thirty per cent, or more than the
o of living itself in the same period.
is the town that through Amer-
ization work in its schools promises in
n her decade if unhampered to turn out
itens of first rank. But all that was
erday, before syndicalism struck.

here came men of poisoned tongues to
essen. At first we smiled and ignored
m. Surely this doctrine of discontent
disordered minds could not find lodg-
t among us. Ah, there we failed to dis-
t the heritage of European blood that
sed in the veins of our aliens. For ages
h ancestors have been oppressed, ground under the heel of a myriad of autocracies flaming their gaunt specters of death across the pock-marked face of Europe. For all that they have become one with us in our industrial life, all the time they have been apart. That is their heritage, and they are blameless. They remember those things to which they were born, and in the memory lie suspicion and ignorance of American ways and life. After all, to them America has been something of a miracle, a mirage of opportunity in which they have not fully believed. It might fade. Oh, yes, the seed of anarchy has been there in some of these souls.

So the idle parasites of syndicalism came with their noise to confuse the workers. They came to create from thin air monstrous wage-slavery systems. Four months ago none of these men believed they were wage slaves. They were satisfied with their jobs, their earnings, their homes. And almost overnight they came to a new viewpoint, perhaps the most dangerous that ever has been arrived at in America.

Yes, the men of sane minds could not and did not believe the ranting, idle noise that had come to confuse the workers. Scarlet revolutionary ideas were being taught and to-day are being taught. The doctrine that the man who works with his hands is alone the wage slave, a downtrodden miserable creature, has been so skillfully injected that these thousands of aliens have forgotten all those things they told me a short time ago. Home, family, savings accounts, comfort and luxuries—none of these mean anything to the syndicalist liars. They have found a fertile field for red revolution and they have propagated their virulent ideas in that field.

The serpent has struck, and a "master class" has been born from among decent, hard-working, lenient employers, business and professional men. The business men of this town of Donessen, the same men who in times of stress have carried these workingmen and their families over the rough places, who have been their friends and neighbors, ready with a helping hand or a dollar in time of misfortune—these men have been openly boycotted by the syndicalist agitators.

Martyrs Without Cause

I am not one of those business men. My own work is such that even red revolution itself would not impair my opportunities. So you, my fellow American, skeptic or believer in these truths I am giving you, can take every word of this as impartial.

Yes, we counted too much on the sanity and the common sense of the aliens. We have seen them, in the name of labor organizations that have repudiated their very syndicalist leaders, fired with blind rage.

Why, I heard the publisher of a labor publication in Pittsburgh, the heart of this district, denounce the red radicals heading all this disorder. I have received at the hands of the Central Labor Union of this Western Pennsylvania a resolution denouncing the syndicalist leaders now striving to put internationalism, lawlessness and mental and social disease on a foundation where they can make these things replace the Government that is American and orderly.

Bloodshed, disorder, martyrism—are sought by these syndicalists, that they may create more empty noise concerning "thugs" employed by the "master class." I have this not from the lips of any employer, not from any boss, but from the lips of John himself. He told me only yesterday, the day before this article is written, that he must become a "marteer." That was his way of pronouncing it.

"A martyr to what, for what, John?" I asked him.

"Oh, a marteer for the cause, for the unions. For the cause it is that I must be arrested, that I must be shot," John explained to me.

"Why, John, no one is going to arrest you or bother you. Why should they?" I asked.

But John has been told he must become a "marteer." It has been preached to him until he believes it. He must do something to be arrested or shot. And the thousands of Johns have been inspired with that idea. For this it is that they have bought weapons, for in this the syndicalists have built their foundation of revolution. If there are no "marteers" there can be no cause. There can be no appeals against constituted law and order. Always the blame must attach to those upholding the law, while they, the lawless, may assault other workingmen, terrorize and boycott business men, as they have done in this once peaceful community of Donessen.

Steadily the conditions under which these men work have been improved. I have studied them, and to-day the worker in the mill is recognized and treated as a human being, aside from his value as a workingman and the high wages he receives. Not only is he safeguarded in the mills but his home life has become a matter of study, and those things that count for better and happier homes have been supplied.

Wanted—A Sense of Humor

Special Americanization schools have been provided for the aliens. Night schools financed by the corporation by which they are employed have been opened. Within the mills themselves classes for the study of the steel industry have been created. These classes have been open to the humblest workingman. In these they are given technical instruction of the industry, an education in practical workmanship that gives every worker, American or foreign-born, full opportunity to improve his position and to advance to the highest possible place in the industry itself.

Under the thralldom of the poisoned tongue there has come complete disregard for these things. Aliens have ignored the night schools and not one in one thousand has shown any disposition to improve his own condition other than in a financial way. The chief aim of each alien is to save and save and save until he has that competence whereby he can return to the land of his fathers.

I sit now where I look at the public park and playgrounds purchased and equipped by the corporation owning these mills. I think of the band that gives its concerts, paid for its time by this same corporation. I am one of the players at the Donessen baseball grounds, laid out and equipped by the corporation. I think of scores of betterments brought about for these men.

The writer, informed by the words of these same workers, tells every American that violence has been and is being inspired by educated propagandists, organizers, expert martyr makers, who must have martyrs properly to spread their poison. When John was told he must become a martyr I thought of the home of John here, and of his home in a Poland of pestilence; and yes, I thought, too, of that fifty-dollar meerschaum pipe, and I wondered if maybe the sense of humor might not eventually save some of these Johns.

But all in all, this is a warning, a red warning if you please. To-day the martyrs are being made. Law and order is being forced to defend itself, and then it in turn is accused of murder and riot. All this is in order that the lying poison of the syndicalists may spread through the root and branch of organized society and wither law, order, decency, the American home and the American Government, to be replaced by the syndicalists backed by the thousands of misled foreigners they have gathered to the cause.

Thus it is we have these once contented aliens, who yesterday breathed gratefulness for the freedom and opportunity of America, to-day spitting venom and hatred for what the syndicalists have taught them are the ruling classes.

This is a warning to America and Americans. The writer tells you that murder is being implanted in the hearts of honest workingmen by disciples of idleness raised in power to the *n*th degree, and that they have so raised themselves on the bowed backs of the aliens, who are my friends, that they may attain the place where they can loot the industrial treasure-houses of the nation, as their teachers, Lenine and Trotzky, have looted the riches of Russia.

They are the students of Marxian doctrines, of the preaching of every creator of turbulence and untruth and chaos. They to-day are gripping the throats of the labor unions of the country. They have placed their fangs in the souls of a million or more of the workers of America, and the poison is spreading. Already they are making impossible adjustment of conditions between capital and labor, that each may be fair with the other.

Underneath, the great heart of America will continue its steady beat and in years to come the poison will be worked out of the national system. But it is to-day that more than half measures are needed to save communities such as this of Donessen.

How will it come out? The property owners of every kind, the heads of industry, the upholders of law and order, the leaders of the nation itself—are being pictured as the unscrupulous enemies of these thousands of aliens.

At first they don't want to believe, but from conditions back of them for generations in their native countries they have known such things there, and finally they believe such things here.

The Contagion of Discontent

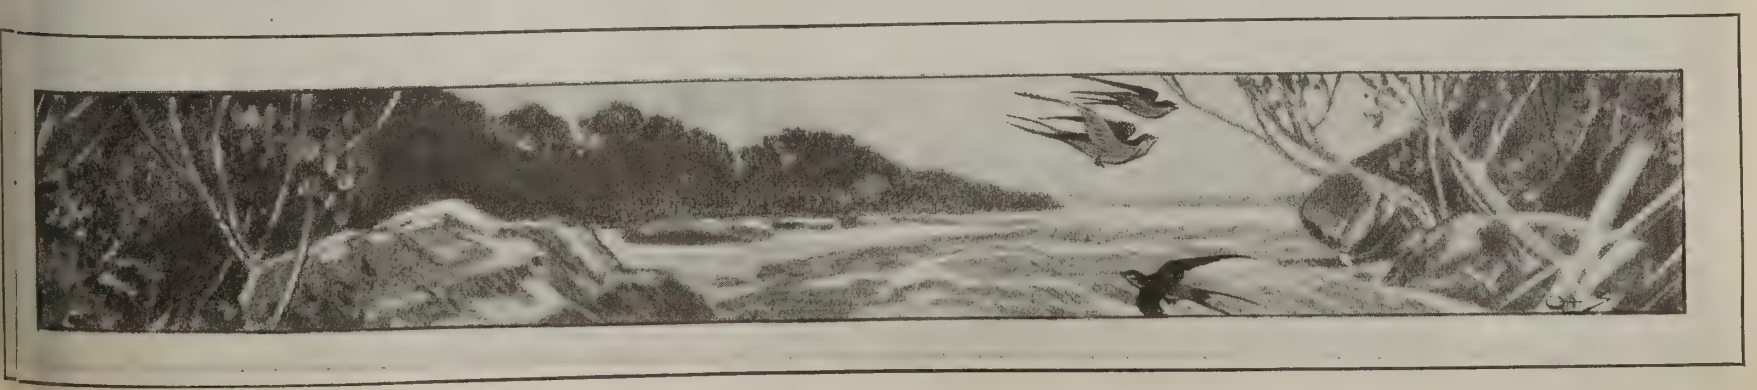
They have more than their skill and muscle could purchase for them anywhere else in the world, but the lust of the syndicalist is upon them. The virus of discontent has worked in the blood.

It is for every American to awaken to this. It is for the executives of all the states to open their ears to that murmuring menace that passed through the streets of Donessen.

Surely it has been preached that conditions of anarchy cannot be repeated in this nation as they have been in Europe. Aliens don't know that. Let me speak for them, as they have told it to me, just as it has been taught to them:

"We, the workers, will lay the foundation. Gradually we will grow in power, until we control the mills, the mines, the railroads. The syndicalist leaders have told us that the cause comes before everything. There is no such thing as honor or law or decency. Employ any methods to win. We are going to do that."

What do the aliens want? They can't tell you. They cannot explain, because it is not of their own desire that they have been taken from their places in the face of world demand and in the midst of prosperity and high wages. It is what the syndicalist leaders want, and these workers are being made the tools to get it. Methods mean nothing to them. Any means justify their end—so have the syndicalist leaders proclaimed. These leaders are in power at this moment. World-wide disorder is spreading, and you, Mister American Citizen, need not think that your home is too remote to be touched by it.



STORAGE
ERY
Willard
ation
THREAD
W
RUBBER

The Still Better Willard

does away with the most common battery repair expense—re-insulation

YOUR KNOWLEDGE of electricity has made you realize the tremendous importance of insulation. It's just as important *inside* your storage battery as on any of the wires that lead from it to your lights, starting motor and generator.

Inside that battery are the jars in which are sealed up the plates (positive alternating with negative), the battery solution, *and the insulation which separates each positive plate from its negative neighbor.*

In ordinary batteries the first thing to wear out is this insulation. Jars and plates may be still in good condition, but the battery has to be opened and "reinsulated" at considerable expense. After that, no one knows how long it will last. It may be long enough to offset the expense, it may not.

But the invention of Willard Threaded Rubber Insulation entirely does away with this most common cause of trouble and expense.

The Still Better Willard does not have to be reinsulated; because it has the durable threaded rubber insulators which last the full lifetime of the battery.

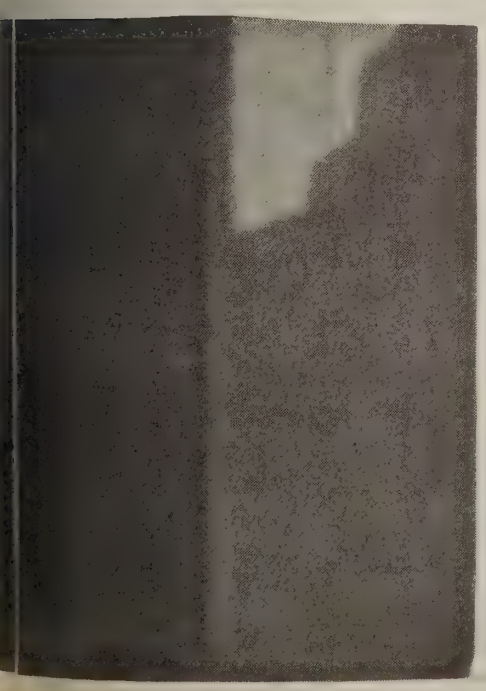
Four years' experience on thousands of cars is daily proving how much Threaded Rubber Insulation means to the car owner in better battery efficiency and fewer battery repairs.

Next time you call, ask us for a fuller explanation of the Still Better Willard.

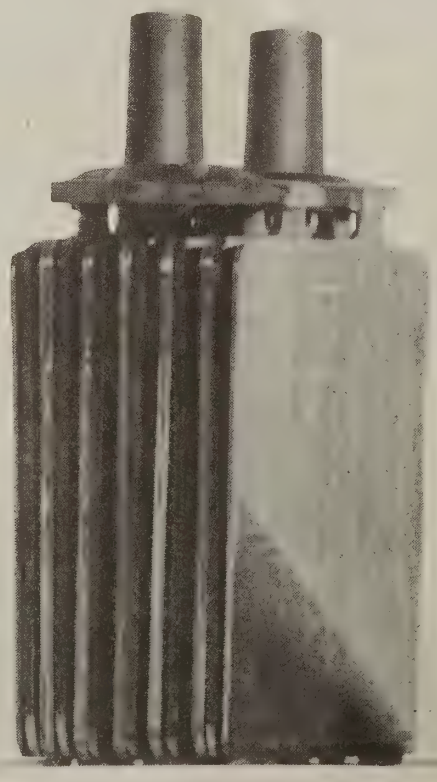
Willard Service.

With Threaded Rubber Insulation

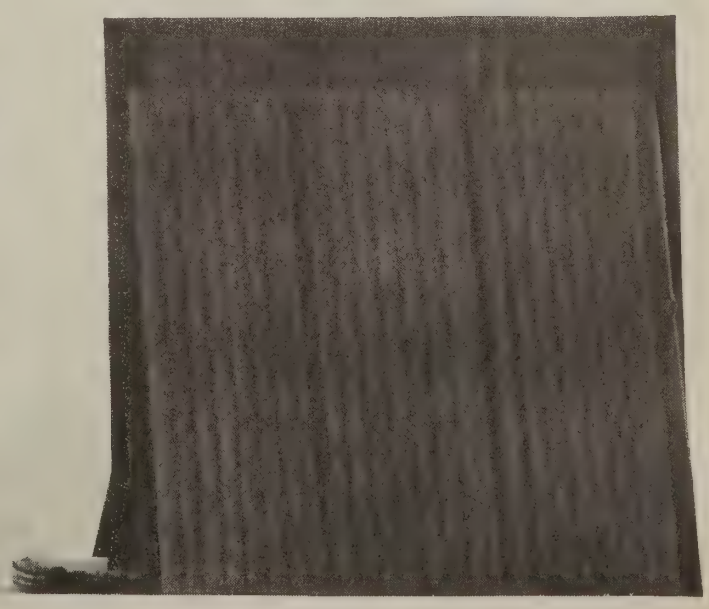
Inside the battery box are the rubber *jars* in which the *elements* and battery solution are sealed, thus constituting a unit which is called a *cell*. This cell is separated and insulated from the other cells in the battery by the *rubber* jar.



Inside the cells are two *groups* of *plates*, one *Positive*, and one *Negative*. These are so put together that they alternate and are insulated—positive from negative—by Threaded Rubber Insulation.



The *insulation* performs the important task of separating each positive plate from its negative neighbor, preventing short circuits which would soon wear out and ruin the battery. The better the insulation, the better the battery.



RIP VAN WINKLE LANDS AN ORDER

(Continued from Page 13)

"Yes, he hits hard. But don't you think he's a bit harsh on the boy? No one could pull an order out of the C. M. & B. with a pair of dentist's forceps and the old man knows it darn well. He's so afraid that we fellows out here won't put the screws on the boy hard enough because he is the president's son that he thinks he'll take a turn himself. But he's positively rough. I've a mind to tell the boy not to worry, that we know something about the C. M. & B. that his father doesn't."

"I wouldn't say a thing about it to him," said Williams, smiling shrewdly. "Listen! There's something doing over at the C. M. & B. offices. I heard yesterday afternoon that old Maganch had been fired and a man by the name of Arbuckle, who has been assistant purchasing agent for the past six months, has been made purchasing agent. And what I came in here to tell you was that this new man was pointed out to me in the dining room of the University Club last night, and who do you suppose was dining with him? Why, none other than the president of the C. M. & B. and our young friend, Victor Havelock, Jr.!"

"No!" exclaimed Carrington.

"Yes!"

"Are you sure?"

"Certain!"

"Well, what do you think of that? Now how did the boy ever do it? Why, say, if he should land the varnish business of the C. M. & B. it would be the biggest customer the Chicago office has taken on in two years! Say, tell me, did Victor look like he felt at home with these two fellows—you know, was he real easy and natural, or did he appear as if he was straining himself to look intelligent and all that?"

"If you ask me, he looked as if he felt as easy as an old shoe," replied Williams.

"Well that's got my goat! Wonder how he got in with them? I'm curious to hear what he will have to say about it when he comes in this morning. We'll certainly not say a word to him about the old man's letter. If he can get in with the president of the C. M. & B., why he certainly ought to be a salesman enough to get them to use Havelock goods in their paint shops. We'll just let him fight his own battle."

But when Havelock came in that morning he said nothing about the C. M. & B. or any of its officers. Nor did he mention the letter from his father. He merely left word with the girl at the switchboard that he would call that morning at the offices of the C. M. & B.

The next morning his report slip showing calls made the day before recorded no order from that road, but did mention the fact that C. M. Arbuckle, for some months assistant purchasing agent of the C. M. & B., had been promoted to the position of purchasing agent and that he would follow him up very closely and try to get him to switch to the Havelock line soon. And Carrington wondered. Had any other man on the sales force dined with the purchasing agent and the president of a road of the importance of the C. M. & B. he would have blown about it round the office for a week and his reports would have been full of reference: "Am getting very close to the new purchasing agent. Had dinner with him and the president"—the word "president" would have been underlined—"last night. Am getting close to some big business. Am on the inside track at last."

But there was none of this on Havelock's report the next day, nor the next, nor the next. Indeed Havelock seemed to be paying no special attention to the C. M. & B. with the exception of the regular twice-a-week call that he had persisted in ever since he started after the business. The fact was he was busy in other directions and had of late been developing considerable new business with some other roads, rather to everybody's surprise except Longstreet's.

Finally one Friday afternoon two weeks after the dinner at the University Club reported by Williams, Havelock asked Carrington if he might be away over Saturday, saying he wanted to go to a house party. When Carrington gave his permission he little dreamed that when he picked up his paper Sunday morning he would run across the name of his cub railroad salesman in the list of guests at the week-end house party being held at the home of the president of the C. M. & B. at Lake Forest.

Monday morning the whole office knew it, but when Havelock came in promptly on time as usual not a word did he say of the party.

Carrington could restrain himself no longer.

"Say, Havelock, what's this I saw in the Sunday papers about you being one of the guests at Hayden's house party?" he asked.

"Why, I was there."

"How long have you known the old man, for goodness sake?"

"Oh, three or four months."

"Know him well?"

"Fairly. I've been out to his house a few times before and on a couple of short sails with him on his yacht out on the lake."

"Well for the love of Mike! Why, you almost live with the man, don't you?" Then half in fun and half seriously: "Why don't you sell him some varnish?"

Havelock colored up.

"Do you know, Mr. Carrington, that's just what's worrying me. I know Mr. Hayden and I know Arbuckle, the purchasing agent, but darned if I'm able to sell them any varnish!"

Just then Carrington was called on the phone, and when he had finished and turned to question Havelock the latter was gone.

From then on it was a joke round the office that Victor Havelock, Jr., could sail and dine with the president of the C. M. & B. but he couldn't sell him a pint of varnish. And that joke—at first passed round on the quiet—gradually grew louder and louder until scarcely a day passed that one or two round the place didn't bring it to Havelock's personal attention in some way. In fact, it became extremely embarrassing.

Did he bring in a good order from another railroad someone—even Carrington sometimes—was sure to take all the joy out of it by suggesting as though it were a sudden inspiration: "Oh, by the way, suppose you drop in on the C. M. & B. this afternoon. They use quite a bit of varnish and we've never done any business with them. Understand you know the president pretty well."

Weeks passed and one afternoon toward the middle of October Havelock found himself once more descending in the squeaky elevator of the C. M. & B. office building without the desired order. And this time he was utterly discouraged, for just when things seemed ready to break right for him affairs had taken a new turn. Arbuckle had been rather noncommittal for several visits past, and he had been at a loss to account for it. But this time Arbuckle had opened up and told him what was on his chest.

He said he had been working for months to get the varnish stock in such shape that he could switch to the Havelock line and at the same time he had been quietly doing a little missionary work in the paint shops in favor of Havelock goods. But now that the time seemed nearly ripe he had begun to realize that his very friendship with Havelock made the situation just a bit embarrassing, for if there was one thing the president would not stand for it was letting friendship influence purchasing. Of course ——

Havelock had smiled a melancholy sort of smile as he sat facing the purchasing agent across the latter's big battered desk. And reaching out he had gently taken from Arbuckle's hand the nickel-plated railroad-spike paper weight he had been toying with nervously as he had explained the situation.

"Now just let me have that silver spike and look me in the eyes, old boy," Havelock had said. "What you're trying to tell me in a nice gentle way is that there is no chance of my getting any of the C. M. & B. varnish business because we're old college chums. Isn't that about it? Be brutal."

"Well, I wouldn't say that exactly, but you know the chief."

"I do know him, and now that you speak of it I believe you're right. I've been so set on getting an order from the C. M. & B. that I've not seen the situation in its true perspective. No, don't try to let me down easy—I see it all now. I've been making it awfully embarrassing for you and I ought to have known better. The only way we ever could get your business would be for me to drop out and for Longstreet to start calling on you. After a while—a few months, say—perhaps you could give him an order."

He had seen a look of tremendous relief come into Arbuckle's face.

"All right," he had said, rising and holding out his hand to the purchasing agent. "We'll get together evenings, of course, as usual, but you won't see me round the office any more. I'll just hand the C. M. & B. over to Longstreet. As long as the house gets the business it makes no difference who turns it in."

And before Arbuckle could reply Havelock had turned and strode out the door and to the elevator. Arbuckle knew that his friend was lying when he said it made no difference, and Havelock knew it, too, as he descended in the elevator.

The truth was it made all the difference in the world. For him to have to admit defeat and turn the account over to Longstreet to solicit would be bad enough under normal circumstances. But with the whole office jollying him about not getting the business, though he almost slept with the president of the road, was a dozen times worse. And then there was his father's letter. That letter kept running through his mind—"The Havelock Company has been built up on aggressive and persistent salesmanship, backed up by good varnishes. The factory is still turning out good varnishes."

Victor Havelock, Jr., felt heartsick as the elevator creaked down the dingy elevator shaft and came to a palsied stop at the bottom. Well, there was nothing to do but admit defeat. And what a sorry story! Couldn't get the business after working on it for months because he was a college chum of the purchasing agent!

"Of all the booby-prize excuses that's the worst," he muttered to himself as he mounted the elevated railroad stairs. "Won't that sound good to Mr. Carrington and dad? Whew!"

But he knew when he was licked and he was ready to take his licking like a good sport. He would go right to Carrington and admit frankly just what the situation was and ask that the C. M. & B. be turned over to Longstreet and that he be given some other tough prospect—some road whose purchasing agent was not a Harvard man! He knew Carrington would roar. And he knew the rest of the office would think it a scream, all except Longstreet, who—bless his soul—would understand and say nothing, for he and Longstreet were now fast friends.

In fact the whole office force had come to have a warm spot in their hearts for "the Harvard cub," though he did not realize it, because they jollied him so incessantly and unmercifully about the C. M. & B. business.

Reaching the office, he went direct to Carrington's private room and at the latter's request sat down.

"Well," said Carrington, "what's on your mind? Brought us a nice fat order from the C. M. & B?"

Havelock winced and colored.

"No, Mr. Carrington, but I've come in to speak to you about that road. I ——"

The telephone jingled and Carrington reached for the receiver.

"Yes, he's right here. All right, wait a minute. Here, someone wants to speak with you," and he swung the phone round.

Havelock took the proffered receiver.

"Hello! Yes. Oh, yes; no—do you really mean it?"

Down at the C. M. & B. offices Arbuckle was talking in a private booth.

"Listen, Vic, I've thought of a stunt that might work and save your face. Why don't you go right to the president yourself and solicit the C. M. & B. varnish business. I'm perfectly willing to have you go over my head. You could say that owing to the rule that you know exists in the purchasing department that no orders must be placed on a friendship basis you naturally didn't want to embarrass me by soliciting our varnish business. You could give the chief your selling talk, and then if he refers you to me, why of course I can give you an order. See? Yes, it's worth trying. All right; good."

"As I was saying, Mr. Carrington," said Havelock, hanging up the receiver and doing some quick thinking, "I want to speak to you about the C. M. & B. In case we should get a big order—say twenty barrels—could we give them any extra discount?"

"Absolutely not, Victor! We don't sell discounts; we sell varnish. Stick to the list."

"All right," said Havelock. "I'll do my best. I'm hoping," he added, not because he wanted to but because something more seemed to be called for, "to land a order from them soon."

"Fine!" said Carrington with ger enthusiasm, for he really did want t the boy make good. And a dozen t since reading the pink-sheet carbon o senior Havelock's vitriolic letter to hi he had been sorry he ever gave him C. M. & B. assignment.

But the next afternoon when he lef president's office Havelock keenly regr having allowed himself to talk so fool about an order from the C. M. & B., f interview with the president had not exactly satisfactory.

At first it had looked like the plan n work out beautifully. He would call at Hayden's office in a perfectly busine way just as any stranger might. Ha was the type of man who would resent i solicited on the golf links or at his ho the club. He liked young Havelock, w he had met through Arbuckle, becau was intelligent and interesting and h droll sense of humor—was good comp in short. And his sons and daughters Victor so much that no house part cruise seemed complete to them wit the young varnish salesman. But had Havelock taken advantage of friendship to press his business.

However, now that Arbuckle had gested that he go right to the presiden explain the delicacy of the situation solicit the business in a perfectly busi like way, why it seemed as though it to smooth out easily. But it did not. first part was all right; the presider ceived him, listened to his story, exan his varnished panels and watched him his demonstrations.

"All very interesting, Havelock, ver teresting indeed," said the president; you probably realize that changing nishes is a serious matter. Eleven ago our paint-shop force struck we changed varnishes and it took n six months to get the affair straigh out."

Of course Havelock couldn't pipe up tell the president that Arbuckle had care of the human-nature side of the lem and had got the men to a point they would not resent a change. He di feel free to drag Arbuckle into the sol tion at all.

His friendship with the president, with most men would have been a help, was a very serious handicap, he f as he sat looking across the broad covered table at that gentleman, a gressive type with gray hair and a p keen eyes, one of which seemed to "Business is business," and the other brief."

Havelock said as much as he dared the probable ease of switching to his nish and then he felt that he must re case.

"Well," the president had finally "just leave these panels with me an call Mr. Arbuckle in and talk the m over with him—very soon."

"Suppose I drop in on you in a we two, Mr. Hayden, and see how m stand?"

"No," said the president, "I'll writ when I'm ready."

Knowing—as does every salesman—h a prospect's "very soon" may mean time from fifteen minutes to fifteen with the odds about 93 to 7 on th teen years, Havelock felt anything happy as he descended in the squeaky elevator. Yet knowing the preside well as he did, he dared not pres point.

"Very soon!" he muttered. "It'll to be very soon."

"Wha's 'at, Mistah Hav'lock?" old Darky Dan, the elevator man, re ing the omnipresent quill toothpick the corner of his mouth.

Havelock started and then laughed

"Was I talking out loud, Dan? asked.

"Yes, suh, you shuh was. You-all hab fell in lub or else you's got money bank."

There was no enthusiasm in the ha!" with which Havelock responded affair was getting on his nerves. He in his prophetic soul that it would be m before he would hear a word from the dent. And meanwhile the folks a

would continue their irritating ban-
ir Why in the name of all that was
a e in varnish had he had to have the
l ck to go to Harvard with the pur-
as g agent of the C. M. & B.?

III

J STICE to President Hayden it must
b aid that while the elevator was carry-
'tor Havelock, Jr., down that after-
n e had made a note on his memorandum
e or the next morning, "Talk varnish
h rbuckle." But it so happened that
fr o'clock that afternoon it had been
e ary for him to leave for the West for
e ergency conference in connection
h ome labor troubles, and it was sev-
l ays before he returned. Meanwhile
e emorandum slip had been lost and
s oject of varnish had slipped the presi-
t mind.
W ks went by and Victor Havelock, Jr.,
t., some weeks patiently and others
i dly impatiently, depending a good
d n how much jollying he got at the
s about getting an order from the
N & B.
W at could he do? His hands were tied.
H red not go to see the president after
a e had said; and Arbuckle, who was
s npathy for him, dared not bring up
s bject lest it look like collusion.
F lly one morning Havelock found in
m il another long white envelope. Tear-
i iopen he found a carbon copy of the
te his father had previously written
n. Across the top in his father's bold
a were two words: "I repeat." And
r was a bold line drawn under the last
r ce, "The factory is still turning out
p arnishes." That was all, but it made
t, Jr., flush to the roots of his hair.
H put on his hat and left the office lest
n unthinking person get off another
m oke about getting an order from the
N & B. and he should lose his temper.
F alf an hour he rambled aimlessly, his
h 's challenge rankling his soul, until
f nd himself in an unfamiliar section
t city. He simply must get an order
fr he C. M. & B. or throw up his job
h away and admit that he couldn't hold
w a job with the Havelock Varnish
C any.
H looked round him in desperation as
b h searching for an inspiration. Across
t reet was a row of little shops—a bake
p a pawn shop, a delicatessen and an
e ishment whose sign announced, "Cos-
m Made, Sold and Rented." Havelock
fi l in spite of himself at the thought of
d g inspiration in that strange spot. As
t ned to make his way to the nearest
st ion his eye fell on a white wig with a
gl owing beard in the window of the
st ne shop. Hanging with it was a tat-
re suit and leaning in the corner was a
st old musket.
"I p Van Winkle—that's me," said
H ock. "It'll take me twenty years to
fi l bill of varnish to the C. M. & B.," he
ic l himself as he walked off down the
bl c. As he neared the corner he stopped
d nly. Over his face came an odd smile
a flickered uncertainly for a moment and
cr ystallized into a devilish twinkle in
s es.
"W hy not?" he demanded. "If he's a
m I win; if he isn't I lose, but I lose if
d 't. So here goes!"
H crossed the street and entered the
st mer's shop. A little old Hebrew wear-
g black skullcap and a pair of large
bl immed spectacles came ambling out
f ack room in answer to the summons
o e bell which jangled when the door
op ed.
"W hat can I do for you, mister?" he
as .
"C ou can rent me that Rip Van Winkle
st p there in the window for about two
da ."
"F ife dollars," said the Hebrew.

"All right, fife dollars it is," said Havelock, "but hurry up."

Six minutes later Victor Havelock, Jr., left the old Hebrew's shop with a bundle and a rusty musket.

Less than half an hour and a South-Side hack drew up in front of a Loop office building on the top floor of which was the studio of one of Chicago's best photographers.

An hour and fifteen minutes later the same hack drew up in front of the little South-Side costume shop and Victor Havelock, Jr., alighted and entered, returning the rusty musket and the bundle.

All this happened on Wednesday morning. On Friday morning President Hayden of the C. M. & B. R. R. found upon his desk a flat package marked "Personal." Taking out his gold pocket knife he cut the string and unwrapped the package. Between two pieces of corrugated cardboard was something flat wrapped in tissue. He tore off the tissue rather curiously and opened a folder and beheld a striking full-length picture of Rip Van Winkle. In one hand he grasped his rusty musket; in the other he was holding what looked like some sort of an order blank.

Bewildered, the president glanced sharply at the face half hidden in the heavy white whiskers. Where had he seen those eyes before? As he turned the picture to get a better light on it a card dropped out. He stooped and picked it up. There was writing on it:

"A picture of Victor Havelock, Jr., receiving his first order for varnish from the C. M. & B. R. R."

For just a minute that business-is-business, be-brief expression came into the president's eyes. Then he threw back his head and roared, laughed until the clerks in the general passenger agent's office next the president's wondered what had happened to the road's ordinarily austere president. When the roar had subsided to a chuckle the president turned to his bewildered secretary.

"Ask Mr. Arbuckle to step downstairs, please, Bentley."

IV

"MR. ARBUCKLE of the C. M. & B. wants you to call on him right away," said the switchboard operator to Victor Havelock, Jr., that Friday morning when he entered the office at eleven o'clock. At the moment Mr. Carrington happened to be in the outer office.

"Better hurry over, Vic. Maybe he's got a ten-barrel order for you," he said, grinning.

Havelock was too excited to make reply. He hurried out, sped down the corridor and stood impatiently with his thumb glued to the elevator button. Fifteen minutes later he almost literally tumbled out of a taxi in front of the C. M. & B. general offices, handed the bewildered chauffeur a dollar bill and a "keep the change," and hurried into the dingy little elevator.

"Hurry up, Dan! I have an important date with Mr. Arbuckle," he blurted.

As the little car squeaked up the four stories Havelock realized that he was trembling foolishly. He realized also that in the next five minutes his whole future would probably be decided. If he had won out—if the president had fallen for his stunt solicitation—he knew he would stick with his father's company and some day probably occupy his father's position as president. On the other hand, if he had lost he would have to throw up the sponge and start out looking for a new job; to stay would be intolerable.

Two minutes later he stood before Arbuckle.

"Mr. Van Winkle, I believe?" said Arbuckle with a twinkle in his eyes. "Well, Mr. Van Winkle, we have a little varnish order for you." He held out a yellow purchase order.

Havelock looked at it and sank into a chair.

"Arbuckle, old sport," he finally managed to say, "Mr. Van Winkle thanks you and your president and the whole C. M. & B. Railroad from the bottom of his heart." Then, a sudden idea striking him: "Say, will you do me a favor and give me another order for just two more gallons—a gallon of rubbing and a gallon of finishing? I'll tell you why later.

"I want to hurry now and get back to the office before Mr. Carrington goes out to lunch."

Arbuckle good-naturedly instructed his assistant to make out the desired order, signed it and handed it over.

Havelock grasped his hand in a hearty thank-you squeeze and bolted out the door.

Just eighteen minutes later he walked into Carrington's private office.

"Well, did you get your order?" asked Carrington.

"I did," replied Havelock, handing him a yellow C. M. & B. purchase order blank.

Carrington looked at it and burst out laughing.

"That's a hell of an order!" he replied. "Two measly gallons—a gallon of finishing and a gallon of rubbing! That's a good one! Oh, ho, ho, ho! Gordon! Come in here and see the order our president's son has pulled out of the C. M. & B."

"Well," demanded Havelock as Gordon Williams appeared in the doorway, "what do you fellows expect? Don't you suppose a railroad has to give a new varnish a try-out before it buys it by the barrel?"

Williams looked at the two-gallon order and then at Carrington and they both burst into roars of laughter.

"Two measly gallons!" gasped Williams.

"Two measly gallons!" echoed Carrington.

When both men's faces were streaming with tears over the C. M. & B. order, for which he had been working for months, Havelock quietly drew the other purchase order blank from his pocket.

"But Arbuckle said he felt so sure the sample would be all right that he gave me this order." And he handed out the other order.

Both men gasped. Fifty barrels of rubbing varnish and fifty barrels of finishing varnish!

On the following Friday—just a week later—the morning mail contained the following letter to Carrington on the president's private stationery:

My dear Mr. Carrington:

Things are shaping up in such a way that I believe it will be advisable to take my son into the home office as secretary of the company.

I have long had this in mind, but I have considered it proper that he should first prove his ability to make good for the company on his own responsibility out among strangers. I believe you will agree with me that he has demonstrated that he has the sort of qualities that will make him valuable to the business.

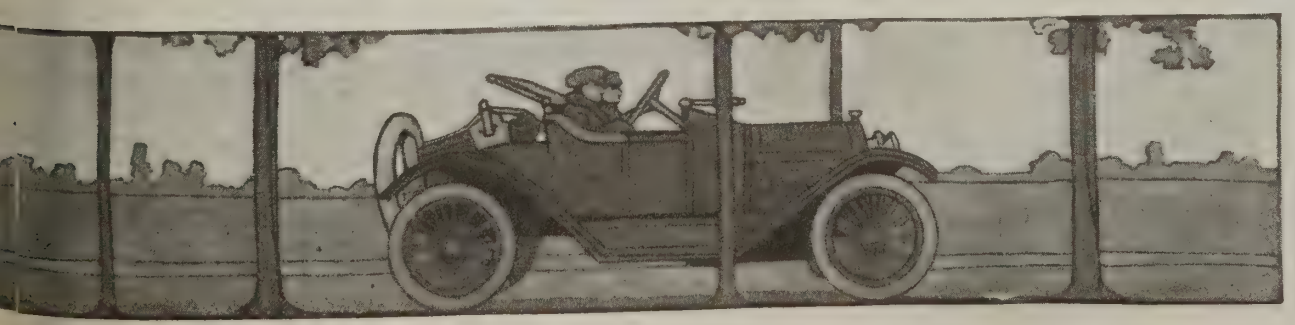
I will ask you therefore to arrange to let him come East as soon as he can conveniently clean up such matters as require his personal attention to close.

Very truly yours,
VICTOR HAVELOCK,
President.

"Now what do you think of that?" sputtered Carrington, walking into Gordon Williams' office and tossing the letter down in front of him.

"Isn't that just like Boston?" he demanded as Williams finished reading the letter and looked up. "When we get a good thing they always have to come along and grab it away from us!"

"Gosh!" said Williams, leaning back in his chair and smoothing back his cherished pompadour as he always did in time of stress. "Won't Longstreet be sore!"



"$1,000 Saved!"

"Last night I came home with great news. Our savings account had passed the thousand dollar mark!

"A few years ago I was making $15 a week and it took every cent to keep us going. Then one day I realized why I wasn't being advanced—I couldn't do anything in particular. I decided right then to invest an hour after supper each night in my own future, so I wrote to Scranton and arranged for a course of special training.

"Why, in a few months I had a whole new vision of my work! An opening came and I was promoted—with an increase. A little later another raise came—I could save $25 a month. Then another—I could save $50 each pay day. So it went.

"Today I am manager of my department. We have a thousand dollars saved—and there is a real future ahead!"

For 28 years the International Correspondence Schools have been helping men and women everywhere to win promotion, to earn more money, to have happy prosperous homes, to know the joy of getting ahead in business and in life.

You, too, can prepare right at home in spare time for the position you want in the work you like best. All we ask is the chance to prove it. Choose your career from this coupon and mark and mail it now.

ATHLETICS FOR COLD CASH

(Continued from Page 23)

I might win in the classrooms of the medical school. To that extent I was confidently and unblushingly expecting to draw dividends on my physical prowess.

On the day I arrived in Philadelphia I had only twenty dollars in my pocket, and I was fully aware that to get through the medical department of the university would require an expenditure of at least one thousand dollars yearly. The discrepancy between my resources and my needs did not cause me any worry, however. Had I not begun my career at DePauw under equally discouraging circumstances? The ease with which I had financed myself through my academic course made me confident that I should have no difficulty in working my way through the medical school. In a big city like Philadelphia there must be lots of lucrative jobs for a chap with a good business head, a bachelor-of-science degree and a pair of strong arms, even if no opportunities were to be found in the college itself.

I paid my registration fee and made an arrangement with the school authorities whereby I was to pay my laboratory and tuition fees in easy installments. When I explained the situation to them they were sympathetic and promised to help me in finding employment.

It was the very next day that I was approached by a little stockily built man, who introduced himself as the manager of the football team of a Pittsburgh athletic club. He had seen my work on the DePauw eleven and had heard of my performances in the weight contests at Chicago. Coming presently to the point, he offered me two hundred dollars a week and expenses to go to Pittsburgh and play guard on his team for seven weeks.

Those were the days when games between first-class professional football teams drew big crowds and earned enormous sums for their promoters. I knew that the players received big salaries, but I was somewhat staggered by the financial inducement he offered me. Nevertheless, I indignantly turned down his offer.

"I play professional football!" I exclaimed. "Say! You've got a nerve to make such a proposition to me!"

"Think it over, young fellow! Think it over!" he rejoined imperturbably. "Fourteen hundred dollars for seven weeks' fun ain't to be sneezed at. You don't have to decide offhand. I can keep the place open for a week. Here's my card. In case you should change your mind you can wire me, collect."

I had no intention of changing my mind, but I put his card in my pocket. A few days later football practice began at the university and I went out with the scrub team and helped beat the varsity eleven. After that game the coach picked me out and had quite a talk with me. His words and manner caused little thrills of joyous anticipation to shoot through me. When he left me I knew that my gridiron future at Pennsy was assured. That is to say, I thought I knew. It wasn't long afterward when my hopes were nipped in the bud by the verdict of the athletics committee pronouncing my doom.

In the midst of my despair my hand suddenly came in contact with the card of that Pittsburgh football manager, and after staring at the bit of pasteboard for a while I began to do some deep thinking. That afternoon I went to the dean of the medical school.

"I want a seven weeks' leave of absence," I told him. "I have a chance to go to Pittsburgh and make some big money—enough to pay my year's expenses and leave a comfortable balance besides."

He looked at me sharply.

"How do you expect to make all that in seven weeks?" he asked. And when I explained a shocked expression came to his features. He was a noted amateur athlete himself and had quite a wide reputation as a boxer.

"Professional football!" he exclaimed deprecatingly. "Are you sure that you want to do it?"

I assured him that I had fully made up my mind. I had thought it all out and had come to the conclusion that the viewpoint that in athletics the words "amateur" and "gentleman" were synonymous was all wrong.

"If I lead a clean moral life and always play the game squarely and honorably shall I be any the less a gentleman because my muscular strength on the football fi a means of paying my way through sch I argued.

He shrugged his shoulders.

"What about your class work?" he

"I'll make it up when I come bac you'll grant me the leave of absen guarantee that I won't be behind studies at the end of the term."

Though it was obvious from his dem that he thought I was making a gri mistake, he gave his assent. I telegr immediately to the Pittsburgh man, whether his offer was still open, a ceived a prompt response ordering come on at once and report for pract

Until I went to Pittsburgh I fancie I had played some strenuous footbal ing my four years on the DePauw e Our annual game with Purdue had a been characterized by the local pr pretty near the limit of organized ph violence. But long before my first s as a professional was over I had co regard those contests of my old school as only a shade more boisterous tha dledywinks. My new team mates an men we opposed on the gridiron wer huskiest, stubbornest, most aggr bunch of veterans that I had ever se action, and the fact that they were paid for their services certainly did n tract from the enthusiasm with which bucked the line. Without prejudice I ture to say that our eleven and any the professional teams that were against us could have romped throug best varsity formation Yale or Harvar ever produced.

When I returned to Philadelphia a end of the seven weeks I brought back me three broken spareribs, a split lip check for fourteen hundred dollars s by the president of the club. I too check to a local bank and opened a count. Then I wrote my own check fo hundred dollars to the order of the versity in payment of my tuition fee oratory fees, and so on, and also mad six more checks for smaller amoun defray the cost of my board, lodging, and various other items. They wer first checks I had ever signed, and the and satisfaction I derived from transactions went a long way toward r ciling me to the fact that I was nev wear the varsity letter.

I was still feeling pretty good wh couple of days later I received word I was wanted in the dean's office. I there confidently enough. I recall there was an idea in my mind that the of the medical department might wa have a chat with me about my footba periences in Pittsburgh. But as soon saw his face I sensed that something wrong.

Without any preliminaries he picke a slip of pink paper from his desk.

"I believe this is your handwriting said grimly.

It was the check for five hundred d I had drawn to the order of the unive

"Of course it's mine," I rejoined. "W the matter with it?"

"Nothing much. Only the bank inf me that it is no good," was his sar response. "I thought that perhaps might feel as though you would like to an explanation."

I found out later that the four hundred-dollar check I had received fo services on the Pittsburgh football wasn't worth more than the paper on w it was written. The man whose signa it bore had overdrawn his account an club itself was about to go into the h of a receiver. Not only did I fail to r any money out of my first venture into fessional athletics but I was indebted t amount of $13.80 for protest fees on h checks I had drawn.

I could feel my hair turning gray as flected on the painful position I wa I was penniless, in debt and seven w behind in my studies. At that bitter ment I would have been perfectly willi head a movement to insure the purit American athletics by wiping out fessionalism.

Through a friend I learned of a man was looking for massage treatment. I to see him and managed to convince that I was the chap who had put the

(Continued on Page 137)

(Continued from Page 134)

nsage" in the dictionary. He engaged e ir six treatments a week at two dollars r eatment, and existence began to look lie less stale and unprofitable. Then et over to the Houston Club and found ien young men who were willing to let ive them boxing and wrestling lessons re dollar a lesson. That, of course, ipl considerably in the solution of my o m.

I he meantime I began to cram furiously n esperate attempt to catch up with the r of my class. For the rest of that term ter had more than three hours' sleep . I was at my books until two at d and I was up again at five each morn- . It was a hard grind, but I had the action of keeping my promise to the oy getting through the examinations th safe margin.

A er college closed in the spring I went t o Woodside Park, a big summer- n ment resort, and landed a job on the a force. I got that position on the e th of my reputation as a football y, and when the manager learned that v also a medical student he offered to double by doing duty on the first-aid r This combination brought me fifty l s a week, and as the job lasted right the time school opened again I was le o save nearly five hundred dollars. t this sum and what the boxing and e ing lessons and the massage treat- n brought me I not only succeeded in y g all my debts by the end of the first a ut had enough left over to cover half th expenses of my second year at college. I ust admit that I could probably have d my way through the medical school th it playing any more professional foot- ll nd considering the discouraging ex- ri ce I had met with on my first venture o he branch of sport it might be sup- se that I should have been unwilling to v nything more to do with it, or at all e that I should have balked at signing th another Pittsburgh organization. h in the fall of my second year at Penn- v nia, however, I received an offer from e uquesne Country and Athletic Club Ptsburgh to play guard on their crack v for two hundred and fifty dollars a ell hesitated only long enough to assure vf of the financial soundness of the ib nd its willingness to pay me in cash tl end of each week.

I ent again to the dean and asked for o er leave of absence. I pointed out to n at I had already crossed the athletic it on. The brand of professionalism is n me for the remainder of my days d ven after I left college I could never p to enter the field of amateur sport. e fore, I argued, I might as well turn y sical strength and skill into money. h I began to practice medicine I was e to have a hard struggle for the first w ears and if I could accumulate a few o and dollars as a reserve fund it would d ubtedly be a big help.

H agreed with me, regarding me now, I p se, as beyond redemption, and not l hat year but for the remainder of my li e course I played professional football r e entire season, burning the well- o n midnight oil in order to keep up with y ass work. At the end of my second a t the medical school I had two thou- n dollars in the bank and no bills out- a ing against me.

O the Duquesne eleven I managed to a quite a reputation for myself and the e season I received offers from several h clubs. I signed with the Philadelphia A lub at a salary of three hundred dol- rs week—and it was real money. The l ing year I joined the famous Franklin ty All-Star team at the same figure and c ed an additional five hundred dollars a onus when we won the tournament r e professional championship of Amer- a Madison Square Garden, New York it

A together I not only made enough out a letics while at college to cover all my e ses, but when I was graduated I had a n balance of nine thousand five hundred ll s.

F m a financial standpoint at least it ill e admitted that professionalism cer- ir had not been a bad thing for me. n that my medical education had not ff ed from my work on the gridiron e e evident when I took my degree. h school records of that year will show a I was awarded the Saunders prize of n e hundred dollars gold for proficiency in n e branch of surgery and that my average rating at the final examinations was ninety-two per cent.

What had I lost? Those carpers for purity in American athletics who look upon the professional as little less than a thug will hold that my moral and ethical standards must have been blunted—if not irretrievably shattered—by my long association with the mercenaries of sport, that a fellow cannot go through the mire without getting some of it on him. Let me tell you, however, that my associates in those professional organizations were on the whole as fine a lot of fellows as I could have wished to meet.

"Treat 'em rough" was their slogan when they went into action, and they behaved like Apaches while they were bucking the line. But when they had removed their nose guards nobody would have suspected from their conversation and manners that they were tainted with professionalism. I have known college elevens whose members were not one bit more entitled to the designation of "gentlemen," even if they could boast that they were honest-to-goodness amateurs. As a matter of fact, many of these salaried players were college men who had worn their varsity letter in their day. Some of them—like myself—had frankly gone into the game because of the big money there was in it; others had joined our ranks because they were too fond of the gridiron to give it up permanently when they were graduated and eagerly embraced this opportunity to continue playing first-class football.

So far as that part of my career as a pro which was spent on the football field is concerned, I am quite sure that it did not demoralize me or even have a deleterious effect on my table manners. As for my later experiences as a professional wrestler—well, possibly that—as Mr. Kipling is prone to remark—may be another story. I have met champions, near-champions and would-be champions of catch-as-catch-can who were men of culture, education and integrity, but I will not deny that if after nearly fifteen years of mingling with the mercenaries of the mat I am still able to feel at home in a parlor I owe it more to the durability of the early training I received from my mother than to my more recent environment.

II

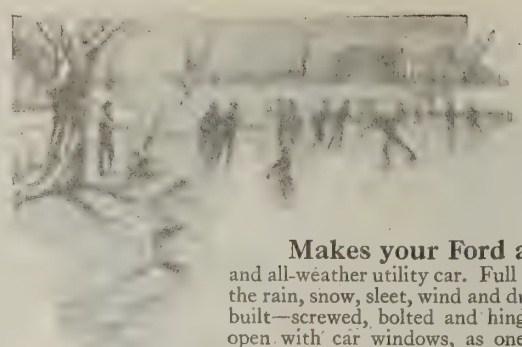
ON THE day that I became legally entitled to attach the letters "M. D." to my name I supposed that I was permanently done with professional sports. Though I had learned from experience that there was big money to be made in the game, I had no desire or intention to follow a football career. After losing my amateur standing athletics had never meant more to me than a means toward an end, and now that I had attained that end I was determined to devote all my time and energies to my chosen profession of medicine.

I went out to the city of Seattle, Washington, opened a bank account there with the comfortable nest egg my athletic activities had enabled me to set aside and hung out my shingle.

I had selected that thriving seaport of the Northwest as the place to make my start on the advice of some of my friends who convinced me that a young physician was likely to find more opportunities in that section of the country than in any of the big Eastern cities. I must confess, however, that my arrival in town did not cause any great excitement among the population. Because I had been a star on some of the big professional football teams of the East, the local newspapers gave me a write-up on their sporting pages, but except for the reporters my waiting room remained for some time barren of visitors. In all probability I should have starved during those first few months if it had not been for my reserve fund.

I had made up my mind, though, not to use up more of my savings than was absolutely necessary to keep me alive, and when the local university offered me the post of physical director and supervisor of its football and other athletics I eagerly accepted. The salary was only fifteen hundred a year, but in those days that was sufficient to keep the wolf a good distance from the door, and as the faculty did not object to my continuing my private practice I considered myself very fortunate in making a connection which not only relieved the strain on my bank account but added considerably to my prestige in the community.

The following year I was offered the position of physical director of the Seattle Athletic Club. This meant an additional



It's Winter Sport, Itself—to have a Koupet Top

A ride in your Ford—in the rain, wind, snow, sleet, or cold—is a frolic when you have the protection of a Koupet Top.

Makes your Ford an every-day comfort

and all-weather utility car. Full and perfect ventilation, but shuts out the rain, snow, sleet, wind and dust. The Koupet Top is substantially built—screwed, bolted and hinged together. Rides quietly. Doors open with car windows, as one. Glass panes in doors slide open, half-width, for easy signalling. Has a score of superior features.

The Koupet Top is a very great value at a very moderate price

—see it, at your dealer's. Price only $55.00 for Roadster, $75.00 for Touring Ford, F. O. B. Belleville, Ill., with Chart Diagram for setting up and mounting on your Ford.

Your dealer will quote you prices delivered and installed. If you do not know his name—write us. Also ask for Koupet Top Illustrated Book.

SHOES

WE HAVE BEEN MAKING THE Bates SHOE GOOD SHOES SINCE 1885

fifteen hundred a year and would not conflict with my work at the university, so I did not refuse. I resigned both jobs, though, a couple of years later, when my private practice had picked up to such an extent that I felt I could afford to devote all my attention to it. I was still loyal to my chosen profession of medicine, and at that time nothing was further from my thoughts than to permit my proficiency in sports to stand in the way of my career as a physician. I say nothing was further from my thoughts at that time. Later, to be sure, when the belt of the world's wrestling championship was dangled seductively before my eyes and whispers of fame and fortune to be won on the mat tempted me to forget my vows to Æsculapius—but that is jumping several paragraphs ahead of my story.

For the next few years I gave all my time, thoughts and energy to my practice, which in spite of the health-conducing qualities of the Washington climate continued to grow most encouragingly. My balance at the bank increased by leaps and bounds. I made several profitable investments in local real estate and became quite a respected and influential member of the community. Few people in those days would have had the temerity to address me as "Doc." I was "Doctor" in full, even to my most intimate friends. And to add to my state of well-being I had won for a bride the daughter of one of our most prominent citizens.

Then came the great financial panic of the Roosevelt Administration. I found my resources suddenly cut off. The banks were closed down. My patients began to evince an alarming tendency to ignore the please-remit epigram I appended to their monthly statements. Some of my most valuable real-estate holdings were threatened with foreclosure.

When I was physical director of the Seattle Athletic Club I had given a great deal of attention to training the members in the art of wrestling. One evening while I was on the mat with one of my pupils a burly stranger had visited the clubhouse. He was a veteran grappler himself—a professional—and had been one of the trainers of the great Gotch. After standing by watching my work for a while this visitor suddenly began to peel off his clothes, and expressed a desire to try a bout with me.

He was out of training and his features showed signs of recent dissipation, but just the same when I laughingly accepted his challenge I discovered that I had a pretty tough customer to deal with. It took me fifteen minutes and all the tricks I had in my bag to get a fall out of him, and I was on the defensive a great deal of the time. Nevertheless, when he got to his feet my opponent was enthusiastic over my victory.

"This is the first time in my life I have ever met an amateur who could stay with me for fifteen minutes—to say nothing of throwing me!" he declared. "Doc, you've got the goods! You're as strong as Jenkins, as speedy as Gotch and as clever as Farmer Burns. If I know anything about the mat you're the cleverest man of your weight in the country to-day. If you want to become a professional I'll guarantee that after six months under my training you'll be able to beat them all."

Of course I grinned at this extravagant praise, which I attributed to a desire on his part to rehabilitate himself in his own esteem, and I made it clear to him that I had no yearnings in the direction of a professional catch-as-catch-can career. But when, during the financial panic, this man came to my office one day and announced that he had a proposition to make to me I did not refuse to hear what he had to say.

"There's a club in Vancouver, British Columbia, which is looking for a good man to match against Jack Carkeek, the British champion," he began, "and I've picked you as the boy for the job."

I shook my head in emphatic negation. I had heard of Carkeek, of course. His name and achievements had been appearing on the sporting pages of the press for nearly three decades. He had come into the wrestling game from the blacksmith's forge and at one time had held the world's championship. The defeats he had met in the course of his long career on the mat he could count on the fingers of one hand. He had the reputation of being the craftiest and most scientific wrestler in the business, and though he was now past his prime I had serious doubts as to my ability to make any sort of a showing against him. Besides which I had no intention of lowerin dignity as a physician by going int arena as a paid gladiator.

"Come on, Doc—just this once," visitor urged when I voiced these o tions. "From what I've seen of your I'm willing to bet my roll that you ca only stay with Jack for the time limi can pin him to the pad. You've got and strength in your favor, and you clever as he is. The terms are to be, w to take all, and it's a chance for y make some easy money—to say nothi the big rep you'll make for yourself."

The prospect of adding to my reput in the sporting world was not an argu which carried much weight with me, was quite sure that if I did allow mys be persuaded to go into this thing it going to be my first and last appearan the arena as a professional, no matter the outcome. But my tempter's refe to "easy money" did interest me. my bank account tied up—if not v out entirely—by the panic, and my r holdings in jeopardy, a chance to get of some ready cash looked rather goo

"How much do you suppose there w be in it for me?" I found myself aski

"Well, the Vancouver Club is willi give sixty per cent of the gate receip the winner, and the event is sure to a whopping big crowd," my visitor re "Speaking conservatively, Doc, I'd that there ought to be at least three sand dollars to be divided between yo me. As your manager and trainer of c we'd split the purse fifty-fifty."

"Fifteen hundred dollars for a few utes' work!" he went on eloquently. "have to roll a powerful lot of pills, D make that amount in your business. then, of course, there's no limit to the you can gather in by betting on you The Carkeek fans will give odds and ought to make a big clean-up."

I did not bet on myself. In fact, w finally consented to sign the articles I nestly advised all my friends not to v any money on me, for notwithstandin assurances of my manager I was not sanguine as to my prospects of succes would be my first public contest agai professional, and I don't mind admi that I was feeling pretty nervous rig to the moment I stepped into the rin

The match took place three weeks before an audience of more than thousand wrestling fans. When I siz my opponent as we faced each other o padded mat I was mighty glad that stolen time from my medical practi put in several hours of hard training i gymnasium and on the road every d the past three weeks. He was sli shorter than I and appeared a bit m bound, but it was obvious that he w the pink of condition, and he looked p formidable. His self-possessed, conf manner and the cool, appraising w which his hawklike eyes looked me did not add to my peace of mind. I been warned that his strongest poin an unerring and almost uncanny abili find his adversary's weak spot. His m ods were not of the rushing, smashing He preferred to work his man out, loc his vulnerable point and playing pati and persistently on it before he tried fall. It might take him time to dis his opponent's pet weakness, but find would eventually, I was advised, if he given a chance.

I had made up my mind that in my he wasn't going to be given a chance. tended to adopt rushing tactics fro start and to keep him so busy throug that he wouldn't have much time calm and leisurely study of my anato defects. So as soon as the gong sou I sprang out of my corner as though I been shot from a catapult and hurled self on him. In less than a minute we both off our feet and down on our k struggling desperately for position. then I managed to get behind him.

There were no breathing spells in bout, none of the long periods of ina and fiddling that sometimes make wres matches so slow and uninteresting to spectators. It was a hammer-and-t rough-house match from the start to finish, and though in that kind of fast my youth and speed gave me all the vantage, the old boy's cleverness and g ness enabled him to put up a rattling fight.

No sooner was I behind him th started after foot and leg holds. I had

(Continued on Page 141)

(Continued from Page 138)

ll oubled up and then all stretched out a a dozen times, but he always succeeded n ipping out of danger. Once I got a o. crotch hold and lifted him above my e., but I could not down him. At anthr time I had a half nelson and arm hold n im, reinforced with a leg hold, a comirtion which I thought was surely going o nish him, but he disappointed me by lig ing the leg hold, and after a futile tnpt at a spin managed to twist flat. Iwas so fast and cool-headed and kept rking away with such marvelous bursts f rength that pretty soon he had me l zing like the exhaust of a steam engine. esently he stopped playing possum and, ning me napping, took the aggressive u as a flash and succeeded in getting e id me. That brought his friends to ir feet yelling madly. They felt sure n the old lion had wakened and was b t to come into his own. But he wasn't b to keep the position for more than a seconds. By a dexterous twist I turned i on his side and as his feet went up lig ed my arm between them for a crotch o. I lifted him halfway from the mat n then grasped my under arm with the a that was through the crotch. It was adly grip as the arm hold made it imo ble for him to bridge and, though he rgled so gamely that I had to jump him w with all my weight before his massive elders touched, I scored my first fall. Vin I heard it announced that the official n was only eleven minutes and thirty-v seconds I could hardly believe my ears. t emed to me that we had been on the nfor several hours.

'iat first fall did not decide the match. 1 is a best-two-out-of-three contest. But hesecond bout ended in my favor less hi seven minutes after the gong sounded. 'h veteran's forty-five years began to tell n im almost as soon as we had got into cn again, and though he remained game g up to the last moment he was so worn u at the fast pace at which we were batli that when finally I got a half nelson n im and stood him on his head it was ll ver with him. A couple of seconds at the referee's hand was on my shoulder n the shouts of the spectators were hail-ngthe first triumph of my career as a ressional gladiator of the mat.

'hose eighteen minutes and thirty-five eads of wrestling brought me exactly ixen hundred and eighteen dollars, and vuld have received double that amount I adn't agreed to split with my manager. t rtainly did look like an easy way to nae money, but just the same I thought vs through with the game. My highly lad manager and trainer thought difritly, though. He became almost tearful wh I insisted that I would never go on hi nat again as a professional.

You can't quit now, Doc!" he proesd. "You can't possibly do it! Why, oc here! Just run your eye over this elram I received to-night from Gotch's nager! The big fellow is willing to come o battle especially to give you a match."

A match with Gotch!" I gasped. "Suferg cats! You don't—you're not sugeng that I can throw the champion?"

ain't sure that you couldn't do it," wahis flattering response. "But you won't ha to get a fall out of him this time. That vi come later, Doc—after you've had oiderable more experience and training. Th will be a handicap match. We'll make a de bet of five hundred dollars and a ue of seventy-five per cent of the gate reipts that the big fellow can't throw o twice in sixty minutes. That'll mean bnoney. What you've won here to-night wi be chicken feed compared to what you argoing to clean up next time."

felt my resolution weakening. After all I argued with myself, a chap could rele from the game after his second conte just as well as after his first. And wh presently I learned that the other twnty-five per cent of the gate receipts wa to go to the loser, so that even if I lost my five-hundred-dollar side bet with the wod's champion I wasn't likely to be out of ocket, I decided to take a chance.

hus it came about that a few weeks lat the great Gotch and his retinue arrivd in Seattle, and my name was linked wi his in flaring headlines across the front pas of the local newspapers. We hired thopera house for the scene of the contest, an when the box office opened there was su a rush for seats that the first day's adance sales amounted to fifteen hundred dors.

I shall not attempt to give a detailed description of that match here. It is wrestling history that the world's premier heavyweight catch-as-catch-can exponent of that period failed to pin my shoulders to the mat within the time limit. Not only was he unsuccessful in his attempt to throw me twice, but at the end of the hour he was still vainly struggling in an attempt to score the first fall. The referee awarded me the decision and I found myself four thousand dollars richer as a result of that sixty minutes' work.

After the bout the audience called on me for a speech, and I advanced to the footlights and announced that this was positively my last appearance as a professional wrestler. I had met the champion and had proved my ability to stand up against him, and now, I declared with all the eloquence at my command, I was satisfied to settle down permanently to the practice of my beloved profession of medicine and never give another thought to sports of any kind, except possibly as a means of keeping myself in good physical condition.

I fancied I observed cynical smiles on the faces of some of the young men at the reporters' tables as I shouted this statement across the footlights, but on reflection I concluded that I must have been mistaken. Surely the astute gentlemen of the press could be relied on to discern when a fellow was thoroughly in earnest.

A day after the match a well-known sporting man from New York visited me at my office and laid a roll of yellow-backed bills in good United States currency on my desk.

"Count it, Doc," he said. "I think you'll find there's twelve thousand dollars in that wad. I'm offering it to you flat for your signature to a six months' contract."

When I asked him to elucidate, he explained that he wanted me to go back East with him and get in shape to meet Gotch again on even terms for the championship. He did not contemplate sending me against the champion right away. I was to clean up all the other big wrestlers in the country first by way of practice. He said he would have no trouble getting matches and money for me—that twelve-thousand-dollar roll on my desk was only a sort of retaining fee—and with the experience I should get by taking on all comers within the course of the next six months he would guarantee that I should have an absolute cinch in wresting the championship belt from Gotch the next time we came to grips.

I emphatically turned down his offer and sent him away in sorrow. But when presently others began to dangle that championship belt before my eyes and first-rate and second-rate wrestlers all over the country bombarded me with challenges by telegraph, mail and through the columns of the press, denouncing me as yellow when I refused to pick up their gauntlets, I found myself—to my dismay—gradually weakening under the pressure.

It was not only the money now—though the more I looked into that phase of the matter the more convinced I became of the big financial possibilities there were in the game. It was the mat itself that was calling me—beckoning to me with an insistence I could not resist. I had played professional football at college solely for the cold cash. I had wrestled at the Vancouver Club with no other motive than to win sixty per cent of the gate receipts. I had measured my strength and skill against the mighty Gotch with nothing else in view but the dollars and cents the match might bring me. But now there was something else. The championship fever was in my bones. The lust for conquest was raging in my veins. At that moment and for the first time in my life since I had run away from the farm to equip myself for a medical career the laurels that were to be won in the arena of sport meant more to me than any prestige I might win as a physician and surgeon.

So there came a day when I closed my office, put my shingle in storage and went out into the world, an open and avowed professional exponent of the art of catch-as-catch-can. How soon that day came after my speech to the audience at the opera house I am ashamed to tell.

I took on the small fry of the wrestling fraternity first. Their impertinent taunts goaded me into giving them attention. And after I had disposed of them in short order I went after the big fellows.

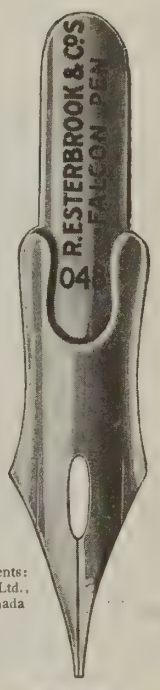
In the course of the next fifteen years I fought and won more than four hundred battles on the mat. I sat triumphantly

EsterbrooK Pens

For Hard and Constant Use

Over sixty years' experience in making pens that write well all the time goes into every Esterbrook Pen.

No. 048 is the most popular and the most used pen in the world. Wherever hard work is required of a pen you find the Esterbrook Falcon Pen No. 048. It is made of finest steel, especially processed to produce a smooth writing, flexible yet firm pen. The design is adapted to meet a great variety of pen needs.



Ask your nearest dealer for samples. 15c a dozen, assorted or of your favorite pen.

BOSTWICK WEAR

How much are YOUR Noon-hours worth?

Of course you don't want *work* for your noon-hours. Without that period of rest and relaxation, your day's work would lack the verve and "go" which you want to put into it. Neither would Mr. B. K. Urmston, of Pennsylvania, consider sacrificing his noon-hours, but he has found for them a form of *recreation* that pays him

$82.00 Extra in One Month

When the men are gathered together after dinner, discussing affairs of national and world importance, he joins the discussions. Every issue of *The Saturday Evening Post, The Ladies' Home Journal* and *The Country Gentleman* contains vital material on every big subject introduced, so he finds it easy to obtain subscription orders.

More Money for You

You, too, can make your noon-hours, or any other spare hours during the week, bring you steady profits. We need more representatives everywhere, and will pay liberal commissions and generous salaries for easy, pleasant work with permanent ever-increasing returns.

The Parting

LONG before that boy of yours shall finally go out to make his own way he has started to *leave home mentally*.

At this vital period, especially now at this glad Christmas season, you can do Your Boy no greater kindness than to put into his hands ***The American Boy,*** the one all-boy magazine that supplements home and school as friendly companion and wise counsellor of more than 500,000 spirited American boys. Without preaching, without moralizing, but through live, healthy, clean and intensely interesting stories, ***The American Boy*** gives boys a previous understanding of the world they can get in no other way.

More than ever before ***The American Boy*** for 1920 has been planned to entertain and develop *your boy*. THIS Christmas gift is the QUICKEST to buy, EASIEST to send, SUREST to please, CHEAPEST in the long run. Repeats itself every month.

THE AMERICAN BOY

"The Biggest, Brightest, Best Magazine for Boys in All the World"

Give yourself an idea of the sparkling quality of the features that will make ***The American Boy*** entertaining and helpful. No greater exponent of the joyous outdoors exists than Enos A. Mills, naturalist, lecturer and "Father of the Rocky Mountain National Park." Every month in 1920 he will delight ***The American Boy's*** readers.

"Boys Who Used Their Brains" is a fascinating series about boys who have overcome handicaps and won success. Inspiring and helpful to any boy.

Departments on fine, helpful hobbies.

Boys rarely get early in life a clear idea of the world as it is, to help them begin to plan their way. So ***The American Boy*** will publish articles that explain government and public affairs: that will help your boy find where his abilities lie: that clearly define the relation of his school to later life: and many others that will aid in making him strong and clean-hearted as he enters manhood.

→ Prof. Brander Matthews of Columbia, says: ***"The American Boy's*** fiction tends to inculcate independence and self-reliance. It shows the value of ***character*** as well as cleverness. It would help a healthy boy become a healthy man."

astride the prostrate forms of Turkish Terrors, Russian Bear-cats, Greek Lions, French Goliaths, Unbeatable Bulgarians, and various other distinguished foreign gentlemen with bulging biceps and unpronounceable patronymics who visited our hospitable shores to demonstrate their more or less invincibility, and I nipped in the bud the ambitions of countless native aspirants to the championship title.

I was never able, though, to realize my own ambition to pin the powerful shoulders of Gotch to the pad. I made three desperate attempts to wrest the title from him, but each time I succumbed to the torture of his famous and deadly toe hold. He, however, was the only man in the game whom I was compelled to acknowledge as my master while I was in my prime, and after his retirement I stood at the very head of my new profession.

It was a profitable business from the money standpoint. Out of my second match with Gotch, though I received only the loser's end, I realized seventeen thousand five hundred dollars. There were few first-class bouts I took part in which did not bring me from five to ten thousand dollars, and even when I appeared in the arena against the second-raters I rarely failed to clean up at least a couple of thousand from the side bets and gate money.

Then in addition to the revenue I derived from my own matches there were other ways of making money. My prestige in the sporting world and my knowledge and experience brought me some lucrative opportunities. Out of the famous match between Gotch and Hackenschmidt, for instance, I made twenty-three thousand dollars. No, I didn't get it by betting on the event—at least not by betting in the ordinary way. Another fellow and I promoted that match, and after doing some shrewd figuring we guaranteed the principals and the club a certain flat sum with the understanding that we were to have all that was taken in above that amount. The gate receipts proved to be far beyond our fondest expectations and there was a surplus of forty-six thousand dollars to be split between my partner and me.

During the latter part of my career I have also received some pretty substantial fees for training and advising other noted wrestlers, and even the sums I have earned by refereeing some of the international tournaments have not been insignificant.

Altogether it is safe to say that I have made at least a quarter of a million dollars out of the gentle art of catch-as-catch-can—and that is a very conservative estimate.

As the man who first persuaded me to become a professional grappler remarked, I would have had to "roll a powerful lot of pills" to accumulate that same amount within fifteen years if I had stuck to my medical practice on the Pacific Coast.

III

WHEN the news that I had definitely forsaken the profession of medicine for a career on the mat first began to circulate throughout the country I received scores of letters from indignant brother physicians whom I had never met, or even heard of, condemning me for my course and telling me in plain unvarnished terms that I ought to be ashamed of myself. Several college professors, too, took the trouble to write to me pathetically and imploringly about the indiscretion of leaving a noble profession even temporarily to follow "the disgraceful career of a professional athlete."

These criticisms sort of got under my skin at first. I was not willing to concede—and even to this day, with a long and plentiful experience back of me, I am prepared to deny emphatically that there is anything disgraceful *per se* about being a professional athlete. But it is a fact that before I had been very long at the wrestling game I began to realize that there were certain disagreeable and sordid fea associated with my new environment I had not wholly foreseen when I tool plunge.

I was inclined to wince, for insta when the writers of the press began to vate the habit of affectionately referri me in their literary masterpieces as Seattle Saw-bones," "The Battling E setter," or "The Grappling Medico. soon got accustomed and calloused to change in my condition, however. fortunately there were other phases o wrestling business to which it was n easy to become reconciled.

Wrestling is the finest sport there when it is clean. It is a regrettable that the game as it is practiced by sor its professional devotees is not al clean. And it is a circumstance still to be deplored that there are a good n people who have been led to believe th is never clean—that every profess wrestler must be a crook and that e big match is a fixed affair.

I ran up against this prejudice rig the start and I have writhed under it or less ever since I have been in the busi On the whole the sporting editors and fans have, perhaps, been more generou me than to some of my probably equ deserving brethren. I have been l enough to win the reputation of al playing the game squarely, and have pointed to as one of the exceptions prove the rule. But just the same t have been whispers and sneers.

When I went up against Gotch fo first time, for example, there were t who insinuated that there was a s understanding—that the champion purposely failed to throw me within time limit with the idea of boosting gate receipts of a second match bet us. And there have been many o occasions when I have been made to s from equally unjust insinuations. I though one has a clear conscience, ex ences of that sort are apt to make a fe realize that there is a disagreeable sid the life of a pro.

There are crooks and fakes in the game, of course. I have seen too muc the seamy side of the business to tr claim that every match has been str on the level. But I do contend that it not by any means deserve the bad r it has been given and that the whole w tling fraternity ought not to be lo on with suspicion just because of the black sheep that are to be found an them.

As for the social side of catch-as-ca can—well, I'll admit that I haven't fo the atmosphere of the business particu elevating. As I remarked earlier in article, I have met and known professi grapplers who were thorough gentlem to use that somewhat overworked wor its general and not in its athletic s But taking my recent associates by large, I don't believe that if I had a s would send him among them to acquir education in manners and deportmen

Still I can't quite agree with my cen ous correspondents of the medical pr sion that I ought to feel ashamed of m for having temporarily forsaken Æsc pius for the padded mat. Suppose I laid aside my surgeon's scalpel to go ou Alaska to dig for gold. Suppose after lapse of fifteen years I had come back i the mines with a quarter of a million lars in precious dust. Should I have condemned because I had chosen to mi with men of rough manners and had obliged to come in contact with a cer amount of dirt in order to acquire treasure?

Is that a logical argument, I wonde can it be true after all, as some of my w relatives seem to apprehend, that my pursuit of athletics for the cold cash dulled my sense of ethical values?

THE CROSS PULL

(Continued from Page 36)

h scent round the cabin had carried nd back to the night at Two Ocean s. This in turn wakened a host of half-gen memories of the Land of Many e. His feet followed the trend of his nd he found himself climbing the nge of the mountains. At first he d without definite purpose, but the to revisit these places gradually in his brain.

h spicy smell of balsam and silver lured him on and he came to the traggling groups of lumber pine. he entered the heavy lodgepole he encountered many drifts of Half a mile of climbing and he the solid, hard-packed drifts of the spruce slopes. Then he angled along e of the range toward a pass that oss it.

jar of hoofs, creaking of saddles and ne of voices reached him from be-d he stopped to listen. It was not hat men rode at night. The horses ed heavily as they bucked the drifts. ll sounds ceased but the undertone es. When the horses started again ent back down the way they had and Flash heard the crunch of snow e men climbed toward him on foot. spring sunshine had packed the ntil it held a man where the sharp and heavier weight of horses would through. Flash waited until they uite close before slipping on ahead. ound the high country under a solid t of white. When he had been here loran there had been little evidence , but the hills had been teeming with ieties of game. This condition was versed. He found no signs of game, ar Two Ocean Pass he crossed many hat had been made by men.

h was not constituted to live happily With Moran he had been content, s life had been full when he traveled ilver. Companionship he must have, of his own kind or that of man.

ept for the big gray owls, there were o sounds to entertain him at night. ole expanse of the hills seemed dead zen and the hollow silence oppressed ith a sense of world-wide emptiness. memories were sooner dimmed than of man. Every vivid instance, each ove and hate had left its imprint and to shape his life, but these did not veal themselves in definite form. ve for Silver and Moran was no a distinct longing for each of them ally, but was manifested only in the te need of companionship in some

therefore lingered near Two Ocean s. The camp was no longer a phantom but very real. He avoided these y day, but when any one of them d to be abroad in the hills at night flanked his trail, testing him with and ear, much as a criminologist have studied his facial characteris-d the shape of his head.

d was scarce and Flash foraged a pre-s living—a scant half portion of his ations. An occasional snowshoe rab-blue grouse was the only living thing find. He grew thin and gaunt, his l pinched up in odd contrast to the hest, and his eyes were sunk in hol-e sockets.

days were warm and by the second in May there were green patches ng through the white in the broad eadows of the Thoroughfare and the llystone, the hardy new grass peeping gh within a few hours after the melt-wn of the drifts. Flash prepared to this country of loneliness and little

left Two Ocean Pass and when he to the confluence of the two rivers he ed up the ridge between them. When lp toward the head he looked far to the main divide. There were brown specks on the white slopes of ampart Pass. They were strung out ttered bands as far as his eye could they were coming his way and Flash to meet them. The famine was n. A few more hours and the Land ny Rivers would once more be the of plenty. The elk herds which win-in the low valleys of the Shoshone coming back to the upland meadows Yellowstone, the summer paradise of k.

Flash met the first few leaders of this migration and pulled down a cow. Great droves streamed down into the bottoms and traveled on toward the Yellowstone. The valley was a veritable thoroughfare for migrating elk—from which fact comes its name.

For a week they came in scattered bands. The big herds that had wintered in Jackson's Hole were now coming from the south and mingling on the meadows with those from the Shoshone.

There was food now in abundance and in a few days Flash regained his usual fullness of form. The meadows and all exposed slopes were bare of snow. The deer had not yet come back. Less averse to the proximity of man, the blacktail bands descended clear to the foothills each spring when the first shoots of green grass sprouted at the roots of the sage. They would follow the grass line up into the hills and not for another month would they cross the divide and join the elk in the Yellowstone meadows. The mountain sheep go up to winter instead of down, grazing on the highest flat tops of the peaks where the savage winds that follow each storm keep the bald ridges scoured free of snow. They now came down for their first nip of green grass and for the first time Flash saw these shy animals in the valleys. But all this was not enough.

He must have company, and here away from Two Ocean Pass there were no men and he could not even experience the vicarious sense of companionship he had drawn from following them at night. He left the green bottoms and traveled up through the spruce. When he came out above timber line he headed straight for the Rampart Pass. He had not left the tree line two hundred yards behind until he crossed a track that angled back down into the timber. The track was many hours old and the scent was faint, but the little that was left filled him with a strange excitement. He knew it for the woman scent.

He had now no clear-cut recollection of the girl he had seen but once, but he turned and followed along on her trail. Dusk was settling over the hills when he started and night shut down round him as he sped through the woods.

The trail led almost straight down and he soon dropped to the lower edge of the snow line. The trail grew steadily warmer and at last he could smell smoke and see the glimmer of a camp fire through the trees. The girl was wrapped in a single blanket and sat leaning back against a tree. Flash circled twice round the fire, his pads making no sound on the pine-straw carpet under the trees. As silently as a shadow he drew near until he stood watching her from a distance of ten feet, breathing deeply each time the shifting breeze carried her scent to him.

A sudden shift of wind drove the campfire smoke straight to him and he sneezed loudly twice. The girl started up in sheer terror at this sound just in time to see a gray shape disappear.

"Flash!" she called after him. "Flash! Come, Flash! Come here!"

Flash halted. It had been long since he had heard anyone speak his name. From centuries of being sheltered and protected by man, brutality and lust to kill have been refined out of civilized woman to an extent that is easily apparent to the animal world, and Flash sensed that he had less to fear from the female of the human species than from the male.

Animal estimates of men are not formed by reasoning but through the composite impression they receive from eye, ear and nose. Of this impression the strongest factor is that of scent. Flash's eyes told him that this girl was the one he had met before. Her tones were familiar, but instead of radiating the bubbling vitality and happiness he associated with her he now sensed an air of weariness and mental depression.

This had the effect of adding a fresh pang to his own loneliness and brought an unexpected whine to his throat. The girl, hearing it, knew he was still near and she resumed her coaxing.

"I knew it must be you," she said. "Come, Flash! Come on up to me, Flash!" she begged.

Ancestral strains waged grim conflict for the possession of his soul. The ancient heritage of dog to be the slave of man clashed with the wolf urge to be away from all this and back to the free hills. Lured on by the

Get Up in a Warm House

ENJOY the comfort of getting up and dressing in a warm house.

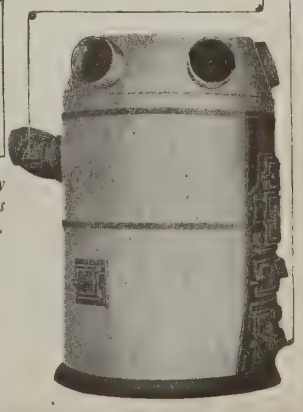
Install the "Little Draft-Man" Furnace Regulator and your furnace fire will start every cold morning while you are snugly nestled in bed.

At night set the regulator at the hour you want the fire to start in the morning. At that precise time the damper is opened and the check is closed. By the time the family gets up the house is warm.

The "Little Draft-Man" is a simple mechanical device for opening your furnace at any time set and for controlling the furnace during the day. To start or check the flow of heat, you simply turn the regulator handle in the "on" or "off" direction. It has no electrical connections or contacts and does not get out of order. It may be connected with any make or kind of furnace, old or new.

The entire mechanism is enclosed in a beautiful bronze case which is fastened on the wall directly above your present furnace chains. The installation is extremely simple. Any one can do it.

The "Little Draft-Man"
Costs Only $15.00
East of the Rocky Mountains



Hardware, Plumbing and Heating Stores in every city carry the "Little Draft-Man". If yours does not we will send you one postpaid on receipt of price.

Sahlin Manufacturing Co.
41 Ottawa Avenue, N. W.
GRAND RAPIDS, MICHIGAN
Canadian Distributors, McClarys, London, Ont.

spell of a woman's voice the spirit of the dog crept forward, dragging with it the protesting flesh of the wolf. Inch by inch he neared her until at last she touched him.

At the touch of her fingers he was once more the dog, the wild in him subservient to the tame, and he fawned upon her, whining with eagerness.

The girl threw her arms about him and drew him close.

"Don't run off like you did that other time!" she begged. "Stay with me, Flash! I couldn't live through another night alone. Stay with me, won't you, Flash?"

The note of appeal in her voice was more urgent than any other sound he had ever heard. His craving for companionship had found an answering need in the girl.

He sensed her helplessness and some vague undertone of fear. The blood of many fighting forbears who had protected man rose to the surface in a feeling of responsibility for the safety of this girl—a desire to fight off that thing she feared.

Even now Flash was not assured that she was the woman he had met before. Not until a measure of her former buoyancy and high spirits returned with her joy at his presence was he sure. Then all three senses coördinated and definitely identified her as the same.

It was long before she slept, and Flash curled close beside her, his newly roused protective instincts fully alert. He growled at each far-off sound. When a cow elk sounded her yelping bark close at hand he rushed out and drove her off, returning proudly to the girl. He knew the elk was as harmless as a mouse and all this was more to assure the girl that nothing could harm her, now that he was with her.

"It won't be so bad if you'll stay with me, Flash," she told him. "The loneliness won't be so heavy that it hurts—like it did before I had you."

Then she slept and the wolf stood guard.

IX

THE girl rested on a rock beside the game trail. A tiny mountain stream rushed past a few feet away. The ground sloped steeply up on either side of the stream bed, matted with a tangled jungle of spruce that was tropical in its density. Great windfalls of down timber were piled about and many trees had not even found space in which to fall, but rested at odd angles against living trunks. A thick carpet of moss covered earth and rocks and clung in frowzy shreds to the trees themselves.

"This seemed the most peaceful, lovely spot on earth when I was here before, Flash." The girl shivered slightly as she glanced round. "It seems dark and gloomy now. I must have been mad to do it. I had to act at once—no time to think; and I was too dazed to think even if I had been granted time. There was no one to advise me, Flash, and I did the best I knew.

"I'm glad we're here at last, Flash." She pointed up the slope. "It's right up there—only a few minutes' climb. It's weakening to live for three days on cold lunch alone, especially on short rations of that. I had to travel light."

She slipped into the harness of the haversack in which she had packed her scanty store of food. The single blanket was rolled sling fashion and she adjusted it across her shoulders and started briskly to climb the slope.

For two hundred yards the ascent was steep. They crawled under and over log jams and threaded their way between close-growing spruce trunks. Then Flash stopped in his tracks.

The ground had flattened into a tiny hollow at the base of the cliffs that towered abruptly up above the trees and defined the limits of the narrow gorge. In the center of this depression a cabin showed among the trees.

His nose had given him no warning of this. Always he knew of the presence of man before drawing near, yet he had come full upon this house. Even now his nose told him that his eyes were wrong. There was not the slightest trace of man scent and his ears caught no single vibration of sound. He had no previous experience to guide him in sizing up a house that had been so long untenanted as to have lost all taint of man. He shrank from approaching this unnatural place. But the girl pressed on and he followed, every hair tingling and each nerve aquiver, his muscles bunched for sudden flight. He was filled with all the apprehensions of a boy who enters at night a house alleged to be haunted.

The girl lifted a heavy wooden latch and entered, but Flash refused to be coaxed inside. He circled the cabin, examining it minutely, shoving his nose hard against the logs and breathing explosively in his effort to solve this strange mystery of the house that held no scent.

It was built of heavy logs. A woodsman could have told at a glance that it had been erected long ago and that only primitive tools had been used in its construction. The door was built of spruce planks slabbed out with an ax and swung on hinges of elk hide nailed on with wooden pegs. The roof was of lodgepole logs five inches through and covered with a foot of dirt.

Satisfied at last that there was no lurking menace about this strange place, Flash went in to the girl.

The fireplace was built of flat stones cemented with clay which had baked hard. The furniture was of rough-hewn pine with legs of seasoned mountain ash driven in two-inch auger holes bored in the planks.

Inside, Flash caught a very faint scent which was not that of man, but was in some vague way suggestive of man. This came from the flour, beans, rice and other food, sealed in almost air-tight cans to protect it from marauding pack rats.

The girl gathered branches and kindled a blaze in the fireplace. From an icy spring at the base of the cliff she carried a small pail of water and started to prepare a meal, cooking over the coals in the fireplace as if over a camp fire in the open. Early dusk was settling in the depths of the cañon and before eating she gathered a great pile of wood.

"That's the only light we'll have, Flash," she told him. "Firelight."

She offered him a share of the meal, but cooked food was not to his liking.

Since finding this lovely goddess the previous night Flash had not once been out of sight of her, but he now felt the pangs of hunger. He scratched at the door and whined, imploring the girl to let him out.

"Where's that man, Moran, who owns you, Flash?" she asked. "He must be here somewhere or you wouldn't be here yourself. If I let you out you'll run away and go back to him. I want you to stay with me until Dad Kinney comes."

Flash scratched and whined again.

"He should be here now," she said. "He'll be here surely in a day or two. Then you can go. You'll stay with me until then, won't you, Flash?"

His whining and scratching became so insistent that at last she walked reluctantly to the door and opened it, leaving it ajar so he could reënter when he wished.

"Don't you desert me, Flash," she admonished him as he slipped out.

Flash dropped swiftly down the slope to the game trail and followed along it toward the mouth of the cañon, his nose uplifted to catch the first scent of meat. Half a mile below, the gorge widened into a narrow park beside the stream. A cow elk was feeding there. She caught a faint whiff of danger and stood rigid. The dread wolf scent suddenly reached her flaring nostrils and she fled—but not in time to escape the shadowy form that drove down upon her from the timber edge with lightning speed.

Back at the cabin the girl, alarmed at his long absence, was whistling and coaxing from the door in the hope that he would hear and come back to her, but there was no answering whine from the inky blackness under the trees, and at last she decided that he had gone back to Moran.

Loneliness clutched her with an icy hand. She sat by the fire, knowing she would not sleep until dawn lifted the shadows from the cañon. The vast silence seemed freighted with unknown dangers. She almost prayed for some sound to break it. Then it came! And her supplication was instantly transformed into an earnest prayer that she might never hear that awful cry again.

She did not know what it was—except that it was made by some terrible beast of prey. It carried to her the same sensation as if she had scratched her finger nails across the rough surface of a sand rock.

It sounded again, this time close at hand, filling the cañon with its volume. The cry was charged with all the aching misery and loneliness of the ages.

A sudden bump at the door startled her horribly. It was followed by an eager whine and a furious scratching. She sprang to the door and let Flash in, barring it shut once more the instant he crossed the sill. The flood of relief that surged through her was like a blessing. She put her arms round the dog.

"Poor Flash!" she said. "Poor Flash! It chased you home. Did it nearly catch you, old boy?"

Flash did not seem troubled. On the contrary he sprawled in front of the fire and blinked contentedly up at her. His mood was mellow, for he had dined well; and his placid calm reassured the girl, for she knew that if danger lurked just outside Flash would be bristling and alert.

She spread her blanket on the bunk and the rough boards felt soft. The last sight that her drowsy eyes rested upon before she slept the sleep of utter exhaustion was the peacefully dozing dog before the fire. It was well for her peace of mind that she did not suspect the truth; that the soul-chilling cry had been his own imploring message to a long-lost mate—the summons to come and feast upon the elk he had torn down with his savage teeth.

She slept on soundly until the dog's restless wanderings about the room roused her to the light of day. Every muscle ached from the night on the hard bunk and her first task after breakfast was to carry spruce boughs to cover the boards.

Early in the afternoon she grew restless from inactivity and wandered down the game trail with Flash. Half a mile down she saw a dead elk in an open park. It had not been there when they came up the previous day. She could see the throat, gashed open by savage teeth, and knew that the elk had been killed by the beast whose cry had chilled her the night before.

She had no further taste for walking and hurried back to the house. Near evening she went to the spring for water. As she knelt to dip it Flash came creeping up from the opposite side. He moved with a stealthy crouch and there was a queer light in the yellow eyes. When within twenty feet he sprang straight toward her.

There was a sudden rushing whir of wings as a blue grouse took flight, only to be struck down by a big paw. The wings drummed on the ground as Flash held the bird down after beheading it with one nip.

For a full ten seconds she could only gaze fascinated by this wild picture, then jumped the spring and ran to him. Flash drew away, fearing he had offended her by this deed, but when she picked up the grouse and turned to him there was no reproach in her voice.

"Oh, Flash, it's a mean trick to steal your dinner!" she said. "But I haven't any meat. Beans and rice and biscuits are so dry, and I do love grouse. Will you share it with me, Flash?"

She carried the bird back to the cabin and dressed it, reserving only the white breast meat for herself and giving the rest to Flash. This female tyranny was no new thing to Flash. Often when with Silver he had killed some small-game animal or bird, only to have Silver deprive him of it.

The next day he foraged near the cabin and killed another grouse. As he pulled off the head and swallowed it a sudden thought struck him and he did not tear at the bird. He had been the main support of his family during the first month after Silver's pups were born, carrying food to the den each night. This wonderful shining goddess who had adopted him had taken his last grouse for her own.

He took the grouse in his mouth and trotted back to the cabin. From past experience with Silver, it seemed perfectly natural to kill and carry his prey to the den of this new companion. When he dropped the grouse before the girl the light in her eyes and thrill of love in her voice repaid him a thousand times.

"Why, Flash! You old darling, you're trying to feed me, aren't you?" she cried. "You're the smartest dog that ever lived. I envy that Moran. I think I'll steal you, Flash."

That night Flash once more scratched to get out. Soon after she heard the dreadful cry of two nights before. She did not know that Flash had pulled down a small yearling elk and that this was his joyful call for her to come and join him at the kill; for now, having killed food for her, his call was meant for her instead of the departed Silver.

Some way he knew that the girl would not come, and after eating his fill he sliced deeply into a hind quarter to tear it off. When he had cut nearly to the bone he seized the foot and wrenched the leg over the back at right angles, throwing the hip socket out of joint. He worked tirelessly, alternately cutting at the ligaments with his teeth and wrenching on the foot with all his strength until it was severed.

It weighed forty pounds, but w heavier load than he had frequently home to Silver and the pups. He lift heavy end and started for the cab foot trailing on the ground beside Every few yards the weight tired hi and he rested, sometimes taking th and dragging the heavy end.

The girl sat in the cabin wonde his long absence, when she heard a iar dragging sound punctuated wit thumps as Flash wrestled the heavy q up the slope from the game trail, jer over and through the windfall jams opened to his scratching and he bac pulling his offering across the sill.

The frayed end of the meat was with dirt and spruce needles and sh back from this gruesome relic. She suspected that Flash had killed this her, but naturally supposed he had f portion of some dead animal and b it in.

Her eyes were bright with tears patted and stroked his head.

"You're a good provider, Flash praised. "You don't want me to sta beans and rice, do you, old boy? The never in this world another dog like

He reveled in the knowledge th lovely mistress was pleased with hi the same time he fully realized her d for this latest contribution. He kne she relished some of the meat h brought. Evidently she did not ca this kind. He was not critical of her She should have the kind she chose.

To his mind the animal world w vided into two classes, as far as foo poses were concerned: The first and the most important included the mea large animals; the second included al animals and birds. Of this division were some few whose meat he did n and which only starvation would driven him to touch.

His mistress seemed to prefer mea came from the smaller species. F next two days he hunted tirelessly had for Silver and the pups. The den be supplied with meat.

The girl was between laughter and at the growing assortment of gar brought to the cabin. Grouse, ra woodchucks, a marten, a pack rat whole family of little striped chipr were included in the list of small cre whose lives were sacrificed through h of her.

His intelligence seemed so nearly h that she hesitated to throw away offerings lest he should take offense. he was off on his hunts she droppe undesirable specimens in deep cra the rock rubble that lay piled at the f the cliff.

In common with the majority human race she grossly underestimate mal powers of scent. Flash could s track made by a grouse two hours A rabbit has a half inch of hair on hi yet Flash could follow the trail one l hard-frozen ground or even on glare easily as a man sees its track in soft

He had no need to go within thirt of the cliff to know accurately the spot in which each one had been dro and just which one it was.

In the old days with Silver he h had buried meat in a score of places the den after the family had feast capacity. That these caches had been reopened mattered not at all. were but reserves against the possible ine which never came.

It now seemed perfectly natural th girl should bury her surplus meat. ever, he preferred dirt to rocks for thi pose, and those of the victims he could a he drew forth and carried to some s his own selection, interring them de the ground and pushing the soft d place, tamping it firmly with his nose.

X

IN THE spring a bear's pelt is in its when the fur of all others slips. Hi has grown thick and silky during the sleep of hibernation. In this high co the bear does not leave his den until s time early in May, but even this is too for men to bring horses across the passes that lead into it.

The girl knew that this fact was mately related to Dad Kinney's The previous fall he had left suppli the cabin, planning to come in on foo collect many prime spring pelts t packed out later when the passes wer

on before Flash, like an answer to a
ay, had come to her on the second
gh But then she had had a fire.
T wind was at their backs and not
til they turned into the cañon and
arfl up the game trail did Flash scent
e nace ahead. His hair bristled and he
turned back. But the girl was now sure of her ground and went on. Flash ran round in front of her, pushing to turn her aside. Not until he growled did she understand that there was danger lurking near.

The scent came plain and it was that of man. He could hear voices which the girl could not. A sudden thought assailed her. Flash must have detected the presence of the beast whose chilling cry she had often heard at night, but she hurried on. It was all she knew—to reach the refuge of the cabin at all costs.

Flash knew these scents and voices were those of some of the men who lived near Two Ocean Pass. To him they meant danger, even death, and as he followed her he bristled uneasily. That they meant danger to her he was not so sure. The ways of men with men had always baffled him. Men whom he trusted associated with those he knew to be dangerous in the extreme. Of the way of men with women he knew nothing at all. Perhaps these men who meant death to him would not harm his lovely mistress in the least.

The sounds which he heard so clearly did not reach the girl until she rounded a sudden bend in the cañon. She heard a man's laugh at the same instant that she saw the dim wavering light of a fire gleaming through the fog. It appeared far off, but was in reality only fifty feet. It meant but one thing to her. Kinney had come at last and someone else was with him.

In her relief at escaping the imaginary dangers of the night she hurried toward the very real one at the fire. The voices which covered the sound of her approach ceased suddenly as she appeared like a wraith out of the night. The group of half a dozen men round the fire stared incredulously. She too was startled by the unexpected number and the absence of any familiar face. Kinney was not there.

"I'm lost," she said unsteadily. And she saw the hungry gleam leap into the eyes of one after another of the group. The firelight revealed faces that were hard and desperate.

These men had long been denied the society of women. This appearance among them of a beautiful girl was like the smell of meat to starving beasts of prey. Not a man there but would have murdered his friend in order to own her.

From beyond the circle of light thrown by the fire a pair of yellow eyes watched this tableau. Flash sensed the menace to his goddess, satisfied at last that she was unsafe among these men.

There was one man whose cold brain never failed him in an emergency.

"Where are your friends camped?" he asked.

"I don't know," she said, some inner voice prompting her to lie. "But somewhere close. I stayed under a rock—and out of the rain—not far from camp."

As her voice trailed away the man rose.

"I'll take you to them," he offered. "Just come with me."

"Leave it to Harte to think first," said another. He rose also. "I need exercise. I'll just go along with you."

Every last man leaped to his feet and leered at her. These men stood in awe of Harte, but the beauty of the girl had inflamed them beyond caution. One man crowded closer to her.

As he moved a silent shadow out in the fog moved with him, crouching low to the ground.

Harte's own blood pounded hotly from her nearness and he knew that he could not control the lawless impulses of the others, yet his brain functioned as coolly as before.

"Think it over," he advised them calmly. "You know what it will mean to have a fight with a party of hunters in here. In a week we'd have posses scouring this whole country."

"What of it? The Hole is twenty miles from here," said one, his eyes resting hungrily on the girl. "I'l have a word with her before she goes."

He threw his arms round her and as he touched her a demon apparition with flashing eyes and fangs split the curtain of fog and drove straight for his throat. The teeth sank deep in his upraised shoulder and the force of the drive bore him to the ground.

The blank wall of fog had swallowed both the dog and the fleeing girl before a man of them fully realized what had occurred. Before she had run twenty feet up the game trail they were after her. The pupils of their eyes, accustomed to the firelight, were not readily readjusted to the velvety black under the trees and they stumbled blindly.

When the foremost man stretched forth his hand to seize her, something struck his extended arm with such force as almost to shear it off. He tripped and fell.

"The dog!" he screamed. "She's got a dog! Look out for him!"

The next man fell over him and pulled his gun as he scrambled to his feet. He bounded ahead—and teeth with the grip of death clamped his leg from behind and a backward wrench slammed him down across a log. As he fell the red spurt of flame from his gun streaked the night and the man close behind cursed him for a fool for shooting almost point-blank in his face.

Love transcended fear in Flash and in his rage against these men who would harm the girl he conquered his dread of guns. Always it was the man ahead, the one nearest to her, that felt his teeth. Human flesh could not endure against this silent, unseen fiend that slashed them and was gone. By common consent they had all turned back before the boldest had made fifty yards from the fire.

Retreat turned to rout, for Flash followed them back, striking swiftly and leaping away from the shot he feared would follow. They shot blindly after him, endangering their own lives more than his. The last man he heeled as he would a cow and threw him. When they burst into the circle of firelight they found Harte seated on a rock calmly smoking a cigarette.

"You're a bloody-looking crew," he observed. "I'd like to own that dog."

One man extended his left hand exhibiting a ragged flesh wound between thumb and forefinger.

"Some fool shot me," he growled. "It was either Seely or Cole."

Both men profanely denied this charge. Harte laughed scornfully as he looked them over.

"Mistaken identity," he jeered. "Clay Siggens, shot by a pal who mistook him for a dog in the battle of hide and seek."

They scowled down at him.

"I was out with Jarrat and Hanlin this spring," he went on. "Jarrat belongs in a coop for the homicidal insane and Hamlin's a thick-skulled brute—but even so, when it comes to brains they have this layout cheated seven ways from the deuce."

"You wanted the girl yourself," said Cole. "You aimed to take her off somewhere alone."

"What of it?" Harte shrugged. "I wouldn't have made a mess of it. Tie up those rents in your hide and let's go."

"Go!" Cole exclaimed. "Go where?"

"Anywhere," said Harte. "Do you poor brainless apes expect to bed down here and sleep? There's a hunting party of the girl's friends camped round here close. They'll have guides. When they hear the girl's story they'll be looking for us and pick us off like rats as we lay asleep round the fire."

As always, his logic was convincing. They started to apply what rough first aid they could to the deepest cuts. As they moved a beast with dripping jaws circled round and round the fire waiting for one to venture out into the night.

When they left they started downstream in the opposite direction from the girl. Flash let them go and went back to her. He followed her warm trail for almost a mile before he found her stealing cautiously along the game trail.

She believed Flash was dead. She knew he had fought desperately to give her time. He had not come back to her after the shots. It was a stunning shock when, without a sound to warn her, a cold nose was thrust suddenly against her hand. The eager whine which followed told her it was Flash, alive and safe.

She dropped to her knees and threw her arms about him, whispering her gratitude in broken sobs.

She started ahead once more, urged on by the thought that they still followed her. Flash turned from the trail and whined for her to come, and she felt her way through the down timber of the slope and entered the cabin.

As she closed the door behind her the rain began to fall, blotting out whatever trail she might have left. She lay on the bunk, straining to hear any sound of pursuit. She heard nothing but the rain, and near morning she slept from sheer exhaustion. When she opened her eyes it was light. Flash seemed calm and peaceful and she knew from this that the men could not be near. He scratched at the door and she let him out.

Flash started at once for the scene of the fight. He circled cautiously, testing the wind. The rank odor of the drowned camp fire was all that reached him. The rain had washed out all but the faintest trace of human scent.

As he drew near he snarled and bristled his back roach at the smell of blood that haunted the wet spruce needles where he had slashed at them the night before.

He followed their cold trail for a mile, then left it, satisfied that they were far away, and started on a hunt for meat. An hour later he turned up at the cabin carrying a grouse.

The girl would not leave the cabin again, not even descending to the game trail along the stream. The scant store of provisions was running low.

She could not help but associate these men with Dad Kinney's failure to arrive. Her worry over him inspired a like uneasiness about a man she had never seen—Moran, the owner of Flash.

On that other trip when Flash had crept up to her in the moonlit park Kinney had told her that the dog would never leave Moran, yet Flash now stayed with her. Her chief fear had been that Flash would leave her any moment and go back to him. But he had stayed. It now occurred to her that he would not so easily desert the man who had raised him from a pup. Something had happened to Moran. The thought persisted and she often referred to it in her conversations with the dog. The frequent repetition of Moran's name struck some chord of memory in Flash. He had by no means forgotten Moran, but his recollection of him was more of a vague longing than a definite picture.

Man's most dependable sense is his sense of sight, and he carries the memory of absent loved ones by a mental visualization of their faces. Dogs, instead of a mental likeness, retain a mixture of sight, scent and sound, the latter two being the predominating elements of animal memory. It is this which sometimes causes a dog to bark at the approach of his master, whom he can plainly see, but cannot recognize until some familiar scent or sound identifies him.

It was sound—the name of Moran—that stirred Flash. Each recurring time it came from the girl's lips it quickened the half-dormant longing that was in him. And it was sound that one day caused him to drop all else and investigate a distant note with a familiar ring.

He had rambled far up the slope of the main divide where he often hunted. Something beat faintly against his eardrums and he knew it was a far-off sound of man. His ears pricked forward and he moved excitedly from spot to spot. It was a man who whistled, and the air was one of the few little tunes that Moran had whistled endlessly as he wandered alone. Flash started swiftly along the hill in the direction of the sound.

XI

THERE was one man who had given many interesting facts to the world. He had unraveled the half-century-old mystery of the lost herd. All that men knew of the swift fox was through his research. He had definitely linked the buffalo gray with the so-called lobo wolf.

Great beasts had come down out of the North and it was rumored that for the first time moose had been seen in the beaver swamps of the Thoroughfare. This man was now on his way to the Land of Many Rivers to determine whether this new Western moose was a distinct type or merely a detached band strayed down from its Northern range.

Far up Seclusion Creek, Moran lay rolled in his blankets, his head propped up on one elbow as he listened to the night sounds which he loved so well and had not heard for so long a time. A cow elk barked from the timber; from far down the stream came the shrill staccato of a coyote and another answered from above. An owl on the rim rocks overhead hooted his whereabouts to a far-off mate. These sounds, the very essence of loneliness to most men, were the voices of old friends to Moran. He read in them more of primitive love and understanding than of savagery.

There was a sudden hush and for a space of minutes no living creature raised its voice. Moran had heard no sound to indicate the reason for this, but he knew that the wild things of the hills could hear things much too distant to be detected by the ear of man. This sudden suspension of all animal communications, the absolute cessation of every note, meant but one thing to

Quaker Flour

A Million Now Enjoy It

Tell Him To Send a Sack

Your grocer now has an extraordinary Flour. Or, if he hasn't, he can get it for you.

It is made by the makers of Quaker cereals, famous the world over. And it matches them in quality.

It includes only half of the wheat kernel—just the choicest part.

It is made by experts—made in model mills—to be the finest Flour that science can produce.

Chemists constantly analyze it, bakers constantly test it—right where the Flour is made. So every sack is perfect.

This Quaker Flour came out without announcement. But women saw the Quaker name and bought it. Then they told others what a Flour it is. A million users flocked to it before we advertised it.

This is the queen Flour—a superlative product. It is made for the people who love Quaker quality. And they are so many that four mills now make it, with a daily capacity of 10,000 barrels.

If you want the best Flour man can make, telephone your grocer for this Quaker Flour. You will be amazed to see how it excels the ordinary flour.

The Quaker Oats Company

Mills in Akron, O.; Cedar Rapids, Ia.; Peterborough, Ont.; and Saskatoon, Saskatchewan

In our Canadian mills, to conform to Government requirements, we use over one-half the wheat kernel. 3268

Quaker Biscuit Flour

For fine foods—like biscuits, pancakes, cookies, cakes, doughnuts, etc.—use this package flour. It is a superfine flour made of special wheat for dainties.

This flour is self-raising. It comes in sealed round packages with tops to keep it ever-fresh. Use it for fine foods in place of a bread flour, for bread flour serves a different purpose.

Quaker Farina

This is the choicest bits of inner wheat in granulated form. A finer farina is impossible, even at a fancy price.

This granulated form of inner wheat makes delightful dainties. Serve as a breakfast dish. Use in fritters, griddle cakes, waffles, etc. Quaker Farina is sold everywhere at a very modest price.

Moran. As unerringly as if he himself had heard it, he knew that somewhere a wolf had howled. Yet Moran knew, too, that this high country was not infested with wolves. This one must be a straggler passing through.

Moran had stopped for the night at the lower edge of the snow line, and when he rolled his pack in the morning it took him less than an hour to climb out of the spruce belt above timber line. He worked his way on up the divide and before noon he stood in the Rampart Pass. The serrated masses of the Rainbow Peaks, the ragged saw teeth of the Tetons and the other distant ranges that walled in the Land of Many Rivers showed up in miniature, clear cut and distinct, broken only by the dark rents which marked each wild gorge through which the rivers rushed on their way to the low country.

The south slope of the divide was streaked with brown where the more exposed spots were free of snow. Moran chose a long ridge that swept down far below timber line, its bald crest looming above the trees and splitting the solid green of the spruce belt, and followed it down the far side of the divide.

When well down among the trees three jays flew above him, rending the air with weird squawks. He watched them pitch down into an opening in the timber. An eagle swooped grandly down out of the sky and a string of chattering magpies flitted from tree to tree toward the same spot. Two ravens winged down from a cliff face, one of them croaking hoarsely and the other emitting a series of clear tenor whistles, each note ending with a click as if a sharp rap on the beak had chopped the whistle short.

Moran knew what this feathered conclave presaged. The meat-eating birds of the hills were assembling to the feast. He would find some carcass in the opening, and he turned aside to investigate. The carrion hosts flapped away at his approach, protesting raucously at this interruption of their banquet. Out in the open spot he could see a dead cow elk.

Moran knew there were but three beasts in the hills that could kill an elk—the grizzly, the mountain lion and the wolf. The fact that the elk lay in open country eliminated the first. Few grizzlies are killers, and those that are invariably stalk their prey in dense down-timbered spots. They must creep close enough for a short rush and then tear and hammer down their meat by sheer strength. The mountain lion launches himself for the back, strikes his talons deep through skin and flesh and rides his victim to death, his teeth buried ever deeper in the neck.

As Moran drew near he had no slightest doubt as to the identity of the slayer. The severed hamstrings convicted the wolf.

The birds had hopped about and obliterated most of the other signs. In a spot of moist earth he could make out one track, and whistled in surprise at its size. He wondered if it was possible that one last buffalo gray still lingered in the hills.

He had come down from winter to spring. Here each open spot was green and the drifts lay in only the darkest, most sheltered spots in the timber. As he walked under the trees Moran whistled cheerfully.

He had a sudden feeling that something watched him—followed him. Many times he had tried to analyze this feeling All men who live in the open are familiar with it. They variously speak of it as a feeling or a hunch. Others, slightly more learned, refer to it as intuition or class it as some mysterious subtle sixth sense. Moran strove always for some natural explanation of all things.

Often when hunting or rambling in the hills he had suddenly known that game was near him. He could not tell why he knew. At times he had even known the kind—bear, elk or deer as the case might have been. Later, upon investigation, he frequently found a fresh bear track or the warm bed of some elk or deer if the animal itself was gone. There is a strong odor that lingers for hours about the deserted bed of a large animal, and when very close to it even the nose of man can easily tell the difference between the scent of deer and elk. It was this fact that had first started Moran's mind working along one certain line until he had finally evolved a satisfactory theory of his own.

In the dim ages of the past, man had undoubtedly used his senses of scent and hearing as keenly as the beasts did, else he had not survived. From many centuries of disuse these senses had become dulled, ye still functioned slightly. Some fain or sound, the snapping of a twig or t pad of a distant footfall, too elus make a distinct impression upon th sciousness of modern man, was con cated to some long-dormant brai which now only reacted sluggishly, a warning was manifested by this feeling, hunch or intuition that all h know.

This was Moran's solution, and walked he kept his face straight front, glancing to the right and left out turning his head, seeking ocula of the presence he felt. His patience warded by one brief glimpse of a lon shape that slipped between the trunks a hundred yards up the slo that one instant enabled him to i the animal as belonging to the wolf His thrill of satisfaction was accom by a shock of surprise.

Moran knew that the tales of a who stalk men through the hills or mainly in the too-imaginative mi novices in the woods. Animals th lived in localities little frequented b had sometimes approached him out osity. He had seen deer draw ne stamp excitedly at this strange two- beast—many such evidences as tha to be followed was something entirel To be followed by a wolf, the one cr that avoids man scent like a pestilen almost incredible to Moran. It up the convictions formed by years of

This beast must be a dog. Moran back until he reached a long dri stretched far up the slope along th tered side of a gulch, and started up the track where the wolf had crosse tracks of dogs and wolves are so that even experts cannot always b The wolf track is slightly, almost ceptibly longer than that of some do the large wolfish types of dogs incli to that shape of track.

One thing Moran knew. A wolf's would be evenly spaced and plac directly before the other in a straig and show no trace of the wavering, bling gait of the dog. But some of th ish breeds of dogs inherit this wolf ga the one glimpse had proved that the was of that kind.

Moran found the trail across the true, straight and evenly spaced. was not convinced. A sudden t flitted across his mind.

"Flash!" he called. "Flash! Co of it, you big gray rascal! Come here!"

He knew that Flash's body had been found after the shooting at the ranch. The Wind River wolf had ne appeared on the range and it was pre that Flash was dead. There was chance that he had survived.

Moran called again and again.

Out in the timber Flash thrille trembled. First, the sound of the v then the familiar appearance of the followed and the scent he knew for M now the much-loved voice; all sens dinated and Flash knew that th Moran. He longed to go to him, bu experience had taught him that al even former friends, now sought his

er for a long time," he said.
I sh turned aside and started up
r gh the down timber of the slope.
c n was not surprised. He had a sudden
o that Flash was mated and that he
ou find the den under a windfall or
n g the rocks at the base of the cliff. It
as ate for pups to remain at a den, but
o s sometimes mated late. This was no
a for a wolf den, but it was possible.
I sh watched Moran. The man kept on
i e had not noticed. Flash whined after
m He ran round in front and once more
r d up the slope.
"hat's up there, Flash?" asked Moran.
Wat do you want to show me?"
I smiled as he thought of the con-
e ation his appearance would occasion
s wolf if the den were really there. He
r d and followed Flash up the slope.
I stopped and stared incredulously at
e abin. It was old and moss covered.
n occupant had left no tracks on the
w trail. This must be the refuge of some
er it—some fugitive who avoided men.

XII

WHEN Teton Jackson tore away from
between two guards and threw him-
lf from a moving train he left no trail.
h solated mountain valley in the shadow
e Tetons from which as a boy he had
d s Robin Hood band to prey upon three
as still bore his name, but the world
ev again found a single trace of the man
m lf. The valley of his name was settled
y nchers. Some few of the earlier set-
er remembered him—and kindly, for no
rgling squatter ever had cause to com-
a of his treatment at the hands of
ac on and his men.
Among all the outlaws who escaped dur-
g ie next quarter of a century there were
utlew—perhaps a score—of whom no
a was ever found. In prison circles
inr linked the names of these men to-
et r and there were whispers of some
ne tom rendezvous called The Hole. No
a seemed possessed of knowledge as to
ie hereabouts of this place. Stool pigeons
eal naught but rumors. These rumors
er persistent, and it was recalled that the
a rity of these vanished ones were of the
ru bor type of bandit. At last the au-
ho ties inclined to the belief that some of
ie men were banded together somewhere
ey nd reach of the law.
Moran viewed the cabin these things
it d through his mind. He recalled tales
ha men told of signal lights flashing from
ee to peak. One sportsman, who could
re the wigwag alphabet, claimed to have
au nt a portion of one message. Among
ne words he made out were the names
f o men—the names of two of the most
es erate escaped criminals alive. Moran
is issed these thoughts as absurd—absurd
t ast in so far as they concerned this
ar cular spot. A number of men could
ot help but leave numerous telltale signs
f eir presence. This was the home of
or lone hermit.
Flash preceded him and scratched at the
do. It opened—and the scene was trans-
or ed for Moran. Any man would have
pr ounced the girl's beauty exceptional,
no perhaps Moran's surprise at this vision
n ie door added to his estimate of her.
He was instantly aware that he had never
ee anything so intensely beautiful as the
gir who stood there, vivid and alive, in this
wil setting. She looked up and saw him
an the color fled from her face, leaving it
wh e and drawn.
"I startled you," said Moran. "I'm
sor y."
She gazed at him without a word. Flash
ne ed back to his side, his big tail waving
pr dly. Moran placed his hand on the
do s head and from this move the girl
di ined the man's identity.
"You're Clark Moran," she said. He
no ed, surprised that she should know his
na e.

"Then they didn't kill you after all?"
"No," he smiled. "I'm very much alive."
"Flash brought you here?"
Again he nodded.
"Did they get Dad Kinney—is that the reason he hasn't come?"
"I saw him a few days ago as I came up the Shoshone—stayed at his camp overnight," said Moran. "He's alive and well."
"Then he didn't get my letter," she stated positively.
"Probably not," said Moran. He sensed that there was some connecting link of thought between each disjointed phrase and he tried to understand it all.
"I can get him for you," he offered. "I can make his camp in three days—two days on a forced hike—and have him back here in five—that or any other way in which I can help you."
The reaction to her normal self was swift. It occurred to her that this man was wonderfully self-controlled. He was passing off a strange situation as if it were no unusual thing for him to find a girl in a secret cabin fifty miles from the nearest ranch. Her remarks must have sounded incoherent; she had spoken of things he had no way to know, yet he showed no excitement or curiosity. She liked his level gaze—knew she had nothing to fear from him.
"I'm here alone, waiting for Dad Kinney to come. Please come in," she said. "I'm starting dinner. As I work I'll try to decide how I can take advantage of your offer to help."
Flash prowled continuously between the two, his toenails clicking across the floor as he tried to keep within touching distance of each one. He sensed a certain constraint, an air of strangeness between them, but he was too well pleased at having brought these two together to pay much heed to so trifling a thing as that.
When Moran picked up his ax Flash followed him outside. Moran selected a tall dead pine, sized it up with an appraising eye and notched the trunk.
"We'll cut some regular wood for her, old boy," he said. "She's been burning squaw wood—limbs and scraps. I wish you could talk and tell me what it's all about. She's had something happen which has upset all her little world—and she's run away from it. Her plans didn't work out right and she's had a tough time of it. Who is she, Flash, and how did she happen to know about this place?"
He had carried a dozen armloads of wood before she announced the meal. The shadows were lengthening in the cañon when they had finished and Moran picked up his blanket roll.
"I'll camp somewhere close at hand," he said. "I'll hear you if you call. You can decide in what way I can help you and I'll hear the verdict in the morning."
"Oh, don't go!" she said. "Stay and talk to me. I've been alone too much. There's some horrid beast that screams here in the cañon nearly every night. I want you to tell me what it is."
Their conversation had been a little trite, limited to formal remarks, and Moran now welcomed the opportunity to break the ice by speaking on this familiar topic, which was almost a hobby with him. He opened the door.
"Let's sit here," he said. "The wild things will soon begin to talk. I'll try to interpret their notes as they come. There's probably one man out of ten thousand who really understands half of what he hears in the woods at night."
They sat together on the sill and Moran told her many things. He realized that the girl had stayed there night after night alone, assailed by all the imaginary dangers that besiege the mind of each novice in the hills. He explained away many man-made superstitions surrounding the creatures of the wild. Flash wedged in between them and as they talked he felt the dying out of that strangeness, the lessening of restraint between them.
"It must be a panther, I think," she told Moran. She noted the almost imperceptible shake of his head. "Why not? Don't they live here?" she asked.
"Yes—only they're called lions here," he said. "The panther, puma, cougar and the mountain lion are the same animal, only differently named according to locality. I've known and studied them under all four names. I've lived in hopes—but I've never yet heard a panther scream. I have inquired of scores of reliable, observing men who have spent their lives in the Northwest where the lions range; in the deserts of the Southwest, the range of the

Enough Sta-so to Surface 36 square miles of roofing

Why Roofing Manufacturers Bought Enough Sta-so last year to cover a city

With Sta-so, the non-fading, crushed slate roofing surface, you can have not only more durable roofing but beautiful roofing in permanent colors that nature herself created.

Sta-so is non-fading—and will stay so
Sta-so is fire-resisting—and will stay so
Sta-so is weather resisting—and will stay so
Sta-so is economical—and will stay so.

Sta-so crushed slate is quarried from the Vermont hills in two beautiful colors, a rich Indian red and a cool sage green. These colors cannot fade because they are *natural* colors.

Sta-so surfaced roofing is equally adaptable to any building. Your dealer has Sta-so surfaced roofing in shingle or roll form. Memorize this Sta-so label. Find it before you buy. It is a guarantee that your Sta-so surfaced asphalt roofing will not fade or turn black.

CANNOT FADE

The Thoughtful Gift is PYREX

in Sets or Single Pieces

HERE is a gift so beautiful, so useful, so permanent in its delight that it will charm every home-loving woman.

PYREX TRANSPARENT OVEN DISHES have created a new art in the baking and serving of food. Food is better cooked, and goes to the table in the same beautiful, golden-hued dish in which it was baked.

Like fine silver, PYREX in sets or single pieces—plain or decorated—is a gift to be proud of. PYREX is guaranteed not to break with oven heat, never wears out and will be cherished forever.

PYREX

TRANSPARENT OVEN DISHES

Last a Lifetime

LOOK FOR THIS SEAL OF QUALITY
THIS IS PYREX TRANSPARENT OVEN-WARE
PATENTED U.S. MAY 17 1915

PYREX never chips

PYREX Gift Sets consist of eleven pieces—pie plate, bread pan, covered casserole, a round and an oval baking dish with handles and six individual bakers which can be used for scalloped foods, left-overs or desserts. Each piece is selected for utility and beauty, all carefully packed in an attractive gift box. All dealers in housewares sell Pyrex.

The price of PYREX Gift Sets is $6.00 in the east, $7.00 in the west, and $9.00 in Canada.

Always look for the PYREX label and the name PYREX pressed in the glass.

Ask your dealer in housewares for the Pyrex Booklet, *"New Facts About Cooking,"* or send his name and address and we will post it to you—free.

cougar; the swamp and hardwood country of the Eastern panther; and in Mexico, the home of the puma. A very few of them have told me that once or twice in their lives they had heard a note which they believed to be that of the panther. Even they could not be sure."

Flash suddenly pricked up his ears and attempted to squeeze past. Moran pushed him back as a low wail issued from the timber.

"Flash knew there was a tragedy going on out there. Guess what made that sound," he urged.

"A wildcat," she guessed.

"A rabbit," said Moran. "That was his dying scream of fear. Few know that a rabbit makes a sound. Most men would have guessed as you did. That cottontail was probably struck by a weasel or by an owl."

A weird, unearthly squall floated down from the bald ridge that topped one wall of the cañon.

"There!" said Moran. "Try again."

"A lynx," she said.

"A fox," he corrected. "Long ago some curbstone naturalist who owned a poodle dog announced to the world that the fox note was a yap. They've been yapping ever since. That long-drawn maniac squall is their real note—call it a yap if you like. I rather thought we'd hear a fox and that it would prove to be the sound that had worried you. That wasn't it?"

The girl shook her head.

"Not in the least like that," she said.

"I can't imagine what else it could be."

Moran was puzzled. A sudden thought struck him. He remembered the dead cow elk with the severed hamstrings, recalled the sudden hush and cessation of animal sounds that had occurred as he lay on the far slope of the Wapiti Divide—the silence that had told him of a distant wolf howl. He looked round for Flash, but Flash had squeezed past on the other side of the girl and was gone.

"I think I can make a pretty accurate guess as to the source of that sound," he said. "Our old friend Flash has been out with the wolves and found his voice. If he inherited his father's cry it was the lobo call you heard."

"Flash!" she exclaimed. "Why, Flash couldn't make such a hideous sound! Oh, surely it wasn't Flash!"

"I'm inclined to believe it was," he said. "You see you've had the most dangerous beast in the hills right with you all the time."

"Flash dangerous!" she cried. "Why, he's not dangerous! He's the smartest dog alive."

"And for that very reason he is positively the most dangerous beast within five hundred miles. Flash has all of the killing power of a lobo wolf, but without a wolf's blind fear of man. Flash fears men intelligently, can gauge their power for harm. He knows their tricks. Instead of fleeing in a panic from the first taint of man scent he investigates it. Then he knows! Of course Flash wouldn't attack men indiscriminately—he'd have to be spurred on by some strong dislike of one individual, but if he held a grudge against some man—well I'd hate to be that man and have Flash find me somewhere asleep or traveling through the hills at night."

"It doesn't seem possible that he could harm a man with only his teeth to fight with," she insisted.

"Only his teeth!" Moran exclaimed. "Yes, that's all. You've not the slightest conception of what those teeth of his can do. They cut like knives through the hide muscles and even the hamstring cords on a bull elk. I've known him to kill elk, deer, antelope and mountain sheep. Only a few months ago there was a five-hundred-dollar bounty posted for the scalp of the worst lobo that ever struck Wind River. Flash was that wolf. I shouldn't have left him. Ask Kinney. He tracked the Wind River wolf more than a hundred miles on a new snow and found Flash at the end of the trail. You and I are the only ones who know he's alive to-day. What chance would a man have against a killer like that if he didn't have a gun?"

The girl's mind traveled swiftly back to a certain night when she had heard screams and oaths behind her as Flash fought half a dozen men to give her time. She had had a vague idea that his snaps and snarls had retarded them until she was out of hearing. Now for the first time it occurred to her that he had struck them so savagely that they had feared to follow her through the night.

"Would you sell Flash at any price asked.

"No," Moran answered instantly. yours. I lost my title to him when him behind. I knew he would hate it city and I expected to be away but or two. He turned outlaw, was hun over the range. He showed up he attached himself to you. I have no to him. He belongs to you."

The girl held out her hand to him

"Kinney told me that all men like she said. "Now I know why. 'They make 'em any whiter than Clark M was what he told me. I indorse his ment. And I want you to know that sider that the very nicest present had."

"That repays me," he said.

"And thank you for talking to instead of questioning me. Of cour know that I have a definite reason fo here. I'd tell you if I could. I t know now how you can help me if yo If you will stay near here until Dad comes, then send him here to me—i too much to ask?"

"I intended to camp within a few of here," he smiled. "So you're nothing but what I would have done event. Just one question, please?"

She nodded assent.

"If I'm to camp here—how shall dress you? As an aid to conversatio understand."

"I'd rather you didn't know my n she told him frankly. "At least not a One of my reasons for being here is to forget who and what I am until reason things out coolly. That's don't care to hear my name spoke and over again. But as an aid to con tion—Betty is the only part of my I care to hear. You may call me that like."

"Thank you," said Moran. He pic his blanket roll. "I'll bunk just ou

"If it storms come inside," she "Circumstances alter cases and I priggishly conventional, you know. night."

Moran knew that there was no least of coquetry in this permission to u given name. There was some deep- reason why she shrank from hearing t of her name. When he knew that he would know why she was here.

He had scarcely spread his bl when a sudden shiver shook him as rang out from the rims above—th cry, the most chilling sound of all th It was tossed from wall to wall of the its echoes dying slowly away amor peaks as the diminishing ripples caus a thrown rock die out against the far of a quiet pool. Moran heard the gi softly from the cabin.

"Do you still believe Flash could m sound like that?"

"I'm sure of it. That was Flas other."

"It's rather a dreadful sound for s able a dog to make," she said. "Bu that I know it's only Flash I nee shiver when I hear it again."

She heard Moran laugh softly.

"You are mistaken," he said. "I live for a thousand years and hear it night it will always be the same. You not fear it—but the wolf shiver will you each time it sounds."

For the first time since her arrival t failed to bar the door at night, but swinging open—mute evidence of her lute confidence in Moran.

Half an hour later Flash touched M hand with his cold nose, gave one brie and went inside to the girl. He sat her bunk, his chin resting on the edge she stroked his head.

"Flash," she whispered. "Flash, couldn't it have been a man like the o there—like Clark Moran?"

Flash trotted outside and lay Moran.

"You old rascal!" said Moran. look what you've led me into now! lieve I've found her, Flash—I kno Isn't she a little beauty? Don't you tell me you ever saw a woman who compare with her! Any girl I've ever would seem drab and commonplace her. What do you think about it, Fla

Flash only thought that he was contented. Nevertheless, he was re and spent the main part of the nig prowling uneasily back and forth bet Betty and Moran.

The future of all our industries pon the human factor. We can go only upon a new basis of complete ation. Everyone must have his fair f present profits and future oppor- ts. These are fundamentals. Those ny them encourage the preachers of ion and strengthen the hands of vio- licals who would proceed along lines e neither sound nor economic.

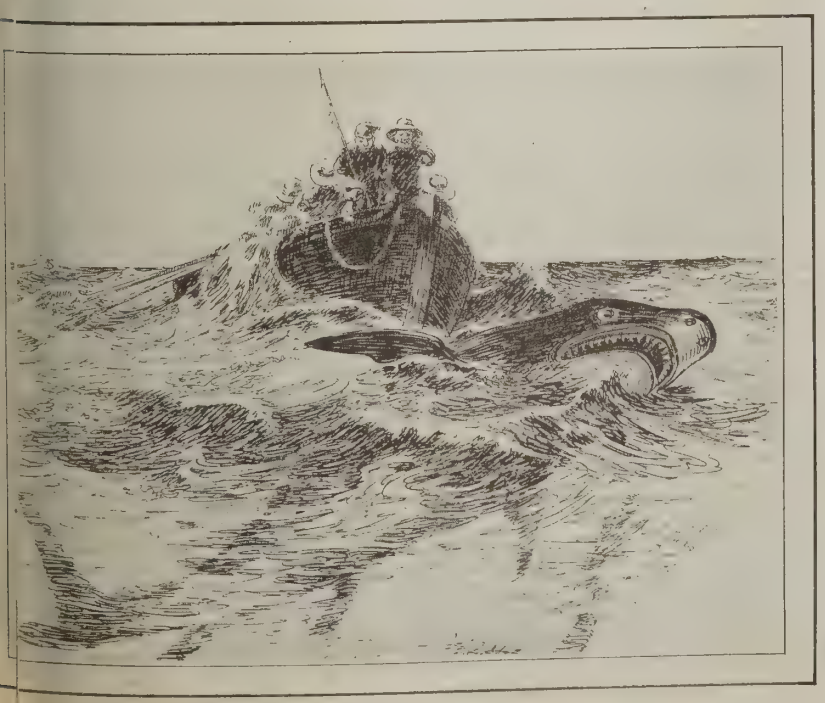
n't mistake my meaning in saying t lesmanship is not so all-important. as well as anyone that you can't you haven't markets, and the big- r market, all things considered, the eime you will work your plant each r. The other day I was talking to a man g a so-called seasonal factory. The oc nature of his business rendered it ct for him to keep his forces together off-season periods. Did he throw up ds? I guess not! He sent a man to tlia, where the seasons are the reverse t we have here. When we are wear- white flannels they are going about r ulsters. My friend is on the right and soon he will be filling Australian uth American orders during his dull . Such foresight counts. But the t mains that the biggest thing is a sensible, just and progressive program of management.

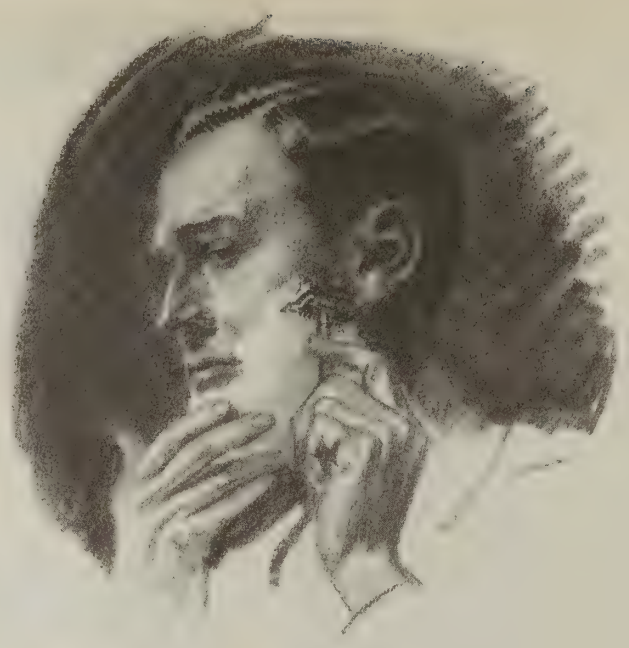
"Just because strikes nearly always were based on wage demands most of us were led to believe that money was really the cause of these labor troubles. Now we know that the dissatisfaction was frequently caused by something else—wages were only a pretext. Strikes are at present taking place in industries where the employees themselves concede that the wages they receive are as high as can be paid. What they now want, and what they have always wanted, is a place in industry equal in dignity to that of the employer. With the introduction of steam the laborer felt that he lost caste, and he now demands that this fancied loss be made good. Only a small percentage of recent industrial plans based solely upon the policy of paying higher wages has increased the worker's interest or lessened his discontent.

"One of the unfortunate things is that our American-born citizens fight shy of the trades. They take to the farms and offices or engage in small individual enterprises. Seldom do you find a native-born son at a machine in a big industrial plant. I do not mean that this kind of work is not done by American citizens; it is, but frequently they do not speak English, and their loyalty though often requisitioned is too commonly of a platonic international character. When the machine itself became the real worker and the man became the assistant to the mechanical device the native American got out. It used to be that we had all-round machinists; one of them could build an entire engine if you gave him the tools and the time. But at present no one man builds even the smallest part of a truck or a tractor; instead of the general worker we have a series of skilled machine assistants.

"When employers commenced to discern that their men were without interest in their work they looked about and made the discovery that though their machines were automatic their factories were not. One friend of mine found that he was hiring 2500 people each year to maintain an average working force of 900. He investigated further and learned that it cost him $85, on an average, to break in each new operator. In other words, his labor turnover was costing his company more than $200,000 annually. Other owners made similar discoveries. Remedies were sought. Some decided to pay their men on the piece basis, rewarding them for what they did, not for the time they worked. Other managements tried to increase the interest of their employees by providing better living conditions. A few evolved stock-purchasing plans and profit-sharing schemes. Some of these plans helped, but all of them together were not a cure-all.

"I am an old-timer in the industrial game and have managed many thousands of men. One thing at least I have learned: There is no worth-while industrial policy to-day but coöperation. No other basis is either sensible or safe."





Can you get 500 good shaves from every 12 blades?

HOW many mornings can you shave with a razor blade before you throw it away?

The first day, when the blade is fresh, you get a smooth, clean shave. But soon after, shaving begins to dull the edge. Every day the dullness increases—each succeeding shave becomes more and more uncomfortable.

Don't endure any longer the annoyance of shaving with a blade that is losing its first keen edge. With the AutoStrop Razor, you are *guaranteed* 500 smooth, satisfying shaves from every dozen blades.

Built right into the frame of the AutoStrop Razor is a remarkable stropping device, simple and efficient, which *keeps* the blades sharp and keen—renews the fine, smooth edge of the blade in a few seconds. You don't have to take the razor apart or remove the blade—you simply slip the strop through the razor head.

Begin tomorrow to get the comfort of a fresh, keen edge for every shave. Ask your dealer today about the AutoStrop Razor free trial plan.

REES
DOUBLE WORM GEAR DRIVE
JACK

WHEN a tire goes down there is only a brief roadside delay if you have a Rees Jack to lift the car. You keep out of the wet and slush too. The long folding handle assists you to put the Rees Jack under the axle, and with a few easy turns of the handle the car is lifted quickly and held safely at any height.

The unique double worm gear drive principle patented and adopted here for the first time in any Jack, together with our high standard of materials and workmanship, accounts for the great power, dependability and convenience of Rees Jacks. See and try the Rees Jack at your dealer's. You will want one for your own car at once.

Rees Jack No. 1, passenger car model, (2-ton capacity) with long folding handle goes readily into any tool box. If your dealer does not have the Rees Jack in stock we will send one to you prepaid by Parcel Post upon receipt of check, money order, or draft for $9.00. Price west of the Rockies $9.50.

Iron City Products Co.
DEPARTMENT 15
7501 Thomas Boulevard, Pittsburgh, Pa.

Manufacturers also of Rees Double Worm Gear Drive Jacks for motor trucks, railway and industrial uses.

ONE THOUSAND DIAMETER

(Continued from Page 22)

Spiders were good for malaria. If you have had any doubt in your mind as to what spiders are good for, now you know. Most people think spiders are good for eating flies and that flies are good for feeding spiders, but here is a use that perhaps you did not suspect. They are good for malaria. Just how they were taken, whether "drunke" or swallowed whole, was not mentioned, but you may depend upon it, whatever was particularly loathsome was good for something.

"A good pouder for the jaundice is as follows: Take earthworms and cut them small and braye them with a little wyne so that ye may swallow it; drinke same fasting."

The last direction must have been a mistake. It should have been: "Drink the same fast!" It is possible that the doctor himself did the "braying."

And then there were snails. Fine ladies had their footmen gather snails in the garden before breakfast. It had to be before breakfast; after breakfast would not have done. These snails were pounded, shells and all: "To be swallowed for a consumption."

Disease was thought to be a thing, an entity, something that entered into the body and must be driven out again by a remedy stronger than itself. Perhaps this idea had something to do with the size of the prescriptions. Some of them contained more than one hundred ingredients. They were built up by succeeding generations of doctors. Each doctor had to add one drug or more as his contribution to medicine or realize that his life had been wasted. After worrying about it for years, possibly, one day he would exclaim: "Gadzooks," or "I' faith," or "By my halidome, I've got it!" Then he would put into the prescription something more terrible and loathsome than all the rest, and having done so, when his time came he would pass the mess on to his successor before he himself passed on, content that his life had been well spent.

Cure by Royal Touch

Those were fat days for the druggist. In 1676 Dr. Gideon Harvey, physician in ordinary to Charles II, wrote:

"I have oft seen bills of Apothecaries risen to twenty pounds and sometimes thirty pounds in the time of a fortnight. Not long since an Apothecary of our suburbs brought in bills to nine patients for less than three-quarters of a year's physick amounting to fifteen hundred pounds."

That would have been equivalent in purchasing power to about forty thousand dollars at the present day! All of which goes to prove that compared with his ancient prototype the modern druggist is a piker.

And then there was blistering, a favorite method of torture. It was probably the first crude experiment in New Thought treatment. It took the patient's mind off his other troubles. Being so occupied with the new sensation he had no room for the old ones. Sometimes the desperate victim refused.

"You must be blistered or you will die!" said her physician to the Duchess of Marlborough.

"I won't be blistered and I won't die!" said the strong-minded old Sarah, and she kept her word for many years.

Scrofula was called king's evil and was cured by the touch of the king. For hundreds, perhaps thousands of years people had clung to this belief, which was probably fostered by monarchs to strengthen their claims to divine right. Dr. Samuel Johnson was touched by royalty at the age of four, but it did not rid him of his taint. Between May, 1662, and April, 1682, or twenty years, Charles II touched ninety-two thousand one hundred and seventy persons. One day a week, Friday, was given over to this touching ceremony, so he must have averaged a little more than eighty-eight persons at one sitting. On some Fridays, when it was necessary to make up for lost time, he exceeded the speed limit, touching more than two hundred and fifty victims of scrofula. But he himself was touched also, for it was the custom to give to each a small piece of gold, called the "touch coin."

Another favorite was bleeding. This was the first, the middle and the last resort. If the doctor did not know what ailed and mostly he did not—he bled h he did know he bled him anyhow. sultation resulted in more bleeding. the lancet or leeches were used, mos ably both—and often.

Louis XIV was bled generous times for scarlet fever. In 1765 a mob attacked the Duke of Bedford' This probably caused the duchess an hysterical fit, for the next morn doctors bled her. George Selwyn w ing one night at the home of Lord C and fell, striking his head upon a table, causing a wound which bl fusely. When the surgeon came di George down, stanch and dress hi ated wound? No, that would hav too simple and obvious a method f days. He bled him, though Natu doing the same thing herself!

Abominable Prescriptio

Ambroise Paré was a celebrated su his time—earnest, painstaking an fatigable in his search for truth. Bu held her face averted. Paré havin that an Italian surgeon had a wo dressing for wounds determined to secret. He gave up his practice, home and served a two-years' appr ship with the Italian. He says: ' end, thanks to my gifts and my p he gave it to me. Then was I joy my heart made glad that I had lear remedy."

Triumphantly, his soul filled wit enthusiasm, he took it back home w and no doubt used it upon wounds after for the rest of his life. This ma remedy, to learn which he had serv years and given presents and gifts, have been used upon Johnny's foo had lived in those days. It was co of "Young puppies, boiled in oil o and earthworms prepared with Ven pentine."

But most probably the attending s would have used a "sympathetic" p A sympathetic remedy is one that h sympathy. That is, it does not con contact with the wound at all. One r the bandages that have been appli first-aid dressing and dusts them w sympathetic powder, then lays then in a corner cupboard and the wound at once to heal.

You don't believe it? They believ the seventeenth century, as the fol narrative will attest: In 1687 a knight attempted to stop a duel by st in between two adversaries. Like another well-meaning go-between and since he got the worst of it, of receiving a serious sword wound in Then he promptly sought the atten a surgeon, who treated him for som without accomplishing anything. I under the treatment the knight g much worse that he began to fear life; also he began to think that he w getting the right treatment. So he p and discharged this surgeon and ca another.

Under the treatment used by this surgeon the wound began to heal and tually our knight became entirely wel when the second surgeon presented for the treatment the knight refused him, though he had paid without qu the bill of the first surgeon, who h benefited him. Naturally, the secon geon entered suit to recover his fee we should be grateful to the knight obstinacy, because the records of this and especially the judge's charge jury—give us a most interesting acco the medical knowledge of that day.

The judge was one Sir Thomas S Knight, Justice of the Common Bench. If Sir Thomas never did an else in his life, he made his fame imm by his charge to the jury in this cas those days a physician's calling w honorable for him to receive a fee services. He could accept an honora which was whatever the donor wish give, but never a fee. He could no even if the patient refused to pay any But a surgeon's calling was lower tha of a physician, consequently the jud cided in the beginning of the trial th surgeon was entitled to sue. There is ing further in the records to show th
